When lately we saw War, like a specter astride the wind, come riding out of the east, we beheld a sudden transformation of values. With the first leap of the eagle on the air, youth, the great tragic generation, stood forth, unreasoning, undaunted, ready, supreme.

In one of the haunting works of the distinguished master, Daniel Chester French, death is represented as coming to the sculptor as a hooded angel with gentle, arresting finger. The young man at the unfinished monument turns in wonder, gazing into the inscrutable destiny which calls him in the full joy of the working.

Just so the summons has come to our tragic generation. Unprepared, incredulous or mystified, in the midst of other destinies, swinging along clear roads, engrossed in safe ambitions, buoyed up with a faith of comfortable success, in the midst of the playtime, in the midst of life's season of laughter, in the keenest of pleasures, suddenly, the traveling finger of that equally mysterious angel of duty touched here and there the young men of the land and marked them for a sterner purpose. While others, old in the knowledge of sorrow, rebelled with the chill vision of sacrifice, they gathered silently, grimly, without complaint and without hesitation. Yesterday they were but fragmentary. To-day they are the youth of America, the tragic generation that goes out to perform.

What new ideal shall rise phoenixlike from the holocaust will depend, preeminently, on this great body of youth—in the questioning, in the new longings, in the need of the consoling vision of a clearer nationalism, which will come to them in that dread moment between the dark and the dawn when, facing the supreme sacrifice, they put to themselves this question: "For what do I stand ready to give all that a man can give?" The new ideal of nationalism, which we who remain behind must build, shall be their monument.

## America's Mental Awakening

IF there is one thing strikingly apparent to-day, it is the mental awakening which is sweeping throughout this country.

Heretofore the American has bothered himself but little with political speculation. Politics has been an incident in his life. In the great universities, once in four years, for a few weeks there is a little dramatic flurry. For the rest of the time the political future of his country is as far removed from the memory of the undergraduate as the laws of the Greeks. So simple and so obvious has been our need of political expression that, whereas the German Reichstag and the French Chambre des Députés each represents a dozen shades of political belief—tenacious, aggressive, and uncompromising—America has known but two enduring political parties. Originally opposed to each other on the clear issue of cen-

tralization or decentralization of power, this distinction has become so confused that each succeeding presidential test has increasingly become a vote of confidence to be given or withheld on the record of administration.

The average American's conception of his country has been one of complacent self-satisfaction. He has believed it to be the greatest country in the world, as a matter of parochial pride. He has been convinced by the mounting numbers of the census and the record of industrial expansion, as his eye has been convinced by the skyscraper which has visualized the New World's superiority over that Old World which is still fettered to the earth. He has believed that a special providence removed his country from the necessity of those stern military obligations which exact their toll on the precious years of youth and saddle on the country a burden of taxation. He has flung wide his doors to the oppressed of the world, in a childlike faith that it needs but the feel of American soil underfoot to transform, by the miracle of political liberty, the German, the Italian, the Hungarian, the Slav, and the Russian Jew into that noblest work of God, the good American citizen. He has seen the immigrant not only absorbed, but casting off, with enthusiasm, his own inherited tradition to embrace that superior ideal of nationalism, the American spirit.

## Questionings

DURING these last transforming decades the American has been troubled with few doubts. His theory of his relation to the state has been that the state exists for the service of the individual; a sort of convenient telephone central with certain necessary policing powers. If at times he has sought its protection with a willingness to extend its authority, it has been, as in the matter of commercial evolution, when he has believed his rights as an individual to have been threatened. Beyond that he has been willing to have it regulate the moral conduct of others and has been critical only when he has felt that it in some way interfered with his business.

His whole attitude has been one of complacent opportunism rather than of any profound political questioning. He has gone his way, and a very pleasant, happy, and untroubled way it has been.

But to-day your American is startled, troubled, awake. His complacency has been rudely shaken. He is beginning to compare, to question, and to analyze. He is asking himself questions. What is the significance of this crystallizing of immigration into colonies, tenacious of inherited customs and ideals? He believed those great waves were to fuse into the one clear sea of American democracy. Why should the foreign press of the United States have increased until it reached the colossal figure, bearing in mind the total circulation, of over 1,500 newspapers and periodicals? If these colonies cling to their national characteristics to the extent of founding their own theatres, clubs, and restaurants, worshipping in their own churches and confining in open or insidious organizations, what is the explanation? Is it because America fails to offer them as high a conception of nationalism as the country from which they have come? Why should this country, the greatest industrial power of the world, as he believes it, with its rich genius for organization, have been brought to a paralysis of industry which not Germany, nor England, nor France, cut to the heart, has been forced to in four years of war? Was it due to a political blunder? Was it rather the result of a chaotic condition, the fruit of commercial disunity?

Through all the perplexities of his self-examination he is passing from temporary explanations to

a search for a central cause. In order to reach a just estimate of his own strength or weakness he is earnestly considering the nations of the world now in conflict and seeking to comprehend the causes of their strength and their weakness as they stand revealed in the white, staring light of war.

### Germany Plans More Wars

FROM an early mystification as to the responsibilities for this present cataclysm we have come to certain unalterable conclusions. The German Imperial Government has been tried before the patient bar of public opinion and pronounced guilty. It has gambled away its honor on a scrap of paper. It has adopted a code of military morality which means a continual and deliberate policy of deceit at home and abroad. It has made inhumanity and frightfulness logical expedients. In the spiritual and moral record of humanity it stands bankrupt. We perceive this, but how many of us realize the alarming intent beneath this moral perversion?

The German conception of war is of logic superseding morality, the declaration of martial law in the domain of the conscience, the sentiments, and the emotions. If a lie will win a temporary advantage, lie, for a lie is now a military feint. Hypocrisy is military camouflage back of the lines. Massacre, rape, looting, devastation, destruction are, in the logical analysis, no more than thoroughness and efficiency. They accomplish the maximum of harm in the present, strike the enemy in his reserve of future resistance, and sow a terror of the German anger that will facilitate the peaceful course of future diplomacy. Back of every atrocity, back of every deed of fiendishness, magnifying it and eternally damning it—because it acquires the quality of a logical act, instead of the impulse of barbaric rage—back of every display of savagery, is a cold, deliberate, definite intention.

When Germany in the devastating march of her armies gives flames to terror; when she lines up innocent men, women, and children for slaughter; when she permits her soldiery to pillage, to murder, to ravage women, to impale children, it would be fatally dangerous to regard this simply as an expression of barbaric lust. She is deliberately sowing the terror of German vengeance so that now and in future conflicts little nations shall recoil before the obliteration which confronts those who, for any reason whatsoever, refuse to do her bidding. When she loots Belgium by unjust levies, when she imports Belgian manhood into slavery and, having enslaved it, wrecks it physically, so that, in the long trains which return the shadows of men to their homes, from three to five corpses have been taken from a car; when she does this, it is not simply from wanton cruelty, but to remove deliberately from the ranks of her future enemies that one nation which, she rightly judges, will curse her to the end of time.

When Germany evacuates northern France and levels, not only all that man has constructed, but defiles the fields, strikes down everything, even to the fruit trees; when she leaves a scientific wilderness; her idea is not primarily one of irresponsible savagery. She is carefully planning that when the next test comes the France which has balked her of her destiny shall be still staggering under the weight of her wounds. When the full record of the exposure to epidemics in her prison camps has been spread before a horrified world we shall at last comprehend to what diabolical detail Germany has pursued her preparation for her next appeal to arms.

All this is true, but the danger is that we, with every sentiment of horror stirred, shall fail to perceive that the menace to us is not in German barbarism but in the enduring vitality of German civilization—not in the things we hate, but in the things which compel our admiration.

### The German Idea

IN this era of imperative readjustments it is supremely necessary that we discard all prejudices and cut straight to the truth. We may conceivably hide the fact of unpreparedness or minimize a military disaster, but in the domain of ideas it

will be folly to stop anywhere short of the final truth. If the German menace were based simply upon military efficiency, we should never have beheld a Germany which in a generation whitened the seas with her fleets, crowded her commerce into every remote market of the globe, evolved a science which drew the admiration of all nations. We should not have seen the penetration throughout the civilized world of German culture in the form of German literature, German philosophy, German music, and German art, at a time when other nations were subjected to the dilution of cosmopolitan influences.

To-day the prevalent conception of Germany is of a people held in unwilling slavery by the supremely concentrated control of a small military caste, as the circumference of a wheel and every vital spoke is controlled by the hub.

No responsible student of world affairs who has lived in Germany or studied Germany believes this or that there is any easy way to escape the challenge which has been flung out. Back of the German army is the German Idea. You may balk, you may defeat, you may conceivably shatter the German military machine; there will still remain to be dealt with the German Idea.

### Nationalism or Individualism

IN the last century there have been two distinct movements in the world of political ideas: the Anglo-Saxon recession toward the supremacy of the individual and the German progression toward the deification of the state. Back of the shock of armies these two ideas confront each other, and when the sound of cannon has ceased to vex the air they will continue to confront each other in irreconcilable combat until one or the other prevails. These two ideas, these two points of view of man's conception of government, cleave through all outward forms. Republic or monarchy, despotism or commune, are but names. The vast tenebrous tyranny of Russia has in a twinkling become a chaos because back of the frowning façade the iron frame of national solidarity did not stand. The Republic of France, despite shifting political leadership and blundering in high places, has not budged an inch from its clear determination, because, while Germany imposes her unity by education and discipline, the essence of national solidarity in France springs from the deepest of spiritual and emotional sources.

Does man exist for the nation or does the nation exist for man? This is the great problem which has emerged out of the smoke of battles which is like the smoke of history. This world conflict has ceased to be merely the march and countermarch of troops. We have come to the glacier clash of fundamental ideas.

Which will emerge supreme in the first test? Which way will America incline in her new self-analysis, seeking a higher spiritual ideal? Indeed, the choice may yet be forced upon us either by the indeterminate issue of the war or to give answer to the rise within our body politic of a great movement from the masses.

For our people will have it dinned into their ears that the solution of the democratic struggle for the equalization of opportunities lies in the socialistic enmity toward private property. There will be a great organized, persisting effort to obliterate all national lines for the panacea of internationalism. What shall we oppose to this disciplined anarchy? The same disorganization of the forces of order, the same loose ideal of Americanism—opportunism, individualism, drift, and confusion?

Back of the conflict of these two ideas of man's conception of his duty toward the state—on the one hand nationalism, the spiritual unity of France, and the scientific discipline of Germany, and on the other that centrifugal movement toward individualism which has swept the English-speaking world—there is discernible a conflict between faith and agnosticism. If a man, when he reaches the age of reason, looks out at the world in which he moves without consciousness of any superior call than his own personal ambitions, his attitude is frankly agnostic. If, on the contrary, he regards himself as spiritually related to his fellow beings, by a sense of family unity and by dedication to national service, his attitude, whatever his religious speculations, is essentially the attitude of faith.

The development of Anglo-Saxon political characteristics has been increasingly along the line of political agnosticism which has tended more and more to develop an extreme type of individualism. In large measure this is due to the fact that the principle of family solidarity—which is the foundation of the political, economic, and spiritual development of France and of Germany and has the quality of faith in that it consecrates the

individual to the group—has no social authority here. It is only a natural progression for the individual citizen, once freed of responsibilities to the family group, to conceive of the state, not as an ideal, supreme in his destiny, but as a loose and convenient organ of opportunism which must interfere as little as possible with his own individual rights in the pursuit of happiness. This has been the tendency of our political philosophy in the past. To-day events abroad compel us to ask with increasing anxiety whether a nation so conceived has the power effectually to resist such a nation as Germany is now revealed to be.

It is for this reason that it is essential to analyze the Teutonic rise, to seek to comprehend not the things which have made her name loathsome, but those elements of strength which have convinced the German people itself that it is destined, like another Rome, to sway the world.

### The Real Menace

WHILE other nations have been spreading out in centrifugal circles toward individual liberty of thought, action, and responsibility, the German race has merged in concentrating purpose toward a central dominating ideal.

The Germans have not balanced the structure upon the perilous base of the king idea. With all his theatric preeminence, the Kaiser is not the hub of the great German national wheel. To have constructed along such traditional lines would have been to intrust the German destiny to the hazard of inherited personalities. Louis XVI and Charles I were in their memories.

It is not the Kaiser but the state that is supreme, and the Kaiser has been glorified only so much as it is essential to visualize for the multitude the deification of the state. To what extent the Kaiser was responsible for the outbreak (Continued on page 41)

The Tragic Generation

## THE WAR OF MOVEMENT HAS BEGUN

*For more than three years the cavalry has been impatiently waiting its chance. Trench warfare having restricted their usefulness, most of the cavalrymen were dismounted and became either machine gunners or riflemen. Now that the fighting is again in the open, the cavalryman has once more come into his own, and will doubtless play a conspicuous part in coming events. Above is shown a detachment of British yeomanry.*

*The French hussar, a picturesque figure from Napoleon's day to our own*

*The uhlans, Germany's famous mounted scouts*

*General Pershing has asked for five more regiments of American cavalry*

# THE AMERICAN DESTROYERS

BY A. H. POLLEN

THE worst of Ireland—or it may be the best—is that, once in that magic country, you clean forget, in a hundred irresistible fascinations, the thing that brought you there. The country's tragic history; its brave, fey, wayward, faithful, inconstant, ill-understood—perhaps incomprehensible—people; the haunting beauty of its literature; the bewitched ruins of the splendid past—each is a challenge to the memory and to the mind; and so arresting a challenge that it is an effort to get back to workaday things. And then the beauty of the land as you see it from a car window!

It was a stormy day in February when I ran through on my recent mission. At times the rain came down in spates to hide land and sky and sea. Then there were spells of bright, warm sunshine, with clouds careering in great battalions across the heavens, some uniformed in fleecy white and others in purplish gray, and some again in every tint of brown from russet iron to gold. Always in the distance one could somewhere see the rising peak or the gently slanted shoulder of a miniature mountain range. In the middle distance were the fields, where the cattle made party-colored patterns against the brilliant green, with gray stone walls shutting one field from another, or turf banks, with here and there a goat feeding on the top; or lower banks edged with hedges of ash or hazel, or scarlet dogwood. The air is crystal-clear, and the vividness of the coloring beyond all belief. For centuries the emerald alone has been thought to do justice to the Irish green. But to depict the sky or landscape or the foreground floods that reflect them both, one would surely have to seek one's other pigments at the jeweler's. What but sapphire could give you the clear, transparent blue of the far-off hills? Where but with lapis could you render the tint of the forest lying between us and the farther mountain? Rubies, cornelian, jacinth, and beryl could alone do justice to things, so commonplace in themselves, as a red-haired cow or an ivy-grown cottage, or the dogwood growing where the turf is cut in a great bank compacted of velvet, colored like a ruddy burst of flame. To get the texture of the leafless hedges and of the ash trees that have fought their battle with the winds and grown, one would have to learn from some infinitely soft fur, like sable. And to paint this scudding, ever-changing sky nothing would serve our needs but pearls of every color turned to vapor and, like vapor, changing shape and hue as the sunlight falls upon it; and it would be to the turquoise and the topaz one would have to turn for the clear sky between the clouds. And then perhaps, before the picture was begun, all would be blotted in gray, cheerless, blinding rain.

## "Motley's the Wear"

THESE alternations of faerie beauty and fierce, driving storm—with memories of the storm in all the beauty, but with woefully little of the beauty in the storm—strike ominously on the mind as signs or emblems of the changing fortunes and constant struggles of this people, great in aspiration, faithful in hope, yet seemingly the mere playthings of chance—if it be indeed chance that creates their trials, and not the evil passions of men. Nor can one pass it by without thinking of the Greater Ireland that lives in the hearts of her sons and daughters, exiled and scattered east and south and west about the world, happy maybe in their exile, but ever with an eye on home, in whose faithful hearts—though they never shall return to it—this enchanted country sits ever, like a tabernacled relic, the object of undying hopes and of constant prayers.

From Admiralty House, standing high up the hill, the view of the harbor is broken only by the noble lines of the cathedral, itself largely an offering of the far-off piety of the Irish in America. There, some at their moorings, some alongside the parent ships, lie such of your destroyers as are not out at sea on their work of escort and convoy. But they are like no destroyers ever seen before—like nothing on earth, one is tempted to exclaim: more correctly, perhaps, like nothing that ever used to be on the sea. 'Till man has won his stealthy secret from the chameleon he must, if he wishes to disguise the obvious, learn in the school that has so flecked the leopard and striped the tiger that, though unhidden, neither can be seen in the dappled shade of leaves or in the long lines of shadow that the grasses throw. If you come with your mind intrigued with the paint box needed for the Irish scene, you will be tempted to smile at these giant efforts at mad coloring you see here. The sleek, slim gray destroyer of old times is gone. "Motley's the wear," and with a vengeance too. Cubists—futurists—there is no crank school that would not envy these effects. One shuddered to reflect on what would happen could one of Marryat's vinous heroes have seen a flotilla like this. You remember how, when in a hard drinking mess, a rat one day dropped from a beam to the table, ran across, and then dropped to the floor. Everyone sat in thoughtful and immobile silence. None could be the first to acknowledge that his time had come. Was it Mr. Daniels's prophetic soul that decreed that only a teetotal navy could face the shock of modern camouflage?

## The New Sea War

IF there is no one boat here that looks like anything else on earth, there is also not one boat like any other. There is something bizarre in this new livery of war. When Codrington took the *Orion* to join Nelson's fleet before Trafalgar, proud as he was of that noble seventy-four, it was some time before he dared paint her in the black and yellow streaks of the great admiral's choosing. To be precipitate in classing himself with Nelson's great brotherhood might have seemed presumptuous. Is it not startling that every new craft that joins this honorable company below us must begin with a crude disguise of such little dignity? It is as if the crested helmet of a paladin had made way for the jester's cap and bells. But sea war has lost its pristine grandeur and become entirely an affair of stealth and secrecy. These fighting men will rarely, if ever, see an enemy's face. It is perhaps never to be theirs to have the joy of battle, with a close-hauled line and the guns roaring broadside to broadside. For these, war is an affair of craft and cunning, of plot and counterplot, of artifice and surprise—a wild crook novel of the sea, but with eighteen-inch torpedoes instead of automatics, with hydrophones and wireless instead of dictographs—and with very few arrests indeed—a submarine leaves as little "spoor" as any victim. There is not less danger than in the old days; there is indeed more. The weapons of this new campaign, the torpedo, the depth charge, the mine, the bomb—these are all devastating things; let a single one get home and what were a ship and a crew are turned and twisted steel, mangled flesh and suffocated corpses, and all on the sea's bottom in a trice.

How good it was to get on board the flagship and meet her gallant captain, with a promise to see all the captains of the flotilla afterward! There were not, it is true, very many in port, but it was my luck that there were not fewer still. Six days at sea

and three, possibly four, in harbor is the apparent rule. But it is often honored in the breach—and it is not often that the breach is made in the sea time! Don't think six days at sea and three in port is the same thing as six days' work and three days' play. The time in port is very little of it even rest. Stout as these good boats are, the Atlantic is stouter still, and that its rude buffets do so little damage is largely because, on each return to port, every plate and fitting on deck and sides and below is carefully surveyed, every incipient weakness detected, and so remedied against the next return to sea.

## Back to "Mother"

IT is here that the mother ships come in. There are two of them, a mother ship and—shall we say?—a grandmother ship. This not in irreverence, but affection. The latest is so much younger, has learned so much from the older generation, and—well, really, she is a wonder. Take Park & Tilford's, Wanamaker's, and Brown & Sharpe's and roll them into one, add a cold-storage warehouse and a few such unconsidered trifles as an arsenal, a hospital, and a torpedo store, and you will have a few of the flagship's features. If only she had towed a floating dock along, she would amount to an automobile naval base. I am sure there is nothing that they have not got on board that they could not make on board; nothing, that is, that the most exacting destroyer could possibly need after four days at sea, or six months at sea on active service. A boat that wants patching or refitting has only got to nuzzle up alongside when she comes in and, forthwith, she has all attention. The foundry can make her a casting up to nearly a ton in weight and, in the machine shop, there is no casting nor steel bar but can be turned into the wanted fitting while you wait. You don't have to wait very long either. It is a factory in which there are no union rules, or eight-hour days; the work is done as it is wanted, quickly. There is steam up day and night, and Sunday is no exception. The mother ship, of course, is not all stores and toil and warlike work. There is a superb canteen where the American bluejackets—lucky fellows!—can still buy candy to spoil their teeth and tooth paste to clean them with afterward, and almost everything else, for that matter, the palate can wish for, or the stomach crave, or the mind of the seafaring man desire. If he wants more kit than the regulations provide, the best can be bought at cost. There is only one department not equal to its task—the post office was never designed for so large a fleet at sea, or for the big reserve camp forming on the hill above us. It was the only untidy thing in the flagship; and it was hopeless to try and keep it tidy. I expect it will be banished to the beach.

## Old Hands and New

THE inspection over, I had, of course, a hundred questions to ask. Serving in this flotilla are a score or more of that first batch of volunteers who were made naval officers at Annapolis in record time last autumn. But a few weeks before I had been dining with the parents of one in New York and playing golf with the father of another at Garden City. I was anxious to see the sons, still more anxious to know how the intensive-culture principle had worked in practice. A comparatively raw hand who is intelligent, keen, and hardworking can do a hundred things on board a battleship without his deficiencies as a seaman ever being evident. But there is no room for a landsman—however willing—in a destroyer in an east Atlantic gale. To be no seaman is to be much worse than to (Continued on page 30)

# Collier's

## Man Power

IT is strange that a man whose business it has been since August, 1914, to create and superintend war industries in this country for Great Britain and France should only now be called upon to help in the direction of the war industries of the United States. No one has had greater experience in the industrial side of war making than C. M. SCHWAB. He knows it down to the ground. He has been one of the most important allies of Great Britain and France in withstanding the German onslaught. The chorus of approval of his appointment is significant of the general desire for the application of great practical knowledge and experience to the problems of the hour. Mr. SCHWAB will accomplish no miracles. The program of the Shipping Board is now under full swing, and with him or without him the yards will turn out an enormous tonnage in the next two or three months. But his experience and energy will be of immense help to the board.

The most cheering thing about the appointment is that it is a sign that under the pressure of the time the President has lost or is losing his old antagonism to the "big business man" and realizes that if you want a particular job well done you must hire a man who knows how to do it well. COLLIER'S has never believed much in the demand for a "business administration." The government of a nation and the management of a business are things apart. A business is run for profit; a government is not. The points of view of the public man and the politician are different. Business men generally have not made good political administrators. They are apt to look too closely at the ledger and take its figures as the measure of their success. But when a nation is at war, it is absolutely essential to military success to bring the industries of the country into the closest relations with the government. If they are not organized to the highest point of efficiency, if transportation and production do not cooperate with each other and jointly with the military arm, failure must follow.

But to gain such efficiency and cooperation, men of the highest degree of technical knowledge must be placed at the head of each of the productive branches. It was not very encouraging in the early stages of the war to have a lawyer at the head of the Shipping Board, a speculator in stocks as director of raw materials, the president of a college Fuel Administrator, and a mining engineer Food Administrator, while the appointment of Mr. WILLIAMS to a commanding position on the Railway Board seemed much like making a man superintendent of a shipyard because he had once been discharged as a calker. The natural intelligence of some of these officials has enabled them to surmount their difficulties, but they themselves will admit that their inexperience caused costly blunders and much loss of valuable time.

The truth is that a year ago Washington was a distracted family—distracted by the bigness of the job ahead, by politics and by personal feuds. "The water pipe is broken and the water is flooding the house. Send for the plumber." "No, don't send for him. He's a Republican. Send for the Democratic music teacher, who is one of us." "We can't get him. He is down in the village shoeing a horse." And so it went until the confusion and failure opened the President's eyes to the necessity of drafting into the service of the Government the most highly trained men available. It was too much to expect the burdened President to supervise everything himself. He was badly advised as to his appointments early in the war. It is greatly to his credit that he has grasped the situation and is conscripting vigorously among the ranks of the men who know, demanding that they put all they have of experience and knowledge at the orders of the Government, and standing behind them in their disagreements with the prehistoric survivals who still haunt some of the departments. The results are plainly to be seen in the greatly increased efficiency and speed at Washington.

## Our Reward

SPEAKING of criticism, can anyone who knows the conditions at Washington doubt its value? Does anyone think mere compliment could have wrought the change that has been brought about in a few months? Human nature is the same everywhere. No one will do his best if his faults are ignored and only his virtues published. Three years ago, when it seemed to us that the national danger was so imminent as to make a great effort of the Navy Department necessary, COLLIER'S laid the hand of gentle reproof

May 11, 1918

on the wrist of JOSEPHUS DANIELS. In ignoring the recommendations of the General Board for a greatly increased navy, or at least subordinating them to his own mild program, we felt and still feel that he was trifling with a great peril. This criticism was widely reflected throughout the country. Since then a happy conversion has occurred in the spirit of our illustrious friend. He no longer tries to "run the navy." He lets the navy run itself—and he bosses the Navy Department, which is another thing altogether. He has turned over the job entirely to the men on the job, and he is doing his own work with patience and good nature. Once he appeared to grow testy, to dispute with contractors and others, to quarrel with literary admirals and unsympathetic editors. But now his soul overflows with tenderness. He is kind to all, even the makers of steel plate. He greets the representative of COLLIER'S hospitably. Washington is darker when he is absent, which he sometimes is, for wineless banquets thirst for his words of unfailing hope and good cheer. In short, he is the JOSEPHUS DANIELS we used to know. Never was there a better example of the effect of friendly monition on a character with a substantial foundation of goodness.

## The Stitch in Time

COLLIER'S is informed, on what it believes to be indisputable evidence, that coal production is diminishing to an alarming degree. Recalling that the fuel shortage of the winter of 1917-18 was one of the consequences of the muddle in handling the problem of coal production last summer, wouldn't it seem sensible for the authorities at Washington to set to work at once to devise a plan to stimulate coal production? The heatless days of last February were due to the superheated days of July, 1917. People shivered in the winter because public officials, coal operators, and union labor leaders were sun-struck in the preceding summer. The time to protect the public against coal shortage next winter is this spring and summer. Heatless days were bad enough; but the greatest coal-bearing country in the world ought to be free from danger of heatless weeks.

## Our East and West

IT was a long time ago that KIPLING wrote his nursery rhyme: Oh, East is East, and West is West, and never the twain shall meet Till earth and sky stand presently at God's great Judgment Seat—"

He didn't mean our East and West. But lately we have been hearing his words applied to them. And our twain have met, upon the authority of a traveler who has just made a journey from the Atlantic to the Pacific and back. They are fused together, he thinks—and he suggests that they do stand at the Judgment Seat if ever a people did.

We in the East have been hearing that this war that we are waging had stirred only some Americans, not all. We have heard that this was a war of the Eastern Seaboard, and that one traveling westward would find, day by day, less thought of the war. This traveler says that is not true; he says it vehemently and with indignation.

He went west with that idea in his mind. And all along the Pacific Coast he found a profound and touching humility. Its people had heard this legend of their indifference to the war so often that they had come to believe it. They asked him if it were true that in the East folk took the war more to heart. They said they knew they were far away, but that they were trying to do their part.

He tried to reassure them. He told them that, man for man, acre for acre, they matched and outdid, indeed, the East in all that had to do with the making of war. He told them that, of all the cities he had seen, Portland, in Oregon, was doing most to work with HOOVER for the conservation of food.

And he told us how, in Arizona, along the railway, in desert country, he had seen Indians working in their fields. These Indians had doubled the area of land they had put under cultivation.

"Don't talk to me of East and West," says this traveler. "I've seen America. That is all—just America. I have seen its camp fires burning. I watched them from the rear platform of my train, coming across Kansas. Little points of fire, burning in the darkness. I heard what they were—fires for burning tumbleweed and corn shucks. But they were the sentinel fires of the harvest. I wish the Kaiser could have seen them. They might have taught him enough to make him quit!"

## One American Contribution to the War

THERE were people, during the first months after our entrance into the war, who wondered why Mr. WILSON, with views of his own on international policy and procedure, made no attempt to press his viewpoint on the Allies. The answer is simple. Mr. WILSON was waiting for America's investment in the war to pile up to a total commensurate with the right of a voice on the Allied board of directors. Before we ventured to offer advice we were going to render service. Before advancing a viewpoint we advanced money, men, food, ships. Only it would be wrong to suppose that at any time there was in the minds of the Administration or of the American people the intention to step in, when our holdings had mounted up high enough, and show France and Great Britain how to run the war. We had only to wait long enough for our influence to assert itself in the counsels of the Allies, without bluster, without intrigue for the seizure of a 51 per cent control. To the extent that our men and food and ships poured into the war, our own legitimate ideas about the conduct of the war would assert themselves automatically.

That process has now been for some months under way, and it has been successful largely because we have shown no ambitions or prejudices of our own. We consented, from the first, to take orders. If the Allies wanted ships, we set to work at building ships. If the Allies needed food, we began cutting down on our wheat consumption. The Allies now want men, and we are pouring men into France. When the needs of a critical situation demanded that a large part of the American army give up its separate existence and merge with the British and the French, we consented readily. We gave unselfishly, without pride and prejudice. We worked for the common cause.

Because we thought singly of the common good, our influence began to make itself felt. Without making any specific demand, it was inevitable that our own subordination to the need of unity should arouse reactions elsewhere. Because we claimed no place in the limelight for ourselves, we were able to help bring about that unified command among the Allies which should have been established long before. Because we were putting every ounce of power into our effort, we established a silent claim on our partners to rid themselves of preconceptions and prejudices that handicapped the war. With the result that LLOYD GEORGE had this to say about home rule for Ireland:

Now I come to the third consideration. What about America? American opinion, so far as I have been able to judge it, supports the justice of the Mun Power Bill provided self-government is offered to Ireland. That is the American opinion, and it is vital to us at the present moment. I wish I could tell the House how vital it is. America at the present moment is coming to our aid after one of the most remarkable decisions ever undertaken by any executive [the placing of our army at the disposal of the Allies]. Nothing would help more to secure the full measure of American assistance than the determination of the British Parliament to tender to Ireland such a measure of self-government as will satisfy reasonable American opinion.

America, readily giving all it has for the one aim of the war, by its silent example compels that historic feuds and injustices shall be done away with wherever they exist to hamper the cause of the Allies.

## Is Mr. Burleson on Our Side?

THE unanswerable objection to that postal-zoning law which aims to put barriers of higher postage rates between readers living in various parts of our country and the periodicals which serve them has been strongly stated by Postmaster General BURLESON himself in a letter to Vice President MARSHALL on March 4 of this year. We quote from the second column on page 13 of "The Official Bulletin: Thursday, March 7, 1918":

Communication is a means primal to the gratification of all human requirements. It should therefore be made as accessible to all persons, whatever their fortunes may be, as considerations of public economy will allow. This means that ample facilities should be provided by the Government which is charged by the Constitution with this great function. It means, too, that the service should be provided at reasonable cost; in fact, at as low cost as efficient service permits, so that the largest number possible may use it.

We are far from indorsing the entire letter. In it Mr. BURLESON says: "The entire revenue-collecting and accounting system can be practically displaced." That last is a dark mystery, and we'd like to have the secret explained—maybe we could use it in our business. But the principles laid down as to communication (see above quotation) are absolutely sound, and we hope the Post-

master General sticks by them. If he does, and if he examines this postal-zoning act, he will find that it makes hay of his creed. It sets up artificial and unnecessary bars against the flow of communication; bars not dictated by any consideration whatever of cost or public economy or good service or any other real criterion. The truth as to the postal business is one and the same for all purposes, and it is Mr. BURLESON's business to find and follow it. If he does, then in this agitation against a bad law he is on our side. If not, why not?

## F. O. B. the Kitchen Door

DO it with your hoe. Or, if you are too progressive to use that implement, the full suite of modern earth tools will do just as well. Whatever you grow in the yard this year is f. o. b. your own back door. It does not need to be crated or hauled; no busy station agent will have to waybill and rate and fuss with it; no freight handler need worry or not worry over the strength of its packing case. Probably your vegetables would not fill a whole freight car, but fancy what five or ten million times your own output would mean in the way of terminal congestion and track space. Try f. o. b. the kitchen door as a slogan for Maytime.

## The Pride of Puget Sound

SOME time ago we published an article by WILLIAM SLAVENS McNUTT on "How Does the Far West Stack Up?" McNUTT had been out to Camp Lewis in Pierce County, Washington. He liked Camp Lewis. He said Camp Lewis was the biggest of all the National Army cantonments. He said Camp Lewis had the finest site. He said Camp Lewis was the healthiest cantonment. McNUTT explained this last statement on the ground that Camp Lewis was on Puget Sound and all Puget Sound ports were healthy places. "Why," said McNUTT—and here is where he did the dastardly deed—"Seattle has had the lowest death rate in the country." Since we unsuspectingly printed that sentence McNUTT has gone to France, and we have been flooded with letters from citizens of Tacoma who want to know why McNUTT dragged in Seattle and failed to mention Tacoma in an article on Camp Lewis. They say Camp Lewis is in Tacoma's back yard, that Tacoma contributed 90 per cent of the \$2,000,000 Pierce County raised in order to present Camp Lewis to the Government, that Seattle isn't even in Pierce County, and they send us maps to prove it. Well—the truth will out. We have discovered the weak spot in McNUTT's armor, the Achilles heel. Citizens of Tacoma will understand that this is not only the truth but a complete explanation. Here it is: WILLIAM SLAVENS McNUTT was once a citizen of Seattle.

## Are You?

IN an idle interval our eye is caught by a high-voltage advertisement which challenges thus:

! GOING ANYWHERE ?

And continues in a minor key with confident assurance of full detail as to:

How to prepare. How to go—When to go—Where to go. It gives the worth-while things, and tells what not to see.

(We used to have a maiden aunt who attended to that last item most conscientiously!) Think of doing all that, and "up to date understandably," for only one dollar. How it must simplify life for the fortunate and the faithful! Why, LUDENDORFF, HINDENBURG, WILHELM, and company have spent over \$30,000,000,000 on their projected grand tour and have not reached any such effective simplicity of procedure as that promises. But, of course, Potsdam's real difficulty is in answering that opening question. One sees it answered, each after its own kind, during these spring days by the hustling beneficiaries of sun and soil. Compared with the average sitting hen or twining bean vine, the ordinary civilized human being seems somewhat rudderless, having lost the guidance of imbedded natural instincts without having acquired that of habits based on sound sense. The present crisis will help a lot of us if only we meet its demands with clear eyes and honest souls. To us at home this war may be something of a grim blessing in that it gives us a cause to which we can tie, a polar star of patriotism by which we chart and fix our course. "Going anywhere?" Yes! Toward better things, toward justice and mercy and freedom, and that despite all the Prussians that ever came out of Prussia.

# FROM BASEBALL TO BOCHES

SIXTH INNING  
BY H. C. WITWER

ILLUSTRATED BY F. R. GRUCKER AND ARTHUR WILLIAM BROWN

"But why do you have to go to the Parée?" she asks

VIVELA, FRANCE.

DEAR JOE: Well, Joe, no doubt you will be dumfounded to get another letter from me, after I had gone to work and claimed in my last that I wouldn't write to you no more, not even if you was runnin' a puzzle contest. But I have just got your letter with the news that you have enlisted, so as long as you ain't too proud to fight, why, I ain't too proud to write!

I will also do what I can, Joe, to keep the war goin' until you get here. It certainly would be tough if you come all the way over, only to find this brawl had been called off on account of wet grounds or somethin'. If I was you, I wouldn't take no chances on it, but get them to send me over at once, or even before if possible.

I sure was glad to hear you had fin'ly decided to carry a gun for the Land of the Free, instead of simply standin' up in the theatre when they play the "Star-Spangled Banner" and lettin' it go at that. You can't win this here war by wavin' a flag and hopin' the Kaiser gets caught in the rain without an umbrella, or somethin' like that, Joe. Singin' all them popular patriotic songs ain't gettin' us guys nothin' over here. That stuff is all right for vaudeville, but it don't take no trenches! It's a case of "Come on in, the war is fine!"—them three cheers and the like will keep till we come back—hey, Joe?

I knowed all along that you had the stuff in you, Joe, and sooner or later you was gonna get in it—especially when the draft come along.

They was a bunch of new guys got here the other day, and I been busy lookin' them over to see if you was amongst them. I ain't seen you yet, Joe, and they ain't no way for me to know if you're gettin' my letters or not. So if this fails to reach you, kindly let me know in the next mail that you didn't get it and where you are located. It makes it easier to write to anybody if you have some idea where they are at.

They was a lot of colored guys come over with this last gang, and while we ain't had no chance to see them work, they sure look like scrappers. They are more good-natured than a young kitten which has had a shot of catnip and they go around grin'nin' like hyenas all the time. I was on guard duty the other night, Joe, and one of them guys come along. I halted him.

"Friend or enemy?" I says.

"This ain't no time to argy, white man!" comes the answer out of the dark. "I'm out yere in dis No Man's Land and them Germans ain't got no love fo' me! One of them there sharp shooters has been wastin' the last ten minutes, tryin' to hit me where it'll show!"

Joe, I had a hard time to keep from bustin' out laffin'. I throwed a flashlight on him, and this baby was scared stiff. His eyes is poppin' out till you could of hung a cane on either of 'em.

"Who are you?" I asks.

"Boss, I'm jes' nothin' but Sam Hendricks—Happy Sam, the Laughin' Man, they calls me," he says, whilst his teeth is knockin' together like them castanet things, "but Ah ain't done a piece of laffin' fo' the last half hour, and that ain't no lie! That there German sharp shooter is suah handy with a gun!"

"Where do you belong?" I says

"I belongs around a Hundred and Thirtieth Street and Amsterdam Avenue," he tells me—like he was standin' on Broadway instead of France—"and Ah'd be insane with pleasure if Ah was there right now! C'mon, boss, lemme pass—if that there German

sharp shooter had missed me any closer jes' now, y'all wouldn't have nobody to talk to out yere!"

"Well, let's hear the password," I says.

"Man, Ah done fo'got it!" he tells me. "Seems lak Ah kain't git mah mind to workin' on nothin' out yere jes' now but that German sharp shooter—"

"You can't get in here without the password!" I says.

"Looks like Ah'm havin' plenty of luck to-night," he says, "and all of it's had! Kain't you gimme an idea of how that password goes, boss? You know, don't tell me outright, but jes' get me started, see? Y'all can say: 'Well, brother, it begins with a Z,' or somethin' like that, heh?"

"Nothin' stirrin'!" I tells him. "For all I know you might be a German spy. We can't take no chances!"

"Boss, I ain't lyin'," he says. "Ah'm simply boilin' ovah with the truth jes' now! I ain't no more German spy than you is, if not less. I ain't no German nothin'. Ah'm jes' a pore little ole Tennessee nigger with one foot in the grave and the othah on a banana peel! If y'all don't lemme past, they ain't nothin' fo' me to do but start walkin' to Germany all by mahself, and as long as we-all come ovah this far togethah, it don't look jes' fair fo' me to be the first one into Berlin!"

"Well, you can't stall around here!" I says. "Go on back wherever you come from. I got orders to let nobody pass, and that's all they is to it!"

He give a groan, Joe, and hitches up his pants.

"Boss," he says, "jes' do me one favor. When General Pershing finds me missin' in the mahnin' and starts rarin' around and tearin' up the whole camp to find me, you tell him how come I ain't yere. Throw me out a couple of them long baynets and a gun. Ah'm goin' ovah to them German trenches and make 'em wish this yere nigger had let the war go on by itself!"

"Wait a minute!" I says, fightin' off the hystericals. "How did you come to get out there in No Man's Land?"

"Boss," he says, "Ah'll tell you the truth. All mah life Ah been workin' on jobs where fresh air was as scarce as honesty in a crap game! Down home in Tennessee Ah worked in a quarry which was so deep that the only way you could see the sky was with a pair of op'ry glasses. Ah comes to New Yawk, and the only job Ah can git me is sand hog in the new subway. Yere Ah am workin' mahself to death, between two and three miles under the ground. Ah goes in the army, and Ah gotta stay in the basement of the ship all the way ovah yere. When Ah gits yere, they put me in a trench. Seems lak they don't wanna let this pore nigger come up fo' air no time, and when Ah dies and gits buried it'll suah seem natural to me! Ah come out yere to-night lookin' fo' the cap'n. Ah wanna get me a transfer to the aviation. Ah'm gonna git some fresh air one time, anyways!"

Oh, boy!

I let him in after that!

Well, Joe, we gotta lot of new songs over here now, besides "Where Do We Go From Here?" which same is our favorite and a lot more of the old stand-bys, which runs more to the sob stuff. This one is all the rage here now with the English, and we often sing it together. It was wrote by a English guy which used to be a actor and is now tryin' to live that down by fightin' for his country. I'll tell you the words so's you can learn it before you come over and also because the words is as good as the music,

which happens very seldom in songs—hey, Joe? The tune is "A Little Bit of Heaven." (Remember how John McCormack used to make that baby lay down and roll over?) This one is called "A Little Bit of Hell." It goes like this:

*Have you heard the tale about the land that lies beyond the Rhine,  
And who it was discovered that home of Huns and swine?  
One day old Satan felt distressed, the sparks flew from his eyes,  
And he said: "I'll find another home somewhere beneath the skies."*

CHORUS

*So old Satan found a spot on earth, all steeped in blood and crime,  
And he hollers out with all his might: "This bit of earth is mine!"  
'Tis the land of Huns and Kultur, is this little bit of hell  
Where they butcher babes and mothers, as they murdered Nurse Carell.  
They sent their imps in submarines to murder on the sea,  
And the rotten Kaiser never thought what would the harvest be;  
So the Devil sent for all his mob and shouted out with glee:  
"I am going to move my Demons here," and he called it Germany!*

Some ballad, hey, Joe? The English sing it more than we do, but we got a new line for the end of the chorus:

*When we get through with Kaiser Bill, they'll be no Germany!*

Well, Joe, I suppose the baseball season will be openin' over there soon now, and I am sure a long ways from the Polo Grounds. I don't have to tell you how much I'd like to be standin' there in the old box once again, burnin' strikes over the plate for Cobb and them guys to laff at and no doubt Connolly would be callin' 'em balls, as usual. However, I ain't got no kick comin'. I been wounded a coupla times, and a guy can't have everything—hey, Joe?

I have got a fourteen-day leave of absence comin' to me and naturally enough I'm gonna spend it with Jeanne, my practically newly made bride. Joe, every time I look at this here human angel from above, I wish Rockefeller and them well-to-do millionaires was around so's I could snap my finger at 'em and say: "Hah! You guys ain't got nothin'—look what I drew!"

Yours truly,

Sergt. ED HARMON. (The Kaiser's nemesis.)

P. S.—That nemesis thing is class, hey? They ain't nobody in my outfit, includin' me, knows what it means. I got it off a movie titel. Ed.

VIVELA, FRANCE.

DEAR JOE: Whoops, my dear—I been to Paris! Joe, I have had more adventures since I wrote you last than Sindbad the Sailor. You no doubt remember that guy, Joe; he was champion liar of the Arabian Nights. But all comical jokes to one side, I been to gay Parée, as we used to say at the work-house, and it ain't no wonder to me the Kaiser is so anxious to get there, because, Joe, I'll tell the world fair this Paris place is some village!

If you got my last letter, no doubt you'll remember I give out the information that I was due for a

fourteen days' leave of absence, and it was my idea to spend at least two weeks of it with Jeanne, my blushin' bride. Well, Joe, on the day I was supposed to leave the American army flat on its back for one-half of a month, I get word to report to the captain. I naturally figured I was gonna get promoted to assistant general or somethin' of the sort, and I walked up to the captain's tent whistlin' melodiously. My dope was slightly out of true, because the first thing the captain said, after we have got the salutes all took care of, was the following:

"Harmon, I've selected you out of the whole company for an important mission. You are to take a message from General Pershing to Major General — at the — Hotel in Paris. Do you know Paris?"

"Well, I heard tell of it, anyways," I says.

"Are you pretty well up in your French?" is the next question.

"Sure!" I says, "I'm up in the air on it!"

"Hmph!" he says. "Let's see. *Parlez-vous français?*"

"That's a cinch!" I comes back. "*Oui, oui, monsieur—also, merci beaucoup, si vous play, tres bien, allons, viola, and likewise aux armes!*"

He grins at me.

"Where did you pick up that collection?" he says.

"I got one of them 'French While You Wait' books," I tells him.

"Do you know what those expressions mean?" he wants to know.

"Well," I says, "I ain't got that far yet. I figure if I can only remember to wave my hands whilst I'm talkin', I'll get away with it!"

He laughs and gimme the message from General Pershing in an envelope.

"Report back here in two weeks," he says, "and — don't spend all your money in Paris."

"They ain't a chance of that, sir," I says, "because I'm savin' all my dough for the big blowout in Berlin!"

The first thing I done then was to go over and break the bad news to Jeanne. She has dolled herself all up on account of expectin' me and, Joe, she looked as good as \$400 a week would look to a chorus girl. She gimme the smile which is one of the reasons we are a young married couple and folleys that up by placin' both of them soft little white satin arms around my neck.

"But you have disappoint' me, *mon chéri*," she says, poutin'. "For two hours I have wait all alone by myself for you."

"You ain't got nothin' on me, kid," I says, givin' her a lovin' kiss, and why not? "I waited twenty-seven years for you!"

Joe, conversation was at a premium, as the guy says, for the next three minutes.

Grabbin' hold of the first breathin' spell, I told her I had been ordered to Paris. Joe, she gets pale.

"But why do you have to go to the Parée?" she asks.

"Search me!" I says. "I must of been born lucky, hey?"

Well, Joe, we have our first set-to since we been man and wife. Jeanne claims that I'm tickled silly at the chance to see Paris, instead of spendin' my furlough with her. She also remarks that once I get inside of gay Parée I will go to work and forget I ever knowed her, and the dashin' young city dames will steal me away. She's talkin' so fast that an addin' machine would of quit like a dog if it had been tryin' to folley her, and all they is left for me to do is wait till she wears herself out. When she has got all through tellin' me what a crool-hearted retch I am, she turns on the weeps for a rousin' finish.

Joe, they ain't no man livin' could deny Jeanne anything when she merely requests it, but when she weeps for it, Joe—well, this here baby would make Von Hindenburg throw away his unction!

"Listen," I says. "You have got me figured all wrong. Paris don't mean nothin' in my young life,

and I'm only goin' there because I been ordered to do the same. As far as havin' a gay time is concerned, I'll lay the mayor of Paris eight to five I can show him more excitement on Broadway on even a rainy Sunday than he seen since he's been in France! But to show you I'm honest and true, I'm gonna take you to this Paris place with me—what d'ye think of that?"

Joe, she looks at me for a second like can I have heard it right? and then she jumps up, claps her hands together and smothers me with kisses. Once again I am the white-haired boy with my family, and we got peace and quiet.

"*Merci, tu es bien aimable, quand partons nous?*" she says.

"I doubt it," I says. "It looks more like rain to me."

"You do not the understand, *mon chéri*," she tells me. "I say you are of the very kind to me, to take me to the Parée, and I ask of you only when we start — *n'est-ce pas?*"

"Listen," I says. "I have gone to work and learned you a dozen words of English, and it looks to me like you could get them in now and then when talkin' to me and lay off that French! Half the time I don't know whether you're makin' love to me or bawlin' me out!"

"*Eh bien, mon chéri!*" she says, showin' me all her pretty front teeth. "It shall be as you wish. I shall to you speak none but the américaine. After all, it is of the simple, *oui vraiment*, I shall to you show, see—'Allo Kit, of the gee whizz but yes, you are the baby's doll, I for you!'"

"Hey!" I hollers, droppin' my hat in the excitement. "Where did you learn that stuff?"

She throws the smile into high and looks down at the floor.

"But the brave, gallant américaine soldiers all have say that to me before we marry." She puts her arm around me and points to our wedding ring. "Now, *mon chéri*," she says, "I show them this and say: 'You have come not too soon!' *N'est-ce pas?*"

I let it go at that, and I might as well of, Joe, because they ain't no man can lick the whole American army, hey? And then again, who am I to blame them guys for tryin'? You ain't never seen Jeanne, Joe, or you'd get me!

Well, we grab a train outa this burg that same afternoon, and it's about two hours' ride to Paris if the engineer is lucky. The trains over here, Joe, looks like a lot of taxicabs towin' each other, and

adventurers. I ain't no more than got into the next car, which is marked "*Billets de Première*," when I seen an American doughboy havin' it out with what I figured was prob'ly a admiral in the French navy, from his unctionform. He turned out to be nothin' less than the conductor. The doughboy come from somewheres south of Washington, D. C., from his accent, and is bigger than the Polo Grounds, whilst the conductor could of hid himself behind a fleck of dust. The conductor don't speak no English, and the doughboy don't parlez-vous the French, but that ain't stoppin' either of them from talkin'. It sounded like a dress rehearsal of a race riot when I batted in.

"What seems to be the trouble here?" I asks the doughboy.

He swung around and gimme the once over.

"Say, sergeant!" he hollers, "Ah could jes' naturally fall on yuah neck and kiss you! Ah thought Ah nevaah was gonna heah nobody talk United States no moah. This yere little grampus is fixin' to put me off his train and—"

The little French guy winds up and cuts loose with everything he had in the line of conversation. By listenin' to every tenth word, I found out that the doughboy had a third-class ticket and was in a first-class compartment. Outside of that he hadn't wronged a soul. I pulled out a five-franc piece and slipped it to the conductor.

"Here!" I says. "Take this and can that chatter. This guy is fightin' for his country so's to make the world safe for the Democrats, and all you're doin' is takin' tickets. If—"

Joe, the minute I mentioned the word "fight," this here little French guy brightens all up. He shoves out his chest about a mile and throws open his coat. Oh, boy! He's got a whole handful of them Croix de Guerre medals on his chest and, believe me, Joe, a guy has got to be a fightin' fool to get them babies over here now! I never felt so much like a boob in all my life, not even when I presented Crawford with a home run, that rare off day I had in Detroit. This doughboy gets wise in a minute, and he looks like he wished to Heaven he could drop through the floor. Here's this little French guy been doin' his bit and got wounded, no doubt savin' France, and all I done was to get hit a couple of times in one of the brawls we had with the Germans. Can you imagine how I felt, Joe, after bawlin' him out?

Well, Joe, I begged his pardon till he got sick of hearin' it, and the doughboy says he's ready to hop off and walk into Paris if the French guy says so. But this bird was an ace. He told us he got his at Verdun, gas and machine-gun stuff, and he hopes to get in it again in a month if he's lucky. As long as we're American soldiers, we can ride first-class and welcome, and in a minute he comes back with a coupla bottles of *vin ordinaire*. Joe, you can't beat these French guys for either fightin' or hospitality, hey? We drunk the health of France, America, England, Ireland, Scotland, Belgium, Italy, Yonkers and Lenox Avenue, and we would of drunk some more, only they is a limit even to *vin ordinaire*.

I took the doughboy in and introduced him to Jeanne. He come from Nashville, Tenn., and is a great big kid with skin like a baby. His old man has got \$8.75 for every Irishman in Dublin. One flash at my blushin' bride made him dizzy, and when I told him she had three sisters which was pro-matrimony, he insists on joinin' our party into Paris. I took pity on him, bein' all alone in a strange land, and declared him in. Joe, he was a good guy and had a express money order for five thousand bucks, so I figured he could use a coupla guardeens, hey?

We arrived in Paris at a place called the Gare Saint-Lazare, which is a burlesque on Grand Central Station. This here doughboy won't have it no other way but that we go to the (Continued on page 45)

Anybody which gets lonesome here ain't got no one but himself to blame!

instead of everybody sittin' together in one car, they are all divided off into separate compartments. Four people can sit in each one, if they've knowed each other for years. The tickets is sold first, second, and third class and, Joe, they could call 'em all steerage and let it go at that, because they ain't no class to any of 'em. We have been on our way about an hour, and still on the track. Joe, and Jeanne is studyin' the English language by tryin' to read an old B. & O. time-table I give her, when I decided to walk through the train and look over our fellow

## Factory Production in Seven League Boots

**Y**OU and all American manufacturers are struggling against a tremendous handicap. Labor is almost impossible to get. The army draft is thinning the ranks of your office clerks. New equipment is practically off the market. Coal is scarce and transportation uncertain. But in spite of these conditions every mail brings the cry for more production. Output must increase with present equipment of machinery and hands. But how?

By Lamsonizing, by saving time. A Lamson Pneumatic Tube System puts your office organization and factory production in seven league boots. It does work that is being done now by man-power and does it better, faster, with unerring precision. It shoots letters, orders, requisitions, and small materials to just the place you want them to go—at telephone speed, with telegram certainty.

Lamson Pneumatic Tubes are working every day with vim and go in thousands of America's industrial plants, in the biggest and best retail stores. They are saving time and money and

footwork in big factories and small ones. Lamson Conveyors fit in to *any* business—from banks to machine shops—from hotels to government buildings. They will do for *your* business what they are doing for other modern concerns.

Lamson Pneumatic Tube Systems keep things moving, and moving fast. They organize and standardize office and factory operation. They centralize executive control. They keep men, women, boys, and girls at their work without interruption. And they keep all departments in finger-tip touch with each other. You owe it to yourself to look into the Lamson Pneumatic Tube Systems—before you conclude that you can't speed up production because you can't get clerks or labor or machinery.

A Lamson man will show you how you can lengthen the day and produce more work without working overtime; with the help you now have. These are facts that we are ready to prove if you will put a little of your time against ours.

# THE TWO-HANDED SWORD

## BY ACHMED ABDULLAH

ILLUSTRATED BY W. H. D. KOERNER

They worked side by side through the warm afternoon

HE judged each act of the passing days by three pictures in the back cells of his brain. These pictures never weakened, never receded; neither during his meals, which he shared with the other students at Frau Groesser's pension in the Dahlmannstrasse, nor during his hours of study and research spent over glass tubes and crucibles and bottles and retorts in the Royal Prussian Chemical Laboratory overlooking Unter den Linden, with Professor Kreutzer's grating, sarcastic voice at his left ear, the rumbling basso of the professor's German assistants at his right.

There was one picture which showed him the island of Kiushu rising from the cloudy gray of the China Sea, black-green with cedar and scarlet with autumn maple, and the pink snow of cherry fluffing April and early May; the island which stood to him for princely Satsuma, and Satsuma—since he was a samurai, permitted to wear two swords, the *daiko* and the *shoto*—for the whole of Japan.

There was the picture of his grandfather, the Marquis Takagawa—his father had gone down fighting his ship against the Russians under Makarov—who in his youth had drawn the sword for the Shogun against the Mikado in the train of Saigo, the rebel chief, who had finally made his peace with his sovereign lord and had given honorable oath that he would lay the lives, the courage, and the brains of his descendants for all time to come on the altar of Nippon to atone for the sin of his hot youth.

There was, thirdly, the memory of his old tutor, Komoto, a bonze of the Nichiren sect who had made *senaji* pilgrimages to the thousand shrines, who had taught him the Chinese classics from the Diamond Sutra to the Kin-Kong-King, later on the wisdom of Ogawa and Kimazawa and the *bunshi no ichi-gon*—the lessons of Bushido, the lore of the two-handed sword, the ancient code of Nippon chivalry.

"The spiritual light of the essential being is pure," Komoto had said to the marquis when the governors of the cadet school at Nagasaki had decided that the young samurai's body was too weak, his eyes too shortsighted, his blood too thin to stand the rigorous military training of modern Japan. "It is not affected by the will of man. It is written in the book of Kung Tzeu that not only the body but also the brain can raise a levy of shields against the enemy."

"Yes," the marquis had replied; for he, too, was versed in the Chinese classics. "Ships that sail the ocean, drifting clouds, the waning moon, shores that are washed away—these are symbolic of change. These, and the body. But the human mind is essential, absolute, changeless, and everlasting. O Takamori-san!" He had turned to his grandson. "You will go to Europe and learn from the foreigners, with your brain, since your body is too weak to carry the burden of the two-handed sword. You will learn with boldness, with patience, and with infinite trouble. You will learn not for reward and merit, not for yourself, but for Nippon. Every grain of wisdom and knowledge that falls from the table of the foreigners you will pick up and store away for the needs of the Rising Sun. You will learn—and learn. But you will learn honorably. For you are a samurai, O Takamori-san!"

And so the young samurai took ship for Europe. He was accompanied by Kaguchi, an old family servant, short, squat, flat-nosed, dark of skin and long of arm. A low-caste he was who had sunk his personality in that of the family whom his ancestors had been serving for generations, who had never considered his personal honor but only that of his master's clan which to him stood for the whole of Nippon.

IF Takagawa Takamori had been small among the short, sturdy daimios of Kiushu, he seemed wizened and diminutive among the long-limbed, well-fleshed men of Prussia and Mecklenburg and Saxony who crowded the chemical laboratory of Professor Kreutzer. Gentlemen according to the stiff, angular, ramrod German code, they recognized that the little parchment-skinned, spectacled Asian was a gentleman according to his own code, and so, while they pitied him after the manner of big blond men, lusty of tongue, hard of thirst, and greedy of meat, they sympathized with him. They even liked him; and they tried to help him when they saw his narrow-lidded, myopic eyes squint over tomes and long-necked glass retorts in a desperate attempt to assimilate in six short semesters the chemical knowledge which Europe had garnered in the course of twice a hundred years.

Professor Kreutzer, who had Semitic blood in his veins and was thus in the habit of leaping at a subject from a flying start and handling it with consciously dramatic swiftness, was frequently exasperated at Takagawa's slowness of approach and comprehension. On the other hand, his German training and traditions made him appreciate and admire the student's Asiatic tenacity of purpose, his steel-riveted thoroughness and efficiency which made it impossible for him to forget a fact which he had once mastered and stored away. Perhaps his method of learning was parrotlike. Perhaps his memory was mechanical, automatic, the fruit of his early schooling when, with the mountain wind blowing icy through the flimsy shoji walls, he had knelt in front of Komoto and had laboriously learned by heart long passages from the Yuen-Chieh and the erudite commentaries of Lao-tse. Whatever the basic cause, whatever his method, the result was peculiar—and startling to his fellow students. Given a certain discussion, a certain argument which sent his German classmates scuttling for library and reference books, the young samurai seemed to turn on a special spigot in his brain and give forth the desired information like a sparkling stream.

"Sie sind ja so'n echter Wunderknahe, Sie Miniatur gelbe Gefähr!" (for that's what he called him: a "miniature yellow peril") the professor would exclaim; and he would give him a resounding slap on the back which would cause the little wizened body to shake and smart. But, sensing the kindness beneath rough words and rougher gesture, Takagawa would bow old-fashionedly, with his palms touching his knees, and suck in his breath noisily.

He was learning—learning honorably; and at night, when he returned to his rooms in the pension, he would go over the garnered

wisdom of the day together with Kaguchi, his old servant. Word for word he would repeat to him what he had learned, until the latter, whose brain was as that of his master—persistent, parrotlike, mechanical—could reel off the chemical formulae with the ease and fluency of an ancient professor gray in the craft. He had no idea what the barbarous foreign sounds meant. But they amused him. Also he was proud that his young master understood their meaning—his young master who stood to him for Kiushu and the whole of Nippon.

Summer of the year 1914 found Takagawa still at work under Professor Kreutzer, together with half a dozen German students who like himself were using the Long Vacations for a postgraduate course in special chemical research, and a Prussian officer, a Lieutenant Baron Horst von Eschingen, who on his arrival was introduced by the professor as "a rara avis indeed—pardon me, baron!" with a lopsided, sardonic grin—"a brass-buttoned, much-gallooned, spurred, and booted East-Elbian Junker who is graciously willing to descend into the forum of sheepskin and learned dust and stinking chemicals, and imbibe knowledge at the feet of as humble a personage as myself."

The German students laughed boisterously, while the baron smiled. For it was well known throughout the empire that Professor Kreutzer was a *Liberaler* who disliked bureaucratic authority, sneered at the military, and was negligent of imperial favor.

FROM the first Takagawa felt a strong liking and even kinship for Baron von Eschingen. He understood him. The man, tall, lean, powerful, red-faced, ponderous of gesture and raucous of speech, was nevertheless a samurai like himself. There was no doubt of it. It showed in his stiff punctiliousness and also in his way of learning—rather of accepting teaching. For the professor, who welcomed the opportunity of bullying with impunity a member of the hated ruling classes, took a delight in deviling the baron's soul, in baiting him, in putting to him sudden questions hard to solve and pouncing on him, when the answer did not come swift enough, with such remarks as: "Of course, lieber Herr Leutnant, what can I expect? This is not a hollow square, nor a firing squad, nor anything connected with martin-gale or rattling scabbard. This is science—the

humble work of the proletariat—and, by God, it needs the humble brain of the proletariat to understand it."

Another time—the baron was specializing in poisonous gases and their effect on the human body—the professor burst out with: "I can't get it through my head why you find it so terribly difficult to master the principles of gas. I have always thought that the army is making a specialty of—gas bags!"

Von Eschingen would bite his mustache and blush. But he would not reply to the other's taunts and gibes; and Takagawa knew that the baron, too, was learning; learning honorably; nor because of reward and merit.

They worked side by side through the warm, soft July afternoons—while the sun blazed his golden panoply across a cloudless sky and the scent of the linden trees, drifting in through the open windows, cried them out to field and garden—cramping their minds with the methodical devices of exact science, staining their hands with sharp acids and crystals, with the professor wielding his

... a dirk—a splendid, ancient blade

## The Two-Year Record of the **WARNER-LENZ**

# The First Lawful Lens

Wins a Million Users and Still Holds Ruling Place

### On May 13, 1916

The first announcement of the Warner-Lenz made its appearance in Collier's.

Mark what has happened since.

More than a million motorists now flood their night-roads with this all-revealing light.

More than a million cars, with this mellow, glareless flood-light, set a good example to the rest.

Many great car makers—listed below—now equip with the Warner-Lenz. This list includes practically every maker who has yet selected any lawful lens.

### No-Glare Laws Multiply

Before that, countless cities forbade glare-lights—where dimmers could be used. But on country roads, dimmed lights or frosted would not do.

Warner-Lenz showed that glareless light could be clear, widespread, far-reaching.

Now blinding headlights are forbidden in 22 entire states.

Soon, wherever you go, you will be protected from this danger and affront.

### Over 60 Other Lenses

This rebellion against glare-lights brought out many other lenses. Some quelled the light, and others simply held the glare-rays down.

With over sixty rivals Warner-Lenz still dominates the field by a wide margin—pioneers with over one million motorists driving behind Warner-Lenz. It has been adopted as standard equipment by more engineers than all other types together.

### Why Warner-Lenz Rules

Warner-Lenz makes your full light legal under every law. This has been certified by countless authorities. Also by every commission appointed under any state law.

### Standard Equipment on

Ohio Electric	Hal Twelve	Doble Steam
Standard 8	Stutz	Daniels 8
Cunningham	McFarlan	Anderson
White	Casa	Westcott
Marmen	Packard	Peerless
Fiat	Murray	Crawford
Lenox	Dodge	Moore

Warner-Lenz light is not restricted to 42 inches high. There are no glare-rays, no direct beams to limit or forbid.

Shaft-lights overlighted just a narrow strip ahead. Warner-Lenz illumines your entire field of vision. It lights the roads and roadsides, the ditches, curves and turns.

It reaches up to light the signs, like rail-road crossing signs. And to make the up-grades clear.

It is, like sunlight, a diffused light. So it floods the entire scene.

Rise and fall of the car does not affect it, as it does all level rays. Turning of the lens in the lamp-rim—as lenses do—cannot set this light askew. A lamp bulb jarred out of focus cannot distort this light.

Warner-Lenz gives the ideal light. Without the no-glare-law compulsion, it would be the wanted light.

### Change Lenses Now

Almost every car now goes where glare-lights are illegal. They blind you when you meet them, and they blind all whom you meet. They make night driving a constant strain. They leave unlighted most that you should see.

If you drove for five minutes behind Warner-Lenz, nothing could induce you to change back.

See your dealer or write to us. To avoid mistakes, we emboss "Warner-Lenz" on the edge.

pedagogic whip, criticizing, sneering, mercilessly driving. More than once, when Kreutzer's back was turned, Takagawa would help the baron, whisper him word or chemical formula from the fund of his tenacious Oriental brain, and then the two would laugh like naughty schoolboys, the German with short, staccato bursts of merriment, the Japanese discreetly, putting his hand over his mouth.

FINALLY one afternoon as they were leaving the laboratory together and were about to go their separate ways at the corner of the Dorotheenstrasse, Takagawa bowed ceremoniously before the officer and, painfully translating in his mind from the Chinese book of etiquette into Japanese and thence into the harsh vagaries of the foreign tongue, begged him to tie the strings of his traveling cloak and deign to set his honorable feet in the miserable dwelling of Takagawa Takamori, there to partake of mean food and entirely worthless hospitality. Baron von Eschingen smiled, showing his fine, white teeth, clicked his heels, and accepted; and the following evening found the curious couple in Takagawa's room: the former in all the pale-blue and silver glory of his regimentals, the latter, having shed his European clothes, wrapped in a cotton crêpe robe embroidered on the left shoulder with a single pink chrysanthemum, queer and hieratic—the *môn*, the coat of arms of his clan. To tell the truth, the baron had brought with him a healthy, meat-craving German appetite, and he felt disappointed when all his host offered him was a plate of paper-thin rice wafers and some very pale, very tasteless tea served in black celadon cups. His disappointment changed to embarrassment when the Japanese, before filling the cups, went through a lengthy ceremony, paying exaggerated compliments in halting German, extolling his guest's nobility, and laying stress on his own frightful worthlessness.

"And the funny little beggar did it with all the dignity of a hidalgo," the baron said the next morning to a major in his regiment who had spent some years as military attaché in Japan. "Positively seemed to enjoy it."

The major laughed. "Why," he replied, "you ought to feel highly honored. For that Jap paid you no end of a compliment. He has initiated you into the *cha-no-yu*, the honorable ceremony of tea sipping, thus showing you that he considers you his equal."

"His—his equal?" flared up the other, who, away from the laboratory, was inclined to be touchy on points of family and etiquette.

"To be sure. Didn't you say his name is Takagawa Takamori?"

"Yes."

"Well—the Takagawas are big guns in their own land. They don't make 'em any bigger. They are relatives of the Mikado, cousins to all the feudal houses of Satauma, descendants of the gods, and what not—"

It was not altogether snobbishness which caused the German to cultivate the little Asiatic after that. He really liked him. At the end of a few weeks they were friends—strangely assorted friends who had not much in common except chemistry, who had not much to talk about except acids and poisonous gases. But they respected each other, and many a sunny afternoon found them strolling side by side through the crowded thoroughfares of Berlin, the baron swinging along with his long, even step, the tip of his scabbard smartly bumping against the asphalt, while Takagawa tripped along very much like a small, owlish child, peering up at the big man through the concave lenses of his spectacles.

Only once did the samurai mention the reasons which had brought him to Europe. They were passing the Pariser Platz at the time, and stopped and turned to look at the half company of Grenadiers of the Guard who were marching through the Bran-

denburger Thor to change the castle watch, shoulders squared, rifles at the carry, blue-clad legs shooting forth at right angles, toes well down, the spotless metal on spiked helmet and collar and belt mirroring the afternoon sun, while the drum major shook his horse-tailed bell tree and a mounted captain jerked out words of command:

"Achtung! Augen—links! Vorwärts! Links an! Links an! Marsch!"

Takagawa pointed a lean, brown finger.

"The scabbard of my blue steel spear is the liver of my enemy," he quoted softly, translating from the Japanese. "I carry the red life on my finger tips; I have taken the vow of a hero!" and when the baron looked down, uncomprehending, asking astonishedly: "Hero? Hero?" the other gave a little, crooked smile.

"The mind too fights when the body is too weak to carry the burden of the two-handed sword," he explained. "The mind too can be a hero. Mine is!" he added, with utter simplicity. "For my body aches for the touch of steel, while I force my mind to drink the learning of books. My mind bends under the strain of it. But I do it—for Japan."

The baron's hand descended on his friend's lean shoulder.

"Yes," he said. "I understand, old boy. I have an older brother. No good for the King's coat—lost a leg when he was a kid. Family shot him into the Foreign Ministry. Works like a slave. But, auf Ehrenwort, he hates it, the poor old beggar!"—and, seeing a drop of moisture in the other's oblique eyes, he went on hurriedly: "Now, as to that gas—that new one Kreutzer is drivelling about—with some unearthly, jaw-breaking Greek name and that fine, juicy stink to it—do you remember how—" And a moment later they were deep once more in the discussion of poison gases.

JULY swooned into August and, overnight, it seemed, the idyl of peace was spattered out by a brushful of blood. Excitement struck Berlin like a crested wave. People cheered. People laughed. People wept. A conjurer's wand swung from Spandau to Köpenick, thence east to Posen, and north and northwest in a semicircle, touching Kiel, Hamburg, Cologne, and Mayence. A forest of flags sprang up. Soldiers marched in never-ending coils down the streets, horse and foot, foot again, and the low, dramatic rumbling of the guns. They crowded the railway stations from Lehrter Bahnhof to Friedrichstrasse Bahnhof. They entrained, cheered, were cheered, leaned from carriage windows, floppy,

"This car for Brussels!" "This car for Calais!"—and, twenty-four hours later, the world was startled from stupid, fattening sleep through the news that Belgium had been invaded by the gray-green hordes, led by generals who had figured out each chance of victory and achievement with logarithmic, infallible cunning, and that already the Kaiser had ordered the menu which should be served him when he entered Paris.

The wave of war struck the laboratory and the pension in the Dahmannstrasse together with the rest of Berlin.

People assumed new duties, new garb, new language, new dignity—and new psychology. The old Germany was gone. A new Germany had arisen—a colossus, a huge, crunching animal of a country, straddling Europe on massive legs, head thrown back, shoulders flung wide; proud, defiant! And sullen!

TAKAGAWA did not understand. He had come to Berlin to learn honorably. He was not familiar with European politics, and Belgium was only a geographical term to him.

War? Of course! War! It meant honor and strength and sacrifice. But—

There was Hans Grosser, the only son of Frau Grosser, the comfortable, stout Silesian widow who kept the pension. Long, lean, pimply, clumsy, an underpaid clerk in the Dresdner Bank, he had been heretofore the butt of his mother's hoarders. When at the end of the meal the *Kompottschale*, filled with stewed fruit, was passed down the table, he was the last to help himself, and then apologetically. The day after war was declared he came to dinner—his last dinner before leaving for the front—in gray-green, with a narrow gold braid on his buckram-stiffened collar, gold insignia on his epaulet, a straight saber dragging behind his clicking spurs like a steel-forged tail. Overnight the negligible clerk had become Herr Leutnant—second lieutenant in the reserves, detailed to the 124th Infantry. The butt had become the potential hero. He was listened to, bowed to. He was the first to dip the battered silver spoon into the *Kompottschale*.

Dinner over, cigars and cigarettes lit, he held court, leaning over the piano in all his gray-green glory. He received congratulations which he accepted with a yawn. But when Takagawa bowed to him, saying something very kindly and very stilted in his awkward German, Grosser looked him up and down as he might some exotic and nauseating beetle, and it was clear that the other boarders approved of his strange conduct.

It was the same in the laboratory. When he entered the students who were already there turned stony eyes upon him.

"Good morning, gentlemen," he said. A harsh, rasping sound, something between a cough and a snort, was the reply.

Only the professor seemed unchanged.

"Good morning, miniature yellow peril!" he said, while the German students formed into a group, near the window whence they could see the soldiers file down Unter den Linden, with the hollow tramp-tramp-tramp of drilled feet, the brasses braying out their insolent call. They seemed silent and grave and stolid, though at times given to unreasonable, hectic fits of temper. They talked excitedly among themselves: about "Weltpolitik," about "Unser Platz in der Sonne" and "Deutsche Ideale." Every once in a while one of them would whisper something about "die Engländer," pronouncing the word

as if it were a dread talisman. Another would pick up the word: "die Engländer," with a tense, minatory hiss. Then again they would all talk together, excitedly; and once Takagawa, busy with a brass crucible and a handful of pink crystals, could hear: "Japan—the situation in the Far East—Kiauchau—"

Baron von Eschingen, usually punctual to the min-

Takagawa went through a lengthy ceremony before filling the cups

unstarched fatigue caps set jauntily on close-cropped heads, singing sentimental songs:

*Lebt wohl, ihr Frauen und ihr Mädchen,  
Und schaffst euch einen And'ren an. . .*

The cars pulled away, bearing crudely chalked legends on their brown sides—"This car for Paris!"

# *The GREATEST MOTHER in the WORLD*

Stretching forth her hands to all in need; to Jew or Gentile, black or white; knowing no favorite, yet favoring all.

Ready and eager to comfort at a time when comfort is most needed. Helping the little home that's crushed beneath an iron hand by showing mercy in a healthy, human way; rebuilding it, in fact, with stone on stone; replenishing empty bins and empty cupboards; bringing warmth to hearts and hearths too long neglected.

Seeing all things with a mother's sixth sense that's blind to jealousy and meanness; seeing men in their true light, as naughty

children — snatching, biting, bitter—but with a hidden side that's quickest touched by mercy.

Reaching out her hands across the sea to No Man's land; to cheer with warmer comforts thousands who must stand and wait in stench and crawling holes and water-soaked entrenchments where cold and wet bite deeper, so they write, than Boche steel or lead.

She's warming thousands, feeding thousands, healing thousands from her store; the Greatest Mother in the World—the RED CROSS.

ute, did not make an appearance at the laboratory that morning.

"Getting ready for the wholesale butchery," the professor explained to Takagawa in an undertone. "Sharpening his cleaver and putting a few extra teeth in his meat saw, I've no doubt."

Takagawa felt disappointed. He would have liked to say good-by to his friend, ceremoniously. For he remembered how his father had gone forth at the outbreak of the Russo-Japanese War. He had only been a small child at the time, but he recollected everything: how his mother and grandmother had bowed low and had spoken unctuously of *waijo*, of inner help; how the little girls of the household had brought their *kai-ken* dirks to be blessed by the departing warrior; how Komoto had quoted long passages from the *Po-ro-po-lo-mi*, reinforcing them with even lengthier quotations from the *Fuh-ko*; how his father had taken him to his arms with the true *bunshi* no *nasake*, the true tenderness of a warrior, and how immediately after his father had left the women had put on plain white linen robes, without hems, as the ancient rites prescribe for widows.

"You—you don't think he'll come back here before he leaves for the front?" he asked the professor.

"Certainly," laughed the other. "He isn't through yet with these!" indicating a wizardly array of tubes and pipes whence acrid, sulphurous fumes were rising to be caught, yellow, cloudy, whirling, in a bulb-shaped retort which hung from the ceiling.

"But—he is a samurai, a soldier!" stammered Takagawa. "What have these—these gases to do with—"

"With war?" Kreutzer gave a cracked laugh. "Don't you know?"

"I know the ingredients. I know how the gas is produced."

"Oh, you do: do you?"

"Yes. And Takagawa, turning on the right spigot in his fact-gathering brain, reeled off the correct formula in all its intricacies.

The professor laughed again. "And you mean to say," he asked in the same sibilant undertone, "that you have no idea what the gas is for—that you have no idea why Baron von Eschingen has honored us these six weeks with his spurred and booted presence?"

"Why—no!"

Kreutzer slapped his knees. "Blessed innocence!" he chuckled. "Blessed, spectacled, yellow-skinned, Asiatic innocence! It is— Well, never mind!"

He turned to the German students who were still talking excitedly among themselves.

"Silentium!" he thundered. "War is all very well, gentlemen. But we are not here to kill or to remake the map of Europe. We are here to learn about— And then a lengthy Greek word and the hush of the classroom.

The baron, who had shed his pale-blue and silver regimentals for a uniform of gray-green, came in toward the end of the lesson. He spoke courteously to the students, who instinctively stood at attention, shook hands with Takagawa with his usual friendliness, and drew the professor into a corner where he engaged him in a low, heated conversation.

"I won't do it!" Takagawa could hear Kreutzer's angry hiss: "The lesson is over. I insist on my academic freedom! I am a free bourgeois of the university. I—" and the baron's cutting reply: "This is war, Herr Professor! I am here by orders of the Ministry of War. I order you to—"

**TAKAGAWA** smiled. Here was the real samurai speaking; and he was still smiling ecstatically when, a moment later, the professor turned to the class.

"Go downstairs, meine Herren," he said. "I have a private lesson to give to—to"—he shot out the word venomously—"to our army dunce! To our saber-rattling gray-green hope! To our so intelligent East-Elbian Junker! To—"

"Shut up!" came the baron's harsh voice. "Don't you dare, you damned—" At once he controlled himself. He forced himself to smile. "I am sorry, gentlemen," he said, "to disturb you and to interfere with your lessons in any way. But I have some private business with the professor. War—you know—the necessities of war—"

"Yes—yes—"

"Natürlich!"

"Selbstverständlich!"

"Sie haben ganz Recht, Herr Leutnant!" came the

May 11

chorus of assent, and the students left the laboratory together with Takagawa, who went last.

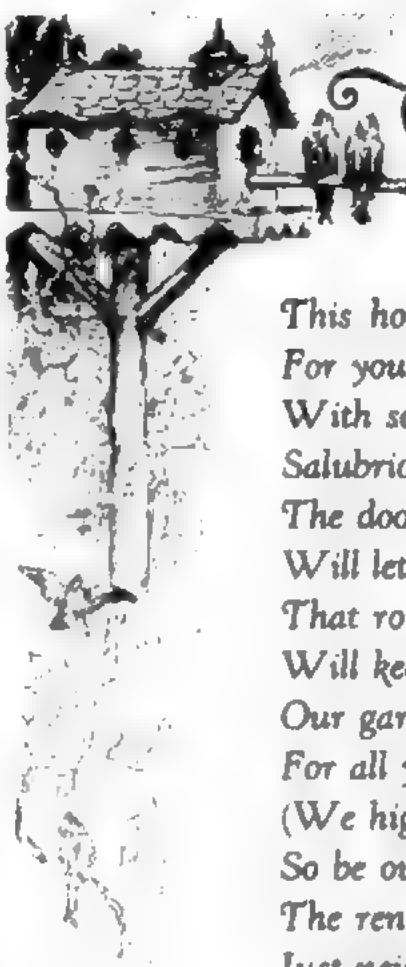

"Wait for me downstairs, old boy," the baron called after him as he was about to close the door.

Arrived in the street, without civil words or touching their hats, the German students turned to the left to take their "second breakfast" at the Café Victoria, while Takagawa paced up and down in front of the building to wait for his friend.

Troops were still marching in never-ending files, like a long, coiling snake with innumerable, bobbing heads, and crowds of people were packing the sidewalks in a dense mass, from the Brandenburger Thor to beyond the Schloss.

They whirled about Takagawa. A few noticed him—only a few, since he was so small—but these few glared at him. They halted momentarily, mumbling: "A Japanese!"

"Ein Ausländer!" ("A foreigner!")

## Wren-house To Let

BY ARTHUR GUITERMAN

This house was built, Miss Jenny Wren,  
For you, your mate, and fledglings ten,  
With solid walls and airy roof,  
Salubrious and weatherproof.  
The door, just large enough for you,  
Will let no rowdy Sparrow through;  
That row of spikes in sharp array  
Will keep marauding Cats away;  
Our garden beds will furnish food  
For all your ever-hungry brood  
(We highly recommend the Worms).  
So be our tenant; name your terms.  
The rent? No, not one feather tip  
Just neighborly companionship!

There was sullen, brooding hatred in the word where, only yesterday, it had held kindness and hospitality and tolerance.

**TAKAGAWA** stepped back into a doorway. Not that he was afraid. He did not know the meaning of the complicated emotion called fear, since he was a samurai. But something intangible, something nauseating and hateful, seemed to float up from the crowd, like a veil in the meeting of winds—the air, the people, the music, everything, suddenly shot through with peculiar, disturbing, prismatic diffractions.

He was glad when the baron's tall form came from the laboratory building.

"Sorry I kept you waiting," said the officer, slipping his white-gloved hand through the other's arm. "I've only a minute for you at that. Got to rush back to headquarters, you know. But—a word to the wise—is your passport in order?"

"Yes. Why?"

The baron did not seem to hear the last question. He took a visiting card from his pocketbook and scribbled a few rapid words. "Here you are," he said, giving the card to Takagawa. "Take this to my friend Police Captain von Wilmowitz, at the Presidency of Police—you know—near the Spittelmarkt. He'll see to it that you get away all right before it's too late—you, and your old servant, Kaguchi."

"Get away? Too late? You mean that—"

"That you'd better wipe your feet on the outer doormat of the German Empire. Get out of the country, in other words. Go to Holland, Switzerland—anywhere."

"Why?"

"War!" came the baron's laconic reply.

"Yes, but Japan and Germany are not at war!"

The baron had put back his pocketbook and was buttoning his tunic. "I know," he said. "But England declared war against us three hours ago.

and Japan is England's ally. Hurry up. Do what I tell you. I'll drop in on you to-night or to-morrow and see how you're making out." He turned and came back again.

"By the way," he went on, "be careful about any papers you take along. Destroy them. Your chemistry notebooks—the notes you made during class. There's that poison gas, for instance." He was silent, hesitated, and continued: "I'm sorry about that, Takagawa. Puts both you and me in a devilishly embarrassing position. You see, I had no idea—honestly—that war was due when the powers that be detailed me on that chemistry course. I thought it was all a tremendous bluff. Otherwise I would never have dreamt of working side by side with you, comparing notes on these poison-gas experiments, and all that. Well"—he shrugged his shoulders—"what's the use of crying over spilt milk? Burn your notebooks—chiefly those dealing with the gas."

And he was off.

Takagawa looked after him, uncomprehending. The poison gas! Here it was again. The same mysterious allusion. First Professor Kreutzer had spoken of it, and now the baron.

But what did they mean? What did it signify?

**FINALLY**, obeying the suggestion of the dusty laboratory windows looking down on him from their stone frames, Takagawa reentered the building and went straight to Professor Kreutzer's lecture room.

He found the latter seated at his desk, his chin cupped in his hands, his haggard face flushed and congested. The man seemed to be laboring under an excitement which played on every quivering nerve of his body; the hand supporting the lean chin showed the high-awelling veins, and trembled.

He looked up as Takagawa entered, and broke into a harsh bellow of laughter. "Come back, have you, you stunted yellow peril!"

"Yes. I want to ask you about—about the gas."

Again the professor laughed boisterously.

"The gas!" he cried. "The poison gas! To be sure! Not quite as innocent as you made yourself out to be a while back, are you? Well, by God, I'll tell you about the poison gas! Got a remarkable sort of brain, haven't you? Retentive faculty abnormally developed—don't need written notes or

any other sort of asses' bridge, eh? Just as good! Couldn't take anything written out of Germany. But your brain—your tenacious Oriental brain—they can't put that to the acid test! All right! Listen to me!"

Professor Kreutzer did not stop to dissect himself or his motives. He obeyed, not a feeling, a sudden impulse, but a pathological mood which was the growth of forty years. For forty years he had hated autocratic, imperial Germany. For forty years he had battled with his puny strength against militarism. Now the steel-clad beast had won. The shadow of war had fallen over the land. His gods lay shattered about him.

Forty years of ill-suppressed hatred—brought to a head, half an hour earlier, by Baron von Eschingen's curt command: "This is war, Herr Professor. I am here by orders of the Ministry of War. I order you to—"

That uniformed, gold-braided jackanapes to order him, a scientist, a thinker!

**KREUTZER** swore wickedly under his breath. He turned to the Japanese, and talked to him at length, going with minute care over the whole process of making poison gas, from the first innocuous-looking pink crystal to the final choking cloudy yellow fumes. He made Takagawa repeat it, step by step, formula by formula. Finally he declared himself satisfied. "You know it now, don't you?" he asked.

"Yes, sir."

"You'll never forget it?"

"No, sir."

"All right. You have what you came here to get. In one respect at least you know as much as the German War Office. Go back to Japan—as soon as you can." He returned to his desk and picked up a book.

Takagawa went after him. "Herr Professor!" he said timidly.

# Pennsy VACUUM

IN 1914, nine Vacuum Cup stock tires were submitted to official test by the Automobile Club of America.

They attained an official average on two-ton cars of 6,764 miles. The maximum was 10,164 miles.

No other make of tires has ever been offered for this official test.

Vacuum Cup Tires stand on that record, and with greatly enhanced quality over the stock tires that made it.

WHEN their fame for higher quality was in the making, Vacuum Cup Tires were correspondingly high in price. While this made slower of building sales volume, the determination to maintain the chosen standard was unalterable.

As sales grew, it became possible to sell more and more closely to the prices of ordinary tires. This was greatly helped by the policy of making tires for the user only, avoiding equipment contracts with automobile manufacturers.

Then was devised our zone system, enabling us to market our growing production without incurring the selling expense.

# ania M CUP TIRES

ay, due to our policies and the  
mies of production in the most  
n and efficient factory in the  
ry, Vacuum Cup Tires cost ap-  
nately the same as ordinary 3,500  
res. They cost much less than  
ther make carrying anywhere  
the same mileage assurance.

# SEEING ALMA FIRST

BY W. P. LAWSON

ILLUSTRATED BY OLIVER HERFORD

was a pool table, and in bechune, under one of them coal-oil lamps awinging from the ceiling, was a cyard table. They was some fellers setting round it playing poker and around them was some more fellers sweating the game and one little chunky feller with tow haar and a cigaret was bringing a couple of loads of drinks from behind the bar and carrying them over to the table. One load was on the tray and the other one the feller was packing internul. He seemed right drunk.

A SIZABLE jack pot was being decided in the poker game, which was the reason nobody paid us any attention. So we j'ined the sweaters and looked on and one of the sweaters whispered to us finely, arter we'd asked him, who the five fellers playing was.

He says the tall, sollem feller, who was about as fat as a match, with a plumb terrysfying mustash curling back like the horns on one them mountain goats, was Brad Thomas. He was the salloon propriyter. And he says the feller opposit, wearing a big sombrero with a convict-wave horsehair hatband and silver buttons on his vest, was the sherreff. This here sherreff was a Mexican, but when I first seen him I thought he was a niggero. He looked plumb light-struck.

The sherreff and Brad, seemed like, was bucking each another, so I didn't pay much attention to the other fellers. Two on 'em was deppity sherreffs, the sweater says, and the last one was Sim Wood, who owned the rival salloon across the street. The sweater says competition betwixt the two salloons wasn't right keen how so ever, because Sim was accustomed to close up arter taking in a dollar or two in the morning, and then to come over and spend the balance of the day in Brad's salloon, where they was more life. If he didn't git cleaned out afore evening come, the sweater says. Because this Sim was a gambler.

Well, Brad Thomas win the jack pot and begun laffing at the sherreff, who looked right mean like he couldn't take a joke. Then Brad called for drinks for the house, and that's where the sweaters got action on their time and their encouraging applause. It's their bizniz to stand around and back the winner; if he's gen'rus, that is. And if he ain't they back him anyway, trusting to luck. Because they're gamblers too.

When the tow-headed feller had come around with another double-bar'l order, one for him and one for the balance of the company, Brad glanced up to see if everybody was getting theirn, and he seen us and riz up and went behind the bar and begun polishing glasses invitng like.

So Allingham and me and two-three other fellers lined up on the more 'xpensive side of the bar and Allingham says: "Well, I reck'n we best take one!"

"What will you take, mister?" says Brad, looking at me first, because Allingham was ordering.

"Whisky!" I says.

"I ain't drinking," says Allingham: "I'll take beer!"

"Won't you and your friends j'ine us?" I says to Brad, looking meanwhile at the fellers standing by the bar.

"They ain't no friends of mine," says Brad, look-

ing at them also, only in a diff'rent way. "They's jest bar-rail birds, as you mought say, and their present bizniz is listening to see if they kin hear any inf'mation about you-all and your affares."

Then the fellers turned around and j'ined the sweaters again, and Brad says: "I'll take a finger or so with you-all, and much obleeged!"

"Have one on the house!" says Brad when we'd dranked up.

So we had one on the house and then, them formal'ties being over with successful, I ordered another because I wanted it. And arter that we all begun to git better acquainted.

I looked around and seen two or three pitchers on the walls and behind the bar was a big mirror, cracked in some spots where fellers had let their guns go off into it keerless. In the middle of the mirror was a large sign which says: "No Wartalk And No Babytalk A Loud Here."

"That there's my motter," says Brad, noticing me reading the sign.

"It's a right good motter," I says. "Does it mean pers'nal or furrin war talk?"

"That depends," says Brad, "on whether furrin war talk gits pers'nal or whether pers'nal talk gits furrin to decorum. It means either of them two."

"Well!" I says.

"And again," says Brad, "if it's a case of furrin war talk, it's important which side you're talking from because we're for the alleys."

"Which ones?" says Allingham.

"I was speaking of the Mex'cans' revolutions," says Brad.

"Oh!" says Allingham.

"And how come I spoke of the alleys," says Brad, "we-all got a saying out yere that they's an asafe a ranged by the alleys Father Time and ole Grand-paw Death agin the Mexican people. And we're waiting watchful for the first two compadres to win. Them illit'rit Mexicans, they ain't ary one of them can rekernize the 'pearrens of two bits, if it's shoved up close to their faces. But they ain't so plumb bad; they're fair workers, when they're hongry, and if it wasn't for skinnin' them four ways from the ace, they wouldn't be none of us prom'nent citizens nigh so well fixed as we is now. But yere, I mustn't take up your time talking, forgetting meanwhile the hospitality of the host. What will you-all drink?"

"Keep right on augrin', Mister Thomas," says Allingham, "your ideas is plumb fassinating. I'll take beer."

SO Brad set out the drinks and says: "You seem to be a avridge good conversationalist, young feller. Are you fixing to stay here any len'th of time?"

"We ain't decided yit," says Allingham, "we're jest looking round."

"Well," says Brad, "you won't see a grate deal."

"It'll likely be enough," returned Allingham.

So then Brad begun looking at Allingham right funny, and I says: "How many is the population of Alma, Mister Thomas, if I ain't too inquis'tif?"

Brad glanced around the room keerful and finely he says: "You ain't, because your querry is simple to answer."

(Continued on page 37)

FIRST off I got to admit Almy is a town, not a gal. It is a town in south New Mexico, not so fur from the border. It is inhabited by a dozen or so men and certain wimmen. That's why Allingham says I've got no right to call this ins'dent I'm about to mention by the title I chosen, because them folks was there when we come. Besides, Allingham says if we'd seen Almy first we wouldn't ever of visited it a-tall, but I dunno. Offen a feller can't tell what he wouldn't of done arter it didn't happen. So I b'leeve I'll leave the title ride.

How come we happened to think of stopping at Almy was we were broke. Leastways badly bent. And it was the nearest town to which we found ourselfs when the holdup feller we'd run onto had finished his bizniz. We'd started from the ranch where I'd been working as cook, with the idee of making a hossback tour of some of the littler known sections of the State. And we was headed for Silver City when we met our mix-up with the holdup feller.

It was a couple of hours afore sundown when we seen this feller standing in the road p'inting a pair of six-guns at us right snaky.

"Who goes thar?" says the feller.

"Friends!" says Allingham. "Leastways we was till we started out on this ding-bustid tour!"

"It was all your idee," I told Allingham. "Making a tour!"

"Shut up!" says the holdup feller. "And advance and deliver up the goods!"

We had a slug of money on us, because I'd drawn seven months' back wages when we started out and had split with Allingham half in half. Because his only perffessional occupation being talking, he didn't make no money reg'lar.

But we done what the holdup feller suggested, because it seemed only right, although I held out a couple or three dollars agin trouble.

Then arter he'd putt our money into his pocket the feller p'inted out the dyrection Almy was in perlite and went onto his way.

ALLINGHAM and me begun riding again then. I was right irritated, being held up so plumb open, but seems like Allingham wa'n't keering grately.

"It's only what toorists can 'sperct," he says, "and we got to admit this yere natuff son has acted plumb shivvalrus. If you notised, he refrained from noddin' insults to robbery by bragging on the climate or claiming we suffered the privilege of seeing God's country for the first time."

So we didn't say no more then; and arter a spell we seen a light ahead and thar was Almy. I looked around cautious when we come nigh and obserfed it wasn't much to look at. Almy, I mean. They was a gen'ral store and a salloon and a dobey building which seemed as if it mought be the hotel. And they was two-three little tumble-down cabins scattered round like somebody had forgot to take them along when they moved. Hit looked plumb shiftless.

"Well," says Allingham, "I'm right diss'pinted in this yere settlement. It reminds a feller of a Kris-mus card without no icing onto it. Or p'raps like a wedding to which the bride has failed to respond."

"It ain't overly exciting to the eyesight," I says, "and that's a fact. But the salloon's got a light into it. Mehbe we'll take more int'rest arter we done dranked one or two!"

So we walked into the salloon and looked around, and on one side we seen a bar and across from it

"Shet up!" says the holdup feller. "And advance and deliver up the goods!"

# *What's Back of Your Packard?*

ENGINEERING KNOWLEDGE tested and proved during twenty years of continuous progress.

SHOP EXPERIENCE covering the life of the motor industry, with Packard quality always paramount.

UNEQUALLED FACILITIES for producing, in the Packard shops, motor cars of the highest class in quantities which permit of giving the greatest value to the customer.

Advanced factory methods that insure uniform excellence in materials and workmanship.

*A business policy of equal treatment to all patrons, and that treatment based on a desire to deserve good will.*

Country-wide Packard service—uniformly prompt, courteous, capable, and reasonably priced.

A great organization built up on the principle of Americans First; composed of men who take pride in their work and in the character of the product. . . The judgment of forty thousand owners.

### Enamolin's Beauty is Permanent

**NO MATTER** where you use it, indoors or out, Enamolin will for years retain its fresh beauty, in spite of weather and wear.

Its surface is tile-like. It will not "turn color," chip, crack or peel. And when it is soiled, you can clean it as easily as a china plate.

Use Enamolin for your sun-parlor, halls, walls, furniture—wherever you want to enjoy the loveliness of a gleaming white surface as beautiful as porcelain.

As for economy—one coat of Enamolin covers as well as two coats of ordinary enamel. Its durability saves you the cost of refinishing.

**NAMLAC FLOOR FINISH** not only beautifies floors with a fine, glossy surface, but protects them, too. It is waterproof, heel-proof, scratch-proof—worthy of use in Enamolin homes.

Ask for "The White Spot Booklet." A sample can of either Enamolin or Namlac Floor Finish sent for 10 cents. Address: Domestic Dept.

# PROHIBITION? THEN GOOD-BY, AMERICA!

BY FREDERICK LANDIS

**THE** corkscrew has not the pull it used to have. So let us consider some of the calamities of prohibition which have been overlooked.

Think of the madhouses which will be emptied; the strait-jackets and padded cells rendered useless. Think of our happy penitentiaries, our beautiful electric chairs, our contented executioners! In partnership with Liquor, the Tubercular Bacillus has established a most active business. Shall we lay it waste? Shall we repeat the outrage visited upon the yellow-fever mosquito when we revoked his license, confiscated his pus, and destroyed his pianola, without compensation? According to the dampest statistics we have, there has been invested in cauliflower noses in the United States nine hundred million dollars and sixty-three cents! Are we to pillage all this vast wealth?

Take the steel industry. Prohibition will reduce the demand for padlocks, jimmies, balls and chains, cheap pistols, daggers, manacles, handcuffs, and prison bars! Armies of steel workers will cry for bread! And this does not include the multitude of skilled workmen now engaged in making brass knuckles. And there is glass. Prohibition will all but wipe it out; bottles will hesitate; dark lanterns will stagger; door-knob diamonds will gasp; red globes will grow pale and the demand for "glass houses" will largely cease! What is the test of national prosperity, recognized by all political economists? The price of fish-worms of course. Adopt prohibition and fishworms will not be worn in the eyes; they will be used only for bait, and the worm diggers of our beloved land will be driven to the soup house, while shovel factories will suspend. It will be bad enough to throw hop pickers out of work, but think of the quarrel pickers! The poker-chip industry will wither; the manufacture of marked cards and loaded dice will expire; gamblers will be reduced not only to want, but to work! Their lovely hands will grow hard; they will not be able to play the piano. The devastation will not end here; it will strike the Philip-pines. Halt the eager throng crowding up our scaffold steps, and the price of hemp will go down! We cannot ignore free lunch. It is still "free" here and there. Being "free," it costs us only a trifle over two billions and a half of dollars annually. What will we do for and with pig's feet when we are all compelled to pay for them? Pretzels will pass away—even from public office. Gravediggers will grow sullen, and merry millions, now singing "America" as they whittle stakes for potter's fields, will be cast adrift! And the hearts that will break when Mr. Barley-corn's beauty parlors close—his statistical valets, his political masquerade, his oratorical barbers, his newspaper manicurists, his legal chiropodists, his judicial hairdressers! It means farewell to the kings of the witness chair—the noblest admirals the sea of perjury has ever known! There are other legal complications. For instance, Liquor has rented many influential gentlemen; it has rented not only their cerebrella, but their cerebellums also, and these leases have a long time to run. Now, will Liquor be entitled to a rebate or will it be permitted to stuff these gentlemen and stand them in the library?

The change will upset social life. If a drunkard's wife now wishes to perfume the house when she gives a reception for the Hungry Club, she can just have Henry sit down by the whatnot and breathe for a few minutes. If this good woman desires to keep her social position after prohibition comes, she will be compelled to buy a goat.

### Nobody Having a Fit!

**WHAT** will happen on the stock exchange when half a million old washboards are thrown upon the market? Will it not ruin everybody's eyesight when Blue Monday turns pink? Will we not lose much of our tenderness if we stop sleeping in woodsheds with the rats? Will it not destroy our climate if twenty million stomachs cool off at the same time? What if in a great emergency we should run out of epilepsy and our scrofula reserve should

become impaired? Can any nation hope to lead the march of human progress unless it has locomotor ataxia?

Can the home survive the ravages of sobriety? After prohibition, father will hang around the house, and a certain degree of familiarity will be unavoidable, and "Familiarity breeds contempt." Picture the family potentate's chagrin on Saturday night. Now he drifts in grandly with the tide, but soon he will be compelled to walk! How the Viking in him will grow when his children will run to meet him instead of crawling under the bed! How dreary the sitting room of the future! Nobody throwing anything; nothing to dodge; nobody choking anybody; nobody breaking the dishes; nobody kicking the dog; nobody upsetting the lamp; nobody having a fit! And the monotony at the theatre—no getting up and making yourself thin between the acts while some hippopotamus walks all over you on his way out and then on his way back!

### A Bottle of Vanilla

**HOW** flat life will be when we are no longer backed against the livery stable and told how the town drunkard loves us! Imagine sitting through six banquet speeches, fully conscious! Think of watching the old year out—perfectly sober!—not one "pillar of society" upset; not one "first citizen" trying to kiss a bearded Bohemian waiter. It will be rough on our very best people. Not only will they live longer, but it will be harder to get divorces!

But the worst will come when millions drink flavoring extract. This era in American history is almost here. A few more months and the lord of the household descends the stairs on Sunday morning—shattered—chaotic! He has been all over the United States trying to get liquor, only to encounter an endless panorama of pumps. He is desperate; lightning flits across his brow; he glides through the dining room like a cat; he peers upon his wife, sitting in the kitchen. His eyes dilate; his thoughts are scarlet; he grasps the potato masher; he lifts it to strike the fatal blow, and then he sees she is picking the side burns off the Sunday chicken. The tender scene touches his heart; he puts the deadly weapon down; he will accomplish his hellish purpose, but without bloodshed! Stealthily he creeps to the pantry; he is in the pantry—with the door shut. He lifts his hand to the top shelf; he clasps something, and now he holds before his frenzied eyes—a bottle of vanilla! The amount that a man drinks depends on his companions. Think of the crowd in that pantry; there our friend stands, surrounded by the clothes wringer, the rat trap, the mop, the coffee mill, and the canned tomatoes. In the midst of that depraved lot, he drinks to excess; he drains the bottle, and in a little while he has delirium tremens—but he does not have snakes. The poor fellow has sponge cakes!

### The Moderate Drinker

**MANY** "judicial temperaments," not only those which have been sold and delivered but also those which are in a receptive mood, insist that prohibition cannot stand before the courts. They base this opinion upon reasons which are conclusive from their legal standpoint.

**FIRST.**—If we stop chewing cloves, it will injure the commerce of Turkey, with which we are not yet officially at war, and this would violate treaty obligations.

**SECOND.**—The Declaration of Independence guarantees the "pursuit of happiness," and this means a gentleman's inalienable right to chase his family around the house.

**THIRD.**—Prohibition is unconstitutional for the following reasons, designated A and B:

**A.**—The Constitution guarantees the right of trial by jury in criminal cases, and prohibition, by robbing man of his desire to commit crime, would destroy the value of this guaranty.

**B.**—The Constitution guarantees the writ of habeas corpus, but this will be worthless when prohibition shall have

(Continued on page 34)

## Who Discovered RICORO?

"An Efficiency Engineer," said the manufacturer. "He had just demonstrated how I could increase our output and decrease our operating expense when I offered him one of my 'customers' cigars."

"Try one of mine instead," he laughed, "Maybe I can also increase your smoking enjoyment at less expense."

"I bit off the end, lighted up and puffed it. 'Well,' I said, 'What's the answer? This is as good as the cigar I smoke, and probably costs as much.'"

"That's *half* the answer," he replied, "It's as good as your cigar—but it costs only 8c. It's a Ricoro, the Corona size—imported duty free from Porto Rico."

"As an Efficiency Engineer you are sure *some cigar expert*," I remarked."

*Sooner or later you'll discover—*

# Ricoro

*the "Self-Made" Cigar*

Because you can afford 15c or 25c cigars is no reason for smoking them if a 7c or 8c Ricoro will prove as enjoyable. A trial is the only test that tells. *Discover Ricoro today.* You'll find out why we call it the "self-made" cigar and why millions of Ricoros were sold the first year they were on the market.

War Savings  
Stamps sold in  
all United  
Cigar Stores

Ricoro is made in a dozen sizes and shapes, from 6c to 2-for-25c—simply the question of size. The quality is the same in all.

Sold only in United Cigar Stores.—"Thank You."

## Each Package Saves About \$2

If Used to Displace Meat

Each large package of Quaker Oats contains 6220 calories of nutrition. In meats and eggs—on the average at this writing—that same food value costs 7 or 8 times as much.

Note the vast difference, measured by food units:

Calories Per Pound			
Quaker Oats . . .	1610	Veal Cutlets . . .	708
Round Steak . . .	896	Young Chicken . . .	508
Eggs . . . . .	720	Fresh Halibut . . .	565

Then mark the great difference in cost. You can serve seven breakfasts of Quaker Oats for the cost of one meat or egg breakfast.

Yet the oat is the supreme food. It has twice the energy value of beef, and several times its minerals.

It is a complete food, supplying every needed element. And its flavor makes it wondrously inviting.

It is the advised food for the young, where cost is not considered. And the favorite morning cereal in mansion or in cottage.

The delightful way to reduce your food cost is to serve more Quaker Oats.

# Quaker Oats

The Extra-Flavorful Flakes

We use queen grains only in Quaker Oats—just the rich, plump oats. The small grains, which lack flavor, are discarded.

Thus we get but ten pounds of

Quaker Oats from a bushel. But those ten pounds are the flavorful oats. And they bring you these exquisite flakes without any extra price. Be sure you get them.

13c and 32c Per Package

Except in Far West and South

(1926)

### Quaker Oats Bread

1 cup Quaker Oats (uncooked)  
2 teaspoons salt  
2 cups boiling water  
1 cup lukewarm water

1 cup sugar  
1 cake yeast  
Scups flour

Mix 1 cup Quaker Oats, salt and sugar. Pour over two cups of boiling water. Let stand until lukewarm. Then add yeast which has been dissolved in 1/2 cup lukewarm water. Then add scups of flour.

Knead slightly, set in a warm place for rise until light (about 2 hours). Bake thoroughly for 45 minutes at 350° F. per oven and bake about 10 minutes. If the yeast is used a sponge should be made at night with the liquid, the yeast and a part of the white flour.

### Quaker Oats Muffins

1 cup uncooked Quaker Oats, 1/2 cup sugar, 1 cup wadded milk, 1 egg, 1 level teaspoon baking powder, 1/2 tablespoon melted butter, 1/2 teaspoon salt, 1/2 tablespoon sugar.

Beat wadded milk in Quaker Oats. Let stand five minutes. Add sugar, salt and melted butter. Mix in dry and baking powder. Bake in muffin tins.

### Quaker Oats Sweetbits

1 cup sugar, 2 eggs, 3 teaspoons baking powder, 1 tablespoon butter, 1 teaspoon vanilla, 2/3 cup uncooked Quaker Oats.

Cream butter and sugar. Add vanilla of eggs. Add Quaker Oats in which hot no powder has been added, and add vanilla.

Beat mixture of eggs stiff and add last. Bake on buttered pan with a teaspoonful sugar for each cup of other spread. Bake in shell on. Makes about 4 cookies.

pillaged the freeman of his desire to go to jail.

Only yesterday prohibition was a far-off dream and now it is a next-door neighbor. The Moderate Drinker did it: he said John Barleycorn was asking too much for liquor. But John only asked a little over a thousand per cent profit, and then he only asked to put in any adulteration that appealed to him; and then he only asked for the Government, local, State, and national; and then he only asked for mountain ranges of blasted homes; and then he only asked for the youth of the land; and then he "just kinda felt" that he'd like to have the eyesight of the habers and the peace of old age! He only wanted political ambition for a cockroach and the law of the country for a doormat; he only

wanted the sword of Bunker Hill for a cheese knife and the flag of Yorktown for a bar towel; he only wanted to rob the graves of all our heroes from Washington to Lincoln and drag them forth as brewery agents.

It seems as if Mr. Barleycorn did want something else; oh, yes, he thought it would be nice to have posterity for a sewer!

And just because he wanted these, the Moderate Drinker got up from the beer table and shouted right into Barleycorn's face: "I'm going to put you out of business." But the worst was what happened outside. The Moderate Drinker hatted his eyes, as if waking from a trance, and then he said to himself: "Why should it take a hog so many centuries to commit suicide?"

## The American Destroyers

Continued from page 11

be quite useless. It is to be a public, unmitigated, intolerable, all-pervading nuisance. And with this elementary little piece of knowledge in my mind, I asked my question, but in a form that was not felicitous: "How are your amateurs getting on?" I certainly got the answer I deserved when the captain rapped back: "We have never had any." Not one, it seems, has missed a day's work, or failed in any single day to do two days' work. It is a tribute to Annapolis that trained them and to their captains and brother officers, older in the profession, who have made them, but most of all it is a tribute to the men themselves. The transformation is complete. In the ensign there is no trace left of the lawyer with his newly growing practice, nor in the great banker's son, nor any touch of the civilian in any of these stout, cheery, hard-driven last comers to the sea. What is true of the after cabin is true too of between decks. The training camps for bluejackets have done their work faithfully too. They tell me that it is only the personal record sheets that prove there is a difference between the old hands and the new. But then, of course, the work is really prodigious, incessant, so that the "sea change" is suffered in the briefest time.

### What the Records Show

THE flag captain keeps a complete statistical record of each boat's doings day by day. At the end of the month a tabular statement of the work of each from the very beginning is brought up to date. In the first column the destroyers' names—and what names! Each a memory and an example of gallant fighting, of duty nobly done, a stirring memory that challenges to emulation! Then follow the total period of the boat's service, the mileage run, the days on escort or convoy, the time in harbor, the period when under repair, how the repairs were done, whether by the boat's own men, or with the resources of the parent ship, or in a dockyard; the numbers of submarines seen, the numbers engaged and how engaged, and so forth. In its way the two half sheets of typewritten foolscap that make up this return are about as eloquent a document as I have ever seen. I would like to print it here and would ask no better text on which to write. But all the really interesting things are secret. You see they would interest the Huns more acutely even than us!

Perhaps those that have never been to sea in a destroyer, and do not know the kind of seas that are usual where the east Atlantic lanes merge into the Channel and the Irish Sea, would hardly realize what a regular service of five thousand miles a week must mean in strain on material and strain on men. Remember that four days at sea means, all through the winter time, almost twice as much darkness as light, and that in war it is real darkness, because no lights are used. These fragile-looking craft must be taken in and out of harbor and go about their escort and conveying duties without showing a glimmer, and never meet a ship—or escort or convoy a ship—that carries a warning ray. Remember that a high mileage has to be run at quite high speed. Steam for the highest possible speed must always be kept up, for Fritz may turn up anywhere, and you must go for him like a shot, or not at all. As a mere test of vigil and seamanship, this kind of thing makes a demand on officers and men of a kind utterly unknown in any naval experience before this war. Yet the vigilance and

seamanship that mere safety calls for are only a secondary factor, for these boats are not here to take care of themselves, but to find and fight and sink the submarines. And the submarines know it, and their whole energies are bent on not being found. For it happens too often to be pleasant that "found" means "fought," and "fought" means "foundered." It is in darkness that the submarine on the surface runs least risk of being seen, and for that reason is it that in darkness the sharpest lookout for submarines must be kept.

The mere mileage, then, means vastly more than meets the eye, but it is the other entries that are the more tempting. "Submarines seen, engaged, and how engaged." I wish I could give the totals or the results! They are agreeable reading. But one thing is intensely striking. There are boats here that have done as great a mileage as any, that have spent above the average of days at sea, whose record is blameless—yet have never seen a submarine at all! There is, in short, as much luck in this as in all other forms of hunting. There are cases, I believe, in the British Service, of men assiduously out in search of submarines for a year together and never seeing one, and then suddenly and for no apparent reason having a burst of luck that repaid a thousand times their persevering patience. Still, to the captains who have been out of luck the denial of a scrap of any kind is, of course, intensely trying. One felt so sorry for them, I could not help being reminded of the little boy who, on being hidden to seek edification in a picture of the Christians thrown to the lions and tigers in the Roman amphitheatre, called out: "Look, mummy, there is a poor tiger that hasn't got a Christian!" Here it is a Christian or two who has not yet got a tiger. But they know that their time will come—and I would hate to be Fritz when it does.

### A Family Affair

I WAS writing just now of the mother ship—it seems a natural word to use, and natural too to borrow Nelson's phrase again in writing of this "band of brothers." For the whole outfit, flag captain and destroyer captains, British admiral and the British Service and the British Admiralty—one sees that it is all a family affair. The bonds between the two services are intimate and strong and curiously cordial. It is something far better than tact or courtesy that has made them so and keeps them so. It is largely the common aim that does it, but chiefly, I think, the common pursuit of the highest standard of skillful conduct in trying to achieve that aim. To win the war by beating the submarine—for this is all that is needed to win the war—is certainly the aim. But what makes things go so sweetly is the intense desire to find the best and surest way of doing it. You may think that there is a rivalry between the services. There is, God bless them both! But then there is just as keen a rivalry between the boats of each service. And the admiral and the authorities at Whitehall are entirely impartial in making all useful information common to all and spreading to each the experience of all the others. Blame and praise and criticism and suggestion are all impartial too. Do not think for a minute that, when the British admiral recommends an American officer for the Distinguished Service Order, he is doing it out of politeness or with an eye to international propaganda. I do not know

 REMINGTON  
UMC

# WETPROOF SHOT SHELLS—

## Steel Lined ARROW and NITRO CLUB

*For your Fall Shooting*

### The Remington UMC Improvement in Shot Shells Everybody is talking about

**T**HE Wetproof development by Remington UMC is a patented and exclusive process of Waterproofing the shell in crimp and top wad—sealed against wet. It makes the shells exceptionally firm in the crimp—strong and dependable where the average shell is weakest. The Wetproof process is now applied to all Remington UMC smokeless powder shells. Wetproof shells do not cost any more—simply ask for "Arrow" or "Nitro Club" Remington UMC.

**W**HETHER he ever hunts in the wet countries or not, there is not a sportsman anywhere but is welcoming the Wetproof development by Remington UMC as a solid contribution to shooting progress.

Here is an interesting fact—no Remington UMC development, once announced, has ever had to be recalled or even modified.

The Remington UMC Pump Gun, the Auto-loading Shotgun, the Steel-lined im-

provement in "Arrow" and "Nitro Club"—all these were adopted without question by thinking sportsmen everywhere, and their position grows stronger and stronger every season.

It is bound to be so with wet-proof—not a competitive "feature" to influence sales for a time, but a matured and permanent service to every man who uses a shotgun and every merchant who sells Remington UMC.

Wherever you find "Arrow" and "Nitro Club" labels, you find the Wetproof shells—Remington UMC. Look for them. It is worth while.

## Sir Walter Raleigh

was one of the first men to smoke a pipe in England. You perhaps remember the story. How his faithful valet thought he was a fire and how he tried to put out the flames by throwing on a mug of ale.

It is quite different today. You see a man smoking a Wellington and somehow you envy him the sheer joy of it. Calm, cozy and contented he looks—the original portrait of happiness!

Nowadays, a pipe is as much a part of a man's equipment as his watch or knife or the inevitable black notebook.

## Wellington

THE UNIVERSAL PIPE

will not wheeze or bubble. The "well" catches the moisture. The Wellington is made of genuine French briar, seasoned by our own special process. It breaks in sweet and mellow. The bowl is guaranteed against cracking or burning through. Any tobacco tastes better in a Wellington.

how things are done on shore, but there is no mincing of words, no mealy-mouthed business where the American hounds are slipped from the leash on the coast of Ireland.

### Wisely Silent

THEN came luncheon in the captain's cabin—a real American luncheon, cooked by a Japanese cook, served by a Philippine waiter, beginning with grapefruit and ending with Java coffee. All the captains were there. The lunch was excellent, but the talk was a failure. I, of course, was trying to get the captains to tell me of their work, and everyone was willing enough that the other fellow—the last to have a scrap with a submarine, or a couple who had been recommended for the D. S. C.—should do so. If they had, of course I could not have written their stories. But it is a simple fact that everyone would talk of anything in the world except himself.

Get them on the admiral, for instance, and you had real eloquence. But, like the simple, efficient, hard-working fellows that they are, they were hopeless when one tried to get them to talk of their own achievements. It was just luck that one had been recommended for high honors—just a chance that another had got an enemy with all his officers and crew. Politeness might compel the bare statement of a fact or two; but there are no stories going, and it was no use trying to get them.

But there was no shyness when I came to asking questions. Anyone who had been in New York as recently as December 20 must surely be a mine of

home news. How were things going? How were the troops getting over? When, and on what scale, would their brothers of the army get to work? What about the shipping program, ordinance, machine guns? Then what was the news about other antisubmarine commands? How were they doing? What did the recent changes at the Admiralty mean? Were more coming? What of France and the great expected German push? The Russian peace? Austria? The German strikes? Before I realized what had happened, the interviewer had become the interviewed. And I noted again a thing I had often noted before. If we are to believe the tales of travelers, whatever reputation or other things the Englishman or American enjoys abroad, he is seldom charged with overmodesty. He is, to put it mildly, generally thought to be something of a bragger. Perhaps I am not traveler enough to say whether this is, in general, a true bill. But one thing I have always found. It is that the genuine professional man is never overconfident and never boasts. He has too much respect for his craft; knows its difficulties too well; knows always the gulf between the task and the achievement. He knows, in short, that there is no end to learning; and he is wisely silent so long as there is anything to learn. And there is nothing conscious or artificial in the thing at all. It is this serious modesty of purpose that is the secret of the success of this outwork of the American navy—the secret of its brotherly concert with the British Service. It is above everything intensely, solely professional. And the result is extraordinary.

## The Two-Handed Sword

Continued from page 23

"Well? What is it now?"

"I—I—" the samurai hesitated. "I know the gas. I know how it is produced, how it is projected, how it affects the human body. I understand all that. But what is it for?"

"You—you mean to say you don't know?"

The professor twirled in his chair, utter incredulity in his accents. Then, reading the question in Takagawa's oblique eyes, sensing that the man was asking in perfect good faith, in perfect innocence, he rose, took him by the arm, and led him to the window. He pointed. Afternoon had melted into a soft evening of glowing violet with a pale moon growing faintly in the north. The linden trees stood still and motionless as if forged out of a dark-green metal. But still the soldiers tramped. Still there was the glitter of rifle barrel and sword tip and lance point. Still crowds packed the sidewalks, cheering. The professor made a great gesture. It was more than a mere waving of hand and arm. It seemed like an incident which cut through the air like a tragic shadow.

"They are going out to kill with bullet and steel. But gas, too, can kill—poison gas, projected from iron tanks on an unsuspecting, unprepared enemy! It can win a battle, a campaign, a war! It can change the course of world history! It can run imperial Germany's slavery down the throat of a free world! Poison gas—it is a weapon—the newest, most wicked, most effective weapon!" The professor was getting slightly hysterical. "Take it back with you to Japan—to France, to England—anywhere! Fight us with our own weapons! Fight us—and give us freedom—freedom!" And, with an inarticulate cry, he pushed the Japanese out of doors.

Takagawa walked down the Dorntheinstrasse like a man in a dream. His feelings were tossed together into too violent confusion for immediate disentanglement. "You will learn, not for reward and merit, not for yourself, but for Japan!" his grandfather, the old marquis, had told him. And he had learned a great secret—for Japan. And Japan would need it. For, passing the newspaper kiosk at the corner of the Wilhelmstrasse, he had glanced at the headlines of the evening edition of the "Vossische Zeitung":

"Japan Stands by England. Sends Ultimatum. War Inevitable!"

War inevitable—and he was a samurai, a man entitled to wield the two-handed sword, though his body was too weak to carry the burden of it.

What of it? The professor had told him that poison gas, too, was a weapon, the most modern, most effective weapon in the world; and he had its formula.

The poison gas! It was his sword!

But first he must get out of the country. He hailed a taxicab and drove straight to the Presidency of Police. A crowd of foreigners of all nationalities—nervous, shouting, gesticulating—was surging in the lower entrance hall of the square, baroque building. But the baron's card proved a talisman, and in less than half an hour Takagawa had seen Police Captain von Wilmowitz, had had his passport viséed and had received permission for himself and his servant Kaguchi to leave Berlin for Lake Constance on the following day.

CAPTAIN VON WILMOWITZ repeated the baron's warning: "Take nothing written out of Germany. Neither yourself nor your servant. They'll examine you both thoroughly at the Swiss frontier. Be careful," and Takagawa had hidden a smile.

Let them search his person, his clothes, his baggage. They would not be able to search his brain. He started figuring rapidly. He would go to Switzerland, thence via Paris to London. The Japanese ambassador there was a second cousin of his. He would give him the precious formula, and then—

He returned to the pension in the Dahlmannstrasse, settled his bill, and ordered Kaguchi to pack. Notebook after notebook he burned, and as he worked he was conscious of a feeling of power. There was no actual presentiment, no psychic preliminaries. It simply was there, this feeling of power, as if it had always been there. He was a samurai, and his was the two-handed sword—a two-handed sword forged in a stinking, bulb-shaped glass retort and shooting forth yellow, choking, sulphurous fumes.

In the next room a half dozen Germans were smoking and drinking and singing. He could hear Hans Grosser's excited voice, and now and then a snatch of song, sentimental, patriotic, boastful, and he thought that he too would soon again hear the songs of his fatherland, back in the island of Kiushu, in the rocky feudal stronghold of the Takagawas. The bards would be there singing the old heroic epics; the ukiyos would warble the old melodies. Komoto would be there, and he himself, and his grandfather, the marquis. "You will learn honorably!" his grandfather had told him. And he had learned. He was bringing back the fruit of it to Nippon.

He turned to Kaguchi with a laugh. "I have learned, Kaguchi, eh?"

"Yes," replied the old servant, "you have learned indeed. O Takamori-san!"

"And"—he said it half to himself—"I have learned honorably."

Honorably? He repeated the word with a mental question mark at the end of it.

Had he learned—honorably?

He stood suddenly quite still. An ashen pallor spread to his very lips. He dropped the coat which he was folding. Doubt floated upon him imperceptibly, like the shadow of a leaf through summer dusk. Something reached out and touched his soul, leaving the chill of an indescribable uneasiness, an indescribable shame.

"Honorably!" He whispered the word.

HE sat down near the window, looking out into the street. Night had fallen with a trailing cloak of gray and lavender. The tall, stuccoed apartment houses on the Kurfürstendamm, a block away, rose above the line of street lamps like a smudge of sooty black beyond a glittering yellow band. Still people were cheering, soldiers tramping.

Kaguchi spoke to him. But he did not hear. He stared unseeing.

He said to himself that he had come to Germany, to Berlin, as a guest, to partake of the fruit of wisdom and knowledge. Richly the foreigners, the Germans, had spread the table for him. Generously they had bidden him eat. And he had dipped his hands wrist-deep into the bowl and had eaten his fill in a friend's house, giving thanks according to the law of hospitality.

Then war had come. Belgium, France, England, Russia—and tomorrow Japan. To-morrow the standard of the Rising Sun would unfurl. To-morrow the trumpets would blow through the streets of Nagasaki. Peasants and merchants and samurai would rush to arms.

And he was a samurai; and he had a weapon, a weapon of Germany's own forging—the formula for the poison gas, safely tucked away in his brain.

They had taught him in good faith. And he had learned. Nor would he be able to forget.

Professor Kreutzer? He did not count. He was a traitor. But his friend, Baron von Eschingen, the Prussian samurai who had worked side by side with him, who had even helped him get away?

Takagawa walked up and down. His labored, sibilant breathing sounded terribly distinct. From the next room there still came excited voices, the clink of beer steins, maudlin singing:

*Von allen den Mädchen so blink  
und so blank . . .*

winding up in a tremendous hiccup. But he did not hear. In his brain something seemed to flame upward, illuminating all his thoughts.

They were very clear. He could not stay here, in the land of the enemy, while Nippon was girding her loins. Nor could he go home. For home he was a samurai, entitled to wield the two-handed sword. And he carried that sword in his brain, the formula for the poison gas. He would be forced—forced by himself, forced by his love of country—to give it to Nippon, and thus he would break the law of hospitality, his own honor.

He had learned the formula honorably. But there was no way of using it honorably.

A great, tearing sob rose in his throat. Then he heard a voice at his elbow: "O Takamori-san!"

He turned. "Yes, Kaguchi?"—and, suddenly, the answer to the riddle came to him. He looked at the old servant.

"You love me, Kaguchi?" he asked.

"My heart is between your hands!"

"You trust me?"

Kaguchi drew himself up.

"You are a samurai, O Takamori-san. The sword of Klushu is unsullied."

"And unsullied it shall remain! And so," he added incongruously, "you will speak after me the foreign words which I shall now teach you, syllable for syllable, intonation for intonation"; and,

step by step, formula by formula, he taught Kaguchi the meaningless German words.

FOR hours he worked with him until the old man reeled off the strange sounds without hitch or error.

"You know now?" he asked him finally, even as the professor had asked him earlier in the afternoon.

"Yes."

"You'll never forget it?"

"No."

Takamori Takagawa smiled.

"Kaguchi," he said, "you will go from here to London, using this passport." He gave him the official paper which Herr von Wilmowitz had viséed. "In London you will seek out the ambassador of Nippon, who is my cousin. You will tell him word for word what I have just taught you, adding that it is the formula of a poison gas and that this gas is mightier than the two-handed sword and will, perhaps, win the war for Nippon and her allies. You will

furthermore tell him—and let this message be transmitted by him to my respected grandfather—that I learned this formula honorably, but that I could not take it back with me to Nippon without sullying the law of hospitality, since the foreigners taught me in good faith. I myself, being thus caught between the dagger of my honor and the dagger of my country, have tried to make a compromise with fate. Honorably I tried to do my duty by Nippon, honorably I tried to keep the law of hospitality untainted. I do not

know if I have succeeded. Thus—" he made a gesture, and was silent.

Kaguchi bowed. His rugged old face was motionless. But he understood—and approved.

"You! Ah—" the word choked him.

"Yes," Takamori inclined his head. He used the old Chinese simile which his tutor had taught him. "I shall ascend the dragon."

He put his hand on Kaguchi's shoulder. "Come back here in half an hour," he said. "Fold my hands as the ancient customs demand. Then notify my friend, the German samurai. He will help you get over the frontier—with the formula safe in your brain."

And the servant bowed and left the room without another word.

The young samurai smiled slowly. An old quotation came back to him: "I will open the seat of my soul with a dagger of pain and show you how it fares with it. See for yourself whether it is polluted or clean."

He walked across the room, opened the mirror wardrobe, and took from the top shelf a dirk—a splendid, ancient blade in a lacquer case, whose guard was of wrought iron shaped like a chrysanthemum. Then he took off his European clothes and put on a voluminous white hemless robe with long, trailing sleeves. Very slowly he knelt. Carefully, according to the rites, he tucked the sleeves under his knees, to prevent himself falling backward, since a samurai should die falling forward. He took the dirk from the scabbard.

The next moment it had disappeared beneath the flowing draperies. He made a hardly perceptible movement. One corner of his mouth was slightly twisted, the first sign of great suffering heroically borne. His right leg was bent back, his left knee too. Then he drew the dirk slowly across to his right side and gave a cut upward.

Crimson stained his white robe. His eyes, glazed, staring, held a question—a question, a doubt to the last. Had he acted honorably? Had he—?

He fell forward. . . .

It was thus that Baron von Eschingen, ushered in by Kaguchi, found him.

"Hara-kiri!" he said, drawing a sheet across the dead man's face; and then, quite suddenly: "Yes—yes. I understand—honorable little beggar!"

**7 Blades for 35c**

**The Sealed Package**

**"The Best Blade in the Service"**

THE Gem Damaskene Blade is held high in the estimation of thousands of Uncle Sam's fighting boys in both services. It has earned its honor mark—and its efficiency and dependability—under all conditions—measures up to "Active Service" requirements.

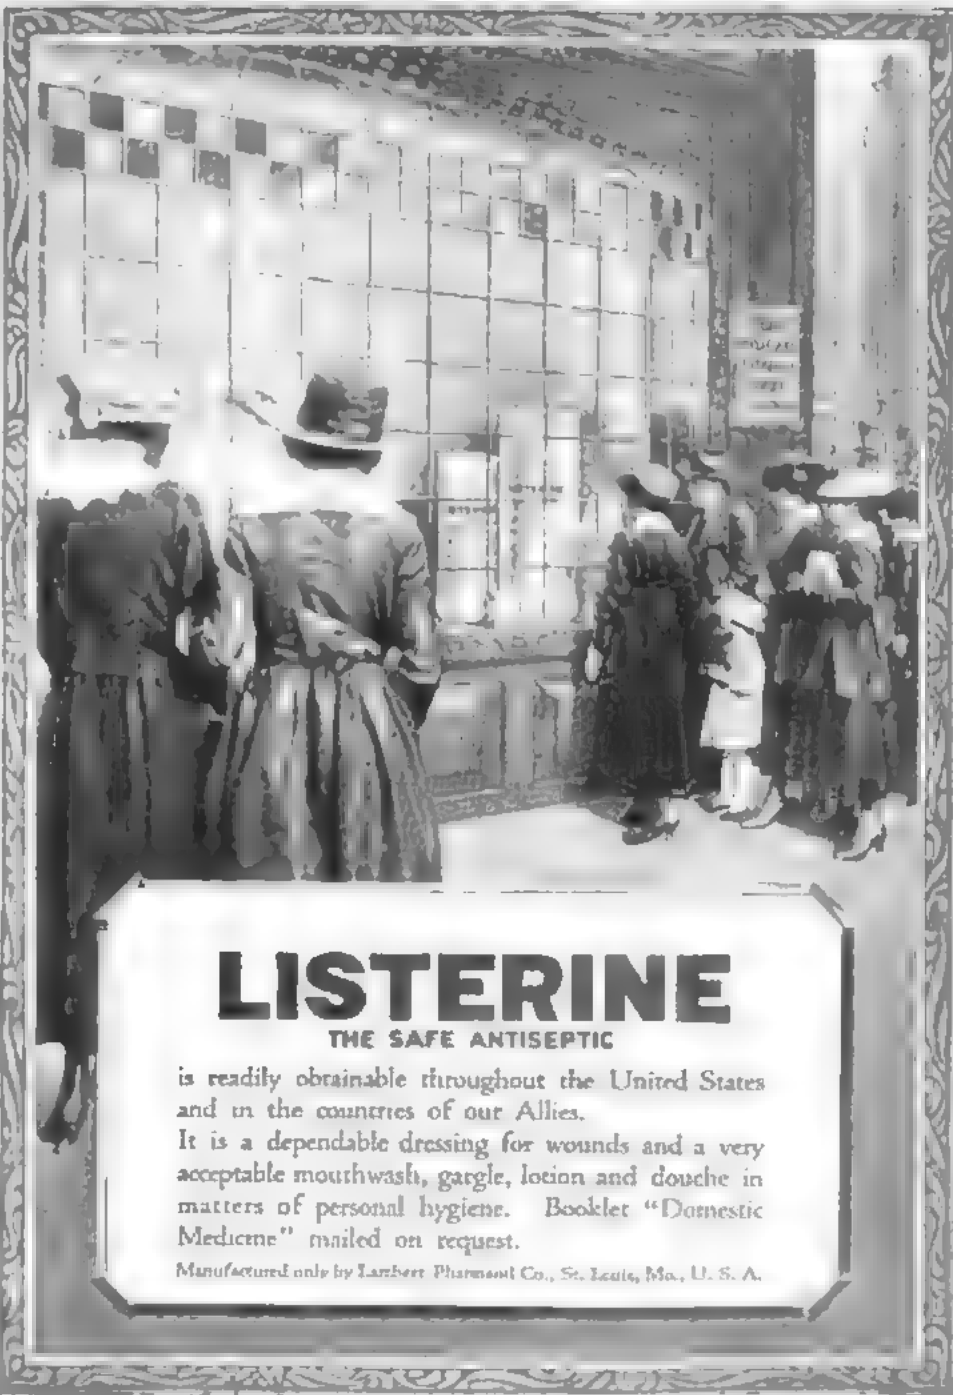

**\$1.00** New Special-Compact, Khaki Service outfit, includes Gem Damaskene Razor complete with seven blades and shaving and stropping handles.

In sealed, waxed-paper wrapped package—dust and rust proof—each blade protected—packet of seven blades 35c. 50c in Canada.

### The "Why" of the Hood Extra "Ply"

The famous Hood Tire sign is not far away from the sign of a Hood Dealer in your town.

Ask that dealer to show you the 5" construction sheet of a Hood Tire, or a 4 1/4", or a 3 1/2" if you prefer. Count the plies of finest fabric. Compare with any oversize tire of "standard" make. Note the excess strength of the Hood carcass, the full round shape, and the natural fit to your car rims.

When you have tried one, divide the price you paid by the miles the tire delivered. We leave the answer to you.

If you do not find a Dealer near you, look for him on the page opposite the contents page of the 1918 Blue Book. The Hood Dealer is somewhere near you.

Hood Tire Co., Inc., Watertown, Mass.

### The Easy Way To Mend Tubes

Touch a match to the non-flaming chemical fuel. In 5 minutes you have a perfect, lasting, "feather-edge" repair. So simple a child can do it. No acid, cement or gasoline. You can use this safety vulcanizer anywhere—in any weather. Carry it in your tool box—save cost of spare tubes and repairs.

**Complete Outfit (With 12 Patch & Heat Units) \$1.50**

The Vulcanizer, six round Patch & Heat Units for Punctures and six oblong units for cuts and tears—with full instructions, only \$1.50.

**Sold by Accessory Dealers and Garages**

Let your nearest accessory dealer show you how easily you can mend your tubes anywhere with the SHALER 5-Minute Vulcanizer. Write for Free Book—"The Cure of Tires."

C. A. Shaler Co., 1102 Fourth St., Waupun, Wis.

## Where Are the Airplanes?

(Continued from page 7)

ardized motor. But they ought to have adopted also the plan of immediate production of existing models on as large a scale as American factories could turn out. This latter plan would have resulted in the quicker delivery of planes for the present fighting on the western front—inferior planes, to be sure, but still entirely useful and most urgently necessary. The other plan would have resulted, and will result, in large quantities of a very superior plane for the fighting in the fall of this year. Both plans, carried along together, would have been a perfect program.

This dual system which the Aircraft Board ought to have adopted can be found in nearly any large factory, especially in automobile factories. In any large factory you will find, somewhere off in a corner, a room, or a floor, which is closed off, which does not share the regular steady hum of production in the rest of the factory. In it are engineers and laborers who work minutely with hand tools. This small room is the laboratory; in it is being perfected the machine which the factory is going to produce next year. But the main factory is organized for steady and uninterrupted production of this year's model.

Now, the Aircraft Board's mistake consists in this, that it focused all of its energy and time and resources on the laboratory instead of on the factory. Not only did it use all its own resources as a laboratory; it used the factories of the country, so far as it used them at all, as laboratories. That is the reason for all the complaint from factory owners of constant changes in design and blue prints. The factories couldn't get a final O. K. and a final "go ahead" order. This was very slow, wasteful, and irritating to the manufacturers.

The Aircraft Board sacrificed everything to perfecting a superb 1919 model, doing little toward producing machines of the present 1918 models, and it is the 1918 machine which is this month most sorely needed on the western front.

Last July, nearly a year ago now, one of the greatest of the French generals gave to an American newspaper man a message for America on the subject of airplanes. The transmission of that message to America was forbidden twice, first by the American military authorities and later by the American Ambassador, Mr. Sharp. The essential part of that suppressed message reads:

"America will therefore need to make great haste if she wants rapidly to attain big results. She must not hesitate before any effort to act quickly and accomplish much. Equip yourselves as if the war were going to last ten years, but speed yourselves as if it were going to end in six months. Above everything, use speed."

That was the need, eloquently and forcefully put. The Aircraft Board met only half the call.

One wonders whether we Americans have a temperamental weakness on this point. We did the same thing about rifles. We did the same about machine guns. We declined to get busy with existing models. We perfected a model of our own. Our new model is a wonderful gun, but we were not ready to make it until several months after we were in the war. The quest for perfection is admirable, but it is slow. And the Germans move fast.

It may be that this sort of thing reflects either the American mental attitude or the army mental attitude. Or possibly it is Secretary Baker's mental attitude.

### Stifling Ingenuity

THE Aircraft Board's decision to focus on one model, and one model only, had another unfortunate result. Once the model was adopted, in the shape of the Liberty motor, all the initiative and ingenuity and energy of all the engineers and inventors and factory managers was discouraged. It was as if some Government board, or, better, some Liberty board, had ordered that the only way to make a motor for automobiles was the Ford way, and that all the engineers and inventors must be content to improve on Ford's design, and not to make a motor of their own. That would have had some very bad results. It would have discouraged a large number of automobiles, and a large number of inventors. We should have had the benefits of standardization, but not a nut, or any part, from

one automobile would have fitted into any other automobile. (These benefits, applied in the Liberty motor, will be apparent and potent in action on the western front.) But the adoption of the single Ford model in 1905, with the suppression of all other production, would have deprived us of most of the invention and development which have given us several automobiles which are faster than the Ford, more powerful than the Ford, and in a score of ways more desirable than the Ford. This discouragement of engineers, factories, and inventors devoted to other models than the Liberty has formed a measurable part of the criticism of the Aircraft Board.

"Standardization," says the editor of "The Aeroplane," "is a dangerous game to play with so immature a product as the aeroplane and the aero engine."

### One-Man Control

WHAT precedes covers the fundamental decision of policy which lies at the heart of the uproar of criticism. There is one other difficulty. This second difficulty is characteristic, not of the Aircraft Board alone, but of most of the war work at Washington.

Even Henry Ford in his blanket indorsement of the Aircraft Board admitted this second trouble. He said: "The chief trouble has been with the form of organization. I have endeavored to advise the Washington authorities in this matter, and I now believe that we have worked out a plan which will roll out any little wrinkle that might appear."

Now this "chief trouble" which Mr. Ford referred to is indeed a chief trouble. It is lack of centralized responsibility. Because there is another man who can express it with more force of authority than I can, I shall quote him. The authority is Rear Admiral Robert E. Peary, chairman of the Aerial Coast Patrol Commission:

"The production of aircraft is an incident. It is an incident not merely of one, but of more than one other activity. To name only a portion of the boards which have a finger in it, there is the Aircraft Production Board, the Aviation Section of the Signal Office of the War Department, the Joint Army and Navy Aviation Board, and the Aeronautic Advisory Committee.

"The Aircraft Production Board is responsible equally to the army and the navy. On the side of the army its head is the chief signal officer of the army. On the side of the navy its head is chief of the Bureau of Construction. Not only has it two heads, but each of those two is also the head of other activities. Its head on the side of the navy has also upon his shoulders the entire responsibility for the construction and repair of the ships of the United States navy. Exigencies of war might necessitate his going to Great Britain, and his place on the Air Production Board would be filled with an officer unfamiliar with the work. The army half of the two heads is also the chief signal officer of the army, Brigadier General Squier. He is first of all an army officer; he has responsibility for the army means of communication, the wireless, the telegraph, the telephone—all the army's ears and nerves.

"Many of the officers working on the air program already had upon their shoulders a man's load before they undertook this additional work. Numbers of the officers connected with our air program are primarily army and navy officers, and as such the army and navy have first lien upon them. There have been five different heads of the Aviation Section of the army within ten months.

"I submit to business instinct the fundamental axioms that divided control and a transient personnel are fatal to speed and efficiency.

"The submarine has held the world's spotlight for the last two years. Its deadly efficiency is universally conceded. That deadly efficiency is the direct result of Admiral von Tirpitz's unyielding insistence on a centralized, independent, untrammelled department for the submarine.

"We must adopt the same methods if we expect to attain equally deadly efficiency in the air.

"We must have a separate, independent Department of Aeronautics to handle all the governmental activities in that field; a department which shall have a permanent personnel of men

# PAIGE

*The Most Beautiful Car in America*

The Motor Car is one of the most efficient Time and Labor-saving devices that has ever been developed. For this reason it has been adopted as *standard field equipment* by wide-awake executives in practically every line of business.

The stern necessities of war have placed a premium on our national productivity—and the motor car has demonstrated that it is economically sound as a producing factor. By conserving Time it multiplies the usefulness of man. By conserving energy, it fosters the broadest and fullest expression of his creative ability.

The Paige is merely *one* of America's high grade motor cars, but we are proud of the part that it is playing in this National Crisis. In no small measure we realize our own responsibility, and the various Paige models will continue to merit the respect and confidence which have been so generously reposed in them.

## Seeing Alma First

(Continued from page 26)

I reck'n all of the boys is here. You kin count them for yourself. Did you all say what your bizniz was?"

"You mought call me a traveling man," Allingham says.

"What line?" says Brad.

"The line of least resistance—jest now," says Allingham. "And my friend here, Mister Lem Allen," he says quick, afore Brad could speak at him, "is a author."

"What all is he author of?" says Brad, putting on his spectacles which he took out of the cash rediahter box and looking at me suspishua like he thought Allingham was lying. Which he was.

"Only short stories," says Allingham, "so fur."

"Well," says Brad, "they's wuss trades than the author bizniz, I wouldn't wonder. School-teaching, fringtans."

"That there ain't a trade," says Allingham, "it's a marderdom!"

So Brad says: "Well, I reck'n you fellers want a bed. Beds is four bits and meals is two bits each, hoes feed extry."

"I b'leve we could do with a couple of beds," I says. So we went over to the hotel and didn't take long getting to sleep, because we was sleepy.

I WAKED up right early in the morn'ing and begun worriten, because here we was owing mighty nigh all our capital for room rent and breckfast and a eye op'ner we hadn't dranked yit. And no ways I could figger of getting outen the tight. Allingham was asleep and I didn't aim to wake him. I imagined I was doing enough mental wrastling for the two on us.

But mebbe my being agitated that-away stirred up the air uncomfortable, for soon Allingham twisted around a couple of times and come alive.

"What are you doing setting up in bed this ungodful hour for, Lem?" he says.

"I'm worriten," I says.

"Shucks," says Allingham.

"We got reason to worry," I says; "a feller's got to live."

"Lots of fellers don't," says Allingham cheerful, "in the long run. But quit being downhearted, you'll spile my appetite, which is so fur so good. You got to buck up, Lem! When a feller's broke is jest the time he should brush up and putt on a clean collar and fasten a smile onto his face and offer to lend his prospectif bennysfactor money. In short, all you got to do is look like ready cash, and first thing you know you kin shed your disguise, because you won't need any."

"I ain't got ary clean collar," I says.

"Well," says Allingham, "tie your handkerchief around your neck and attack the finger boles v'lent at breckfast and leave the rest to me. And chirrup, if you got any regards a-tall for my feelin's."

"And besides that, what?" I says.

"It looks like to me," Allingham says, "that we got to stay here at Almy for a spell."

"What on?" I says.

"I dunno, less'n it's sufference," says Allingham.

"It's got to be something more substantial than that," I says, "if I ain't got this yere Brad Thomas figgered plumb wrong. I b'leve he's right close. I wouldn't undertake to pry a nickel from him, not for a hundred dollars!"

"We got to git to work," says Allingham like he'd done made up his mind.

"Yes," I says, "I think it."

"In some ways," says Allingham, "the idee don't hold no lure a-tall, but in other ways it kin be countenanced. When I think of work in contrast to being idly rich, or richly idle if you preefer, my mind shudders at the pitcher of toil and settles like a hungry butterfly onto the latter concept. But when I see starvation and work walking hand in hand towards me, I xclaims with the pote: 'Lives they a man with soul so dead which never to hisself has said I'll try anything once!' And I embrace work."

"Supposing they ain't no work," I says.

"They's allus work," says Allingham. "The pinch comes when a feller wants to git paid money for doing it. It's the old, old fight of labor for capital."

"I dunno what we could do," I says.

"I don't b'leve they want any cook yere, so that lets me out. And you ain't never give no proof of being right verastyle as a lab'ring man yourself."

"You fergit," says Allingham, "that work is one them double intended words

which can be used in the trans'tif or the intrans'tif or the subjectif or objectif or the pers'nal or gen'ral."

"What are you talking about?" I says, impashunt.

"Work, a lass!" says Allingham.

"What I'm gitting at is we kin work ourselfs or we kin work somebody else, the latter procedure being more biznizlike and therefore more remuneratif. Do you ketch my drift?"

"Do you mean stealing?" I says.

"I kin tell you better later," Allingham says, "when I see whether we git away with it or no."

"I don't want to run no risk of gitting into trouble," I says. Because I'm cautious.

"You got to run risks to git easy money," says Allingham, "less'n you're rich to begin with. Confiscation is agin the law unless the feller committing it kin prove he don't reely need the money but is jest taking it with the idee of protecting sassity by keeping wealth in respectable hands. Then he's called a bullwork of the nation instead of a thief. Or leastways that's what they tell me."

"I don't know as I'd like to be called either of them two," I says.

"Oh, we won't have to chance nothing so hazardous as that," says Allingham. "I got a better idee, based on the principle that the only thing worsen ewing money is not being able to owe it. My idee is to see if we kin run up a bill with Brad. We'll likely make some money afore long to pay him back with. And anyway we can't be no wuss off than we are now."

"We mought be in jail," I says.

"Well," says Allingham, "if you ain't satisfied with my plan you best sudget a better one."

But I couldn't think up nothing, although I tried, and then I thought: Oh, well, owing a bill ain't a crime and besides I didn't figger we could git credit with Brad nohow. So I just says: "Well, I'm agreeable."

So we walked over to the salloon and found Brad augrin' with a feller about whether the feller should git a drink or not. When we come close up we found it had been decided not. So I ordered the drinks and we all had one.

I didn't think it a right favorable moment to approach Brad, but arter Allingham had swallowed down a couple of fingers of whisky he taken a deep breath and hitched at his trowls and begun to look pensif, like he was meaning some devilmint.

Then finely he says: "Brad, you done made a grate hit with me. I dunno when I met a feller I could talk with more soshable. I been figgering out how me and Mister Allen could do you a good turn. Without losing nothing by it, that is."

"Did you say 'do me to a good turn'?" asked Brad.

"No," says Allingham, "you disturbed my words."

"The words ain't noways as important as the meaning," says Brad, glancing keerless at the cash rediahter. Then he taken out his spectacles and putt them on.

"Now," he says, tapping his head caushus with one nuckel, "I'm knocking wood, young feller. Make your talk!"

"First off I b'leve we better have another drink," says Allingham.

"This one's on the house," says Brad, "and if the balance of your speech is as dry as the first stanza, you and your friend kin drink all you've a mind to till the perorashun comes."

"Look out for a flibuster!" says Allingham, laffing hart'ly like he'd said something funny.

I RECK'N he wanted to git Brad into a good humor, but Brad didn't laff hardly a-tall. He jest says: "You kin shoot Griddel when ready!"

So Allingham taken another drink and says: "First I better tell you a little about myself."

"Be shore it's little and make it pethy if possible," says Brad.

"I got a duel persnality!" says Allingham, leaning over and whispering like it was something right important. "I'm allus at war with myself!"

"Hit ain't noways uncommon," says Brad, yawning.

Allingham didn't look discouraged hardly any, but kept right on talking. "Sometimes my better nacher gits on top," he says, "and sometimes my animal tennencies is vict'ryus."

"That ain't nothing to me," says Brad. "What is it you're wanting?"

# TarVia

Preserves Roads  
Prevents Dust—

## Let Us Introduce You to a Town That Believes in Good Roads!

Did you ever see a more interesting lay-out of a city than this of Madison?

Lake-fronts at top, bottom, and end. And what a waist-line! A lithe young American city of the very best and most progressive type.

Its streets are its special care. Its motor-cars are so many, its trucking is so heavy, that the town demands streets that are dustless, mudless, and bumpless.

Therefore, it is a Tarvia town.

Note the black lines in the map: those are Tarvia streets—39 miles of them.

Madison began with Tarvia in 1908. The people liked it so well that street after street has been treated with Tarvia.

The officials gave the people what they wanted, namely, streets without dust, without mud, without noise, and without big maintenance expense.

Madison continued to use Tarvia extensively during 1917 and the Tarvia mileage in Madison will be bigger this year. For Madison, like hundreds of other American

(Upper picture)  
Madison Street, Madison, Wisconsin, constructed with "Tarvia-E," progressive method, 1917.  
(Lower picture)  
Depot Street, Madison, Wisconsin, constructed with Tarvia. Notice the old macadam base, 1911.

Towns, has found in Tarvia the solution of the vexatious road problem.

The Street Superintendent has written recently in a published article about the streets of Madison:

"We have been informed by officials from various cities who have visited Madison to inspect our streets and obtain cost data of maintenance that we maintain our streets at a lower cost than any other city in this section."

Now, when the nation needs good roads so that motor-trucks can help out the great railroad congestion, it is more important than ever that every community should investigate the road proposition thoroughly.

To any one interested we should be glad not only to send our regular good-roads literature, but to give advice on specific road problems.

### Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department, which keeps up to the minute, on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity the matter will have the prompt attention of experienced engineers. This service is free for the asking. If you want better roads and lower taxes, this Department can greatly assist you.

"A chance to talk," says Allingham, irritable.

"Well," says Brad, sinking his head onto his hand wearily; "go to it. Only remember I ain't had no sleep last night to speak on. Nor to listen on neither!"

"Yere it is in a nutshell," says Allingham. "Some time since I found myself possessed of considerable money and I begun to think: 'Here, this ain't right!'"

"You was what wasn't right," says Brad. "You should of been putt to the sanitory test. They should of got you then!"

"They didn't, though," says Allingham, "because about that time they was a crusade agin money started and I found myself plumb in the fashion, having learnt to hate the horrible stuff thataway."

"That there brand of insanity never reached Almy," says Brad.

"It ain't nothing strange nor new, however," says Allingham. "They been abusing money offen on ever since the first coin was struck. If money could talk like they falsely say it kin, what a plumb pitiful story we would hear!"

"Money would allus find a friend in me," says Brad. "It wouldn't never have to call on my name in vane moren once."

"Well, that's the way I used to feel long ago," says Allingham, "afore I got this idee I was telling you of and noticed it was gitting disreppitable to have any doin's with money a-tall. I recall when I first seen the light. 'Twas one night when a friend says to me susplahus: 'Didn't I see you with money last evening—when did you git crooked?' That was the turning pint for me!"

"Since then," Allingham says, "money and me has been, if not strangers, at least only caswell acquaintences. We win't seen together but seldom, and at this partik'lar moment my character is unsalable and withouten stain or belmish. I kin stand up and face the sun rising in the yeast and swar on a stack of almanacks a foot high I ain't shook hands with a cent for days!"

"Is your friend afflicted the same way?" says Brad shortlike.

"Not from prinsipel," says Allingham. "He ain't clumb to my spirit-school level as yit. But the author biznix has been right trifling of late, and the results attained is similar."

"Are you fellers broke?" says Brad. "Hit's putt crude," says Allingham, "but I wouldn't say we wasn't because it would be a ontruth."

"You could of passed me that information in three words," says Brad, "and I could of answered in one. Lookit the time and licker you've wastid!"

"In the first place it ain't been wasted, and in the second place I ain't finished my argyment yit," Allingham says. "Here's my idee; it come to me whilst I was a-figgering things out that p'raps you and Mister Allen and me could make muchoolly advantage arrangements by leaving you extend us the right hand of fellership and a sufficient line of pers'nal credit to do us till we git in funds agin. It seemed like a right good idee to me."

"It ain't no idee a-tall," says Brad, "it's a false hope. Amongst the few things charged in yere is not 'xpensive drinks. The only credit I'll gin you-all is for the honesty of your intentions in trying to owe me money. Kin you pay your present bill?"

"We kin if it ain't too much," I says. "Well," says Brad, "I'm waiting for the proof."

So I disklivered we could pay the bill, and I done so and kept forty cents which was left over. Then we went outside on the salloon porch where they wasn't so much temptation to spend the forty cents and begun to figger out some more idee about working.

IT was evening before we got a idee how we was to earn our living. And then we didn't exactly light on the notion by ourselfs. It come trickling up from behind like one them onry Mexican dogs which the first thing a feller knows they're nigh is when they takes him by the undefended sector of the trowsis, as you mought call it.

We had spent the best part of the day on the salloon porch where it was warm in the sun and we could see the stream of traffick pass by on the road. Only it wasn't a stream hardly, it more closeter resembled an arroyo, which is dry and empty. They wasn't no wild Western life visible a-tall.

"This is shore a bustling little set-

tlement," I says to Allingham, arter we'd watched a spell without seeing nothing more exciting than the seven citizens what dropped into the salloon offen on, and a burro nibbling lone-some onto some tin cans in Brad's back yard.

"Yes," says Allingham, "it is plumb lively here. They tell me a feller was kilt in front of the post offis last week and they didn't diskliver the corps till three days arterward."

Then Allingham reached into his pocket to git out the makin's and drewed out a cent instead, which he didn't know he had.

"Lookit!" he shouted with his eyes glistening.

"What about it?" I asked.

"Why, now we kin gamble more than the time away, till a idee comes to us," says Allingham. "You got forty cents, ain't you?"

"Yes," I says, "but what way kin we gamble? They's a poker game going on and we can't use the cyard table."

"We kin play pool," Allingham says. "I can't," I says; "not for money!"

"I'll show you a right new and interesting game," Allingham says.

So we went into the salloon and Allingham stood at one corner of the pool table and rolled a ball around the table with his bare hand, hitting on three cushions, and the ball come back to where he was standing and dropped into the pocket thar.

"The one who kin do that the most offen by trying with the hull fifteen balls," he says, "gits the money."

IT looked right easy, so I says "All-right!" and Allingham putt up his cent and I putt up a cent and I got three balls outen the fifteen into the pocket and Allingham got four. So he win.

Then we bet two cents a piece and Allingham win again. Then we bet four cents a piece and I lose. And in about half an hour or sech a matter Allingham was wuth forty-one cents and I was broke.

"It ain't as easy as it looks," I says. "No," says Allingham; "it's shore a money maker."

So I didn't say no more then, and Allingham begun rolling the balls around and whistling loud and cheerful and d'rectly some of the fellers sweating the poker game come over and begun watching, and finely one of them says: "What all kind of a game is that there?"

"It's a plumb simple little gambling game," says Allingham, and then he explained the workin's of it to them.

"I b'lieve I kin play that game," says Sim Wood; "let's start playing at a quatter a piece!"

So three-four of them putt up quatters and Allingham putt up twenty-five of the forty-one cents he had win and I agreed to hold the stakes, and then they begun to roll.

ALLINGHAM win the first game and a dollar and then he lost the second game and then he win two-three games hand running.

"Yere," says the feller which had win the second game, "this yere's a fascinating pastime, only the stakes ain't high enuff to putt a man onto his metal. Let's play for a dollar a throw!"

So that's what they done, only nobody win ary game arter that but Allingham.

Finely one or two dropped out because they was broke, but in the meantime the poker players, hearing the shouts of mirth and deviltry, had quit their cyards and gathered round the pool table to watch. And as fast as one feller dropped out they was more to j'ine in.

Sim Wood, who was a big feller that looked like he'd wear about a number seventeen collar and p'raps a number six hat, running more to heft than head as they say, was shooting better than the rest, and he win every once in so offen.

But still Allingham kept gitting a bigger lead all the time, and my pockets was plumb full of money.

Then finely Brad, who had been watching the game from a loof, come over and says to me: "What is it your friend is starting round yere?"

"Hit's a new game," I says.

"And what mought be the name oc it, if I ain't overly inquis'it?"

"It's called Pickpokkit Pool," says Allingham, coming up jest then arter shooting his turn.

"Well," says Brad, and then he

## CICO\* Paste Prevents Waste

When you buy CICO it's ready for instant use and it stays ready. You never have to throw half of it away because it gets hard and dried. As long as there's any paste left it's usable.

You'll find a score of ways of using this handy, economical paste—so always keep CICO in your home and office. No messy water well to fill. No trouble with the brush ever getting stiff and lumpy.

Remember, CICO sticks best when spread thin.

says: "Seems like you're gitting together a slug of money, Mister Allingham!"

"Yes," says Allingham, keener, "I ain't counted it yet, but I reckon afore we git through me and Lem will have enuff so's we kin snap our fingers into the face of toil. We will likely be above sordid considerations of expeditiousness then!"

"Well," says Brad; "I got a word to say, and that is that if you git outen this simple and onassuming community with the money you got in your friend Mister Allen's pockets you will have to show more of that there expeditiousness than anybody's had what's been through Almy for the last twenty year or so."

"What do you mean?" asked Allingham, giving a startle.

"I mean this," says Brad; "if my ears don't deceive me I kin hear the best part of all the loose money in Almy jingling not two feet away at this minit, and these fellers yere ain't agoing to part with it perm'nent without something happening first. They been sending scouts around town for the best part of a hour to draw in new blood and silver dollars in the hopes of winning back their capital by honest gambling. But if they fail thar, watch out!"

"Holy Hossifat!" says Allingham, looking plumb backed. "Shorely them fellers wouldn't do a unsportsmanlike trick like shooting up a stranger because he win their money. Why, it would be cold-bloodit murder on their parts!"

"Either that or hot-bloodit soccide on youn," says Brad. "Depending on how a feller xamines the a fare. Because this yere game's got beyond sport now; it's degenerated into a matter of bizniz. And, as you are doubtless aware, bizniz is war and war is hell. Specially if you're outnumbered and outshot."

"We got the most amount of metal," says Allingham, doubtful.

"It ain't the right kind for a mix-up in this yere lokal'ty," says Brad. "Coming down to cases, they was the case of a feller come through from Santa Fe not long ago, riding one of the best hosses I ever see. He was a gambler and he left here with a considabel amount of money. And a couple of days arterwards they found he had shot himself accidental down the road a piece. He was plumb dead."

Allingham begun to look right solemn and says: "Forewarned is disarmed. What would you do if you was me?"

"In the first place I wouldn't be you," says Brad; "the idee's redik'lus. But I should say offhanded that your ackshuns will depend on which is the strongest, your avarishness or your desire for a safe and pleasant voyag'hence. You got to rec'lect that a vessel from a neuter country ain't the only place in the world where a innocent traveler kin meet up with a accident!"

ALLINGHAM'S turn to roll the pool balls come round about then, but he didn't preform with the same sperrit and dash, as the feller says. Nor I wasn't nothing loath to see him lose seve'l games and feel my pockits getting lighter. Seems like I'd plumb lost my taste for packing round such a onwerldly amount of money.

Soon they come a lulling in the game and all them Almy fellers got in a bunch by theirselves and begun talking and I begun counting up what I held. It amounted to nigh six hundred dollars, which seemed a hull lot of money when broke up small.

Brad noticed what I was doing and he asked me how much was thar and I told him.

"How much did you start out with?" Brad asked Allingham.

"One cent!" says Allingham.

Brad begun to whistle reflectful and finely he says: "You got a nerve, ain't you?"

"I ain't totally lacking in moral courage," says Allingham, "if that's what you mean."

"I was speaking more partik'lar of immoral courage, commonly called gaul!" says Brad.

"You kin callit what you're a mind to," says Allingham; "it's did me yoman's service this day."

"Remember," says Brad, warning-like, "he laffs best whose laff lasts!"

"Sho!" says Allingham, indifferent.

"And another thing," Brad says; "this ain't no laffing matter nohow. My idee is when them fellers makes their final splurridge, you best leave them win back their money."

# Keds

## The Most Comfortable Hot-Weather Shoes

LAST year many thousands of persons who tried to buy Keds were disappointed. The enthusiastic welcome accorded these high-class, rubber-soled canvas shoes left us unable to take care of the public's huge demand.

For the coming season we have made careful preparations for supplying customers.

There should be no difficulty in obtaining these good-looking, durable sport shoes this summer.

The fine quality of Keds workmanship is beyond dispute. None but materials of unquestioned value are used in their manufacture. For style, economy and comfort, Keds are indeed, without equal.

You may wear Keds on all occasions—at home, at the club, at the office, on the street, in the country. Whatever the business or pleasure, there is a style to suit you.

More than 50,000 dealers in the United States stock these shoes in a large variety of styles. Each pair carries with it the reputation of the largest rubber manufacturer in the world.

Keep these three grades of Keds in mind when buying. The name is on each shoe.

## POWDER IN SHOES AS WELL AS GUNS

### Foot-Ease to Be Added to Equipment of Hospital Corps at Fort Wayne

Under the above heading the Detroit Free Press, among other things says: "The theory is that soldiers whose feet are in good condition can walk further and faster than soldiers who have corns and bunions caused in raw hides."

The Pittsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning.

One war relief committee reports, of all the things sent out in their Comfort Bags or "Kits," Allen's Foot-Ease received the most praise from the soldiers and men of the navy. It is used by American, French and British troops, because it takes the friction from the shoe and freshens the feet. There is no foot discomfort equal to Allen's Foot-Ease, the antiseptic, healing powder to be shaken into shoes and sprinkled in the foot-bath, the standard remedy for over 25 years for hot, tired, aching, perspiring, smarting, swollen, tender feet, corns, bunions, blisters or callouses.

Why not order a dozen or more 25c boxes today from your Druggist or Dept. store to mail to your friends in training camps and in the army and navy.

RAISE BELGIAN HARES For U.S. ARMY PROPS meat and dressings made in U.S. raised abroad and pay for it in U.S. and are representative for all other hares and rabbits in U.S. NATIONAL FORD & FUR ASSOCIATION CHICAGO, ILL. Sept. 76

"Well," says Allingham, "I will think over it."

Jest then Sim Wood broke away from the Almy feller and come walking towards us.

"I been choosen to reppisent Almy in the wind-up of this here gambling contest," says Sim. "Some of the boys has got weak harts and we decided not to spin out the agony any longer. You got about three hundred dollars of our money and we got about the same amount left. I'll roll you for a hundred dollars a game till one of us is bust. What do you say?"

"I say you're taking a big chance of getting cleaned out," says Allingham. "but it's all right with me."

"Well," says Sim, "let's git going."

So Sim and Allingham gathered around the pool table and the rest on us stood back and watched.

They throwed up a nickel to see who would start, and it was Sim's first shoot. So he taken the fifteen pool balls and stood at one end of the table determined and everybody held their breth.

Then he rolled caushus and the ball dropt in the pocket slick as you please. And all the Almians set up a yelling so's you couldn't hear yourself think, till Sim moshunned them to stop.

Sim missed the second ball, but got the third, and then he missed seven in koncushion and the Almians begun to look right discouraged. And when they found out he'd only putt down six balls outen the fifteen they done some right clever cussing to theirselves. And anybody else who wanted to listen to it.

But they didn't make no noise when Allingham got up to roll; only glanced at him right earnest. I reck'n, though, if wishes was hosses, he'd of been kicked in the back a couple of times afore he'd growed a minit older.

ALLINGHAM seemed right nervous when he begun to roll and he missed the first four-five balls, which clotted up around the pocket so's they blocked the way for the others. He cussed once or twice, but not right convincing. And afore he'd got through I'd begun to figger he'd took Brad's advice and was playing off.

He only got four balls to Sim's six and you should of heard them Almy fellers holler. "Twas plumb sickening and I begun to wish Allingham didn't have to lose thataway. I felt as if I'd jest as soon take a chance on the results if he win. If he'd carry the winnin's, that la.

Sim acted right jubilant. "Hit's more easy sometimes to pre-dick winning than put her over, ain't it?" he says to Allingham, sneering.

Allingham didn't say nothing, only got right red in the face and looked at Sim plumb vishus. Then he called for a drink and took his place to shoot. And then he give a sly smile at me right cold-blooded like he was meaning for me to git ready for the worst, and then he begun to roll. And twan't maren a second afore I see he was cutting her the best he knew.

It shore done me good to see the way he putt them pool balls in their place. And every time he rolled the Almians give a grone because I reck'n they had a feeling the balls was awairst not to go where they was sent.

Well, when he got through shooting they counted up eleven balls and the best Sim could do was to git six, which was right good for him. But nobody yelled about it only me. My voice sounded right lonesome. But the exercise gin me a heap of plesshur, and that's a fact.

Then Sim says: "Lookit here, Mister Allingham, let's putt all we got left on the one game and finish her up."

So Allingham says "Allright!" and they turned over the money to me and then they shoot; but they wa'n't nothing to it only Allingham. He win standing still, as they say.

Then Sim walked over to the bunch of Almians, and they-all begun to talk together plumb bitter. It gin me the creeps to watch them arter what Brad had been saying. So I made haste to give Allingham the winnin's, which he shoved into his pocket absent-minded like. Then he says to Brad: "I wisht you'd take keer on my vallybles in the safe, Brad!"

"No," says Brad severe, "you done made your bed, now you got to lie on it. And if the corncocks in the mattress pokes up into your frame you got only yourself to blame."

"Well," says Allingham, "I reck'n it's the price of success; oneasy lays the head what's going to be crowned!" "I warned you not to win," says

Brad, "but you wouldn't listen. You're like all these headstrong fellers, you got to glom onto easy money when you see it. If you should apply your talents respectable and git working in some legitimate industry, you could earn all kinds of money. I wouldn't wonder."

"Yes," says Allingham, "but I wouldn't git it. Or only the small kinds, like nickels and dimes. And feller what works in one them legitimate industries ain't got no more sense than a snowbird. It's the clever fellers which owns the industry and therefore don't have to work in it that gits the high-living wages."

"You didn't talk so smart ellicky this morning," says Brad.

"No," says Allingham, "I was broke."

Then jest as Brad started to say something, the salloon door swung open and that Mexican sherreff busts in, waving a couple of guns around his hat plumb feeroshus.

"I hear the law's been broke," he hollers. "Where'bouts is the culprits?"

ALLINGHAM give a start, but the sherreff had him kivered and hollered agin: "Don't nobody move! It ain't nothing to me if I kill a couple of three fellers. It's come to my ears that they's been gamblin' going on yere for money, and it's my dooty to make a 'xample of the fellons."

"Are you arter the losers or the winners?" says Brad.

"The winners," says the sherreff, indignant; "how could I arrest them withouten they had ev'dence onto them?"

"Well," says Allingham, looking cress-falling, "it is tag day for me. I'm it. I reck'n I got about all the ev'dence in Almy onto my person at this minit."

"Aha!" says the sherreff, "I'm glad you owned up so frank. I'll mention it to the persecuting attorney and it won't be held agin you. In the meantime you're a restid."

With that he taken all the money offen Allingham and says: "Now you're released on your parole!"

Then the sherreff backed out of the salloon door without no more said.

Well, sir, it was plumb surprising, and the funny part of it was nobody amongst the Almians made no move to foller the sherreff. They jest stood around looking solemn.

"Whyn't you chase arter that dobey colort raskil and git that money back?" says Allingham to the fellers.

"We ain't prepared," says Brad, saying. "Why don't you follow your own idee?"

"If they's any fl'in' to be did," says Allingham, waving his arm right eloquent, "me and my one friend will be found in the front rank. But it don't do no good for us leaders to go out by ourself. Give us the men and we'll guarantee to git 'em so worked up they'll be dis'p'inted if they don't come back dead."

"You come to the wrong place for that kind of talk," says Brad cold. "we're peaceables here. We go on the prinsipel here that a soft ans'er turneth away wrath!"

"Hit may," says Allingham sarkastik, "but yit it ain't a right good shield agin a soft-nose bullet. I'm a-swear they's a lot of fellers like you going round shouting for peace at any price they kin git for their speechmaking; but hit's been my experience if a feller's got anything wuth gitting they'll allus somebody willing and ready to relieve him of it at his inconvenience, less'n he keeps his eyes open and his guns lled. You'd ought to git prepared, and you'd ought to git out and catch that robber. Who's game to foller me?"

ALLINGHAM looked around when he'd finished his discussion and found that they wa'n't nobody left in the salloon only him and me and Brad. The Almians had all snook out quiet, seems like, while we'd been augin'.

Then Brad begun to laff: "The boys is out dividin' up with the sherreff now," he says. "I told you fellers they'd git their money back; but they used more tact than I 'xpected. You kin consider yourselfs lucky."

Well, Allingham looked right hacked. "How fur is it to Silver City, Mister Thomas?" he says.

"Around eighty mile, they callit," says Brad.

"Well," says Allingham, "I got a enemy at Silver what I'm convinced wouldn't see me starve, because he's waiting to attend at my hanging. Let's go, Lem."

That's what we done. Went, I mean

## The New America

Continued from page 9

of hostilities and to what extent he yielded to pressure is still point for discussion. But what is not doubtful is that to-day the appeal to the German strikers at the moment of an incipient revolt was signed, not by the Kaiser, but by that military autocrat who represents the centralized determination of the Pan-Germanistic party.

The state and not the Kaiser is exalted to the dignity of a faith. It is a faith if it still lacks a church of its own. If there is not a German religion, there is a German god—that German "God" so often invoked by the Kaiser, so often the cause of merriment to those who do not perceive the true significance of its relation to the German idea—the necessity of founding centralized political institutions on the rock of one supreme faith. The early conflicts of Bismarck with Catholicism and the "May Laws" against the Jesuits came because of a refusal to admit this essential German doctrine of the supremacy of the state.

### The German Lesson

THE Germans have conceived of a national solidarity such as not even Rome produced, and they have carried it out to the minutest detail. They have nationalized all education and animated it for two definite ends—to make each class of citizens efficient for the work which has been allotted to it in the needs of the national scheme; second, to imbue in the imagination the conception that the result of this service will be to produce a civilization so great that its duty will force it to dominate the world for the world's own good. They have nationalized their commerce. Whenever a German industry has sought to invade any portion of the world, in any guise, the German Government has stood back of it. Wherever one German trader has penetrated the sum of German Kultur has followed. Labor—its welfare, its health, its insurance against disability and old age, even to its happiness—has rightly been regarded not as a separate problem, but as an inseparable element of German commerce which in turn must be an inseparable element of German greatness. If the empire has lacked an industry which even to the slightest degree might make it dependent on foreign assistance, individual initiative to remedy the deficiency has always met with popular chauvinistic support. Even to the question of the physical type to be developed nothing has been left to chance.

German art, German literature, German science, all expressions of mental activity of which man is capable, have not been allowed to wander and to struggle along unrelated paths. Each has been made to feel that it is a necessary arm in Germany's disciplined march toward the future; just as beyond the massed battalions of infantry and artillery the modern army, in its intricate mechanism, depends on its engineers, its electricians, its telephone corps, its scientific laboratories, its financial organizers, its winged Pegasi of the air, even to the trumpeters of the national faith in the press and on the platform. What other nations struggle to improvise in the crisis of war, in the supreme need of unity to obtain the maximum of power, Germany achieves continuously in time of peace.

It is well to ponder this contrast. If suddenly, put to the test of existence, we seek an industrial control to protect the citizen from the extortion of the great producers of his necessities; if to obtain a maximum efficiency in destroying other men we assemble and give direction and unity to the scientific forces of the country; if to stop waste and extravagance we put an end to that industrial civil war which is now waged between capital and labor; is it not worth while to consider why, in times of peace, such a conception of nationalism could not accomplish equally imperative results?

### There Is No Easy Way

ADMITTED, then, that the German idea is grandiose, is it not probable that this menace will be swept away either by internal revolution or broken by an Allied victory? This is the greatest danger we face to-day, the danger of deluding ourselves into a belief that there is any easy way out.

What probability is there of revolution? You will find in the directing classes no indication of revolt against the German national conception. Against the barbarity of Prussian discipline,

CHALMERS  
*Porosknit*

LET'S THE  
BODY BREATHE

## For "Resort coolness" —resort to Chalmers.

In hot, sultry weather the "coolest spot" is not a matter of geography, it's just a matter of air circulation.

That's why you feel so cool and comfortable inside a suit of Chalmers "air-cooled" underwear.

It blots up perspiration like magic, and air then circulates freely all through the fabric, rapidly evaporating the moisture and cooling the body.

Therefore, for "Resort coolness" wear either Chalmers "Inrox" or Chalmers "Porosknit."

## W. L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

\$3 \$3.50 \$4 \$4.50 \$5 \$6 \$7 & \$8

W. L. Douglas name and the retail price is stamped on the bottom of every pair of shoes before they leave the factory. The value is guaranteed and the wearer protected against high prices for inferior shoes. You can save money by wearing W. L. Douglas shoes. The best known shoes in the world.

BOYS SHOES  
Made in the U.S.A.  
\$3 \$2.50 \$2

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York. They are always worth the price paid for them.

**CAUTION**—Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top lining. This is your only protection against high prices for inferior shoes. **BEWARE OF FRAUD.**

Sold by over 9000 shoe dealers and 105 W. L. Douglas stores. If not convenient to call at W. L. Douglas store, ask your local dealer for them. Take no other make. Write for booklet, showing how to order shoes by mail, postage free.

W. L. DOUGLAS  
153 Spark St., Brockton, Mass.

For a brief time W. L. Douglas worked for a farmer for his board and clothes and the privilege of attending school in Winter, practically the only period of his long and busy life that has not been spent in the shoe industry.

Copyright, W. L. Douglas Shoe Co.

against present sufferings in war time, against temporary and incidental burdens, yes, there is both resentment and rebellion; but not against the cardinal faith of German nationalism, "Germany above all and all for Germany." The very issue of the war, if it should be utter defeat, will magnify this sentiment in the necessity of rebuilding a new industrial fabric. There will be as much need of efficiency after the war as during the war.

How will we shake the German's disciplined faith in his own theory of government when he contrasts the records of the Allied democracies—decentralization, waste, extravagance, and blunders—with the efficiency of a nationalism which does not need to improvise?

There remains the uprising from the mass—a French revolution or a Russian anarchy. Those who fondly hope for this easy solution do not remember that revolutions succeed only when either the accident of a weak or vacillating personality, such as Louis XVI, or a long succession of corrupting events, has weakened the central authority. Revolutions which have meant the overturning of the forms of government have never succeeded when that central authority was united, alert, and relentless.

Will a German defeat in itself make the world safe for democracy? There are developments in war that it is given to no one to foresee, but, as far as we can judge from what is on the horizon to-day, and to be prudent, sane, and loyal to our trust, we should build for the future on the basis that now and in the future the one outstanding fact to be reckoned with is a great German Empire.

Granted that Germany may to-morrow give up Alsace-Lorraine, restore northern France and Belgium with indemnity, her compensating future lies across the shattered Russian Empire. If she is temporarily balked from forcible annexation, she has the opportunity of peaceful penetration such as she alone knows how to wage.

What the power of German emigration into Russia was able to accomplish during this war, in treachery and nullification of threatening Russian thrusts, we know to-day clearly. To-day she is there on the Russian frontier, alert and ready. If Russia continues to disintegrate into detached fragments, the task will be easy! If the revolution goes the way of anarchistic excesses, when the final revolt of the law-abiding and property-holding classes arrives, Germany will be prepared to assist as the friend of law and order.

The original intention of Germany in launching this war was not annexation on the western front. She intended to occupy Paris, exact a staggering indemnity, and turn to cripple Russia. To-day Russia is hers. The Balkans are hers—Serbia and Montenegro annihilated; Rumania, victim of treachery, in her grasp—Berlin to Bagdad secure; Berlin to Vladivostok begun.

Yet, despite this triumphant spread of the German shadow, so irresistible that Europe seems to be moving into an eclipse, there are still some who cling to the idea that we can now, in the full tide of their arrogance, sit down at a peace conference and persuade the Germans to renounce their dream of world power.

### Our Fifty Years' War

THE German national leaders will never risk a crushing defeat. They intend to keep their war machine intact. With that, they have no fear of internal revolution. They may temporarily relinquish Alsace-Lorraine. They believe that they can win on the west to-day. They do not wish to give up Alsace-Lorraine, but they will do it to procure a peace that will save German territory from invasion. It may be that the Allied armies will persist until Germany has been invaded and large areas of German territory placed on the same economic level as northern France, Belgium, Serbia, and Rumania. It may be that German armies will be crushed and scattered like chaff in the wind and Germany so wounded that not in a century will she be able to lift up her head. This may happen, but with the temper, the longings, and the pacific vision of the Allied democracies, it is inconceivable.

Yet I go further. Even if the pacific should realize his dream of disarmament, the eternal principle of nature, the survival of the fittest, would still hold true. The struggle would continue along industrial lines, and if we could not compete with equal

unity and efficiency with the spread of German civilization, we should find ourselves crowded out of the markets of the world, invaded in our own industries and forced to a dependence on German commercial science.

We shall still have to face the alarming fecundity of the German race, whose in fifty years has not only doubled its home population, but sent out its surplus across the world: into Russia; into Austria, ten millions persistently and efficiently Germanizing that empire; into our own country, over five millions, to say nothing of their immediate descendants; into Holland, Scandinavia, South America, and Mexico, powerful united German colonies able to swing public action to the ends of the Fatherland. Wherever they have gone, whatever their citizenship, they have never for a moment swerved in their belief in the right to destiny of German civilization.

The thing to perceive is that we have been at war with Germany for fifty years, that this resort to arms is but a second phase in Germany's preparation to Germanize the world, and that when peace comes, whatever be its phraseology on a scrap of paper, we shall continue to be at war with a nation whose guiding principle is to discipline itself to a singleness of purpose, and that purpose the subjection of our people and every other people in the tide sweep of Teutonic civilization.

To meet that challenge it is essential that we act now, when the necessity is clear to everyone, rather than in some future period of relaxation when the mass of the people will have returned into that complacency which prefers not to be convinced by speculative arguments based on a remote contingency.

Is this an argument for the autocratic centralization of all efforts in the state? Is there no way to resist Germany but to Prussianize American institutions? Yes; besides Germany there is the alternative of France; alongside the specter of Prussian militarism there is the bright democracy of Republican service; over against the scientific tyranny of Germany there is the spiritual fraternity of France.

### They Knew How to Die

THERE are many minds and many opinions still with us to-day, running the gamut of political speculation, from those who admire unreservedly the doctrine of autocracy to that social phenomenon, the parlor radical, who coquets with the Tolstoyan theory of nonresistance and the Bolshevik application which prefers that the nonresistance should be on the side of the enemy. There is wide difference of opinion as to whether the individual should consecrate more to the state or should extend further his individual liberties; as to whether this war should teach the necessity of military preparation or that such future training is to be fiercely resisted as inimical to that millennium of international amity which is finally at hand. But it is safe to say that on one thing all minds and all opinions are agreed; that it was an exceedingly fortunate thing for civilization that one nation at least was prepared, not only in military efficiency, but unified by a flaming and unquenchable spirit of dedication to its national honor.

Out of the hideous blur of war certain celestial deeds rise and fix themselves indelibly against the black memory. When we think of Belgium, out of the somber void there flare forth twin stars, the uncompromising saint-like figure of Cardinal Mercier and that republican king who has proved himself father and leader of his people, Albert of Belgium!

There is the "contemptible little English army" that went out to die at Mons and Ypres that France might mobilize; deeds that shine forth like the flaming belt of Orion. There is the luminous memory of stricken Serbia, sweeping back the first contemptuous Austrian invasion; Italy finding her soul in the darkest moment of the Teutonic invasion; the steadfast shining points of light of our own crusaders, Victor Chapman, Alan Seeger, Stuart Wolcott, and a hundred others who laid down their lives generously and without regret, not at the mandate of duty, but in the eternal love of right and liberty.

### France Shows the Way

THEN there is France—France, with the spiritual beauty of her mobilization; France of the Marne and of Verdun; France, united from the first; never wavering, never complaining; unshaken to-day after reverses to

will the courage of the soul; Rumania; the Russian debacle; the Italian retreat. When we think of France it is of the simplicity of her heroes, the gayety of her courage, the chivalry of her defense. Before us rises the vision of women moving in their white ministering robes to their posts of healing as their men went singing to the flaming front, as mothers, dry-eyed, sent out their sons in a greater love of country. We recall the eloquence of a simple soldier in the cry: "Debout les morts!" the epic simplicity of that officer who, when asked for what he was fighting, stooped, raised a sod to his lips, and replied: "For France!" There is the quiet, unswaggering figure of Joffre; the Roman stoicism of Castelnau. When we turn to France, her memory in the night of shining deeds is like the multitudinous effulgence of the Milky Way itself, that vast procession of stars, anonymous as her heroes have been anonymous.

Why is it that the very mention of her name stirs the pulse as nothing else? Consciously or unconsciously, what is the supreme quality that has convinced us, a nation of many strains and philosophic individualism? It is because when we turn to France we perceive a nation completely and spiritually united: a love of country that is not a defensive opportunism, but a flaming faith. Some who did not know France have seen in this a miracle. It was not a miracle. The consecrated sense of duty toward a common ideal was not improvised; it cannot be improvised. It existed in all the troubled years of peace; it is founded on that fraternity without which liberty and equality are but incentives to lawlessness and selfishness.

The German idea is an idea of materialism and discipline. The French idea of nationalism is an immortal idea that springs from the emotions in a spiritual impulse which gives to every duty the nobility of a faith.

## We Must Think Nationally

**S**UPREMACY, then, the question which confronts us to-day, in our search for an idea of nationalism, is a choice between order and disorder, between faith and agnosticism. Order and faith; without these two no nation has ever survived.

That there is a great unexpressed longing for a new attitude of faith toward the national ideal I gladly admit. It is perceptible in the tendency of the people to magnify the Presidency into a spiritual and mental leadership, the President into a sort of Big Father. Increasingly we have tended to elect a czar for four years, and the trust of the people which goes out to him in this time of war is mute evidence of a national groping toward some abiding inspiration which will be more than political or economic opportunism.

The cheerfulness, the common sense, the willingness to assume now and extraordinary burdens, the crystallizing of the spirit of sacrifice, the awakening of national pride and national determination, in a people which still but half comprehends the startling summons to war, but respects and trusts its appointed leaders and obeys without question—all these things are indicative of the power to conceive a higher nationalism. What remains to be shown is that the same unity which makes a nation formidable in time of war maintains its greatness in the competitive times of peace. What we must achieve is to think *nationally*. But that this faith, which we venerate in the new revelation of France, may become practical, the problem is one of order.

**Order—Faith—Nationality!**

**I**N the profound instinct toward idealism which is the slumbering heritage of America are the treasures of such a faith. What we lack is order. Wherever we turn we perceive disorder. With us the family, that cornerstone of authority in France—France is minuscule—is not the expression of one impulse, political, spiritual, and economic. The family has been disintegrated by a spirit of individualism which often is carried so far that the father not only refrains from any mental direction of his children, but leaves it to his child's maturity to decide not merely the question of sectarian worship, but whether God Himself exists.

It may well be worth our while, in the thoughtful consideration of the great problems arising from the war, to consider whether any spiritual national unification comparable to the inspiring record of France or Germany can be

***You enjoy perfect freedom***

**You can stoop, stretch, run, walk, sit down, with *absolute ease and comfort* in your Rockinchair Union Suit. No binding, chafing or annoyance, anywhere. From neck to knee it is one big *improvement* in summer underwear. Like its namesake, it is *typical of comfort*.**

Sized and proportioned like a suit of clothes - to conform to the lines of your body. Every size made in *three shapes* - to perfectly fit the regular man, the tall slim, and the short stout!

Follow the arrows on the figure below for the rest of this Good Story—to the full blouse that permits unusual freedom of bodily movement; to the sanitary closed seat and crotch (exactly like your trousers)—no old-fashioned gaping back split to bunch up and annoy you; to the side leg opening that opens in a wide sweep clearly across the back, with buttons in sight, so easy to adjust.

See the variety of attractive materials in which it is made. Then wear a suit, and experience the *unusual* comfort and delight Rockinchair Union Suits bring to you. If your dealer hasn't it, write us.

## Baseball to Boches

Continued from page 16

best hotel as his guest, so we grabbed a taxi for the Grand Hotel, which a pal of mine had tipped me off to. I asked the clerk how much they was tryin' to get at the time for three rooms and a bath, and he says fifty francs a day. After thankin' him for the compliment of thinkin' I had it, I says we will give him sixteen, and he says all right.

Our rooms was on the fifth floor, and the doughboy's, whose name was Calhoun, was right across from us. They is every convenience with the exception of fresh air, light, hot water, soap, clean linen, and service. Once you get in a room they ain't no way of gettin' in touch with the clerk downstairs except by cable, and then he don't know what you're talkin' about and don't care. They is a lot of push-button bells in the room, and if you ring any given one of them, Joe, in comes a *femme de chambre*, which is French slang for chambermaid. She grins like a wolf and asks are you an officer, and no matter what you ask her to bring, she says: "Oui, oui!" and "Merci!" like she understood English as well as the next one. She never comes back with nothin'.

You can only get hot water on two days a week, Saturday and Sunday. Even on them red-letter days, they is little danger of scaldin' yourself in the bath, because the water is about as hot as that pole Cook claims he found!

**W**ELL, the next mornin' I let Jeanne sleep, and me and this Calhoun guy goes out to get his money order cashed and give Paris the up and down. We passed a lot of places called the "Knickerbocker Bar" and "New York Café" and things like that, which made me homesick up until the time I looked into them.

Calhoun changes his money order for about 28,000 francs and we are off to stand Paris on its ear.

I know you are crazy to hear what I thought about Paris, it bein' the first time I ever seen it. Well, Joe, all I can say is that Paris reminds me of Philadelphia with a bun on! The streets is all called "rues" and the main one is the Rue de la Paix. It's a whole lot like Broadway would be, without the electric lights, theatres, hotels, and cabarets. Every other place is a restaurant, and the ones in between is cafés. The people here is so stuck on their home town that they won't even go indoors to eat, but sit right out on the pavement at little tables for all their meals, so's they can keep right on lookin' at that dear Paris all the time, not to say the dames which parades up and down.

The girls is pretty near all knockouts, and none of them is too stuck up to give a guy a pleasant smile and pass the time of day. I must say that anybody which gets lonesome here ain't got no one but hisself to blame, Joe! The men is all in unction and great little

## "Lafayette, Here We Are"

Through remote French villages resounds the unaccustomed tramp of American soldiers. But a little while ago and these men were in the quiet of their homes in a peaceful country. Today, in a strange land, they are facing the world's bloodiest struggle.

Pershing at the tomb of America's old time friend months ago reported, with true soldier eloquence, "Lafayette, here we are." And it is for us of the great American democracy to rally all our might to the support of our army and our allies.

From our shores to the battlefields of France are thousands of miles which must be bridged with ceaseless supplies to our troops. Every day calls for action here, no less than there. Cooperate! Sacrifice! These are the watchwords sent over the land by the Government.

In this national effort the Bell System has served with every other essential industry in order that communication, manufacture and transportation may be kept at the peak of efficiency to provide the munitions, ordnance and supplies so urgently needed.

**"Give Me only 15 minutes of your time daily at home and I'll Make You a Self-Confident Forceful Speaker!"**

**By GRENVILLE KLEISER**

**Y**OU have been or will be called upon to speak in public—sometime—somewhere. It may be at a dinner or other social function, at a political meeting, or in your lodge-room, or to sell Liberty Bonds or War Stamps. Can you "say your say" confidently and forcefully?

Grenville Kleiser's wonderful practical Mail Course in Public Speaking takes only 15 minutes of your time daily in your home or office, and it teaches you quickly

#### HOW TO

Make After-Dinner Speeches—  
Talk for the Government—  
Tell Stories—  
Make Political Speeches—  
Sell More Goods—  
Address Board Meetings—  
Develop Power and Personality—  
Improve Your Memory—  
Increase Your Vocabulary—  
Acquire Poise and Self-Confidence—  
Speak and Write English Correctly—  
Earn More—Achieve More.

Let us tell you by mail all about this course which District Attorney Small, of Bloomsburg, Pa., terms "the best investment I ever made."

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. We can give you indisputable proof of this. Mr. Kleiser has had years of experience as a teacher of public speaking in leading educational institutions.

Order, Sign, and Mail This Form Now

**LINK & WAGGLES COMPANY, Dept. 111, New York**  
will please send me by mail, without cost or obligation, your  
Circulars of the Kleiser Mail Course in Public Speaking.

Name \_\_\_\_\_  
Street \_\_\_\_\_  
City \_\_\_\_\_  
State \_\_\_\_\_

the founder and director of the Public Speaking Club of America and Great Britain, and is generally recognized as the foremost teacher of speech culture.

His Personal Mail Course is his life work. Into it he has put the ripe fruits of his many years of experience as a teacher.

We will send descriptive literature showing how Grenville Kleiser's Mail Course not only will teach you how to speak without notes at dinners and meetings, but how it will increase your self-confidence and give you a good memory, build up and augment your personal power and influence, and improve your use of the English language. How it will teach you to argue effectively and winningly—present a proposition logically and forcefully; how it will teach you to hold attention—to think on your feet. This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker.

**Joseph P. Day**

Famous New York Auctioneer, who annually sells millions of dollars' worth of Real Estate: "Your Course has been of great service to me in my business, and I recommend it to others in the highest terms."

Remember, this Course does not cost from \$30.00 to \$100.00 and upward, the tuition fees usually asked for correspondence instruction. The Kleiser Course costs very little for the value received, and if you should enroll, within the next thirty days the price to you will be only about one-fifth of what you would pay Mr. Kleiser for studio instruction—and the terms of payment are very easy.

By all means sign and mail the Inquiry Form so that you may learn all about this Course at once. No agent will call upon you—nor will you obligate yourself in any way by doing so.

guys. I think us doughboys is mixin' with the French better than anybody else. They go out of their way to make things nice for us and don't laff at us when we try to speak French and call eggs "woofs" instead of whatever it is.

Joe, a Frenchman is the politest guy on earth. If you go into a place of business here and ask a guy how to get to some certain street and number, he closes down his desk, calls a taxi, stops on the way to buy you a shot of vin ordinaire, and delivers you personally right outside the door, the while beggin' your pardon for not gettin' you there sooner! Can you imagine anything like that in New York? You go up to a guy on Broadway and ask him how to get somewhere, and what does he do? He says: "I never heard tell of it; I'm a stranger here myself!" Am I right, Joe?

When I first come to New York, I thought the place must of been deserted the day before, because everybody I asked for information was strangers there themselves, accordin' to their own confession.

**I** HEARD a lot of talk about Paris bein' up against it on account of the war, the people all downhearted, and food bein' as scarce as heat prostrations in Iceland. Joe, that is all the bunk! There is plenty of food here for everybody, and I put away some of the finest steaks I ever seen. If the people is downhearted, then I'm vice president of Egypt! Joe, they are the gamest nation on earth, and we are proud to be in the line-up over here with 'em. They've had a tough time for four years, and they know they been to the war all right, but that ain't gloomed 'em a little bit. They're as full of pep as a steam drill, and pretty near everything that was runnin' before the war here is still doin' business at the old stand. Why, Joe, one of these French guys could kid the Kaiser to death, on the level!

Well, I deliver the letter from General Pershing, and then me and Calhoun walks around. We seen the Champs Elysees and the Invalides, where Napoleon is buried. There's a thing which goes to show how game and stubborn the French is. Here this guy Napoleon has been planted since St. Looney win a pennant, and the French won't even admit he's dead yet—they call this joint the Invalides, which is only concedin' that he's sick! Can you tie that?

The dames all look us over, and this doughboy gives 'em a pleasant grin and keeps tellin' me what a riot of a burg Paris is. He claims the outlook is that they won't be a dull moment for him till he goes back to the front. I had my hands full with this bird, keepin' him from runnin' wild till we get back to the hotel.

The taxicabs over here is the same as New York, except that the chauffeurs is all bum guessers. They ain't even got the slightest idea of where you told 'em to go, and they take you somewhere else at the rate of a hundred miles an hour, swearin' somethin' terrible every time they miss runnin' over somebody. We started back to the hotel in one, and this guy took us there by way of Russia, I think, because I never seen so much of the country before in my life! We finally got outside the hotel and managed to make this bird stop. He acted like he was sore because we had cut the voyage short, and I made the mistake of askin' him what we owed.

"Quatre-vingt-quatre francs!" he sneers.

Joe, this was past me! I thought I knowed all about countin' in French, but this was new stuff. I found out later that the French has got a trick way of countin', all their own. Instead of sayin' "eighty-four," for instance, they say "four times twenty and four."

**W**ELL, Joe, we get out of the cab and start to give this bird an argument, and it begins to rain. We get back in the cab to continue the debate without gettin' wet, and this French Jesse James shows the clock on again and keeps right on comin' back at us while the meter keeps registerin'. Here he is probly callin' us pigs and like that, and at the same time gettin' paid for it! Every time we agreed on the original charge, Joe, the clock would show somethin' different, and we'd start scrappin' all over again. This might be ruin' on yet if a porter from the hotel hadn't come to the rescue. He sized the thing up in a second.

"Pay but fifteen francs, monsieur!"

he says. I give him twenty, and we beat it. The last I heard him and the chauffeur was runnin' down each other's grandfathers, uncles, parents, friends, and brothers. They was quite a crowd enjoyin' it.

**J**EANNE was dollin' up when we got upstairs, so we went into Calhoun's room to wait. He claimed walkin' around had made him thirsty and that buyin' vin ordinaire was helpin' France the same as fightin' was, so he pressed a button. In about half a hour we hear a key in the door, and in comes a tall, thin guy, all dressed up like a fish. In a Paris hotel none of the help ever knocks—that is, they don't knock nothin' but the Germans—they let themselves right in your room with a pass-key. This bird has got on a dress suit, and he's featurin' a mustache which is sharper on each end than a bayonet. He looks like the ambassador from Coney Island, or somethin' of the sort.

"I guess you-all have got in the wrong room," says Calhoun.

"Ah, monsieur," says the newcomer. "I speak well the English. There is not of the mistake. I am the commissaire."

"We're in right already!" whispers Calhoun to me. He turns to the stranger. "Commissioner of what?" he says—"fire, police, or water?"

"Ah!" is the answer, with a piece of shoulder waggin', "just the commissaire."

"Will you have a little swallow?" asks Calhoun, reachin' for a glass.

"It is the too early for the bird—she is not too good!" says Stupid.

"I'd been figurin' him out. I got him!"

"This guy's a waiter!" I says to Calhoun.

"You're suah crazy!" he tells me. "They ain't no waitah goes around in a dress suit in the mawnin'. He's gonna get hisself married or somethin'. I betcha, heh?"

"What would monsieur desire?" asks Mysterious Mike.

"How's the champagne runnin' today?" asks Calhoun.

"Nothin' doin'!" I says. "You're an American doughboy, and you're on the water wagon!"

He gimme a frown.

"That goes!" I says.

"All right!" says Calhoun. "Bring us some seltzer lemonades."

"That I do not the understand," says the commissaire. "What is she that acidlitz lemonade?"

"Well," says Calhoun to me, "I done what I could—I asked for it, and if they ain't got it, can I help it?" He turns to the commissaire. "You claim you speak English, hey? All right! Bring us two Bronx cocktails. Parlez-vous?"

The commissaire looks more stupid than usual for a second, but he's game!

"Of the certainly!" he says, without battin' an eye. "I will return in a trice!"

Joe, we wait an hour. Jeanne is ready, lookin' like a million dollars and champin' on the bit to gaze on Paris, but Calhoun is firm.

"Ain't this great?" he says, smackin' his lips. "Imagine gettin' Bronx cocktails in Paris. Them guys is there, eh?"

We wait another half hour, and in comes friend commissaire. He backs into the room with a tray. Calhoun smacks his lips some more. "Your wife will like this Bronnix," he says. The commissaire turns around, grinnin' from here to Japan. Joe, he hadn't nothin' on me in the grin line when I seen what he brought. On the tray is the following—one set of chicken feathers; that's all!

"I have the time of the most difficult to get the cocktails," he says. "The hen she is of the easy, and I catch him, scald and pluck the feather. The cock he joomp the fence, and I have much run to catch her. But, *viola!* I am the success. I take off the magnificent feather of the tail. Here are they. I know not at all what monsieur requires of them. For madame of a certainly, perhaps for the *chapeau*—who knows? I have them. The price is nothing—forty francs!"

Oh, boy!

I got the hystericals, and Calhoun throwed all the pillers in the place at him.

Can you imagine us tryin' to kid them guys?

Yours truly,

Sergt. EDWARD HARMON.

(Hey, where's them cigarettes?)

(To be continued in an early issue)

## What About Your Children's Reading?

Are you the parent of a youngster eight or ten years old, or in the early teens, when the growing mind seizes eagerly at books and absorbs them as a blotter absorbs water? Then, at that age, your child's books should be, in fact, must be selected. Mental and emotional pitfalls yawn in unguided reading.

May we send you a copy of the free book pictured above, which describes the "Junior Classics," a library of literature for children, selected by experts? Write for it.

P. F. COLLIER & SON, Dept. I, 416 W. 13th Street, NEW YORK CITY

## *You Can Count on Perfect Cooling*

Every motorist knows that perfect cooling means higher motor efficiency.

The radiator is the vital factor in the cooling system. Leading automotive engineers, recognizing this fact, choose Harrison Radiators.

They know that Harrison construction embodies all the qualities in a radiator that make for perfect cooling.

They know that the wide, unrestricted water passages promote easy circulation and the big free air cells, rapid cooling.

This is why you can count on perfect cooling, higher motor efficiency and greater fuel economy when you see the Harrison Hexagon cell—the symbol for the highest quality in radiators.

Harrison Radiators exclusively have been used on Chandler cars for several years

# 19 places where sediment damages your engine

**W**HEN your engine loses power, knocks, bucks and overheats, nine times out of ten it is sediment in the oil that is to blame.

Just look at the long list of vital parts that will quickly show serious wear when sediment is present in any considerable amount.

Ordinary oil cannot resist the intense heat of the engine—200° to 1000° F. It breaks down quickly. The resulting sediment crowds out the oil with true lubricating qualities from points where it is needed most. Moving metal surfaces, which should always be separated by a protecting film of lubricant, are thus thrown into direct contact.

#### Why sediment causes wear

A strong magnifying glass reveals millions of microscopic teeth covering the apparently smooth surface of a bearing or other working part.

When the cushioning oil film between these surfaces is destroyed or excluded by sediment these tiny metal teeth grind together, thus causing friction and wear.

When this happens in any important part of an engine, costly replacements soon become necessary. Damage due to sediment in ordinary oil can never be averted.

That is why you cannot afford to buy ordinary oil at any

price. The cost of using it is appalling, because of its injurious effects on your engine.

A. Ludlow Clayden, Engineering Editor of Automotive Industries, and one of the most prominent engineers in the automotive field, says:

"In the past too little attention has been paid to lubrication. This needs to be changed for an engine almost more carefully than food for a child."

Chas. E. Duryea, consulting engineer and a pioneer in automobile construction, states:

"Buying inferior oil is the poorest economy a motorist can practice. Inferior oils must be used in greater quantities and, even then, they increase friction, loss of power, fuel consumption, heat and repair bills."

"Good oil costs a little more per gallon, but far less per mile."

P. M. Heldt, recognized authority on internal combustion engines, and author of "The Gasoline Automobile," declares:

"The proper selection of oil for the lubrication of an automobile engine is a very important matter. The grade of lubricant used affects not only the efficiency of the engine but also its life."

#### How the problem was solved

Exhaustive research and comprehensive practical tests have proved that the formation of sediment in dangerous quantities has been successfully overcome.

Today over a million motorists avoid the sediment menace, with its accompanying troubles and repair expense,

and keep their cars running like new, at reduced operating cost, by using Veedol—the lubricant that resists heat.

How Veedol reduces sediment 86% is made plain by the two bottles, showing the famous Sediment Test, at the left of the page.

The average motor oil acts like water in a kettle. When water is subjected to intense heat it evaporates as steam. Under the terrific heat of the engine ordinary oil evaporates very rapidly through the oil filter in the form of vapor.

Veedol not only resists destruction by heat and minimizes the formation of sediment, but also will not evaporate rapidly in your engine. You will get from 25% to 50% more mileage per gallon with Veedol for this reason.

#### Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

#### Send for this 80-page book on lubrication

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

## The Last S. O. S.

Time to leave ship. Going down by the bow. Boilers awash. But wireless still working!—thanks to the Gould Storage Battery installed for such an emergency.

## WITH THE TRADE MARK *Dreadnaught* PLATES

Gould Dreadnaught Plates are the *original* super-hard plates that have been the basis of *Gould Quality* for 10 years and have never been successfully imitated. The difference in durability between Gould Dreadnaught Plates and ordinary plates is as

marked as the difference between ordinary steel and chrome-nickel steel. The hardness of the Dreadnaught Plate reduces disintegration from overcharge and severe service to the minimum. The result is a long-lived, rugged, powerful battery.

**W**IRELESS Reserve, Gunfiring and Submarine Batteries built by Gould are known the seven seas over. They have made *Gould Quality* a term respected in the navies of the United States and other world powers.

When Starting-Lighting Batteries *built by Gould* were placed on the market five years ago, motorists were quick to say that a battery built by the makers of submarine batteries *must have quality*. Now, after years of service on thousands of cars, the reputation of the Starting-Lighting Battery *built by Gould* stands on its own bottom. It has lived up to the Gould tradition and *Gould Quality* which means a definite standard of service and satisfaction to a steadily growing army of motorists.

The Gould is not an untried starting-lighting battery, but one of the oldest. Its outstanding difference is not merely a matter of structural detail, but is fundamental. The service organization back of it is competent, trustworthy and country-wide. Put a Gould on your car this spring.

They're a brave, jolly, fine lot—the advance of our doughboys

# AT THE AMERICAN FRONT

BY JAMES HOPPER

COLLIER'S SPECIAL CORRESPONDENT

C. International Film Service

**JANUARY 17** is the date, the historical date. On that day the American army went into the trenches for good; on that day the United States took over a sector of the long battle line in France. It is a very small sector as yet, but it will grow—it is growing, in fact, as I write—and perhaps it will end by changing the world. I have been there ten days now, and I am going to try to tell what I have seen there.

But, first of all, where is that sector, where is that advanced bastion of America in the fight to save civilization? Take a map of France, and mark with your pencil the long battle line. It starts on a beach of the North Sea, at Nieuport, in the last little corner of free Belgium; it runs then south (soon entering France) along the following towns, approximately (some of the towns I name are on one side of the line, some on the other), thus: Nieuport, Ypres, Lens, Arras, Comblès, Péronne. Gradually it inclines eastward till it is running southeasterly along Saint-Quentin (held by the Germans), Laon (held by the Germans), and Rheims (held by the French). From Rheims it shoots frankly east to Verdun (everyone knows who holds Verdun). After Verdun the line does a queer trick. It goes southward for twenty miles to a little town called Saint-Mihiel, then turns at right angles and runs east to Pont-à-Mousson, almost up to the German frontier. The line then follows the frontier, a few miles within it, till it crosses into Alsace, a slice of which it puts back into France, and finally ends up against Switzerland, at a point near Altkirch.

Now, let us go back to Verdun, and that place where the line plays the queer trick. If Saint-Mihiel is not on your map, find Commercy, and make a cross about twelve miles north of Commercy, and call that Saint-Mihiel. Draw a cross at Pont-à-Mousson. Then, just halfway between those two crosses, draw another one, a big one—a red, white, and blue one, if you wish. You can now hang your map on a wall. Teach your eye to fall without hesitation upon the cross which is halfway between Saint-Mihiel and Pont-à-Mousson. Look at that cross every day, look at it several times a day, look at it tenderly—that's where your boy is.

## That Cross in Lorraine

**ONLY**—he isn't. Or rather, it's a hundred to one shot he isn't. An army is a big affair; to keep one man in the trenches it takes many men behind. And the man in the trenches isn't there all the time

not by far. There was in a town, in the American zone but well and safe in the rear, a boy who interested me. He was a private in the Quartermaster's Department. He was young and joyous; a big smile was ever upon his face; he had one front tooth missing—he looked like Jack London when Jack London was a boy. His special work was to act as clerk in the commissary store. He handed out across a counter the tobacco, the jams, the canned fruit, the bacon, the waterproofs, the boots, the sweets and trinkets which make of every American soldier in France at least a millionaire. But he did not spend all his time in this shop. This shop had given him a liking for all shops—and often you could find him at the greengrocer's, or the charcuterie or the Grand Bazar or the Magazines Réunis flirting with lots of busy but jolly French damsels in a French of his own which satisfied him and irresistibly brought smiles from those most resolute in fighting off his gay impertinence. He knew all the children of the town; they ran to him when they saw him and gave him their small hands, and he was an adept at praising the family baby—in short, he was having the time of his life. Yet when I mentioned that fact to him, he clouded a little.

"Sure, I'm having a good time," he said. "The only thing that bothers me is my mother, back in the States. She thinks I'm in the trenches."

"But you write to her, don't you?"

I objected. "Sure, I do," he answered.

"I keep writing her I'm not in the trenches and all hunky-dory. But each time she writes, I can see she thinks I'm in the trenches, my feet getting all froze up, and me all torn up with boche shells. Can't make her believe I'm not in the trenches!"

Anyway, keep your cross on your map. If your boy isn't there, many boys are there, and they're as brave, jolly, fine lot the advance of our doughboys, the nucleus of the fighting army which may end by changing the face and the world. But where is that cross? In Lorraine. There's a town that reverberates in the thing, Jeanne, the village where she was born,

lies just south, not more than forty miles south, of the trenches held by our boys. What a difference between her and them—what a difference in outward attitude and gesture, in apparel of combat, and yet, probably, what a profound similarity in the quality of their courage! Since the maid, Lorraine has given France many heroes. She is a proud and indomitable land, ever a live and ready rampart against the continuous fluxes of central barbarism and hate. The Germans divided Lorraine in 1870, and now our world is saying to Germany: "Give back Lorraine to France." Thus our trenches there, in the land of Lorraine, become almost a symbol.

## Here the Huns Were Outgamed

**TWENTY** miles south of our trenches, maybe just a little east of south, you will find on your map the city of Toul, and east of Toul, Nancy. Toul—there's a name that sounds like the cannon, while Nancy expresses gay and almost coquettish courage. The names truly picture the cities. One is somber, the other joyous; both, in the course of the centuries, have often stopped the Hun. At the beginning of this war, in the last days of August and the first days of September, 1914, there was a great battle before Nancy. It was just after the Battle of Charleroi; the French armies and the little British

force, beaten and outflanked there, were retreating from the frontiers of Belgium southward toward their position, between Paris and Verdun,

where they were to fight the Battle of the Marne. While they were thus retreating, other German armies, backed by the formidable arsenal of Metz, tried to burst through over Nancy and Toul from the east.

Had they succeeded, they would have got behind the armies retreating from Belgium—and there would have been no Battle of the Marne, and France would have been lost. Well, they did not get through; Nancy and Toul stopped them. Before Nancy, De Castelnau spread an army which, outnumbered, outgunned, outmanned, fought for five days with the courage of despair. On the fourth day both armies, French and German, were bleeding to death; it

The real bond in Franco-American relations is the French child

seemed impossible the French could hold longer. De Castelnau then sent out orders to hold twenty-four hours longer at any cost. He had few illusions left. "It will be twenty-four hours more for France," he said—and that is about all he expected. The reeling army fought on one more day—and the following morning, as they prepared for the last of this hell, they saw the Germans retreating, outgamed. At just about that time the Battle of the Marne was beginning!

A little later, after the Battle of the Marne, while the French were fighting on the Aisne and extending their line northward in the famous race for the sea which ended at Neuport, the Germans made another effort to break through to Paris from the east, this time by going between Nancy and Verdun. This move (a very menacing one at first) was finally held by the French along the Meuse. But from it resulted the angular salient Verdun, Saint-Mihiel, Pont-à-Mousson, which has existed ever since. Our sector is in the center of the lower line of that angular salient.

It was there I went. By a bit of good luck, too, I was whisked in one swoop to the farthestmost part of it; that is to say, within thirty-six hours from starting from Paris I found myself not only with the American army, but with that part of the American army actually in the trenches, and not only with that part of the American army, but with the detachment altogether in the first line of the foremost system—in short, with those of our soldiers farther away from home and nearest the boche. But I am going to tell about the getting there as well as about the there, for my effort is to enable you to visualize the American army and its surroundings, and the only way I see to do it is to tell what I saw myself.

### Like Coming Home

I LEFT Paris from the Gare de l'Est, which is already at the front. I had no sooner passed the gate into the great hallway than I knew I had left the rear, with its civilians and its worries. All about me were French poilus returning from their short leaves, on their way to their eternal toil—stocky, heavy, patient French poilus who, even when on leave, with nothing on their backs, walk with feet a little apart and legs stiffened from thigh to toe, in that attitude which months and months and months of marching under heavy burdens, along roads, along communication trenches, or behind barrage across No Man's Land, has given to them all. They filled the

He was all over the town and seemed to get on very well

(another "war correspondent") and me waiting there on the platform; he came up to us with a grin and said: "Are you the guys who're coming with me?" If it had been the French front we were coming to, we would have been met by a staff officer, at least a captain, who would have introduced himself formally, and given us the compliments of the general—which is all right too, in its way. But this—it was exactly like coming back, after an absence, to my little home town and being met by the old stage driver who has carried me so many times over the hill. We said we were the guys, and he led us to his car, we carrying our valises (blessed democracy!), and when we got to the car, it was a Dodge car! Had it been a Ford, I'm sure I should have wept; even as it was, though, a tenderness entered my soul. We got into the Dodge and were off—in Lorraine. The road went up and down, sometimes steeply, through a rolling country of soft brown

stubble oozing with wetness of melted snows, with woods here and there, leafless, of warmer browns. We roared like a meteor through a small stone village up to its knees in the mud, and perhaps ten minutes after we had left it behind, our chauffeur and mentor said: "That village, back there."

"Yes," we said, "what about it?"

"That's where that Joan was born—you know that Joan of Arc." Thus it was we knew we had been in Domremy. But there was still a long ridge to our right; on its slopes, we surmised, it must have been that the maid tended her sheep when the visions came to her; we looked at those slopes and tried to be satisfied. A little while later, though, our minds were taken up with a little incident expressive of two things—first, of that amusing insolence which comes to any man of any clime who drives a car; second, of that little pique which exists between nationality and nationality, be these even the best of allies. There came along behind us a large automobile blowing wildly with its siren a demand that we should let it pass. Our chauffeur, of course, held the road. The slimmest of malicious grins was upon his face; every once in a while he sent the little Dodge to the side of the road just long enough to tempt the pursuing machine to try a dash for it—upon which, smoothly, he would close the way again. Said he, turning to us nonchalantly: "I'll bet you that's a French machine heck there." My companion and I, being neither of us butting men, did not take him up. But the machine behind was fairly tearing the air with its

get to a battle—or to dinner. Our chauffeur turned to us triumphantly. "I told you," he cried; "I told you it was a French machine!" And then, in a buzz-saw growl, he added: "They think they own the road—just because they are in France!"

### Ready to Be Let Alone

THEN we reached the town where we were to be billeted and saw for the first time American soldiers in force. A body of them was quartered there in that inelastic town of stone, quartered right together with a body of French troopers; the khaki mingled with the horizon blue. These men from the States struck me as different from those I had seen in the border warfare (how dry the land had been then, and how blue the sky! And now, how delicately hazy was the air, and how shining wet the houses of stone, the roofs of slate!). On the border they had been natty, sharp, and snappy of gesture, with that sort of compactness of body and stiffness of spine which come of long parade drills. Now you could see these had been busy with more serious things. They had retained, for one thing, more of their native quality. After seeing many, I thought the type could well be set down as the "rangy" one—a tall, lithe youth, narrow of hip, long of leg, and loose-limbed, with that relaxation of muscle which the true athlete learns, which holds the body in cunning rest for the effort to come, and which, when the effort does come, makes the transition from that looseness to sudden tightness as powerful as the reaction of a crossbow. His bearing was between the ridiculous "military" stiffness of the goose-step school and exaggerated sloppiness; it was a sort of natural ease, in some cases very close to grace, and beneath it one felt somehow something redoubtable—the consciousness of several things well learned: bomb throwing, for instance, and bayonet sticking, all sorts of skills which made that pleasing young man, with all his lazy grace, a being rather to be let alone. And he wore his campaign hat—I liked that. In Paris I had been told the campaign hat had been abolished. If an order had abolished it, our young man had abolished the order. He wore his campaign hat on his head, just a little tilted, cavalierly.

### "Tout-de-Suite"

HE was all over the town and seemed to be getting on very well and to be quite at home everywhere—in the shops, in the inns, everywhere. His ready smile went for much, but also he had learned some French. His vocabulary consisted especially of the phrase "tout-de-suite." The American, internationally, is distinctively a tout-de-suite man. On the other hand, the shopkeepers had learned some English: the principal word used on that side was "Finish!" Whenever that American, tormented with an eternal desire to buy, asked tout-de-suite for something which did not exist, the answer was "Finish!" Between "tout-de-suite" and "finish" you might think there would be little chance for complicated relations. Yet those complicated relations existed. The truth is I have not told the whole of the business. As a matter of fact, the real bond in Franco-American relations is the child—the little French child. When one enters a little shop in one of those small French towns, one really enters a family. The father, of course, is in the army somewhere. But the mother is there, behind the counter, and the eldest daughter, who may be old enough to be quite interesting. If she is not quite that, then she is a wise and good little schoolgirl, who attends the école communale, and who helps her mother after hours while she does at the same time her home work, snatch by snatch, at the end of the counter.

They wore no campaign hats, but steel helmets, khaki-colored, flat-brimmed helmets

train, they and their lithe, snappy young officers, and there was here as yet very little of America—only a lone khaki spot here and there.

It was only after an eight hours' ride, when I got off at a little station, that I met America. America came to me in the guise of the chauffeur of the military automobile sent to meet us. He wore a wrinkled army uniform, khaki spiral puttees, much muddled, and a greasy campaign hat. He saw my companion

hoarse cries of rage, and finally our man went to the side and let it pass. It was a French machine; we caught a glimpse, as it whizzed by, of the two soldiers in the front seat, their strong aquiline faces impassive under the blue steel helmets, and behind them, inside, sat a French officer of superior rank—some general in haste to

In that case, it's a ten-to-one shot she is studying English at school, and hence is the natural intermediary, proudly pushed forward by mother (who knows only "finish") when the Américain comes in. But, besides this, there is apt to be another child, some little tot, playing behind the counter somewhere, with cardboard boxes or something; the Américain has soon rooted that one out. If it's a little girl—and anyway or other it always seems to be a little girl—so much. (Continued on page 23)

# COOPERATION IN ROCHESTER

HOW ONE TOWN SOLVES ITS WAR-TIME LABOR PROBLEM

BY EDWARD HUNGERFORD

ROCHESTER is one of our industrial strongholds. Rochester is not a large city—not as we view large cities to-day. Her population is hardly over 250,000. But the quality of her workers is Rochester's industrial strength. The larger cities near by—Buffalo and Pittsburgh and Cleveland—far exceed Rochester in tonnage of manufactured output, but not in value. For this western New York city which I am going to make a text on cooperative effort turns out some of the most delicate and valuable products manufactured in America—cameras, lenses, scientific instruments, barometers, thermometers, motor gears. High-priced products mean high-priced labor. Rochester differs from Buffalo or Pittsburgh or Cleveland in the fact that she has no large sectors of foreign population—the result of low-priced labor—to be amalgamated and Americanized, if possible. Rochester's savings-bank deposits, built up on thousands of small individual accounts, run to a huge figure. She has subscribed most generously to the various Liberty Loans. Her per capita subscription to the second one ran well over \$100 to every man, woman, and child in the community. She is intensely American, and immensely proud of that. To this high-grade industrial community came last July an army officer upon an important mission. He found his way to the Chamber of Commerce, which had not then moved into its new home. To its secretary—Roland B. Woodward—he explained his mission. This officer's task was to help arrange the production of guns for the army. He was formerly of the regular army, in charge of an important division of the Watervliet Arsenal. Retired under the age limit, he had returned to the colors and was engaged upon the most important task of stimulating the gun production of the United States.

His was a real job. For while motor-truck agents thronged Washington day after day, while persistent men were offering to supply wool or cloth or canned corn or hats or boots, while a host of concerns were anxious to embark upon the rather dangerous business of powder making, not one manufacturer offered to engage in building guns larger than rifles or field guns. And only three concerns in the country—outside of the regular arsenals of the army and navy—were making or were equipped to make them.

## Wanted: 12,000 Skilled Men

THERE was a cause for this reticence. Gunmaking is a ticklish business—not dangerous, but just ticklish. It's mighty exact. A gun manufacturer must not exceed a variation of two one-thousandths of an inch in a six-foot bore. Not every man who walks into a shop, his overalls under his arm, and announces himself as an expert mechanic, can build guns to as delicate measurements as that.

And a complicated business too. A single disappearing gun, of a standard type adopted by our army, has, with its disappearing carriage but exclusive of its sights and accessories, almost eight thousand parts. A three-inch gun battery requires 3,876 tools, accessories, and supplies which are simply part of its standard outfit. And yet our Government stands in great need of thousands of these guns—and their accessories.

The army officer made these things clear to the Chamber of Commerce man. And the Chamber of Commerce called a conference of several dozen of the leading manufacturers of Rochester. To them the man in khaki made the problem clear. He said that the program for heavy guns for the army until July, 1919, would run to a cost of \$2,000,000,000—perhaps even more. He translated these figures into those of size. He said that within that time there would be needed at least 65,000,000 tons of new parts for these guns in addition to 45,000,000 tons of replacement parts. Let me translate these figures still farther for you. There are 65,000 railroad locomotives in this country. Let us assume their average weight to be 200 tons each—it is a very fair estimate. That means that the railroad locomotives together weigh some 13,000,000 tons—or just one-fifth the castings required for the new parts alone of our heavy ordnance for the next eighteen months of the war. We have embarked upon no piffing enterprise!

"It is because of the remarkable skill and precision of Rochester workmen in the war work that

*Plumbe is a plain-speaking, hard-headed man who has known labor all his life*

they already have turned out," concluded the man in khaki, "that we have asked this city to be one of eight or ten to engage in the production of large modern guns for the army. And we have found one of your Rochester concerns enterprising and patriotic enough to shoulder its part of the task—provided it can get sufficient workmen."

From the back of the hall a small voice spoke—it was the voice of a local manufacturer.

"How many workmen will they need?" he asked.

"About 12,000," was the reply.

The silence was deafening. Twelve thousand skilled workmen from a town whose total operatives did not far exceed 70,000! But Rochester met the test. Before the army man had boarded the evening train back to Washington he had been told that the local concern could take the gun contract. It would have its labor, even if the lathes and benches of the other industries of the town were deserted. Its labor would have proper transportation—if it were necessary utterly to abandon some of the trolley lines in the residential portions. And if that were not enough, private automobiles would be commandeered. Its labor would have housing. And amusement. And special education. To these things Rochester pledged her faith—and Rochester is a town of high credit.

## How It Works

THE community faced a real problem. It realized that if it did not find an adequate solution of that problem it would have labor chaos upon its hands. And as a result the Government would have gained nothing, the city would have gained nothing—the men would have gained nothing.

Without planning, industrial confusion was almost bound to ensue. Employers would begin stealing labor from one another—as is being done in other of our war-bred communities to-day; piracy rather than patriotism would result. The Government can do a community an almost irreparable injury by placing within it a plant and a working force that the town cannot digest.

Rochester wanted to be patriotic—to do her bit and a lot more—but did not feel that she should have to suffer a great injury in the doing of it. But there was a way out, and its gateway bore two words—"community cooperation."

Cooperation counts. But to make it count means far more than the canting or recanting of phrases. It meant in Rochester conference after conference. The employers of the city received many ideas, rejected some of them, adopted the best, and evolved a plan. In ultimate effect this was an employment

bureau which, although a fundamental part of the gun works, was quite independent of it—in fact, was to be financed and directly controlled by the Chamber of Commerce. It was to be, in effect, a central employment bureau for all the important manufacturing industries of the town. Like the gun works, they pledged themselves to engage labor whatever except through it. And it, in turn, pledged itself to find the labor; to keep the men contented and on the job; to keep their wage demands reasonable; to see that they had more than merely adequate housing, transportation, and amusement. A large contract? Not so tremendously large. The Underwriting Committee of the Chamber of Commerce, appointed to supervise the cooperation job, quickly raised a fund of \$25,000 and with it secured a sixteen-thousand-dollar-a-year man to carry on the workings of the new bureau. His name is R. E. Plumbe, and he came from Chicago where he had had a large employment experience. In the midst of the contractor's welter and disorder from which the new gun works began to rise last fall, a small wooden building was erected. It is an unpretentious structure, but in it is housed undoubtedly the most important social experiment that has arisen in connection with the war-munition industry in America. Plumbe is a plain-speaking, hard-headed man who has known labor all his life and who respects and understands it—and incidentally has a decent measure of respect for employers. He showed that when he met the larger employers:

"I shall not call on you for your skilled labor until I actually need it, and you must not call on me for labor until you actually need it."

They ignored the last clause of this statement. "What are we to do when you call on us to furnish skilled labor, and we have important contracts?"

Plumbe did not hesitate. "Keep steadily training new men for the places of the skilled men you have promised the gun plant. It is part of my job to find the unskilled folk for you to train. We shall establish a school in every important plant in this city. I will supervise. And I give you my word that you will not be called upon for your skilled men until the works absolutely needs them. And you'll have at all times at least ten days' notice."

He faced the employers steadily. "Don't you see my plan as I see it? We are creating a reservoir of skilled labor in my little shop out at the arsenal. Each of you men who controls an important industry in this town will have a smaller individual labor reservoir which will draw its supply from outside sources chiefly—only occasionally from one another. The gun-plant reservoir will draw both from without and from these Rochester reservoirs. Only the Rochester reservoirs are the guaranty against drought or even shrinkage of outside labor supply. They must be kept filled and efficient."

"They will be kept filled and efficient," said the Rochester employers.

That was early last autumn. In April I went to Rochester to see how the plan was working; to see whether it was going to do the things it had promised to do. I found that the gun works had taken on fully half of its ultimate full quota of men, and that practically all the other large industries were working as large forces as last fall, when the plan was first placed in effect—perhaps slightly larger forces. There had been no strikes, not even any labor disaffection worthy of note. And the town had not lost its head and gone crazy over housebuilding.

## Plumbe Always Finds a Way Out!

A REAL-ESTATE man had waited upon Plumbe soon after his arrival in town. "You're going to need a lot of new houses to accommodate these workmen. We're ready to lay out a miniature city near the new plant," he said, "and I understand that the Federal Government will get behind housing schemes for war workers like this and back them to the limit if necessary."

"You are looking for an appropriation," said Plumbe as he dismissed the real-estate man, "and I think that we can come through the situation without building any great number of new houses."

It looks as if he would. For he has been "taking up the slack" in Rochester's housing facilities—quietly but very efficiently. He has listed vacant

accommodations so thoroughly that at the time of my visit he still had available 818 furnished rooms, 9 furnished apartments, and 284 unfurnished houses (although Rochester never has been an apartment-house city), and 576 houses, with a total capacity of over 6,000 men—or just about the number necessary to complete the gun works—and the housing resources of the city under no serious strain! If the necessity should arise, Rochester will bring war-working folk into the homes on East Avenue, which Rochester is as Fifth Avenue or Park Avenue to New York or the Lake Shore Drive to Chicago.

In a similar way Plumbe had tackled the city transportation problem. Rochester's street-car facilities have never been among her strong points. But the company came forward in the cooperative spirit and said that it would do its best to move the war workers, though it might have to call the city's promise to allow the partial abandonment of lines in certain residential quarters.

"Is there no other way out?" asked Plumbe.

The trolley people thought there was. If the different big manufacturing plants could be induced to let their 70,000 workers out at varying hours of the late afternoon, instead of all of them between five-thirty and six o'clock, the trolley people would get along. It was arranged. The different plants in Rochester now close each afternoon all the way from four-thirty to six-thirty, in accordance with a definite traffic plan of the transportation experts of the city; there is neither undue congestion upon the trolleys nor too big a "peak" at the power house. And it is worth noting that under the new plan for diffusing the rush-hour traffic, the power house is saving 125 tons of coal a day.

At the same time Plumbe was wrestling with an-

other problem totally different—the sex problem: women in industry. Rochester long has employed many women operatives, but the girl in overalls—the girl at a man's job, if you please—was something of a shock. And when two girls went to work in a big button factory at machines hitherto reserved for men the thirty men employed there struck.

Plumbe did not explode at the strikers. He had a definite feeling that they were human beings. So he argued with them. He asked them if they did not realize that the war demands upon industrial America were going to force many women into men's jobs. They did not realize that. They said they did not. And if they had realized the situation they would not have bucked in the traces. The strike ended forthwith.

#### A Central Employment Bureau

OVER the manager's desk at the Central Employment Bureau hangs a huge chart. It is too large to reproduce here. But one sees that it embraces many activities beyond the mere hiring of men and women. It includes elaborate welfare and amusement plants, schemes for training in the various industries of the city, checking of personal efficiency, and in addition some fairly elaborate advertising plans to secure labor in territories not thoroughly drained as yet by other war industries. The Central Employment Bureau of Rochester—the city's clearing house for labor—has four experienced men scouring those neighborhoods. It has them platted and understands to a large degree their human resources.

"But," you interrupt, "suppose that every town adopted the Rochester plan and sent its agents scouring out into the open country. You might have individual civic labor efficiency, but wouldn't you have a national labor confusion, employers bidding against

one another and stealing each other's workmen—the very thing that Rochester has striven to avoid?" Let us ask Plumbe.

"There would be no confusion or panicky bidding if there was proper correlation, or cooperation," is his reply. "It all comes to a question of organization. It would be an easy matter so to zone the country as to give each munition-producing city not only its immediate field round about as a supply territory for labor, but perhaps distant fields as well—in portions of the country not producing war supplies. It would be against the law for any community to cross the boundaries of the zones assigned to it. If there was not enough labor in its own fields, it would have to borrow, of course, from others—but only through the medium of central employment bureaus. Cooperation counts, you know."

At the very moment at which this is being written Kansas City—a community whose size roughly approximates that of Rochester—is torn and paralyzed by a species of civil war. The enterprising city at the head of the Missouri is not engaged—extensively at least—in the production of war supplies. But it has keenly felt the labor pressure from other munition-producing cities. And for lack of a strong cooperative policy in its labor problem Kansas City allowed its great industrial district in the bottoms to become a sort of miniature Marne.

I would not want to prophesy absolutely that Rochester's policy of community cooperation would invariably prevent strikes or other labor upsets in her factories. I do believe, however, that it will be a powerful force in combating labor unrest. It is not an expensive plan; but, no matter what the cost, it will far more than justify itself in the long run. Cooperation counts.

# THE ACTOR AND HIS PART

BY KATHARINE HOLLAND BROWN

ILLUSTRATED BY LUCIUS WOLCOTT BITCHCOCK

TO my certain knowledge, Miss Sallie Lou Johnston is forty-eight years old, going on forty-nine, a dubious age indeed for a heroine of romance. More, she is not a beautiful woman. I don't believe she was ever pretty, not even as a young girl. Four times a day she trudges past my window, back and forth from her windy old house on the hill to Douglass School, where she has taught eighth grade for twenty-nine inexorable years: a large, square, sandy woman, in worn blue serge, its long, ill-cut skirt floundering about her large, square shoes, and a dingy velvet hat, with a black sateen bag full of review papers and a lean little mink muff with a fierce little mink head glaring atop. Not a vision to enthrall one's thoughts! Yet only to-night to Miss Sallie has been vouchsafed the eternal talisman. For her the white stars have been lighted. Their radiance will never go out, their glory dim.

NOW, Miss Sallie is the salt of the earth. All Salerno knows that. But she never was anybody much. Her vague old father died when she was eighteen and left her the meek, paralytic old mother to care for. Year on year Miss Sallie taught school and nursed her mother and went to prayer meeting and baked her incomparable chocolate cakes for the Presbyterian sociables, by way of recreation. It wasn't a vivid life. When old Mrs. Johnston died the sewing circle agreed piously that Miss Sallie deserved her release. And we grew a little tried at her stubborn and heartbreaking grief. We didn't understand, you see, that that old, helpless woman had been to Miss Sallie as her beloved, helpless child. But our impatience at her sorrow was as nothing to our impatience and our wrath at her behavior the year that followed.

Down Salerno Levee stands the Planters' Delight Burlesque House. On New Year's Eve one Barry O'Brien, a song-and-dance man, was stabbed to death on its steps in a drunken brawl. Barry was an unknown, a bit of the river drift. He left not a penny in the world. However, he did leave a broken accordion, a horseshoe rhinestone pin, and a ragged, sulky ten-year-old son. Up on the hill, respectable Salerno argued and wrangled as to which public charity could be forced to accept the child. And while we wrangled, didn't Miss Sallie step in and march him down to court and adopt him? Before you could say Jack Robinson!

Salerno gasped, then loudly disapproved. The poor, soft-hearted old maid! To adopt this young vagabond, when everybody knew she was now past forty and her salary only eight hundred a year! But I reckon Miss Sallie was clean starved out. All the thwarted mother in her was clamoring for its own. A while ago her own feeble old mother had fed that hunger. But now its urge was tearing at her flesh.

Well, from that hour she fed her starved heart on Chester—Chester Pinckney Johnston, she'd named him, for her own father. And Chester was mighty poor provender. He was as handsome as a picture, with red-brown hair curling round a clean-cut, surly young face, and long-lashed red-brown eyes and a cream-and-freckle skin and a slim panther body, grace in every tricky line. Tricky—that was the word. He was all trickery. He'd sing like an angel at Christian Endeavor Sunday night, then rob a melon patch Monday night, with equal aplomb.

He was as keen as tempered steel; he made his grades without turning a hair. Yet he'd let Miss Sallie sit up evenings and solve his algebra problems for him. He shot up like a green bay tree; at fifteen he was Salerno's one real athlete; he played football like a veteran, but he'd lie abed mornings while Miss Sallie climbed out in the freezing dawn to build fires and sweep snow. He was lazy and brilliant and churlish and adorable. All Salerno glowered at him and mistrusted him and snubbed him. That is, if you can snub a creature as beautiful as the morning, who saunters past you with the serene eyes of a young prince stooping to mingle a moment with his humblest peasantry. And Miss Sallie cooked for him and washed for him and spent her lean wage on his smart shoes and gay, spotless linen and tucked him up nights and thanked God on her knees that He had given her so glorious a son.

Chester cared little for his successes of class or field. One passion alone possessed the boy: the theatre. Barry O'Brien's vocation was stamped into his child's being. He had an amazing talent for mimicry. He'd sell the shoes off his feet for a

ticket to a show—any show. At eleven he'd tease Miss Sallie into taking him to everything that came to town, from Maude Adams to "East Lynne." At thirteen he bullied her into letting him "ush" at the Salerno Opera House. At fourteen he ran away with Kennedy's Carnival Kids. I never will know how Miss Sallie lived through that black fortnight while we traced him up. He came home an infuriate prodigal. Kennedy had paid him twelve dollars a week, and promised to put him into vaudeville the next winter. Why the devil had Salerno

folks butted in? How dared she let the town search for him? He stood there, slim, exquisite, flaming, and hurled the brutal, raging words at that big trembling woman like hail. Then, in a breath, his savage young voice fell. He stared at her blankly, a long minute. He thrust a shaking hand into his pocket and pulled out a green plush box.

"Brought you this from St. Louis," he growled. "Ketch." He slammed the box at her, and slammed himself out of the room.

Wide-eyed, Miss Sallie opened the box. It was a wrist watch, plated gold, set with large glass amethysts, hideous beyond belief. Miss Sallie just sat and looked and looked at it. And her drawn, pale lips relaxed, and pitiful, adoring laughter bubbled up into her haggard eyes.

"Isn't that Chess, all over!" she sighed. Yes, that was Chess all over, a black-browed young demon one minute; a sulky, appealing child the next.

Well, the drawn look came back soon enough. Chester swung straight ahead on his reckless road. At sixteen he toured all summer with a tent show, working the Mississippi River towns. He came back from those rowdy weeks to sing

Didn't Miss Sallie step in and adopt him?

"Jerusalem the Golden," fit to melt your heart, at Leda Carter's funeral, and to carry nine-tenths of the program at our Belgian Relief festival, and make it the one sweeping success of the year. Miss Sallie fairly thrilled with panicky triumph. Salerno tried to unbend then. But it is difficult to unbend to a cool-eyed, scornful cub who doesn't even listen to your felicitations. Further, it didn't take us long to hear how he'd sent Garrity's pool-room gang into whooping ecstasies by his unerring impersonations of his fellow stars. After that we hoped for the best in Chester—and looked for the worst.

Next winter he quit school flat and joined a vaudeville team which went on the rocks by March. Sullen, footsore, he made his way back to Salerno. And Salerno gave him a mighty cold shoulder. But Miss Sallie laughed and cried and rejoiced over him, filled him up with goodies and bought him a new twenty-dollar suit and two silk shirts. No use, sighed Salerno. She never would learn. You can't teach an old fool—especially a poor, tender fool of an old maid whose blind eyes see only the child that makes real her dreams.

Out of all our doleful chorus, just one voice spoke for Chester. That was the voice of old Major Stearns, Salerno's grim, ancient seer, throned in his creaking wheel chair.

"Tough? And selfish? And ne'er-do-weel? And rotten blood back of him? Yeh. He's all that. But he's something more. He's an actor born, a cracking big actor too—an actor who's never found his part. Let Fate once give him his cue, and you'll see. You'll see. Let Life once grab him by the scruff of the neck and shove him down to the big footlights—then watch. He'll wake up. He'll make good. You'll see."

But nobody listened to the major. He was getting pretty old, anyhow. By this time we had something else to listen to: a nearing, ominous thunder. The war!

ONE week after war was declared I went to Washington. I came back six months later. The morning of my return I met Miss Sallie on the street. I stopped short and gaped at her.

She didn't see me. She passed me by without a glance. In those six months Miss Sallie had aged ten years. Her big, sturdy body had caved in, her hair blew in gray wisps around her gaunt, wan face. She went by me like a hunted thing, stumbling in deathly weariness, driven, driven on.

"Oh, it's that scoundrelly Chester of hers. He's been playing aboard a show boat, the *Ohio Queen*, all summer. In September the Paducah sheriff pinched the show-boat boss for passing a counterfeit bill. They do say Chas wasn't mixed up in it—that he skipped so's to dodge testifying against the old man. Anyway, skip he did. Gone to France as mule tender aboard a transport, I've heard. Good riddance."

Maybe. But a cruel riddance for Miss Sallie. Day after day, that windy autumn, she plodded past my window, the dingy hat rammed down anyhow on her gray braids, her step dragging heavier every day. And once a week she mailed a letter to France—a pitiful, futile letter, sent in care of first one army organization, then another, in the senseless hope that somewhere, somehow, it might reach Chester's hands. Red Cross, Field Service, Army Y—such a wild-goose chase grieved Salerno. As if Chester would ever trouble to answer her! She had fed him and sheltered him and slaved for him all his growing years. Now he had left her without a word of good-by. What could you expect of a cheap actor's son, anyhow? River drift, Chester had come to Salerno. River drift, let him go.

The weeks dragged by. We sewed and knit and rolled bandages; we scowled over the Russian enigma and raged helplessly at the treachery that lifted its head at our very doorsteps, Christmas came.

We packed and shipped boxes on boxes of cigarettes and candy, cases of sweaters and mufflers and jackets, to our own boys at the training camps. And Miss Sallie sent a box to France, in care of the Y. once more: a sweater that she'd knit evenings, heavy socks, a five-pound box of her own luscious pecan fudge. Once more Salerno shrugged and sighed. Why cast your pearls eternally before the swine?

New Year's dawned in bitter cold. January dragged through lashing winds and sleet. Day on day Miss

Sallie trudged by. Under the dingy hat, her gray eyes, those wells of kindness, clouded and grew dim. Under the patched and turned blue serge the heart in her breast—a child's heart, full of love and service—lay a lump of freezing lead. We were all sorry for her. Of course we were sorry for her. Poor sentimental old soul, to imagine she could pick a bit of riffraff off the levee and make a man of it! If she could only realize her luck in getting rid of Chester, before he'd brought some lifelong disgrace upon her! But, poor stubborn thing, she'd never realize that. And then—

WELL, all the miracles happen just as simply, I reckon. Maybe this wasn't such a miracle, after all. Only the opening of the eyes of a very small, blind, obstinate town. Only the waking of one pygmy actor to the splendor of his part in the mightiest drama of all time.

Along five o'clock the Salerno "Courier" bumps on our porch floors, and we all teeter gingerly down the icy steps and snatch it in. To-night, when all Salerno sat down by the sitting-room table and snapped on the green lamp, I'll wager that our multitudinous glance fell on that flaring headline at one and the same moment. But be sure that it took many minutes for our Doubting Thomas spirits to grasp the meaning of those curt, unbelievable lines:

"Cited for gallantry, Corporal John D. Jones, Privates Hill and Murphy. While civilians are seldom mentioned in dispatches, it is known that high praise is due a boy of seventeen, named Chester Johnston. Young Johnston ran away to France in September, and has served as helper with the Red Triangle in every capacity, from entertainer, at which he is said to be an adept, to scouring floors. Early Tuesday morning, during a heavy bombardment, a German shell struck an emergency tent just back of the trenches, demolished it, killed four wounded, and fatally injured the surgeon and one orderly in charge. Young Johnston, who was giving first aid, was wounded by shrapnel, but set at once to removing the surviving wounded to the nearest field hospital, a mile away. Unaided, he managed to transport eleven helpless men aboard his car, making three trips in all. On the last trip a shell struck his car and smashed it to bits. Both he and his wounded received severe injuries, Johnston's left leg being broken and his head badly cut. However, he crawled out of the wreck and dragged his men into the nearest gully. Later a field-service car picked up all four. It is thought that young Johnston will survive, although his condition is grave. The eleven wounded will recover. . . ."

Right there I dropped my own "Courier," snatched my cloak, and rushed out into the clean, cold dark. I had to. I wanted the darkest corner I could find. But halfway down the block, didn't I meet Miss Sallie, coming home from the post office. And

Chester thrust a shaking hand into his pocket

again I stopped, and stared with all my eyes. For it wasn't my gray, tired Miss Sallie any longer. She walked like a goddess, erect, transfigured. Her head was up, her cheeks blazing, her gray eyes were gray fires. And, mind you, she hadn't laid eyes on the "Courier." She had not heard one word of the dispatch that had swept all Salerno. But in her hand she held a letter—a handful of flimsy pages, stamped with the Red Triangle: the first letter her boy had ever written, the first love letter that had ever come

to her, in all her long, gray woman's life. Without one word she put it into my hands.

It wasn't much of a letter either. It was dated four weeks back. It began abruptly:

"MISS SALLIE LOU JOHNSTON.

"DEAR FRIEND: Your Christmas box come tonight. Also 5 letters that have been stuck somewhere. Also socks & sweater. Also, Oh you pecan fudge! I ought to of wrote to you before, but kept putting it off. Now I am writing at the dug-out. I wish to tell you how I am employed. The Secretary and me take turns doing night duty. Just now I am on day shift. I climb out at 5 a. m., start the coffee kettles, drink some myself, make sandwiches, I bushel or so like you used to do for our S. S. picnic, only they don't come up to yours not by a long shot. I then sweep the hut, wash up, drive to railhead for freight & unpack it, for there is always boxes coming. Between times I run the grub counter, make more sandwiches, clean our 3 cars, etc. The soldiers string in all the time and eat and ask questions. After 4 o'clock the place is jam-full. I usually do about 8 turns for the fellows. They like my black-face work. They also fall for my monologues, especially the one about the Chicken and the Axe. Also I bet they would keep me doing clogs all night if I would let them. When on night shift I pack cigs and sandwiches around the trenches. There is one American woman in Paris who makes peanut brittle that I can't hardly tell from yours. Some brittle! You would not believe it to see how tickled those dough-boys are when I slip them a hunk. Now and then the Boches pick off a Field Service man, and I grab his car, and drive till the new driver gets there. It is bully for the Boches know our roads and shell them and dodging shells and craters is some sport. But mostly I am kept jumping on my own job.

"The Y pays me 100 francs a month, which is 20 dollars of our money. It is good pay, for they give me my bunk and grub, etc. free gratis. In this letter I send you a money order for 35 francs. I want you should hire that Uncle Jess ducky to come tend furnace. This will pay him one month. By that time I will send more. Also I want you to hire his wife to iron. When I remember how you use to get up and tend furnace and iron my striped shirts it makes me sick. After I get home you ain't going to open that furnace door again. Believe me. Nor you don't cook for me nor nigger for me no more. I have learnt how to cook and to nigger myself and I don't put up no squeak am glad of the chance to do it for the fellows but when I think how I let you do it for me I want to hike out into No Mans Land and holler Here Goes Nothin. You always treated me white and you took my part when those dam old Salerno stiffies would of skinned me alive if theyd got the chance and you gave me a new suit and a dollar

every birthday and if you think I am not coming back to square up then you have got a nother think coming. I want to stay here as long as the Y wants me for it is one peach of a job it is like being in the grandest play ever and there is always something doing but when I come home I am going to get a mans job and get busy.

"I wish if not too much trouble you would send me some of your peanut brittle and a maple sugar Easter egg with my initials on it like you always use to make me. I never did see how you poured that hot sugar into the egg shell & not bust it. The fellows say it cant be done & I will show them. It is now my shift at the grub so no more at present from

"Yours truly,  
"CHESTER P. JOHNSTON."

It wasn't much of a letter. Any boy of seventeen should be able to write a neater one. To say nothing of that rude and ungrateful reference to his home town! But when I

looked at Miss Sallie I knew that those three sneaky pages had heaped her scale with minted gold against forty-eight gray, drudging years.

"Miss Sallie," I choked. "Dear Miss Sallie—"

But Miss Sallie wasn't listening. She stared straight past me—past me into the lighted window of Tucker's fruit and grocery store. "Do you suppose Tucker has got in any maple sugar?" said Miss Sallie, her eyes like stars. "But it's too early in the season. Maybe I can get some by sending to Va. . . at."

# UNCLE SAM'S NIECE—AND YOURS!

## BY JOSEPHINE DASKAM BACON

WHAT is the greatest profession now open to young women? I mean by this, what profession offers them to-day the greatest opportunity for service to their country and at the same time assures them steady employment with an income advancing as the responsibilities of the work advance?

Ask this of your niece, Mr. Business Man, when she comes bubbling into your office, begging for a job as your stenographer. Ask it of your sister, lieutenant, when she wants to drive her car in France. And remember that what she does in this war is going to affect the country you are saving for her quite as much as what you do.

If the young woman of to-day cannot answer your question offhand, I will put it somewhat differently, to help her out. If you were asked to name the profession for women which combines the duties and the rewards of the mother, the teacher, the physician, the soldier, and the priest—what would you answer? Obviously this order is too large to be filled by the munition worker or the ambulance driver: the busy lady who serves so madly on committees and caucuses cannot expect us to take her quite so seriously as this!

No, there is only one woman who can answer "Present!" when the roll is called in this tremendous fashion: she is the Trained Nurse.

I am not going to talk about the enormous constructive power of the trained nurse in times of peace; I am not going to draw your attention to that wonderful development of community life, the district nurse. Ask your wife, or any of her friends who are interested in this triumph of civilization, what is happening now to the babies in the rural districts; now, when the terrific demand for educated, capable, experienced nurses is stealing that one hope of the poor and ignorant from the districts which have no big hospitals, no free clinics, and no ambulances. They can tell you what is happening: the babies are dying. The rise in infant mortality is so great that it is startling county authorities.

But to the girl who is obsessed with the idea of Joan of Arc (and during the last few years I have almost wished that this famous young lady had remained a shepherdess!), to the girl with a trained mind and a sound body who feels that nursing is too tame and not modern enough for her powers, in the present great crisis, I should like to put a few questions.

### What Saves Wounded Men?

DO you realize, Miss Young America, that when Florence Nightingale and her little band of nurses arrived at the dreadful hospital barracks of the Crimea, the death rate went down from between 30 and 50 to about 2 per cent? How many fighting men do you suppose that saved the nation? Governments couldn't do it; money couldn't do it; kind hearts couldn't do it, any more than coronets. Professional trained nurses did it.

And what they did then they are doing now. The first American girl to make the great sacrifice for her country in this war died in a British base hospital in Etretat, France, January 17, 1918. She was Amabel Scharff Roberts, a young graduate of Vassar and of the Presbyterian Hospital of New York. Just before her death she wrote to her mother:

"He saves others; himself he cannot save." That is to me typical and descriptive of the soldier. I don't think we can do enough for them. These men have left everything—business, family, civilization. Yet surely it is better to die young than to live a hundred years to no account. I am more thankful every day that I took up nursing, even though my bit is so very small indeed. More than half my class at the training school are over here. Am I not fortunate?"

A soldier and a woman wrote that letter: the bed where she died of septicemia has all the honors of six feet of the trenches.

What saves wounded men? Nursing saves them—not surgeons nor medicine. That is why there must be, for every million soldiers, at the very least 12,000

trained nurses. Remember that when we entered the war there were hardly 30,000 registered nurses in the country. Nearly 20,000 were enrolled in the Red Cross by April 1, and an urgent appeal for an immediate increase of 5,000 was being made. By the end of the year more than 35,000 will have to

earn from \$1,500 to \$5,000 a year and upward? And how many, in offering this, add to the offer the satisfaction that goes with work of scientific standing and the knowledge of fulfilling inestimably important public service? If you know of any, especially in this crucial year of our national honor, when every

life saved, from the baby in the almshouse to the financier planning our national loans, is one more unit in our line of defense, then you are in possession of facts that have hitherto escaped me.

There is surely a great opportunity here for principals of high schools and instructors, who watch hundreds of high-school graduates go from them into the business schools, to urge instead the advisability of a three-year nursing course in any of our great hospitals.

"Of course," you must say, Mr. Patriotic Professor, "this is no get-rich-quick six weeks' course, young lady. Saving human lives is a little more important than pounding a typewriter; and, besides being many times more interesting, it offers a much bigger future, financially and socially. But you don't have to pay for it at the rate of a college education, because you earn your living at it while you are learning."

It should be the duty of all such instructors, clergymen, business men, and Y. W. C. A. directresses to inform every girl who has the slightest gift for such work that the great majority of training schools for nurses require no fee whatever for the entire course, beyond a slight deposit for food, etc.

Many a young girl who could not pay for three years' instruction does not need to be earning anything during that time, if only she could be sure of not being a drag upon her family.

### The College Graduate's Position

BUT now, to be quite fair, we must listen to the college girl; for up to now she has had a good reason for not enrolling herself very heavily in this profession.

"All this is very inspiring," she answers, "and I assure you that the career of nursing—especially now—appeals greatly to my imagination. I know that the income is sure, the figures show me that the need is great, and I have always felt that for the really important executive positions in the profession no brains or training could be too much. But consider my situation for a moment. I entered college at eighteen; I left it at twenty-two. The only nurse who has any standing with the Government—and very properly—is the registered nurse, the 'R. N.' This course consumes three whole years, with practically no vacations whatever. This would leave me twenty-five years old, and precisely on a par with the high school graduate who began nursing years before I could. With four years' specialized training, practice in taking lectures, perhaps four years of biology and practical laboratory work, I have no credit for any of this, but am presumed to require all the teaching and drudgery necessary for the untrained mind of a younger woman who has had not a tenth of my cultural advantages. I could do more in her job than she, I am sure; I could get more out of it, and put more into it—but this is not recognized. I'm afraid—at the price and considering the fact that I haven't a burning call for it—it isn't good enough.

"And even if I thought it might be, this terrible year of all years—why, it would be three years before they'd have any use for me!"

Frankly, if Miss Vassar or Miss Smith or Miss Bryn Mawr had answered me in this way on April 6, 1917, I should have been obliged to cough politely and change the subject. For I should have agreed with her absolutely.

But now a change has come about, and what I firmly believe to be the greatest, the most thrilling, the most responsible war work open to educated women is to be offered to them, for the first time, in the most rapid, practical, and interesting manner possible.

(Continued on page 37)

For every million soldiers there must be at the very least 12,000 trained nurses

be in military service, if we are to give the aid for which our allies ask. Our nursing force as it now stands is not big enough for the armies alone. At the present rate of withdrawals from private work and the tremendous increase of need at home (for already war conditions are taking a terrible toll of health) we shall soon be facing a dangerous shortage of nurses.

### \$1,500 to \$5,000 a Year

IF you don't believe me, Miss Young America, wait till your little brother runs from bronchitis into pneumonia, next winter, and your younger sister has the measles at the same time, and her ear begins to swell and inflame, and the doctor fears mastoiditis! Your first-aid course and the twelve-lesson nurses' aid lectures that you took last summer won't help you much. Nursing is a science at bottom, if it rises to an art at the top, and you'll feel under the trying circumstances I mention, that thirty dollars a week is little enough to pay—if you could buy capability and experience with it.

And this brings us to the next point: How many professions, do you think, offer hundreds of positions

## THE HEAVIES

**THIS** is the war of artillery, and above all of heavy artillery. Never before have so many large-caliber guns been employed. The picture above shows a battery of British 9-inch howitzers in action along the Somme. The center picture gives a good idea of the huge size of a group of 310 mm. (12-inch) shells. Below is an airplane view of the German lines during a heavy Allied bombardment with gas shells. Notice that the wind is spreading the gas to the rear lines. The German front trenches are on the left.

## ARE SPEAKING

ABOVE is a battery of big French naval guns in action, mounted on railway trucks. In the center is all that remained of a German 155 mm. (6-inch) gun after a French shell hit it. When one reads that "the British have captured the village of So-and-so," it is natural to think of houses and streets. What one of those captured villages really looks like is shown below. It is Passchendaele—or what is left of it after three and a half years of war. The photograph was taken from a captured German aviator

## Paper and Prices

FOR hundreds of years our civilization has been working up a way of business in which things are not traded directly for things, but indirectly by means of money. The only way money could be made uniform and good was by having the Government control it. One result is that when things are hard to sell or hard to buy certain believers in the power of government urge that more money be made so as to help out the unfortunate. That is inflation. The typical American inflationist used to be the visionary who thought that our Civil War was won by the printing presses that turned out the greenbacks, and his equally whiskered brother who held that more greenbacks would free Kansas from the mortgage chains of bloated Eastern bondholders. That is all ancient history now, and our modern inflationist is a close-clipped, keen-eyed sort of business man who is sure that plenty of bank credit will float our Liberty Loans, lessen taxes, stimulate production and trade, and, in general, keep our economic system full of red blood. The once despised pumpkin-belt philosophy now issues from the mouth of the stock ticker! Modern business has to have modern banking, which deals in credit, and the huge task of our nation's war production cannot go on without using such credit on an appropriate scale. But war is fought and won with things, and all the credit is only a means of getting things. Too much money, whether gold or paper or bank accommodation, means cheaper money and dearer things, means higher prices and all the friction, waste, and trouble which must (and do) follow when suddenly boosted prices give some people an immediate business advantage over others. Modern centralized banking under government control can inflate credit, and inflation is an easy way of getting a sort of fevered business activity. But, in the long run, the Government will have to borrow more money, pay higher prices, meet a bigger debt, and lay heavier taxes over a longer period. That is what the greenback issues did for our Civil War. That lesson should have been learned by now, and it ought to be clear to all of us that the true worth of our Federal Reserve banking system is the chance it gives to keep our country on a solid financial footing through this war. The general level of prices is the acid test of inflation.

## Hold Your Bonds

IF you will notice the current pictures, you will see that our soldiers and sailors and allies need things to use in their war business. The point is to help make those things and to go easy on using them. By doing just that you will be lightening your taxes for the next twenty years or more. What is the sense of lending your money to the Government and then forcing up the prices of what the Government buys? That is exactly what happens when people neglect useful work or waste useful goods. On any one day or during any one year there is only so much stuff to be bought, and when it is all bought it is all gone. What the Government wants is your buying power, part of your purchasing strength, and you can lend that by subscribing to these loans or give it up by paying taxes. But you will mess the whole thing and badly by then turning around and competing with the Government for what the market has to sell. If you insist on doing so, you had better be taxed, for your loans are only an Indian gift. The man who turns his Liberty Bond in at the store for merchandise is only faking; he has not lent his country a red cent. Inflation, by forcing up prices, tends to encourage that sort of action. The cures for inflation are working and saving. Americans usually know about how much work they can do, but saving is rather a novelty and might possibly be overdone. A safe working rule is to save for your country during 1918 10 per cent more of your income than you saved in 1917, and turn it into Liberty Bonds, War Savings Certificates, or Thrift Stamps. If your family gets paid, or makes, a hundred dollars a month, just add a War Stamp every two weeks to your family budget, and the good work is done. Saving on that scale will kill inflation, lower prices, lighten taxes, and help win.

## Pathfinders

WHILE CHARLES M. SCHWAB is helping to build our ships, JOHN D. RYAN helping to build our airplanes, and E. M. STETTINIUS is attending to the nation's marketing, we may spare a moment's consideration for the other men who were tried out in important places and found wanting. They were not all red-tapists and in-

competents. They were pioneers; and they served their country by fulfilling the duty of pioneers, which is to try out a good many wrong paths before the right way is found and to make all the necessary mistakes upon which final achievement is founded. It is doing no injustice to SCHWAB or RYAN or STETTINIUS and BARUCH to say that they are fortunate in two ways: in the errors of their predecessors, and in the fact that the disillusion and disappointments of a year of war will win them a fair and patient trial.

The history of our wooden ships holds a lesson. It is pretty well admitted now that the wooden ship has lost us more tonnage in the delays which began with DENMAN versus GOETHALS than all the tonnage we shall ever get from the timber boats. Yet we only have to imagine what would have been said about the Administration and war efficiency if the Denman idea had been turned down without a trial. The wooden ship came at a moment when we were all winning the war by a series of happy ideas. To have rejected the wooden ship would have been to demonstrate the worst that has been said about bureaucratic inaccessibility to bold and original thinking. Or, again, should Mr. WILSON have dismissed DENMAN within a month after the beginning of the quarrel with GOETHALS, instead of waiting four months? Perhaps; only we should be still hearing to-day that a fatal mistake had been made in refusing DENMAN a fair trial. So that in the long run, for our permanent peace of mind, we may not be the losers after all. As for DENMAN's carrying the fight to GOETHALS, and the other way about, it is not in the psychology of our people to blame a man for standing pat on what he believes.

It is right that the men who have been tried and who have failed should go; but their share of merit must not be denied them. There must be men to make the mistakes in war, as in every great enterprise, and to that extent they play their part in the scheme.

## Americans of German Blood

THERE crops up now and then evidence that some people in this country regard a German name as evidence of disloyalty. A man in Montana writes to us that he is dismayed to find nearly all the Government posters in his town bearing the mark of firms that to him "sound German." We have had other letters of similar import. In each case the writer seems to think "something ought to be done about it." We think something ought to be done about people who feel this way. We think they ought to examine the casualty lists of our army in France. If they will do so, they will discover that the activity of Americans whose names "sound German" is not confined to Government printing; they will find that Americans whose names "sound German" are dying under the Stars and Stripes in France. And perhaps it will occur to them that you can no more judge a man's loyalty to America by the sound of his name than you can by the color of his hair.

## The Point of Pride

ANY man in the National Army will tell you with utter conviction in each and every syllable that he belongs to the best company of the best battalion of the best regiment in the first prize division of all UNCLE SAM's khaki-clad nephews. (That is, he will if it's not raining.) That word "belongs" is the key to his state of mind. Most of us are spiritually very much like the late ANTEUS of the old fable. We really depend on that sense of being part of something which is worthy to claim our best. That consciousness of belonging straightens the back and fires the eye and nerves the arm. Take these young fellows who mope around unattached in various odds and ends of reserves, training courses, and the like. They have no officers permanently in leadership to whom they can look for orders, but are only temporarily detained, and feel in consequence very much like new boys unwillingly in school. Practically everything is dubious if not worse, the food is unspeakable, the quarters are no good, the clerks or yeomen always have everything mixed up, and so on. "Grouse and grouch" is their golden text, and "anything you can get by with is all right" is their gospel. But let these men once get their hands on a machine gun of their very own or their feet on the narrow deck of the destroyer that is to be their home and field of glory, and all is changed magically. Their pride then has a point to hang upon, a hilltop from which to see that active world and know that it is good. Our country's cause can then claim its true place in their hearts.

## Our Red Cross in France

THE "Petit Parisien" gives us a charming and moving picture of the work of our Red Cross on behalf of refugees during the great battle in France:

Women and children from Amiens were still arriving yesterday. Most of them had left that city two or three days earlier. Passenger trains not being able to move freely now over lines encumbered with troops and with war material, it is necessary to send these convoys over the most improbable routes. The travelers arrive tired out, with the noise of the cannon that was raging at twenty kilometers from their city still ringing in their ears.

Two mothers are camped in the midst of their miserable bundles and thirteen youngsters—one of them has five to her credit, the other eight. Among them are children who hardly know how to walk, and the fear of losing one of the covey is a veritable obsession of these two poor mothers, who are constantly looking this way and that without finding a place where they can be comforted.

On the station platform an American soldier of the Red Cross inspects the newcomers and offers his aid. Promptly he takes possession of the two smallest that he hangs on his arm. It is indeed infinitely touching to see these two tiny babies almost lost in the arms of this kind-faced colossus. He stammers to the mothers a few encouraging phrases, half in English, half in French, and indicates with a nod of his head the way to go, and, in a few seconds, the children are all dressed in new clothes from head to foot, and the mothers cannot restrain a happy smile before their little ones' exclamations of delight.

And so it was all day! The representatives of the American Red Cross would not let these unfortunate French leave the station till they could say: "We have need of nothing more!" How many meals were served in this station since our allies took hold! How many clothes distributed! How much money given! And all this with such an expression of true fellowship that our poor compatriots were profoundly moved.

Thanks to the service of the automobiles installed at the hours of arrival, the évacués finished the nightmare travel in a vehicle. Our allies installed their autos in separate groups—each bearing a sign lettered with the name of the station toward which the autos were going—in such a way that there should be no error, no loss of time. If the hour of the train which was to take the refugees out into the country was past, the auto takes the voyagers to a building where they can sleep; next day it comes back to look for them and for their baggage.

## The Verdict of the Press

WHEN various members of the Associated Press and of the Newspaper Publishers' Association met last month, the New York "Evening Post" interviewed them as to that new postal-zoning scheme. The one solitary man for it was JOHN S. SUNDINE of the Moline (Ill.) "Daily Dispatch," who argued thus:

Like most small newspapers, we are in favor of a limited zone. It keeps the large newspapers out and gives the home paper better opportunities. We have our own carrier and don't have to use the mails. We are not in sympathy with the newspaper of national aspirations.

This parish doctrine was at once repudiated by the others, as witness R. W. HITCHCOCK of the Hibbing (Minn.) "Tribune": "When it comes to the point of depriving us of the national newspapers, it is going to affect us tremendously." H. E. TAYLOR of the Portsmouth (Ohio) "Daily Times" was too angry over the zoning law to be able to express an adequate opinion. EUGENE KELLY of the Sioux City (Iowa) "Tribune" spoke of it as "a serious menace to the whole newspaper structure." Representatives of the Nashville (Tenn.) "Banner," of the Indianapolis "Star," the Findlay (Ohio) "Republican," the Tacoma (Wash.) "News," the Sharon (Pa.) "Herald," and the Birmingham (Ala.) "News" all joined their voices to this chorus of condemnation. Even so staunch a supporter of the Administration as HENRY M. PINDELL, editor of the Peoria (Ill.) "Evening Journal," "Morning Transcript," and "Sunday Journal-Transcript," held that "the new Postal Zone Law is a severe tax on the newspaper publisher which he should not have to suffer." GARDNER COWLES of the Des Moines (Iowa) "Register" and J. W. MILLIGAN of the Bradford (Pa.) "Era" called attention in this connection to the inefficiency of the whole postal system as "the root of the evil" and "the source of worry to all publishers." That makes a verdict of twelve to one against Mr. SUNDINE, and there were others. None of these men are publishing big metropolitan dailies, but they know a bad statute when they see it. That is the verdict of the press on this postal-zoning law, and Mr. BURLESON, and whoever else is responsible for so weird an act, will do well to heed it.

## Arithmetic Is Not War

A CERTAIN school of thought in our country and abroad seems to extract comfort every once in a while from churning over a lot of figures as to the "desperate condition of Germany's finances." Great play is made with certain stock phrases such as "ominous result," "danger limit," "growing snowball of debt," "last forlorn

hope," "fatal day," etc., etc., and the reader is left with a notion that all this means something real as to the war. It does not. Germany is bankrupt now and has been for some time, but what of it? Her leaders are concerned only with immediate military success. To get that success the entire nation has been organized into a rigid military serfdom, put on short rations, and forced to long hours of hard labor. If they can only win the war, something may be done about the debt; if they do not win the war, the troubles of the Potsdam group will be much more serious than any mere matter of bonds and taxes.

## Americans All

A RECENT census of Camp Devens at Ayer, Mass., showed the following languages available at once, in addition to the conventional United States:

French . . . . .	2269	Welsh . . . . .	21	Bohemian . . . . .	31
Filipino . . . . .	1	Ukrainian . . . . .	2	Serbian . . . . .	2
Hungarian . . . . .	62	Turkish . . . . .	67	Italian . . . . .	1354
Polish . . . . .	726	Spanish . . . . .	109	Chinese . . . . .	4
Slavic . . . . .	■	Flemish . . . . .	4	Norwegian . . . . .	37
Syrian . . . . .	36	Portuguese . . . . .	168	Hawaiian . . . . .	1
Slavonian . . . . .	28	Albanian . . . . .	9	Armenian . . . . .	59
Finnish . . . . .	24	Russian . . . . .	356	Arabic . . . . .	8
Dutch . . . . .	11	Rumanian . . . . .	7	Assyrian . . . . .	4
Greek . . . . .	218	German . . . . .	625	Danish . . . . .	41
Hebrew . . . . .	385	Bulgarian . . . . .	2	Egyptian . . . . .	1
Lithuanian . . . . .	115	Swedish . . . . .	389	Gaelic . . . . .	42
Japanese . . . . .	2	Lettish . . . . .	5	Persian . . . . .	2
		Maltese . . . . .	1		

As given in the "American Leader" magazine, it looks like a listing of the Tower of Babel, but the dictionaries are the least important part of it. Imagine behind those men the lands and races from which they came, the dim interminable ages of war and hatred that so long had set them one against another, and then behold them to-day under one flag and devoted to one cause. Surely WASHINGTON would be proud to command such an army, gathered as it is from all mankind and drawn hither by that freedom under the law which he suffered to establish. One can fancy the old ghosts of the men of Massachusetts, the men of the *Mayflower* compact, reviewing that later and mightier host of armed Pilgrims and murmuring: "All these are our children: it is well."

## Salt-Water Rimes

AN old-established British periodical called "Punch" rejoices in an ocean-loving versifier who signs the initials "C. F. S.," and his work is worth reading, for it brings home to all landmen the maritime side of this war. He writes of the North Atlantic derelict: "We left 'er headed for Lord knows where in latitude forty-nine, with a cargo of deals from Puget Sound, an 'er bows blown out by a mine." There's never a hand to reef an' furl an' steer an' strike the bell, so his hope is that she'll go to 'er rest as a good ship ought to do. The Clyde-built clipper of 1873 has been pulled off the bone pile and sent out to earn war freights and defy VON TIRPITZ, "with stunsail booms to every yard and flying kites both high and low to catch the winds when they do blow." Age and all, she'll show her heels to any concrete thingamajig that ever was poured into a dock-side mold. Your true sailor is uncommonly slow to change the habits of his calling, much more that calling itself, so in "London River" we hear of "half a score o' sailormen that want to sail once more." Torpedoed thrice before this, and seven days in open boats adrift up and down, makes no special difference to them. "Half a score o' sailormen that won't come home to tea, for she's dropping down the river with the Duster flying free, down the London River on the road to open sea!" Not that torpedoing is anything of a joke either, for one able seaman, DAN by name, has been there and gives his verdict: "Lord knows it's nippy in an open boat on winter nights at sea." Diplomats may argue about status quo ante, spheres of influence, and all that; while the economic experts discourse of their learning as to raw materials, trade agreements, preferential arrangements, and the like. DAN has endured the experience and the suffering; perhaps his word will have had its weight as history makes up her final record on the submarines:

When peace is signed an' treaties made an' trade begins again,  
There's some'll shake a German's 'and an' never see the stain;  
But not me, says Dan the sailorman, not me, as God's on high—  
Lord knows it's bitter in an open boat to see your shipmates die.

# A DOCTOR OF CHEERFULNESS

BY HENRY JAMES FORMAN

ILLUSTRATED BY F. E. GRUBER

"NO, Teddy"—and she laid her tremulous hands on his shoulders—"it wouldn't and it couldn't succeed. I would marry you to-morrow if I saw any hope of its coming out right, but I can't, Teddy." Tears glistened in her eyes, and her lips quivered pathetically.

Even though she was pronouncing his doom, he adored her balance of emotion and reasonableness and, secretly, he felt proud that her emotion was on his account.

"Wait one moment, Rosalind." And with a tense nervous movement he laid a protesting hand upon her arm. "Just what is it exactly that is the matter with me? Say the word and I'll change it right now!"

"When you do change it, Teddy dear, I'll marry you"; and she wiped the tears from her eyes. "But I'm afraid you can't do it in a moment, and I can't do it for you. I have heard of men being cured of all kinds of habits," she continued more quietly, turning to the fire; "drinking, smoking, drugs—anything except everlasting gloom and nervous irritation. That must take time, and a man has to do it for himself."

"But I'll do it, Rosalind—" he began and paused. The nerves within him were at that instant vibrating like taut wires, a fact that Rosalind noted, and he knew she noted it.

"But marriage, Teddy," she took him up, "is too serious a thing to experiment with," and the glow of the fire lighted the silken hair about her face, producing a picture at once beautiful and spiritual. "Both of us," she added, "ought to be very sure of the outcome."

"But I love you, Rosalind; I love you," he broke in with a quick, appealing gesture. "and your very poise and steadiness will be a cure." His face was working with the tension of his despair.

"I know you love me, dear; and it means to me more than I can tell you"—she smiled tenderly—"but I could not live with a gloomy, irritable man, no matter how much I cared for him."

He winced perceptibly and turned away from the alluring picture she made by the fire.

"Look at the life of my cousin Winifred with Jack Leighton," she went on quietly. "He's driven her to the verge of insanity. She's had to take the children away and leave him. And that, of course, makes him worse than ever. Horrible!" And she gave a slight shudder.

"I don't mean to hurt you, Teddy," she added gently; "you know that. But we are not children, and we must talk of these things frankly, dear boy; don't you think so?" He stared for a moment at the lamp on the piano at the farther end of the room, as if hypnotized by the spot of light.

"But if you married me"—he wheeled about and drew near her again—"why, I couldn't be gloomy any more, don't you see, dearest girl? And my irritation would vanish, of course. Anyway, it's all due to the war and this miserable loneliness. Sometimes I feel the loneliness eating me like a disease. I'm a doctor, and I know the effects of mental states. Who wouldn't be gloomy in these con-

ditions? Say you'll marry me, right away, like an angel!" And, carried on by his own desire, he was about to seize her in his arms.

"No, no, no, dear boy," she protested, gently pushing him from her; "I know it would be a frightful mistake!" His arms fell to his sides and dejection once again resumed possession of his haggard features. "But I'll tell you what I will say," she put in, as though to still the turmoil in his mind. A faint ray of hope glimmered in his eyes.

"Some say a man's nature can't be changed," she went on, "but I think it can—by the man himself, if he tries hard enough." And though she was but twenty-six, she

suddenly seemed to him to be clothed in that intuitive wisdom which even young women possess by ancient inheritance.

"If you try to do that," she pursued softly, "in the next six months, and I see the change, I promise to marry you at the end of that time—that is, if you still want me, Dr. Theodore Smiley," and she made him a tender little grimace. "That is the best I can say, and you mustn't ask me in the meanwhile, Teddy, dear."

HE was silent for a moment. The play of his mobile features indicated a struggle of disappointment and hope for the mastery.

"Maybe I'll be begging you to marry me," Rosalind added, with a flash of her sweet smile that showed him how sympathetically she felt the pain of others. That smile seemed to caress and soothe him like a mother's hand. His heart had been thumping with pain and excitement, but suddenly, under the warmth of her gentleness, a stillness seemed to come over his jangling nerves.

"All right, darling," he finally answered in tones strangely quiet and firm. "If that is the best you can say, it's good enough for me. I'll do exactly as you wish."

"You dear," she cried in affectionate admiration, and she kissed him lightly on the cheek. "And when

do you begin?" she asked, still radiant, her hand upon his arm.

"Right now, Rosalind, this minute," he assured her with energy. "All I ask is that you let me come to see you as often as possible—just as I have been doing. Is that a go?"

"Of course it's a go. I'd feel wretched if I didn't see you, goose!"

"Gloom and all?" he asked, somewhat baffled.

"Of course, gloom and all," she repeated after him. "I should miss it now."

"Saints of consistency!" he cried with an almost care-free laugh. "But never mind that. I'll be satisfied on any terms. In this case I'm a peace-at-any-price man." He kissed her gently on both cheeks.

"Good-by, Eve," he whispered, and walked swiftly out of the room. Had he turned, he must have seen the love and the hope that glimmered in her eyes.

HE was unaware of his steps and barely aware of the direction in which they led him as he walked out into the frosty night, his brain whirling with a chaos of plans, words, resolutions. He was eager to get into the seclusion of his own study and to think the whole matter out clearly, if that was possible, before he spoke to a living being. He walked briskly westward from Rosalind's house in Ninety-first Street and turned almost unconsciously into the wintry solitude of Riverside Drive, to let the shrewd north wind beat upon his forehead and his face, as a counterirritant and a tonic. The momentary exaltation under the influence of Rosalind's sweetness and sympathy was subsiding, and he knew now how men could be so filled with misery that they could seek annihilation of their pain and of themselves in the cold, mysterious river as the only way to peace. He turned and approached the very brink of the river, drawn forward by its icy glitter.

There was a momentary lull in the chill, flapping wind and then, on a sudden, a sharp gust struck him full between the eyes, and for an instant all the whirl in his brain, all the chaos and despair, were magically stilled. All thoughts of Rosalind, of himself, of his misery, were blotted out as a wave might overwhelm the flame of a match. In the roar of the wind he stood for a space, an eternity for all he knew, like an inanimate thing in nature, moveless, silent, still. His brain was empty. He was merely an object buffeted by the wind.

"Good God, what a fool I am!" he exclaimed, and

"Two of them are in France, enlisted, both. The draft had no chance at my boys"

# CAR OWNERS - Read This Message

IN  
EVERY TOWN  
FOR EVERY CAR

**JENKINS VULCAN SPRING CO.**  
**SERVICE**

FACTORY  
RICHMOND, IND.

Automobile Springs

RICHMOND, IND.

OFFICE OF THE PRESIDENT

April 9th, 1918.

Mr. Seymour Schiele, President,  
Schiele Advertising Company,  
St. Louis, Missouri.

Dear Mr. Schiele:

There are four basic reasons why every car owner in America should replace a broken spring on his car with a VULCAN spring.

- (1) VULCAN SERVICE is such today that we have adopted the slogan - "IN EVERY TOWN - FOR EVERY CAR." When a spring breaks, anywhere, the car owner can get a VULCAN, an exact duplicate, a perfect fit, and he can get it quickly from a nearby dealer. Over 3,000 VULCAN dealers with well assorted stocks of VULCANS are ready for him.
- (2) VULCAN QUALITY means that every VULCAN is so made that it not only replaces a broken spring of weaker fibre, but the replacement is acknowledged to be as nearly permanent as human skill can provide.
- (3) VULCAN STABILITY is a tangible element demanded in every operation of the VULCAN process. This quality is best manifested when the spring is subjected to intense strain.
- (4) VULCAN SATISFACTION is the car owner's legitimate expectation - it is the logical result of the great care we have used in the making. The car owner should expect it - we want him to expect it.

Now, Mr. Schiele, we will close with the full knowledge that you will present our story with dignity and exactness. We prefer to under-promise and overperform.

Very sincerely,

*W.B. Jenkins*  
President.

simultaneously a kind of glow filled his brain, and a flood of cheerfulness seemed to rush into his emptied soul. He had the feeling of a man who had been down into the depths and had miraculously emerged with a new lease on life. It was as though the momentary desire to lay down his life had brought to him the privilege of a new birth. The face of Rosalind glowed before him and a new courage surged in his veins. She was the best influence a man could have to live for. Just now she had miraculously interposed and saved him—

"What a fool I have been!" he exclaimed again, and instantly he was conscious that he had been overheard. Not a sound had reached his ears, but he had the instinctive feeling that another human being was near.

"So am I," said a voice, and not twenty feet away stood a tall, motionless figure which Teddy would doubtless have remarked earlier but for his self-absorption. He gazed for a moment in silence, and then slowly approached the stranger. The man was holding in his hand a bright metal object which a not distant street lamp disclosed to be a revolver. Deliberately the man unbuttoned his dark overcoat and dropped the weapon into the pocket of his dinner jacket.

"You, Leighton!" Teddy exclaimed in incredulous amazement.

"Yes, I, Smiley," Leighton answered quietly enough, but with a note of the most bitter ruefulness. "Let's go up to my apartment and have a smoke and a talk. We seem to be in the same boat—lonely bachelors, I mean," he added hastily.

SO this was in very truth Jack Leighton, Rosalind's cousin by marriage, whose wife and children had gone from him—John Sheridan Leighton, proprietor of a chain of newspapers, one of the richest men in America and, evidently, one of the most miserable.

"Why do you call yourself a fool?" remarked Teddy, as though he had not noticed the pistol in Leighton's hand.

"For being out in this perishing gale, for one thing," Leighton answered quickly. "And there are other reasons. Why are you a fool?" he added with a faint smile.

"For all the other reasons," answered Teddy blithely; "and though you may not believe it, I had just decided to go up and see you anyway, when you spoke."

"Good enough," declared Leighton. "I am ready to believe anything after to-night. Come along; it's only a step." He put his hand through Teddy's arm and faced northward toward the upper nineties. They breasted the gale in silence; speech was inadvisable and almost impossible.

Turning from the Drive into Ninety-fifth Street, where the Leightons occupied a floor in a large apartment hotel, they came face to face with a cripple, blind, making his way on crutches and led by a boy of perhaps sixteen. Under the corner light the faces of both were purplish-blue with the cold. The blind man wore a thin, flimsy overcoat that could no more keep him warm in that marrow-freezing wind than so much gauze. The lad had a sleazy reefer jacket as his only outer covering and his thin gangling legs showed that the rest of his clothes were of no better quality. Both were huddling toward each other in the bitter cold, and the blind man was visibly shivering.

"Wait a minute, please," Teddy called to them sharply, and suddenly his hands were busy with the buttons of Leighton's overcoat. In a twinkling he had the coat from Leighton's back and over the shoulders of the cripple.

"Why, man alive, what—" But before Leighton could frame the words, Teddy's coat also was off and thrown upon the back of the boy.

"Good night!" he yelled at them in the teeth of the wind. "Good luck! Come on, Leighton, let's run!" And before Leighton could reply he and his companion were sprinting like a pair of schoolboys to the brilliantly lighted canopy of the Orduna Hotel entrance.

Once within the doors they stopped, panting violently, and, finally, a grin overspread Teddy's wind-bitten features. He laughed out loud in the sheer boyish exhilaration he was suddenly feeling. Leighton, however, gazed at him bitterly, and at last found breath to utter:

"What the devil is the meaning of all that, Smiley? Call yourself a fool? Why, you're a lunatic! Give a meal or a dollar or an old coat—but my best overcoat, this weather—"

"Stop right there, Leighton," Teddy commanded peremptorily. By asking Teddy whether he called himself a fool, Leighton was referring to the scene that had been enacted by both of them in Riverside Drive. The impression on Leighton's mind was evidently ineffaceable. Teddy, however, suddenly realized that that particular episode was a thousand

years, an eternity, behind them. A change of vast moment had happened in his own soul, and he believed it must also have happened, at least to some extent, in Leighton's. He now felt himself strong with a new strength where earlier he had been weak and wavering.

"Come on up to your rooms," he added crisply. "I've got to talk to you. Come along. Don't give the bell boys a treat." And, passing his hand through Leighton's arm, they marched into the elevator.

## FAITH

BY ARTHUR SOMERS ROCHE

They say that You are dead. . . .  
We know so little in this world of ours.  
Yet when the fall and winter kill the green,  
And when the sun sets o'er the western hill,  
We do not say that Earth is dead;  
We do not say that Light is dead;  
For we have seen the spring in its lush glory,  
And we have seen the sunrise,  
And what we see we know is true.  
So this we know: that all that seems to die  
But changes. . . .  
And so the lovely frame that once held You  
No longer holds You—that is all;  
E'en as the tree no longer holds the green;  
E'en as the waning day no longer holds the sun,  
And as to-morrow's dawn will bring the sun;  
As winter melts before the rush of spring;  
So does that frame which I called You,  
But which was not You, any more than  
yon dead tree  
Is summer,  
Yield to another frame. . . .  
I hear the murmur of the ice-clad brook,  
I hear a robin sing a note of spring.

"Cold night," the elevator boy brought forth in one of the two or three phrases of affability by which he maintained his cordial relations with the inhabitants of the Orduna. "Some weather," he continued, glancing at their overcoatless condition.

"Isn't it!" Teddy caught him up without giving Leighton a chance to reply. "Good night to play indoors."

"Yes, sir; sure is," said the boy, letting the two men out on the top floor.

LEIGHTON mechanically turned a key, opened a door, and the two men stood in one of the most luxuriously furnished apartments in New York. A silent, grim-visaged servant seemed to be its only occupant, but for the rest those soft lights, the priceless rugs, and the rare furniture, collected from the ends of the earth, formed a setting for precisely nothing at all. On one or two other occasions when Teddy had been there Winifred Leighton had come forward to greet him, the voices of children had been audible from distant rooms. But now there was only a sepulchral stillness.

"Luxury, thy name is Leighton," Teddy cried out in an attempt at lightness. But the owner of that luxury merely glanced at him quizzically as he led the way into the living room and somberly sank into an opulent chair by the fire, motioning his guest toward another.

"Have a cigar," he murmured tonelessly, pushing toward him the humidor that stood on a low table between them.

"Thanks, no," Teddy declined. "Had to cut that out—nerves. But, hang it, no!" he suddenly changed

his mind. "From to-night on I shall have no more nerves!" He clipped the end, lighted the mild Havana, and puffed with luxuriant deliberation.

"Jove, how good it is!" he pronounced. "How good everything is, if you only realize it!"

Leighton turned slowly and lifted his eyebrows. "That from a cynical scientist," he mocked. "You must be done up. I know of a sanitarium in Connecticut—"

"Not for me, thank you, Leighton," Teddy interrupted eagerly. "I carry my sanitarium with me, thank Heaven, and so do you, old fellow."

"I?" Leighton queried. "You are mistaken, doctor. I haven't been giving overcoats away; I don't need one."

"You do need one," asserted Teddy, "and I can bring it to you."

Leighton laughed mirthlessly and poked the fire.

"If I didn't know myself to be sane," he finally uttered with a subdued drawl, "I would think we were both crazy."

"No, Leighton, we are neither of us crazy—neither you nor I."

"Thanks," whispered Leighton.

"But you need help, and I've come to give it to you."

"Very kind, I'm sure," answered Leighton, "but I have a family physician—friend of old standing. Besides, your don't practice generally—"

"Oh, don't apologize," Teddy replied with energy. "No, I'm not a general practitioner. But you don't need any. What you need, Leighton, is not a doctor of medicine, but a doctor of cheerfulness!"

THE roar of laughter that followed, for the first time that evening showed any trace of Leighton's old-time polo-playing, athletic vitality.

"And you think you're that," he chuckled, and again came a roar of vibrant laughter from his capacious lungs. There was still something strained in the laughter, but the gloom and even despondency that time had recently chiseled on his features were surely less marked than when Teddy had first seen them less than an hour before.

"Laugh myself to death," stammered Leighton; "that's what you'll make me do. Well," he added more soberly, "let's say I'm it. Now turn on your laughing gas. Where's this jet of cheerfulness coming from?"

"From yourself," answered Teddy quietly. "I have already turned on the gas: when I—when you gave your overcoat to the blind man."

"I wouldn't brag about that if I were you," said Leighton, the cloud returning to his face.

"I know you wouldn't; but confess that deep down in your heart you feel a glow of satisfaction."

"No, old chap," Leighton shook his head thoughtfully. "I am glad you came along there on the Drive and—all that. But you can't expect that coat business to make me jump for joy. Better have another try."

"Ah, there's the very point," cried Teddy. "You want me to have another try, and I will have another try. You want to be cheerful—jump for joy, as you put it—and you will jump for joy when I get through with you. Why, man alive, you ought to jump for joy every minute. You're one of the most powerful men in America. Think of the influence you wield by your chain of newspapers! Few kings in the old days had any such influence, or anywhere near such influence. And yet—" Teddy hesitated.

"And yet," Leighton took him up, "you think I abuse it; is that it?"

"I'll show you whether you do or not in a minute," Teddy met him; "and I think I can also show you what you do to do yourself."

"Shucks! That's easy," Leighton exclaimed bitterly. "Why, you caught me in the act."

"I meant all that went before that," Teddy hurriedly interposed. "But don't be peevish with me, Leighton. You've never had a better friend than I am to you at this moment."

"Peevish with you. Oh, I think I've behaved rather well, considering. You took my best coat, and yet here we are. Isn't that cigar any good?"

Teddy laughed. "Yes, Leighton; you've been fine, I admit. But it's the very fineness in you that is the seat of the trouble. There is a war going on inside of you, and that fineness of yours makes you fully conscious that you're pursuing a wrong course. But you haven't the nerve to change it. Yet you and a world of people would be the gainers if you did change it."

"I must be deaf, dumb, and blind," Leighton declared in a resigned voice. "Would you mind telling me just what it is you mean?"

"Oh, I'll tell you, never fear. The troubles of this

## What has *This* to do with your Bank Account

ONE of the great responsibilities entailed by the war has fallen on the shoulders of the industrial plant. With restricted fuel supply, they are now accepting the role of "commissaries to the world." But were it not for one thing—industrial efficiency—this enormous overload might have left you neglected—deprived of necessities—and perhaps with an even lower valued dollar.

Plant efficiency has absorbed a great part of the overload and thus protected your share of the supply. Ten thousand materials as strange looking and strange working as this Sea Ring Packing\* (maintenance materials as they are called) have added mightily in raising the production of the manufacturers and protected your purchasing power your Bank Account.

In our measure of values, there is no more important group of products among the many we make than those whose function it is to save power, heat, friction, wear and leakage, used in the maintenance of hundreds of plants. For to the extent that they have served and are serving industry, they are serving the public, which is the ultimate realization of this company's aims.

\*Sea Ring Rod Packing marks a new era in packing rods and plungers of engines, pumps and other machines. Other packings are put into the stuffing box and constantly forced against the rod, by the pressure of the stuffing box gland. Constant friction between rod and packing consumes and wastes power. Sea Rings are not forced against the rod by gland pressure. Their packing lip is forced against the rod by the pressure of the fluid that tries to escape and so the pressure of Sea Ring Packing automatically varies as the tendency of leakage. This automatic action saves power due to elimination of unnecessary friction between rod and packing. A reduction of friction also means less wear on packing and rod and longer life for both. The Sea Ring typifies the aims of the Johns-Manville Company in their conscientious effort to better conditions in every field to which we render service.

## Service to you through Power Plants

# A New Sedan for The Hudson Super-Six

**T**HE Sedan is another popular type that was introduced by Hudson.

It is natural, therefore, that this new model should be an advance over the cars of similar type which have preceded it and which are now its contemporaries.

Those who have used Sedan bodies know there is much more than the mere appeal they make to the eye and to the comfort of the passenger. There is the vital question of sturdiness.

A body of its type with its permanent roof, if not properly designed and constructed, is apt to give endless annoyance. Such has been the experience of thousands who have had cars designed by those who did not know how to meet the various stresses which are responsible for squeaks, sagging roofs and the general breaking up of the bodies.

Then, too, not every chassis is suitable for carrying a Sedan body. Sturdiness of frame and power of motor are very essential.

These are things the inexperienced buyer is not likely to think about. They are important to know.

You may make a mistake and get a car that is not suitable to carry a Sedan body.

## Important That Car Stay in Adjustment

The best repairmen and mechanics are now in the army. They are needed to repair its motors. You either must have a car that does not require such frequent service attention or else put up with much inconvenience.

All motorists are familiar with Super-Six records for endurance. Every test showed ways to further increase Super-Six endurance. There are fifty thousand Super-Sixes in service. All that was learned from them has been put into the New Hudson Super-Six.

Ask any Super-Six owner about the service he is getting. Let what you can learn about it in your neighborhood determine if it is the best car for you to buy.

If the Sedan does not interest you, you will find a body you will like among the ten different types we are building this year.

Hudson Motor Car Company, Detroit, Mich.

*Note the roominess of the Hudson Super-Six Sedan. There is the open airiness of a summer porch or the complete protection of the conservatory. Two doors on either side permit of easy access to front and rear seats.*

*The seating arrangement comfortably provides for five persons. Auxiliary seats fold out of the way when not wanted and give comfortable accommodation for two additional passengers.*

world are bad enough, but you and your newspapers have been madly busy exaggerating them, Leighton. And no one can go on doing that without absorbing blackness and fear and despair, any more than you can work in a cloud of smoke without swallowing some of it.

"Look at your headlines," he pressed on without giving Leighton a chance to reply; "every one of them contains either a threat, a menace, or a shock. If all that those headlines imply actually happened, this country would be nothing but a graveyard and a heap of ruins in a very few days."

"Do you know the effect of that? No? Well, I do. I am a psychologist, and it is my business to know. Day after day those alarming headlines and vague news items are putting gloom and fear and distrust into the minds of hundreds of thousands of people, including yourself and myself, until the whole universe looks black. The Day of Judgment seems like a Tammany field day by comparison. Leighton, I tell you solemnly that without intending it, you are as much a wholesale poisoner as though you poured arsenic into the water mains!"

"Look here," Leighton began with set teeth, obviously controlling himself, as he rose from his chair, "this has gone far enough—"

"Oh, you're not the only one, Leighton; I admit that," broke in Teddy.

"Thanks," muttered Leighton.

"No, no," Teddy added hastily, "there are plenty of others. But you own more papers than any other one man in this country, and you—you could set an example to all of them."

"Smiley," Leighton answered in measured tones, "after what has happened to-night, I'm considerably in your debt, I suppose, and, anyway, I don't want to hurt you. But the net of it is, you don't know what you're talking about. Your job is in the psychopathic laboratory at the hospital. I'd stick to my last, if I were you, pounding the knees of recruits and nervous old women, but don't tell me how to run a newspaper."

"Rot!" cried Teddy vehemently. "I know that tale: 'News is news,' and 'give the people what they want and the way they want it'—pahaw! a clown does that; so does a moonshine whisky distiller. They are not considered guides of the public mind, nor makers of public opinion."

"Wait a minute—just one minute," Leighton stopped him with a decisive gesture. "Drop the bit from your teeth and tell me just what you would do. What kind of dope would you give them in place of news? That Aunt Roale's cow has calved, or that the pickle crop is up to standard? No? Well, where am I to get this optimistic stuff you think I ought to fill my papers with?"

"Man alive, it's all around you!" thundered Teddy. "Look at the spirit that has arisen in this country almost overnight. Men have enlisted by the hundred thousand, willing to give their lives—for what? For an idea! A little over a year ago people in Europe were saying that we cared for nothing but the almighty dollar, and we agreed with them. Now Wall Street bankers and speculators who made fabulous sums a year are working for a dollar a year. Mothers and fathers are giving up their only sons—for what? For a hope and a faith in a better future for unborn generations! Which is the bigger fact—that, or that a few boys out of several hundred thousand had pneumonia in the camps? They would

probably have had it anyway, but you never would have heard of it. Some Mexican bandits cross the line, and we read that 'Mexico invades the United States'; a German alien is interned, and we hear of a 'Dangerous Spy Caught'; a drunken Sinn Feiner wrecks a barroom, and the papers sound as though he'd tried to wreck the universe. Fear, gloom, terror, menace—that's what your headlines spread in the land. It's a perpetual crying of wolf, and that's why when the wolf came we were not prepared. What we want and need is hope, courage, and cheerfulness."

LEIGHTON merely laughed, but there was no joy in his laughter.

"Oh, what's the use?" he murmured wearily to the fire, "you don't know—by the way," he broke off with a glint of animation, "when did you get this crusader spirit? As we're telling each other the truth, I always thought you were rather a grouch."

"I got it suddenly—to-night—as you'll get it suddenly. I realized the truth in a flash. That's the way the truth comes to people. I suppose it's born in us and we carry it unconsciously for years, buried and plastered over by the so-called facts of so-called civilization. But some day a volcanic eruption takes place inside us and the poor thing comes to light. And, mind you, you can't bury it again—ever. You may laugh at the crusader spirit, but that's what we need just now. We are crusaders! People who fight for a great idea are nothing short of crusaders. The crusading spirit cannot die. It's the best part of the human race. It's because you forget this that, as Rosalind tells me, your own wife and children—"

"Stop!" shouted Leighton fiercely. "My wife and children must be left out of this. I won't hear another word." A tremor of violent anger shook his frame. "Rosalind and you must have gone crazy to—to—"

"Beg pardon, sir," the grim-visaged butler put in, taking advantage of Leighton's hesitation, "there are two persons at the door."

"What do they want?" growled Leighton.

"They want to see you personally, sir."

"Show them in," snapped Leighton.

In a moment the blind cripple and his boy, the recipients of Teddy's and of Leighton's overcoats, were standing before them. "You wish to see me," demanded Leighton blankly, without recognizing them.

"Excuse me, sir," the blind man spoke firmly. "We found this in the pocket of the coat you were so kind as to give me a little while ago. A picture of a lady and two fine children, my boy tells me. You see, sir, I am blind. A beautiful lady and such pretty babies, from what Dick here says. I know you wouldn't want to lose it, sir, and—I want to thank you for your great kindness to us to-night."

There was a silence in the room; the ticking of a grandfather clock made the only audible sound, though Teddy imagined he could hear Leighton's heart beating.

"Thank you very much," said Leighton, advancing to the cripple and taking the photograph. "Won't you sit down by the fire and warm yourself? This your own boy?" he added with an attempt at ease and naturalness.

"Thank you, sir. Yes, sir. He's the youngest of three. Two of them are in France—enlisted, both. The draft had no chance at my boys," he added

proudly. "Good lads, they are, sir, though I do say it."

Teddy shot a quick, triumphant glance at Leighton. "That must have made it hard for you," he remarked quickly to the blind man.

"Oh, of course, sir, it isn't easy. But this boy helps me a little—and so do the boys in France. We've all got to suffer some. At a time like this everybody's glad to do his share of suffering."

"Perfectly true," Teddy replied, and as he was mechanically adding—"if only this winter weren't quite so beastly," he was casting about in his mind for some means of discovering how a human being like this cripple lived at all. As if answering his thoughts, the man remarked: "You see, sir, I make brushes, and the war has hurt my trade like it did many others. I'm mighty glad," he added, "when I can make a dollar a day."

"Well, well," Teddy sympathized heartily, "that's too bad. Mr. Leighton and I need a lot of brushes. You must make some for us."

"Yes," put in Leighton, as though waking from a dream. "Surprising how many brushes we use up."

"Thank you kindly, sirs," answered the man with the soft, moonlike smile of the blind, "but you gentlemen mustn't spoil us. It's fine to think there are gentlemen like you in the world, but we feel we must give you back your overcoats. Warms a man up only to think there are people right here in New York who could do a thing like that. But hadn't you better take 'em back?"

"No, sir," retorted Leighton with a new and vehement cordiality in his tone. "We are not Indian givers. Can't do that, you know. Call it a little Christmas gift to the father of two fine American soldiers. So many coats," he went on with an engaging imitation of perplexity, "don't know what to do with them. You did us a favor by taking those two off our hands—didn't he, doctor?"

"Sure did," laughed Teddy. "Let's say no more about it." The old man gazed tranquilly straight at them from his sightless eyes, and presently they filled with tears.

"I guess—I'm—too weak—to do anything against a spirit like yours," he stammered tremulously. "Will you let me shake your hands, gentlemen?" Each of them warmly grasped one of his blindly extended hands.

"I can only repeat," he said, "thank you kindly, both, and—good night, sirs."

"Good night!" Teddy and Leighton chorused simultaneously, "and the best of luck."

THEY were gone, the man and the boy, and Teddy and Leighton stood looking at each other steadily without speech.

"Well, Smiley," Leighton finally spoke, "I'll go so far as to admit I'm glad you gave away my overcoat. What else would you have me say?"

"Don't say a thing," Teddy answered earnestly. "I can see by your face and your eyes that you would admit a lot more than that if I pressed you for admissions. I'm not going to do that. But I'll tell you what I will do, Leighton. I shall describe to you what happened to me on Riverside Drive just before I met you. That may explain a little of what you call my lunacy."

"I was so full of misery that I confess to you I thought longingly of the North River and understood why despairing

# PIGGLY WIGGLY

## *All Over the World*

**A PICTURE OF THE OUTSIDE—A PICTURE OF THE INSIDE**  
**That the whole World may know how a PIGGLY WIGGLY Store looks**

One can readily spot a PIGGLY WIGGLY Store in whatever town situated by the peculiar combination of blue, white and yellow, as shown on the outside of a PIGGLY WIGGLY Store front.

Interior arrangement of a PIGGLY WIGGLY Store stamps it separate and apart from any other kind of a store in the entire World.

It is new—scientifically proportioned in its many parts, producing the utmost efficiency in merchandising methods.

Standard and the most widely known brands of a comprehensive assortment of various food products is a distinctive mark of excellence of every PIGGLY WIGGLY Store.

Each customer with a basket that is loaned the customer while in the store, waits on herself according to her own no-

tion and inclination, having before her at the time of each selection a swinging price tag clearly indicating the exact price of each particular kind, size or assortment.

A continuous, circuitous passage-way is provided from the entrance turnstile to the exit turnstile along which every visitor of the store must pass, thus insuring a forward and methodical movement of all customers toward a given exit point.

PIGGLY WIGGLY Stores are now operating in more than fifty cities and towns—every one of them exactly alike as to general appearance, method and class of merchandise on display.

If one is not already in your city or town there soon will be one and more there.

A booklet descriptive of PIGGLY WIGGLY system and its stores will be mailed free upon request and you will be told how soon and where a PIGGLY WIGGLY Store will be in operation in your town if you will address a postal to the Piggly Wiggly Home Office, Memphis, Tenn.

The instrumentalities used in Piggly Wiggly Stores are protected by Copyrights, Trade-Marks and Patents allowed and applied for in the United States and Foreign Countries.

# OFFICERS

BY OCTAVUS ROY COHEN

ILLUSTRATED BY W. K. STABETT

THE northbound train rolled under the shed of the rather dilapidated depot at Montgomery, Ala. I seized my suit case and started for the gate to find myself in a vortex of khaki. My progress was painfully slow.

Two rigid military policemen—the white M. P. on their blue arm bands being the sole mark to differentiate them from the troops of the line—stood just inside the gate inspecting passers. There was no confusion, no attempt made to hurry them. And they did their work speedily and thoroughly. One man was turned back—something wrong with his furlough. He was disappointed, but did not argue about it—much.

Once in the train, I hurried to the smoking compartment and took the one vacant seat: between a lanky cavalry sergeant and a heavy-set major of infantry. The train started northward, and I gazed with interest at my companions. I was the only civilian in the compartment. The others were Ohio troops of the Federalized National Guard.

The sergeant accepted one of my cigarettes. The match box by the window was empty. He looked around the car. "Somebody got a match?"

There was a concerted dive pocketward. But it was the major of infantry who beat them to it. He extended the box, and the sergeant accepted it quite as a matter of course. "Thank you, sir," he said, and the "sir" was the only sign of military inferiority.

I pondered. I was shocked. My pet aversion bubbled to the surface: an abhorrence of the National Guard system of officer choosing. It has never looked right to me. I had personal experience—some nine or ten years ago—with various National Guard organizations in the South. I know the fraternity between officers and men. I could not rid myself of the idea that in war time this fraternity must beget a lack of discipline and a subsequent contempt—however unconscious. And unless a soldier looks up to his commanding officer constantly, as a superior, that officer's efficiency as a leader is lessened. It may be negated entirely. That much is a tactical axiom.

A second incident obtruded itself just then. A first lieutenant—infantry, I believe—entered the smoker. He produced a cigar, lighted it, and smoked in silence. My sergeant, two privates, and a corporal were seated. No one of them made a motion to give the standing officer his seat. Nor did the officer seem to expect it.

The officers did not notice one another. I understood that in such a situation the rules of courtesy—attention and salute—are shelved, but the thing made a peculiar impression upon me. I was struck with the idea that these men did not respect their officers. Their chatter went on as it had before. And when the lieutenant and the major eventually left the smoker there was no sign to indicate a difference in the manner of any of them. I horned in with a question—a vital question. My companions were the square-jawed, clean-lived young fellows who make up the personnel at Camp Sheridan, in Montgomery. They are a high-class crowd, these Federalized National Guardsmen: perhaps the best men, individual for individual, to be found in our fighting forces.

"Your officers," I vouchsafed at length, "how do you like them?"

"A bunch of good fellows," retorted a keen-eyed private promptly.

"Sure, I know that. I've served in the National Guard. But I mean as officers."

I was stared at. The sergeant actually grinned. "Best in the world. They're real officers."

"How is that possible?"

"Most of them are old-timers. Maybe they weren't the finest military men in the world when they were chosen years ago for commissions. But they were men, and they were fine men. They've studied and, by Jingo! they're going to show other fine officers a thing or two!"

Others echoed his sentiments in no uncertain

terms. "You mean you like them better personally—" I hazarded. "They're not strict?"

A laugh went up. "Not strict? Holy suffering mackerel! Listen to that, would you. Strict? Jehoshaphat, man! they make you toe the mark every time. They know they're leading men who are in this thing because they want to be, and they're not falling down on the job. If you mean they ain't a bunch of damned fools on this military stuff, you're right. They're hit the happy medium. They're one with us—but we never are allowed to forget that they are officers. We'll follow them to hell and back—and we expect to!"

I hadn't looked for this. I made one last guess—another bad one. "But the regular army officers—the West Pointers—and the reserve officers?"

The sergeant threw up his hands in disgust. "Deliver me from West Pointers. They think they're commissioned by the powers in heaven. They keep the bars up all the time. Never would serve under one if I could help it. And as for the reserve officers, gee-whillikens, they have all the cockiness of the regulars with none of their ability. Of all rotten things in the army, deliver me from the reserve officers."

"Reverse officers?"

"We call 'em that—it fits!"

## Satisfied? You Bet They Were!

I VISITED Camp Sheridan later. It is an ideal camp. On nights when extensive absence leave is granted a great percentage of the men remain in camp because things are made enjoyable for them. And I moseyed around through the company streets and chatted with whosoever would smoke my cigarettes. The spirit of admiration for the officers was general. Of course there were a few martinets who were thoroughly despised. But, for the great majority, the men had a respect and admiration for their officers which bordered on personal affection. They had confidence in their leadership and ability. The sum and substance of it seemed to be put into the mouth of a skinny private from Akron: "They'll always see that we get a square deal. And while they'll always make us toe the mark, they'll never run it over us!"

As a patriotic American I was delighted to find that my theories were not shared by the men in the service. But then, thought I, perhaps this condition is peculiar to the Ohio ex-guard. I promptly visited Camp McClellan at Anniston, Ala., where the bulk of the New Jersey and Maryland troops—the ex-guardsmen—are stationed. And there I found an identical spirit toward the officers. And at McClellan I carried my investigation a bit farther. I talked with some of the officers.

Satisfied? You bet they were! They wouldn't swap their com-

former National Guardsmen are quartered. And this much I gathered: However wrong the National Guard officer system may have been basically, it has worked out well. The officers are ready to lead and the men to follow.

## "Finest Crowd That Ever Put on Puttees!"

BUT my visits had filled me with a contempt for West Pointers and for the graduates of the two series of officers' training camps. The guardsmen—ex—were unanimous in their ridicule of both of the other sources of officer supply. "Good enough men in their way, but too cocky!" Another fellow summed it up as: "Too impersonal." So I went to Camp Gordon, just outside of Atlanta, where one may find as heterogeneous a crowd of drafted men as have been gathered together in the country.

I bought the drinks for a crowd of half a dozen—and it is a commentary on new army conditions that the drinks were soft ones, ice-cream sodas for the most part—and then steered my easily won friends, five privates and a corporal, all infantry, to a pool room, where we indulged in an innocuous game over the green-covered slate bed. And there I broached my subject.

One thing has always impressed me in my wanderings about the camps: your soldier—be he regular, conscript, or ex-guardsman, will drop anything to talk shop. My answering spokesman was a husky New Yorker, a drafted man. He was an educated man, a fine specimen, physically and mentally.

"Deliver me from West Pointers!" and he launched into a tirade similar to the plaint of the guardsmen. "And as for National Guard officers," he sizzled, "I'm glad I never joined up with one of those tin-horn outfits. The men are good enough, I guess, but they're commanded by a bunch of play soldiers."

"And your company officers?"

"Reserve officers, all of them. And say, bo, they're the finest crowd that ever put on puttees. They're strict, but they don't put on any lugs. They know they're green; they know they're learning just as much as we are. Some of them, of course—but then the exception proves the rule."

"Remember this, brother: the finest set of young men in the country got commissions from our two officers' training camps. They're men who've got heads on their shoulders—and the shoulders are broad enough to hold 'em. They're there because they want to be. They're strict, as a rule; but they're on the level. I'd follow them to—"

"Yes," I said, "I know where you'd follow 'em. I've heard of the place before."

There are a great many reserve officers at Camp Jackson, Columbia, S. C. An old college friend of mine is commanding one company there. I asked his men about him. When they finished I sought my friend and shook his hand. "First time I know what a wonderful man you are," said I, and he understood and grinned. "I've got the best company in the whole army," was his answer. "It's great the way they pull with me."

## West Pointers

I HAD proved conclusively that National Guard officers and reserve officers were the best in the army. I felt right sorry for the poor fellows who had fought their way through West Point. I had to carry it out, but I hated to do it. I didn't relish the job of sitting down and letting a bunch of enlisted men roast their officers. But it was up to me to take the medicine, and I traveled to Fort Oglethorpe, Georgia, where most of the company commanders are West Point graduates. And squatting on the Chickamauga battle field, my head against a monument which, like thousands of its fellows, tells the world that "here the Ohio troops fought

nobly," I delivered myself of the burning officer question and waited with trepidation for the inevitable diatribe.

"Our captain is a regular," said one of them, an unusually intelligent fellow, "for which I thank goodness. He's a youngster, but, suffering Moses! what that lad doesn't know

(Continued on page 32)

## Specify this TOP on your new Car

If you are planning to buy a new car this season, would you not prefer to add a fraction to the regular price and obtain this car with the more useful Rex All-Seasons Top in place of the regular cloth top?

Think what this choice will mean to your family—ideal shelter during all kinds of weather.

And think, also, that you will never again be obliged to struggle with the boot, straps and other riggings of a cloth top in a sudden rain—

And that you will always have a top which remains up and, therefore, remains unmutilated by folding—a top without fabric cracks and tears and broken windows.

The weight of the Rex All-Seasons Top, with side panels out, is only 25 pounds above that of the usual cloth top and, when the side panels are in place, the difference is less than the

weight of the average adult passenger: hence, the Rex-Topped car retains its full touring range and economy in the use of gasoline and tires.

In Summer, the sides of your car will be more open than with the overhanging cloth top.

When October begins to chill the back seat occupants, put in those fine, big rear side windows and have a fashionable-looking semi-enclosed Autumn car—one also suitable for early Spring.

At Winter's arrival, all the side panels will go into position—snugly—making the interior like a living room.

The greater comfort, usefulness and attractiveness of a Rex-Topped Car are obtainable at only approximately \$200 higher than the price of a cloth-topped model.

This means a saving of from \$300 to \$500 under the usual sedan construction.

Write for "A Rex Demonstration In Pictures"

Tell us the make and model of the car you expect to buy or now own and we will send you this interesting pictorial description.

The Rex All-Seasons Top is obtainable as standard equipment on leading popular priced cars.

# WHAT AN AIR RAID MEANS

NO better idea of the effects of aerial bombs could be obtained than from these pictures, taken after a recent German air raid on Paris. The taxicab was running on one of the principal streets of the city. It was not struck directly by the bomb, but was going too fast to stop in time, and fell into the crater. The bomb pierced the paving and blew open a sewer. Two British officers who were in the taxi were instantly killed, as was the driver. The small picture shows one of the signs that are placed throughout the city on houses that have cellars suitable for use as shelters during a raid. This particular house has room for 120 people in the cellar.

AT the left is shown what one bomb did in the heart of the city. Two hundred people were imprisoned in the cellar of this house for nearly twenty-four hours. A cemetery was struck, too—rather an unnecessary bit of German thoroughness, it seems. It happens also to be the last resting place of Heinrich Heine, the great German poet.

*Mitchell*  
Sixes

## *We Have a Great Six* *For \$1250 This Year—Go See It*

**T**HIS is a time for utility cars—cars fit for any service. It is a time for reliable cars, needing little attention. Good service men are scarce. It is a time for good values. Extravagance and waste are tabooed. We ask you to measure the new Mitchell Sixes in the light of today's requirements.

### *Fewer Cars, But Better*

We shall, like others, build fewer cars this year. War demands require it. But reduction in output enables us to make this a record year for improvements.

In the past few months we have added numerous specialists to the able Mitchell staff. Each is an expert who has made his mark in some part of car building. Together they combine the knowledge gained in building hundreds of thousands of cars.

These men have fixed new standards on many important parts. On some the strength requirements have been even doubled. New steel alloys, new treatments, new designs have been adopted. Every part has been studied, to attain in these new cars the very summit of sturdy endurance.

Our tests and inspections have been doubled. Costly machines have been installed to aid them. The highest-priced car is not today more carefully watched and adjusted. A famous designer has been placed in charge of all our body building.

And all these improvements, remember, are added to a car with a 15-year fame. To a car which has won respect all the world over. To a car which has stood for superlative endurance, for beauty, for comfort, for economy and performance.

### *A Big, Roomy Six at \$1250*

The Mitchell D-40 — price \$1250 at factory — is by far the greatest value in this price-class today.

The wheelbase is 120 inches, which means long, low, impressive lines, and unusual room. The motor is a 40-horsepower Six—the final result of specializing for many years on Sixes.

This car embodies the new Mitchell standards. Every line and detail shows distinction. The rear springs are shock-absorbing, so the car is a marvel of comfort. At \$1250 this new Mitchell Six is this year's wonder-car.

### *Equal Over-Value at \$1525*

The Mitchell C-42 — price \$1525 at factory — offers equal excess value. Both these models, at their prices, offer more than you'll expect. Both are built to tests which are far beyond what cars in service meet.

These extra values are due to scientific methods, to remarkable factory efficiency. This model factory has been perfectly adapted to produce the Six type economically. These new Mitchells, in a hundred ways, show the results of those savings. Write for our new catalog.

**Mitchell D-40** Built as Touring Car, 3-Passenger Roadster, Touring Sedan and Coupe. Touring Car price is \$1250 at factory.

**Mitchell C-42** 127-inch Wheelbase — 48-Horsepower Motor. Made in 12 styles of body, including Club Roadster, 4-passenger Surrey, Touring Sedan, Club Sedan, De Luxe Sedan, Coupe, Cabriolet, Town Car, and Limousine. The Touring Car price is \$1525 at factory.

**MITCHELL MOTORS COMPANY, Inc., Racine, Wisconsin**

### The Graflex

A reflecting camera that lets your eye see what the lens sees, before exposure, and right side up. You watch the ground-glass screen, adjust focus till the image of your picture grows clear and sharp—then snap it.

## See the picture before you snap it

**S**IMPLICITY, speed, absolute control of focus and composition—the satisfaction that follows increased certainty—this is the Graflex story. Automatic exposures from a tenth to a thousandth of a second; successful snapshots in failing light, where slow exposures with other cameras would result in failure; fully-timed negatives, in good light, of two-mile-a-minute motion that other cameras could never get. ## DISPUTED DOCUMENT

BY C. P. CONNOLLY

**S**HOULD the signature affixed to your will be disputed after your death, would the jury be allowed to compare it with signatures of yours admitted to be genuine?

In Colorado many years ago there lived a very wealthy man named Andrew J. Macky. When he died he bequeathed practically all of his estate to the University of Colorado. In honor of Macky and in gratitude for his bequest, the university built a massive stone structure and called it the Macky Auditorium. After the trustees of the university had partially built the auditorium, there turned up this typewritten letter, addressed to Oscar A. Johnson, the attorney for the adopted daughter of Macky:

"LAS LUNAS, N. MEX.,

"Sept. 5, 1909.

"DEAR FRIEND JOHNSON: I have had to spend several days in the country a few miles east of this place, looking into the matter of an old land grant for Uncle Ed. On my way back I was detained and interviewed in a most unique fashion by an old Mexican woman, and you should have witnessed the proceeding. I speak bad Mexican and she spoke bad English, so by the end of an hour I had been made to understand only this much, or at least thought I understood, that this new and handsome pocketbook belongs, or should belong, or will or must belong, to you, 'Johnson, Lawyer,' and 'Colorado, Boulder City.' And then I remembered something, and said to myself: 'Hi there! My old friend Oscar A.' So I promised the poor soul to send it, and, 'weary and tired, continued my ride. I now regret not having had time to learn just what she wanted and tried to tell me, but, in truth, I was in such a hurry to get away from this hot, beastly, God-forsaken country that even the feminine charms of an old Mexican woman could not detain me longer. If it is of any account, or my sending it is due to a misunderstanding, which is quite possible, let me hear from you, for I shall not very soon forget the incident.

"I started from home about three weeks ago, after promising the folks that I would travel over the world for at least a year. I will spend the next few months in South America, though would much rather be back at my desk, then sail for Australia, which place, God willing, I must reach the early part of January. I will be in Melbourne about a month attending to some business for father. This will be the only long stop I expect to make. Father is still in the store and doing well. He will, of course, know my address from time to time.

"I met Charley Bentwell about three years ago. He said that you were married, had a good practice, and were living as a man should. I am still plodding along 'single,' but there is a brown-eyed girl back in the dear home State that I have not forgotten even in three weeks. But you know, my friend, when a man has two lungs that are only doing half duty, and a stomach that wouldn't bring ten cents at a country auction, he would better—well, one ruined life is not so bad as two. I trust, Johnson, that you are well and happy and will experience more of real life and the thing we call enjoyment than I can expect or hope to.

"My train will leave soon, so I must come to a close. With best wishes for you and yours, I remain, as ever,

"Very sincerely yours,

"C. G. DENMAN.

"P. S. Be sure and let me know what the pawnbroker or junkman offers for the pocketbook—or perhaps you are getting a collection of antiques, or if nothing better, keep it as a token of remembrance from your old friend,

"C. G. D."

### Inside the Pocketbook

**I**NCLOSED with this letter was a dilapidated pocketbook, and in this old pocketbook was an apparently original contract of agreement, dated at Leadville, Colo., August 27, 1880, between Andrew J. Macky and John M. Bradford, the latter during his life a United States deputy mineral surveyor. The body of the document purported to be in the handwriting of Bradford. The contract was for the adoption by Macky of Moina May Bradford, only daughter of John M. Bradford.

In this contract, drawn in the usual

formal and traditional style of legal documents, it was agreed that

"Moina May Bradford shall, by father's consent become a member of the family of Andrew J. Macky, subject to the discipline and control of said Andrew J. Macky and his estimable wife, Adelaide B. Macky, from day that she shall reach Boulder and she shall have attained her majority and that she shall continue to remain in the said home and in the said family for such indefinite period thereafter shall be agreeable to herself and to members of said family."

### Andrew Macky's Will

**M**OINA MAY BRADFORD was to receive a liberal and thorough school and college education in such schools and other institutions of learning as in the judgment of her guardian seemed the most desirable and the best calculated to insure fruitful and satisfactory results. Her guardian agreed also to foster and promote such talent or ambition as might awaken in or become manifest on the part of Moina May Bradford during her years of growth and development from childhood to womanhood. But the real core and gravamen, the very breath and significance, of the document lay in these testamentary words:

"And it is further agreed that the said Andrew J. Macky shall make actual and careful provision for the future welfare and maintenance of the said Moina May Bradford by preparing and having in his possession at all times a legally executed and valid will, in which he shall name all money, property, and securities existing under his own right and title and comprising his individual assets, together with a specific enumeration for the disbursement and distribution of the same, which shall state in plain and direct language the wishes of the said Andrew J. Macky in the event of his death, and in which aforesaid legally executed and valid will he shall bequeath to the said Moina May Bradford a portion amounting in the minimum to a sum equal to not less than one-third of the valuation of his entire estate."

The alleged contract was witnessed by "M. F. West" and "Lee Kahn," who were never located or recalled by anyone connected with the case.

Oscar A. Johnson resided at Boulder, Colo. He claimed to have received the letter inclosing the old purse and the contract in regular course. He denied any knowledge of the man who had addressed him as "Dear friend Johnson," and who had with such homely familiarity referred to the business of his "Uncle Ed" and to the supposed mutual friend "Charley Bentwell," not to mention the artless reference to "a brown-eyed girl back in the dear home State."

Andrew J. Macky had no children of his own, and Moina May Bradford had actually lived for many years under his roof. She had left his home and guardianship when she married. Macky had no heirs other than two brothers, who received a small legacy, the remainder of the estate going to the University of Colorado.

### A Handwriting Expert

**S**UIT was brought by Moina May Bradford against the university for her one-third of the estate, and at the trial the vice president of the bank in which Andrew J. Macky when living was president testified that in his opinion the contract found in the ancient pocketbook was a genuine document. Two other bankers and numerous business men of Boulder testified to the same effect.

In addition to this opinion evidence there was the usual feeling of sympathy for one in Moina May Bradford's position. She had actually lived all those years with Macky's family, and there was no reason that the public could surmise, other than some gossip regarding a quarrel that was said to have taken place between herself and her guardian, why she should not have received a share of his estate, especially in view of the fact that practically all of it had gone to a public institution.

The central point of interest—the pièce de résistance—was, of course, the dilapidated pocketbook and the story of the old Mexican woman who had so fortuitously met up with Denman, who

## If you could watch HAVOLINE OIL in the cylinder

If you could see the cylinders of your automobile motor cut in half, with the piston going, you would see the reason for Havoline Oil.

You would see a film of oil evenly spread between piston rings and cylinder side. You would see the piston moving with lightning-like rapidity, hundreds of strokes per minute.

You would see heat as high as 3,000 degrees at the cylinder head, with the walls below at some 400 degrees—heat which the most perfect cooling system could not prevent from ruining your motor were not good oil protecting the closely fitting steel surfaces.

## HAVOLINE OIL

"It makes a difference"

It takes an oil like Havoline to maintain this thin film constantly even and indestructible under the wear and great heat in your motor. One little break in that protecting oil film would put dry metal against dry metal, and friction would quickly get in its deadly work.

Then, too, that fine film of Havoline between piston and cylinder wall acts as a seal to prevent the gases escaping between cylinder wall and piston. Should these gases break through they would eat into the oil, and kill its lubricating quality, then would begin your motor's breakdown. If you could see this you would know that Havoline is the safest oil you can give your motor under all conditions.

Havoline Greases are compounded of Havoline Oil and pure, sweet tallow. Your dealer knows the kind of Havoline Oil and Greases for the motor and gears of your car. Ask his advice.

supposed himself to be the friend of Johnson, who was the lawyer of Moina May Bradford, who was the ward of Andrew J. Macky, whose signature was attached to the document so miraculously recovered.

When the case came to trial the University of Colorado secured the services of Albert S. Osborn, the handwriting expert of New York. It so happened that among the archives of Bradford's old office were found a letter and other writings of his of August 27, 1880, the date of the alleged contract. Also there turned up numerous specimens of Macky's handwriting. These the handwriting expert used for purposes of comparison. He pointed out that the design of the disputed contract was inconsistent with its lack of freedom and with its noticeable hesitation. The design was intended to indicate the writing of one who naturally wrote with great force, rapidity, and freedom. Words were connected with each other, and long words were written with continuousness.

But the most damaging fact of all was that from beginning to end the alleged contract was written over a carefully made pencil outline which had been imperfectly erased after the tracings in ink had been finished, and these erasures had broken up the ink-written lines in certain characteristic ways, as was easily shown under a powerful magnifying glass. Also, there were literally hundreds of places where the original pencil outline still remained, where it had not been quite covered up with the ink, or where the ink line had run off from it. This was true even in the signatures.

It was so perfectly apparent from the exposition of the handwriting expert that the alleged contract was spurious that the attorneys for Moina May Bradford, at the conclusion of Osborn's testimony, rose in court and, stating that they had been deceived in taking up the case, confessed judgment in favor of the University of Colorado.

### In Old Bibles

THERE is a psychology in crime and fraud which is easily readable to the expert who has studied the workings of the human mind under temptation. Dickens tells of the criminal who in his extreme caution to cover up his tracks omits the one precaution, the lack of which discovers him: just as the author of this forged document never dreamed of the searching power of a magnifying glass. But there is another phase, the overdoing phase, in which the one who seeks to deceive enlarges the story beyond its normal dimensions and introduces details, intended to give verisimilitude and to make the story narrable, which in reality condemn it as improbable.

The most common hiding place for such unhallowed documents is in the old family Bible. There is where most of the fraudulent wills are found: in the Holy Scriptures. And that isn't the only sinful use to which the family Bible is frequently put. The mind conjures up the thing most likely to disarm suspicion, and in this overreaching trips and falls. A legislator under investigation, trying to account for his sudden access of wealth, explained that a backward and uncertain debtor had paid him a large sum of money. Where did he pay it? Why, standing in the parlor of the country residence, he had laid a roll of large bills on the cover of the old family Bible which rested on the center table. He remembered the occasion very distinctly. But he had forgotten that his house had burned down a month before the alleged payment, and with it the old family Bible.

One might naturally ask why in the Colorado case the forged document was not produced without any fanfare and a prior knowledge of its existence admitted. Undoubtedly the thought of contesting the will did not at first suggest itself, and by the time it did it was necessary to trump up some story to account for the failure to assert its existence at the proper time.

### The Law in Other States

SO much for the illustration. Now for my text. If the case against the University of Colorado had been tried in any one of a dozen States of our Union, this forgery could not, under the law of those States, have been proved by a comparison of handwritings, as was done in this trial in Colorado, and the University of Colorado would likely have lost its case. I am not now dealing with the justice or merits of the case, but with the methods by which the ends of justice are achieved. Not

Also Makers of Lady Sealpax Athletic Underwear

until 1913 could the Government convict a man in any Federal court of the United States for cashing a money order, the signature to which was forged, by comparison with the genuine signature of the payee of the order, unless somebody saw the payee write his signature. In other words, the Government was not allowed to introduce the known genuine signature of the payee for the purpose of comparing it with the forged signature and permitting the jury to decide as between the two.

#### Witnessing a Signature

**AND** if a man to-day die in certain of the States of our Union, and a forged will be produced, you cannot go to the bank where he kept his account and get a dozen of his checks, two or three of them drawn perhaps on the same day on which the will was alleged to have been signed, and say to the court and jury: "These show whether John Smith wrote this will or not." You have got to find somebody who saw John Smith write. If, sitting in an express wagon, I saw John Smith write his name in pencil in an express messenger's book, I can testify twenty years after and say whether I think his signature to the alleged will is genuine; and if nobody else has actually seen John Smith write, my testimony is apt to be conclusive; there is nothing to oppose it. There might be a hundred genuine signatures of John Smith extant, but these could not be introduced before the jury for the purpose of allowing it to compare them with the signature to the alleged will and to say by its verdict whether the latter was genuine or not. That was the law in New York until 1880 and in Pennsylvania until 1895. New Jersey, Illinois, and other leading States have but recently set aside this archaic rule. In Massachusetts, Connecticut, Ohio, Kansas, and a few other States the courts themselves, under the leadership of that remarkable jurist, Chief Justice Shaw of Massachusetts, saw the light and changed the rule.

In some of these restrictive States they will allow you to compare the disputed document with any other document that happens to be introduced into the case for some other purpose; but they will not allow you to compare the questioned document with any writing outside of the case, and they will not permit you to introduce any genuine document into the case for the sole purpose of comparing it with the alleged forged document. To one who is not a lawyer this seems the height of absurdity. One of the legal reasons for it is that it is likely to introduce collateral questions as to whether or not the alleged genuine signatures are really genuine. But this is a matter usually susceptible of the most convincing proof.

In the Indiana case of *Kahn vs. State*, decided in 1914, and tried before the passage of a later statute, the Supreme Court of Indiana said:

"The comparison by experts must be confined to papers in the case, which the party is estopped to deny, and such others as are admitted to be genuine by the party against whom they are offered." The lameness of this rule is apparent. No party conscious of a fraud on his own part is likely to admit the genuineness of a paper which he knows will expose his own forgery.

The doctrine was more lucidly laid down in an early case in Michigan, which read:

"The great majority of cases are against allowing any witness to make a comparison of the handwriting of the signature in question with other admitted signatures and then giving an opinion upon the genuineness of the one in dispute, but have generally allowed the jury to make the comparison by contrasting the disputed signature with that of any other document relevant to the issue already in the case. This is the well-established rule in England."

The English Parliament abolished this rule in 1854, but Michigan clung to it until a few years ago.

In one case a witness had seen the person write but once, and had forgotten how the signature appeared, but he was allowed to compare his uncertain recollection with the paper in the case and then to swear to his opinion. This was no opinion at all, or at best no better than anybody's opinion, but it shows how venerable and how absurd the law has become by much repetition and by constant application to variant facts.

Few people realize that common documents are comparatively recent in the

history of the world. Two hundred years or more ago an order was issued by the authorities of London that a mens of handwriting should be obtained of everyone in the city who could write in order that the author of a seditious article might be found. This instance illustrates the fact that illiteracy at that time was very common in England.

Undoubtedly many of the ancient restrictions regarding proof of handwriting go back to the time when the average juror could neither read nor write. "What purpose will it serve," it was asked in one ancient case, "for a juror to compare hands if they cannot read them?" And yet in one New York case not so long ago four alleged eye-witnesses testified to the execution of a will, and the jury decided it was genuine. In another New York case witnesses testified that they saw a certain contract signed, and the jury decided that the contract was a forgery. In still another New York case the convicted a distinguished member of the bar of a forgery of two words of typewriting that, by comparison, was traced to his own typewriter.

So much for the scientific knowledge of handwriting experts and for the intelligence of the average jury to-day. Unfortunately, there continue to be among the specialists who testify these technical subjects, frauds and charlatans who ought to be in jail, and the lawyers who discover and keep them in business.

On January 23, 1913, Attorney General George W. Wickersham wrote Senator Clarence D. Clark, chairman of the Judiciary Committee of the United States Senate:

"Correspondence with a large number of the United States attorneys discloses that the Federal courts in their districts are adhering to the old common-law rule with respect to the proof of handwriting. That rule prohibits the use of genuine specimens of handwriting for the purposes of comparison, unless specimens are already in evidence admissible for other purposes. Reports of the various United States attorneys show that the enforcement of this rule has resulted in many miscarriages of justice, particularly cases against persons charged with sending obscene matter through mails."

Nor is there any more reason why the microscope should not be used to aid a jury to determine a fact of disputed handwriting than there is why a jury should not be allowed to compare disputed handwritings with genuine ones. Many jurors are required to wear glasses to enable them to read the evidence submitted to them, or to read the instructions of the court. If one of the jurors should lose his spectacles, would he rather a rigid sort of practical which would preclude the court from lowering glasses to be handed to him enable him to examine such writings his duty required him to examine. A yet some of our courts will not allow a jury to gaze through a glass. The rule is the most plastic and liberal of sciences; it can be made to fit the fact of any issue; but some of the judges who administer it are often hopeless out of touch and sympathy with potentialities.

#### Catching the Forger

**IN** many instances the disposition of millions of dollars depends upon correct identification of a single signature. This fact tempts many to commit forgery that would balk at the commission of coarser crimes. Nearly every term of court has forgery cases of more or less magnitude. But the forger who imagines he can escape detection in these modern days dwells in a false paradise. John H. Wigmore, the eminent law writer, recently said:

"A century ago the science of handwriting did not exist. A crude empiricism still prevailed. This hundred years past has seen vast progress in the relevant branches of modern science have been brought to bear. Skilled students have focused upon this field many fold appurtenant devices and apparatus. A science and an art have developed. A firm place has now been made for the expert witness who is emphatically scientific and not merely empiric. Each age crime takes advantage of conditions, and then society awakes and gradually overtakes crime by discovering new expedients. Well down into the 1800's the most daring impositions were possible. But society at last seems have overtaken the falsifier once more."

# TORBENSEN

## INTERNAL GEAR TRUCK DRIVE

### What it does

This I-Beam makes Torbensen Drive lighter and stronger than ordinary drives. It carries *all* the load. It makes Torbensen Drive last as long as any truck. It makes rear tires give 20 percent more mileage. It is *patented* and is probably the main reason for Torbensen leadership.

Torbensen Drive adds 45 percent to rear axle road clearance. Where streets or roads are torn up or muddy; when the truck has to go 'cross country; when deep snow drifts are encountered; this extra road clearance often marks the difference between a stalled truck and free, clear driving.

Here you see how Torbensen Drive works. You can see how the sturdy I-Beam passes through the wheel hub and how it supports the differential housing. This construction absolutely separates the functions of the load-carrying and driving parts, yet it holds them in practically perfect, permanent alignment.

Unusual accessibility makes it easy for any driver to keep Torbensen Drive thoroughly lubricated and finely adjusted. Torbensen Drive is exceptionally free from mechanical troubles. It is made so readily accessible to cut down the time and cost of repairs or adjustments, *should* they ever become necessary.

Simplicity is the keynote of Torbensen Internal Gear Drive. Power is applied to the wheels through internal gears *at* the wheel and *near* the rim. This gives Torbensen Drive great leverage for driving just where it is needed. It increases pulling power and saves gas and oil. These gears are guaranteed for two years—two years of faultless rear axle service.

One pound of dead-weight equals *nine* pounds of weight carried on springs, in its effect on truck life. When you figure on this basis, knowing that Torbensen Drive is *half* as heavy as other types of equal capacity, you have very strong reasons for a 20 percent increase in rear tire mileage and big savings in gasoline, oil and repairs.

THE TORBENSEN AXLE CO.  
Cleveland, Ohio

Torbensen Drive is made to last. Every owner gets a Gold Bond Guarantee that the I-Beam axle and spindles will last as long as the truck and the internal gears at least two years.

***Largest Builder in the World of Rear Axles for Motor Trucks***

### Make today the day for "Yale"

EVERY house has at least one place where a Yale Cylinder Night Latch should be used—at least one place where a Yale Padlock belongs by right—at least one place where a Yale Cabinet Lock will bring proven security. And every day you put off installing "Yale"—just so long will you be without the certainty of protection and security that are assured by the trademark "Yale."

Make today your day for "Yale" protection—the same protection that the world has enjoyed for half a century.

Simply tell your hardware dealer what you want. And he will show you the "Yale" trade-mark on it—your guide and guarantee. Yale products include Yale Cylinder Night Latches, Padlocks, Cabinet Locks, Trunk Locks, Builders' Hardware, Door Closers and Chain Blocks.

## Officers

Continued from page 34

about military isn't in the books. Why, say—"his voice rang with an almost paternal pride—"our captain was an honor man at West Point!"

"You other fellows—your captains are West Pointers?"

An eager and general nod of assent. "You bet!" It reminded me of a bunch of college boys claiming intimate acquaintanceship with the captain of the varsity football team. "They're West Pointers, and they're there forty ways for Sunday."

"But—but," I said weakly, "aren't they too strict? Don't they think they own the world and—all that?"

"Think they own the world? Think it? Man alive!"—it was my first man speaking—"they know they own it. They know that they know what they're doing, and we know it, and they know that we know that they know it! They make us toe the mark, you bet. And we're glad to do it. Why?"

"Young fellow, it's because these are the men who are going to have command of us when we get over there—when a wrong command will send a bunch of us into Kingdom Come. And we know our captains won't give that wrong command. They don't know how to. This isn't any pink tea: it's a war. We're in the ranks to be led—and as for me, when I'm led I want to be led by a man who knows all there is to know about leading. And that's just about any West Pointer in the army to-day. Don't make any mistake about it!"

"And I guess," I suggested, "that

you'd all follow 'em to hell and back again?"

"Would we?" came the chorus. "Well I guess yes!"

"I thought so," said I. "It's what they all say!"

### The Best Officers

SO I returned home a considerably wiser man. I had learned that the best officers are—officers! I had learned that any one of the three classifications might lead their men to hell and back again; and this much I knew—that whosoever an officer leads, his men will follow and follow cheerfully. More: the men will follow with supreme confidence that they are being led with a superlative leadership.

I was amazed at my discoveries. And I was very, very glad. I had visited men in seven camps and talked with others from a half-dozen more. There was a unanimity of praise for officers which cannot fail to bear fruit when the hour of combat is at hand.

A writer of note on military subjects has said that confidence of the men in their leaders is a primary necessity.

Our men, in all branches and classifications of the service, have that confidence.

And more wonderful than that is the fact that the confidence is tinged with a personal pride which more often than not borders on affection.

Such a condition cannot fail to bear fruit!

## JIMMY HOPPER

THIS photograph of Hopper is a unique achievement on the part of the photographer who made it. At first glance it doesn't look anything like the Hopper we have seen in our office; at a second glance it reminds us of Hopper; at a third glance it seems more like Hopper, than Hopper himself. The truth is Jimmy Hopper is half French and half Irish.

When you look at him you see a short man with a chest like a barrel, powerful hands, and an extraordinary mop of reddish curls. No—this is not the Irishman in Jimmy Hopper. It is the Frenchman, sturdy as a Breton fisherman.

When you read Jimmy Hopper's writing you read the work of a literary artist, imaginative, occasionally impish in conception, and always beautifully clear in execution. This is the Irishman—the modern literary Irishman. If you do not believe it, remember Synge, Yeats, James Stephens, and the others.

JIMMY HOPPER played football at the University of California. Afterward he divided his time between newspaper reporting and the law, being admitted to the best magazines about the time he passed his bar examination. Whereupon he served for a year or so as an instructor in French at his Alma Mater. Then he went to the Philippines. For a while he served on the staff of "McClure's Magazine," in the days when S. S. McClure roamed two continents collecting writers as other men collect paintings or postage stamps or first editions.

Since then Jimmy Hopper has been a free lance, writing now a story and now a series of articles. He has been to the war zone twice. Two years ago he was on the Mexican border with Pershing, writing that series of articles for COLLIER'S which gave us, at least, the sense of having been there and hav-

ing seen everything there was to see. That is Hopper's extraordinary merit as a reporter—that he goes everywhere without prepossessions, observes everything with the wide eyes of a child, and then gives you the picture clearly, simply, and with enthusiasm.

Last winter, when an ulcerated tooth was delaying Hopper's third trip to France, somebody tried to sell him a patent suit guaranteed to keep a man afloat for days, and provided with a whistle to call for help. Hopper was interested—as anyone about to sail through the submarine zone would be. But he was inclined to be skeptical.

THE salesman suggested that he try it. So Hopper and the salesman went down to the Battery. Hopper put on the suit and jumped into the icy river. The suit worked perfectly. Hopper found himself supported head and shoulders above the water. And when he pulled the string the valve in the top opened and the air blew a shrill blast on the whistle. Hopper was delighted. But when he came ashore and got thawed out he began to run his hand through his curls in a manner indicating serious reflection. The salesman wanted to know what the matter was.

"Well," said Hopper, "it works too well. If I am torpedued and go overboard in that thing, I will float like a cork—that's sure. But what will the rescuing party do? They will see me safe as a church and pass me by for some poor fellow who's got no suit with a whistle in the top." I will have to swim all the way to Ireland, and everybody else will go in a boat. I'd rather be like the rest—more an object of decent pity."

So Hopper sailed for France on behalf of COLLIER'S without any patent suit. His ship got through all right, and this week we are publishing the first of his articles from the front.

## An Incident in the Lives of Two Famous Smokers

It is related of Carlyle that once Tennyson, after they were both famous, for the first time to call upon him. They were familiar with each other's work, though they had never happened to meet.

Carlyle greeted Tennyson at the door and led him into his study. They sat down in front of an open fire. They took their pipes and smoked vigorously.

At the end of two hours, Tennyson rose and took leave. He declared warmly that to him the two hours just spent were the most satisfactory in his life. And yet these two world-famous writers had passed those two hours, puffing thoughtfully at their pipes, without saying a word to each other.

It's marvelous what depths of silence and understanding come to men with pipes in their mouths.

Pipe-smokers are called dreamers. It would be far more sensible to look more closely and perceive if they are not the real thinkers of the world.

An open fire, a pipe that is going well, and a pipeful of the right tobacco. Oh, Mr. Kinnear, what you missed! What more could one ask at the close of a busy or fretful day?

The right tobacco—that's the urgent need! One that has flavor and tang and individuality and yet doesn't dry up the mouth or tickle the throat. A tobacco that is soothing and yet never becomes tame to you.

Edgeworth is given credit for having these characteristics.

And yet pipe-smokers are so finicky that its manufacturers don't want to recommend it to you too strongly. It's possible that you might not like it better than the brand of tobacco you are using at present, though many have changed to Edgeworth.

It doesn't delight every pipe-smoker. It would be asinine to make any such claim as that, but it does seem to win and hold many fastidious smokers.

Its manufacturers would welcome your trying it to see what you think of it.

It isn't incredible that you may find yourself drawn to Edgeworth, as to some people, the first time you have a smoke with them. You may like many other smokers—decide that it is not only less expensive than the tobacco you now smoke, but richer and tastier.

There seems to be something about Edgeworth that wins friends, so its manufacturers would be glad to have you put it to the test.

Send them on a postcard your name and address, also that of the retail dealer to whom you turn for supplies and they will despatch to you generous samples of Edgeworth in both forms—Plug Slice and Ready-Rubbed.

Then get out your favorite pipe—the one you've set aside to give a rest—make sure it draws well, scrape out the bowl, and load it up with Edgeworth. Loosely back, find the most comfortable position in that old chair, light the willow mixture and puff, puff, puff it into your mouth, slowly—stimulatingly.

Now, what do you think of Edgeworth? You can pour Edgeworth Ready-Rubbed straight into your pipe from the tin. It packs thoroughly and it burns freely, evenly, to the very bottom, getting better and better as it kindles to its work.

Edgeworth Plug Slice greets you in thin slices to be rubbed a moment before being packed into the pipe. One slice feeds the average bowl.

Edgeworth is sold in convenient sizes to suit all purchasers. Edgeworth Ready-Rubbed in pocket-size packages is 12c or two for 25c. Other sizes, 30c and 40c. The 16-ounce tin humidor is \$1.15; 16-ounce glass jar \$1.25. Edgeworth Plug Slice 1-12c, 20c, 30c, and \$1.15. For free samples, write to Larns & Brother Company, 31 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants: If your jobber cannot supply Edgeworth Larns & Brother Company will gladly send you a one- or two-dozen carton of any size of the Plug Slice or Ready-Rubbed by prepaid parcel post at same price you would pay jobber.

## Face the Day with a Smile

### Start with Bran

There's a bran-flaked breakfast dainty which everybody likes. But the joy of eating can't compare with the after-joy it brings.

It is bran flakes—Nature's laxative—hidden in rolled cereals. A studied mixture with a most delightful flavor—Pettijohn's.

It supplies what all folks need—the daily bit of bran.

### To Make You Fit

Bran acts as roughage. When you omit it, fine foods often clog.

Then come dull days, headaches, blues.

The world would be ten times as cheerful if folks kept clean inside.

Clear bran isn't likable, so nine in ten neglect it. Pettijohn's is likable and welcome.

To serve once daily means a constant bran supply.

Try it one week and watch results. See what it adds to the joy of living. You'll not go back to branless diet when you know the facts.

# Pettijohn's

#### A Flaked Cereal Dainty

55% Wheat Product—20% Oats  
25% Bran

A breakfast dainty whose savory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent Government Standard flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

## At the American Front

Continued from page 7

the better! Soon she is on his shoulder, pulling his hair intrepidly and rattling French at him. He has probably left behind, on the farm in Kansas or Nebraska, a little brother or sister of just that age—which explains his tenderness. But his real ecstasy comes from the fact that the little child on his shoulder is speaking French. Here's a miracle of which he never tires—that this small tot should speak French. So volubly too, and easily, each word coming out perfect as a pearl from the pretty lips! He can't get over it; reverence dwells in his eyes. Which reminds me: I was once on a steamer entering a Japanese harbor, and on deck was an American family, with a little girl, and also an English family, which was observing the American family. The little American girl, thrilled at the sight of the colored harbor, cried out some remark to her mother. A sort of rustling went through the attentive English family. And then I heard in an awed whisper: "Oh, Bertie, listen. Even the little one speaks that Yankee brogue!"

### Signposts of War

BUT I am afraid this is not writing seriously about the Great War, so I will skip all the other good stories I have, and get to my trip to the front trenches. We started the next day—in a limousine: that is the way one goes to war these days. Now (this is for the benefit of anyone finding himself wandering in the region of which I speak) there are two ways by which you may know whether you are going to the front or the rear, backward or safetyward. One is by the villages through which you pass; the other by the houses of the persons whom you visit. The villages, for instance, at first are intact and populous. You pass through one after the other; as you go on, the civilian population decreases and the military increases. Then you get to one in which a few houses are destroyed as though by earthquake. What's that? you ask yourself. Air raids? You don't know. The next village is still queerer. Half the houses are down; all the roofs punctured. Then comes one in which there is no house, only walls, angular and torn and where everyone lives in the cellars. The next village is just one razed, black horror. You've been going in the right direction. As for the people upon whom you call, well, first of all, the general lives in a beautiful chateau. You ride a while and call on the divisional general—a smaller chateau in which they carefully close the blinds at night. You ride farther and call on the brigadier general—and he is living in a house, a plain house, and right by is a very deep and comfortable dugout for emergencies. Farther on you find the colonel—in the reinforced cellar of a collapsed chaumière, and a big shell has just fallen in the garden. As for the captain, he's in a dugout scooped under a trench—a little bit of a place, very low-ceilinged, all shored up and leaking, which might be taken for the cabin of a fishing smack were it not for the penetrating, cemeterylike smell of earth, damp and deep.

### The Frontier of War

WE went through the whole gradation that day. We did it slowly, loitering on the way. We stopped, for instance, to view a British aerodrome which had been bombed during the night—the rival aviators play such jokes on each other these days. Three big sheds had been torn to pieces by bombs, but the British aviators, resting now and waiting for the night, walking slowly about in the pale sunlight, smoking their pipes, were little concerned—for they had not been here at all during the strafing. They had been out on a little expedition of their own, over there across the lines, and hence, as one of them explained to me, "perfectly safe, don't you see." We stopped also at an American aerodrome. I use the word aerodrome because I wish to be courteous to my country—but it was an aerodrome without planes and without aviators. Still, the emplacement had been chosen, and sheds were beginning to go up—and as long as something is going up or something is arriving, I suppose everything is all right.

Between stops we were burning up the road, the narrow, hard, little road, up and down, low rises and falls, with cold stubble to right and left, and now and then, farther off, a leafless for-

## 57 Varieties

stand for good things to eat

IN all grocery stores, in many markets, delicatessen shops and other places where things to eat are sold, you will find some of the 57 Varieties.

In many places you will find all of them.

Some of these varieties are foods; others are condiments or relishes intended to give an appetizing taste to other foods. All of them, whether foods or relishes, have one very great thing in common—one thing that makes them characteristically Heinz—they are all good to eat. They are all made of good materials—the choicest that can be raised, or bought, or made. Many of the fruits and vegetables used are grown under our own supervision, from our own selected seed in those localities where we have found that soil and climate combine to produce the best.

**They are all clean, all pure—  
all wholesome**

They all have just the right flavor, that perfect taste which makes them so likable, the result of careful cooking and preparation, the work of men and women who have spent their lives in the work of making food taste as good as it should.

Heinz has many plants, preserving kitchens, salting stations, warehouses, all over the world, and thousands of happy, enthusiastic, loyal work people to keep the promise that wherever you find a product bearing the name "Heinz" on the label, that product is good to eat.

**Baked Beans, Spaghetti, Tomato Soup, Tomato Ketchup,  
Pickles, Vinegar, Olive Oil, etc.**

All Heinz goods sold in Canada are packed in Canada

## Essentially a Service Car

**I**T is true that a goodly portion of the popularity of National motor cars is due to their comfort and security.

It is true also that their pleasing design and the careful method of their manufacture have played a large part in their favor.

But their strongest appeal rests on a much sounder basis—a basis of unquestioned significance at this time.

It rests on the capacity of National cars for competent and sustained performance—for service under all conditions without failure.

New dependence on the motor car as a means of swift and eco-

nomical transportation has magnified the National's importance in this field.

The National is essentially a car to be used; built to last several seasons and to serve without waste.

With either the six-cylinder or the twelve-cylinder airplane-type motor it is conspicuously reliable and efficient.

Its smooth action and perfect balance, its staunch and enduring construction, make its fuel, tire and maintenance costs surprisingly low.

NATIONAL MOTOR CAR & VEHICLE CORPORATION - INDIANAPOLIS

*Eighteenth Successful Year*

*We believe that the twelve-cylinder National will outperform any genuinely "stock" car in the world*

National Dealers Now Offer Complete Range of Body Styles in Both

### *Six and Twelve Cylinder Models*

Seven-Passenger Touring Car, Four-Passenger Phaeton, Four-Passenger Roadster, Seven-Passenger Convertible Sedan

est of marvelously rich browns. we'd slither through a village, up knees in mud, between stone walls with expressionless façades, along main street peopled with cannon, chickens, and children—healthy children of Lorraine with red cheeks, little girls wore their hair down, boys wore the military forage cap horizon blue; they would get ready along the walls, as they saw us approach and just as we would pass they'd thrust their heels together and give us salute—the American uniform popular in these parts. Just these children, who practically never known days of peace, whose memory and experience is that of in a land at war, on the front of a land at war!

#### *Waiting for the Chance*

**B**y noon we were in Toul—Toul in her old grass-grown ramparts a woman in a medieval corset of whalebone (what is a whalebone when it is of iron?) One can be very good déjeuner at the Hotel Comedie, in Toul. In fact, generally for good eating, I recommend the place. And also for joyous spirit; for air; for blood that runs free through the veins; for the gaiety of soul comes with action; for smiling, for our optimism.

At the rear there are cartes depeche and heavy, poisoned air, and old people, and inert people with stagnant minds who cower, all bent up with thoughts of disaster and impossibilities, of surrender and maudlin despair. Never listen to the rear.

From Toul, on again, still toward north. We reached divisional headquarters, past which we would have gone on had we not been stopped by the enthusiasm of a young captain in charge of a supply company who brought daily food, ammunition, clothes to a regiment in the trench. I would not write of him were he not the first sample I struck on the way of something across which I was come many times in the succeeding days—our young American officer, suddenly raised in rank and dropped in the midst of the world's biggest war and tickled to death with his job; eager to learn, to do it well; resourceful, inventive, impatient of routine old ways of doing things; prodigal of himself and—I must repeat it—close to death to be in the Big Thing. The men I met later were not like this. But so many were that I have away from that army, raw and learned as it still is, still small child and just learning to walk with a burning faith in what it will accomplish—if given the chance.

#### *Through Seas of Mud*

**W**ELL, that young captain, who created, all by himself, something which no one had seen, wanted to show it to us. He took us to his establishment—his sorting room (an ex-pigpen, shoddy, but not altogether evacuated of a corner of which two porkers grunted), his stables, his horse hospital, his showers, his bath shop, his butcher shop, his restaurant, his shoe shop (where daily some pairs of trench shoes were resoled and patched). He pointed everything out to us, and over everything he passed with love—for he had created all this in a few weeks, right in a sea of mud, out of nothing; he was a prodigious god. His job was to keep a whole regiment in the trenches fed, clothed, armed and equipped. He was in command of I don't know how many men (I've forgotten, to tell the truth), of five hundred mules (that I remember), of something like sixty-four wagons. Every morning at seven his long wagon train reported at railroad and loaded up the stuff ordered the day before. Then it went back to his headquarters (the little settlement he had created) and, while the animals feed and the men of the train slept and fed and rested, he, with a stationary detachment, unloaded, re-sorted everything by category and company, and reloaded. At four in the afternoon the wagon train, reloaded, was on its way again. It had to pass through a forest while still it was day and emerge out of that forest just as it was dark. The rest of the way was in the night, the train segregating itself, it went, sending some wagons toward one company, some toward another, pushing all of its elements right to the trenches, to the company kitchen, then to unload—a long, rumbling, groaning, mysterious journey, through darkness, through seas of mud, lit up at times by

sudden flares from the German positions and sprinkled also at times by shells. The way back was the same—in the dark. And at seven in the morning they were at railroad once more, to begin all over again.

We finally left the young captain and his enthusiasm. I could tell his story clearly, reading it between the lines, he said. He had been mad as the letter H when put on this job—he who dreamed of the first-line trench and glory. But he had got after it hard—and now he thought it the best job in the world and the most important in the whole army; it was to him the very center and pith of the universe. With men capable of such a charming illusion, and only with such, are things done—big things.

#### And Now Gas Shells

WE went on to the next village, and there our nostrils began to dilate. For things were manifestly changing. This village was nicked—quite a bit nicked up; the veriest tyro could see that things happened here sometimes. Also, the doughboys, of whom there were many, had a strange appearance. When you saw them near and peered at their faces, you saw they were merely young lads with amiable grins, but as soon as they were at a little distance they took on a sort of secretly formidable aspect. At first I could not make out why that was; then I saw it was because of the helmets. They wore no campaign hats, but steel helmets—the khaki-colored, flat-brimmed steel helmet of the British army. On the British, somehow, this helmet has a vague, Chinese air. A British troop, marching along a road, gives one visions of rice fields and pagodas. But somehow, on our young alim lads, the effect was different. It took me several hours to discover just what that appearance was—I'll tell about it later.

Besides the helmets upon their heads, they wore their gas masks at "ready," under their chins, and as we turned a corner in the village (a nicked corner) we saw a sign left by the late French occupants: "Le port du masque et du casque est obligatoire." So we in our limousine threw off our caps and put on our helmets and hitched our gas masks, which had lain on our hips, to the readier position on the chest, right under the chin.

The gas mask, by the way (as well as the steel helmet), is now at the front as natural a part of one's equipment as one's shoes. This is because of the evolution which has taken place in the pleasing art of burning out the other fellow's lungs. The gas waves, sent by complicated apparatus, densely and for small distances, is now out of fashion. Its use depended too much on fortuitous occurrences, such as the quality and direction of the wind. Asphyxiation, these days, is sent by shells. Besides the shrapnel shell and the high-explosive shell there is now the gas shell—of which there are several kinds, all quite different. So nowadays, when shells begin to drop, you not only sink yourself into a cellar or dugout or throw yourself on your belly behind a wall so as not to be torn to pieces; you also put on your gas mask—a most loathsome uncomfortable contrivance—so as to escape asphyxiation. A most charming war, this.

We were now at brigade headquarters. A house—just as I told you—with a comfortable dugout at the kitchen door. It must have been once the house of the rich man of this humble hamlet, but it has been stripped of its furniture and refurnished. The furniture of the salon, or parlor, consisted now of boards laid across horses, of maps and telephones; it was here most of the business was transacted. Across the hall was the dining room, still a dining room, and upstairs was the brigadier general's bedroom—but I did not go up there. The general invited us to dinner, and, as it was quite time for dinner, we slipped across the street to the Salvation Army hut.

#### A Salvation Army Hut

THE reason we wanted to see the Salvation Army hut was that, all the way up here, everyone we talked to, from general to private, had gone out of his way to enlist us in a violent and (it seemed to me) unreasonable partisanship. Everyone, in most violent terms, had praised the Salvation Army huts and had "knocked" the huts of another organization (much stronger and richer than the Salvation Army) which also has huts at the front. Now I know that we Americans love to take sides and espouse causes. I remember

## "Both Are Equipped With R&M Motors"

Eagerly she has awaited his arrival with the two household aids that promise so much in easier tasks and greater comfort.

Her appreciation is complete when she sees the famous Robbins & Myers Motor on both cleaner and fan, a sure sign of utmost quality throughout.

Her husband has learned by dollars-and-cents experience in his own factory what R & M Motor satisfaction is. And his selection was based on that experience.

A Robbins & Myers Electric Fan is a fan built by motor specialists, a fact well worth remembering. A fan is as good as the motor back of it; and the motor is as good as the concern back of it. Whatever the fan size or purpose, you will find it in the Robbins & Myers line.

Robbins & Myers have been building quality motors for twenty-one years—motors ranging from 1-40 to 30 horsepower—motors for general power services—motors for electrically-driven equipment for the home, office and store.

A Robbins & Myers Motor on a vacuum cleaner, addressing machine or any other

electrical device is a sure sign of superiority throughout. This name is assurance of value just as it is a guarantee of service.

Power users, electrical device manufacturers and dealers find the utmost in value and satisfaction in the Robbins & Myers line.

## More Strength Where Strength Is Needed

Road strain on tires is especially severe at the points where the tread begins. Re-inforcement at these points means better, longer tire wear.

Mark carefully how Ajax tires are braced where the road strain comes. Note those burly supports. They're known as Shoulders of Strength—a mileage adding feature that belongs exclusively to Ajax.

Shoulders of Strength distribute road wear evenly over the tread. Friction can't center and grind quickly through to the fabric. Shoulders of Strength put more rubber where it should be. They put more tread on the road.

### Ajax Road King

This stalwart Ajax tire rolls up amazing mileage records. See those Shoulders of Strength, and the massive Road King tread of heavy triangle barbs. They give you splendid traction. You can count on them to hold the road.

The Ajax Road King, with a four-ply seamless Ajax tube, is a combination that's sure to show a profit. Ajax tires and tubes, together are the combination that yields the utmost in service. Try them.

### 97% Owners' Choice

Ajax tires are 97% Owners' Choice. This great percentage of our yearly output is selected by individuals to replace tires of other makes that came on their cars.

The nearest Ajax Tire Supply Depot is headquarters for Ajax Tires and Ajax Tubes, and real service. Write for a copy of the new booklet "Ajax Shoulders of Strength."

very well a period in my life during which we who wore blue jerseys considered ourselves infinitely better, squarer, more moral, and at the same time more courageous than some fellows (regular skunks), a little farther down the line, who wore red jerseys; and yet I know also that, meeting since some of these red-jerseyed skunks, into whose stomachs it had been a delight to sink my head, I have found most of them quite decent men, and some of them, in fact, rather amiable and admirable characters. So I was a bit leery about this hut business. "But why?" I would ask, and also "How?" And they would speak vaguely of hot chocolate served to men just out of the trenches, and with more enthusiasm of pies and doughnuts, and I was not quite convinced. That is why I went into the Salvation Army hut to see.

It was night, by this time, and the place we entered, lighted only by a few guttering candles, was made vast and mysterious by the great shadows which massed in the corners and pulsed in the depths of the high ceiling. It was, as a matter of fact, I think, some big deserted barn, but it had the aspect of an old and ruined cathedral. At first this is all one saw—the old, thick stone walls; the floor of beaten earth, smelling damp; the high ceiling, patched, where there were holes of suspicious shape, with white squares of tent canvas; the candlelights, each with its humid little halo. Then we saw that beneath the candles were tables, and about the tables chairs, and that at some of the tables men, American soldiers—coated still with the mud of the trenches, their steel helmets upon their heads, their gas masks beneath their chins—sat reading or writing; reading news from home, writing letters home. The vastness of the place, the darkness, the discomfort of the place, together with the thought that to those from the trenches this was warmth and comfort, made of the scene something at once weird and touching. At the end of the room there was a long counter with a row of candles that made it look like an altar. It wasn't an altar, however; when we were near we saw that it held all along its length small packages of tobacco, of cigarettes, of nuts, of candies and dates and figs and cigars—little bits of sacks, made little so as to be cheap and within the means of all, little bags such as one makes for a Christmas tree, a great Christmas tree to which a thousand children, a thousand poor children, have been invited.

#### Why This Hut Is Popular

HERE, by the counter, was another group of soldiers. One of them, back from his turn from the trenches, was holding forth to others who had not yet been there. He was a young lad, very young (how very young most of these soldiers look!); a stripling of a lad, tall and lithe. His attitude toward what he had just been through was one of intense and eager satisfaction; he was like a freshman just out of his first football game still athrill with it, and tremendously anxious for the next one.

His young face was all alight; beneath the steel helmet his dark eyes glowed and dilated as he tried to pass to his less fortunate fellows, who had not been there, some of the essence of what he had seen and learned. At that moment he was holding forth on the subject of poisoned gases. "Yes," he was saying, "and there's the mustard gas. That sort of burns you all over, and blinds you and makes you choke. Then there's the convulsion gas—it gives you coma and convulsion and nausea, and things. Then there's the pukation gas—"

One of the boys, farther away, rapped on the counter for attendance. A moment after the canvas screen behind parted, a young woman appeared and now we knew the reason of that Salvation Army hut's popularity; we understood the vehemence of its many partisans. It wasn't a matter purely of chocolate and doughnuts and pies. The real answer was right here before us—the woman who had just come through the screen and who now was waiting most graciously on the lad who had rapped. She was a young woman, and she was very pretty and most becomingly gotten up in a khaki-colored costume which had something about it of military chic and yet remained subtly feminine. And when she spoke it was with a pretty, low, well-modulated voice, and her eyes were bright and frank. Many soldiers came forward now to be waited on, and she did this graciously as any queen (fairy-tale queen, I mean) who loves her people very dearly and is

bound to share their worries and the troubles and is filled with tenderness for their hardships and their perils—we could see she was adored.

After she had attended to many wants we introduced ourselves, and she invited us behind the canvas screen to see her kitchen. The kitchen was merely the farther end of the building, like it, it had grimy stone walls, a dark earthen floor, and an absurdly high ceiling patched with canvas. But the ground was a field range, and there were, besides, a deal table, several rough chairs, barrels, boxes, and cans of provisions, and in a corner a little tent which was her home. We sat at the table and, while observing secretly, meanwhile the fact that she possessed humor and tolerance and understanding, a mind as beautiful as her external charm, we pursued our severe investigation (though now we knew). We asked why the Salvation Army was around these "diggings," was more popular than the other organizations. She deprecated such talk, of course. She said the other organization was an admirable one, and that it and her worked together in mutual helpfulness and amity. But when we pressed our questioning she at last admitted that perhaps the unreasonable partisanship of the soldiers of the sector was due to the fact that her hut made hot chocolate and doughnuts and pies (once more the chocolate, doughnuts, and pies). She called her helpmates, two blond Salvation lassies, and asked them statistics on the subject, and they said the record was this: one day they had made fifty pies and two thousand (I saw two thousand) doughnuts.

#### "They're Arrivals"

AS we talked there had been a number of heavy detonations near by, and I, wishing to show I had been in this sort of thing before (man will always show off before woman), said: "You have a battery stationed near by, haven't you?" But she, in a rapid parenthesis, answered negligently: "Oh, these are not departures; they're arrivals," and went on with the subject thus disturbed. Now, a departure is when you shoot at the other fellow, and an arrival is when the other fellow is shooting at you (and coming close). For the first time I noticed, hanging on the back of her chair, on one side a steel helmet, on the other a gas mask. A dinner engagement is a dinner engagement; our watches, shake them as we might, now told us it was time for dinner with the brigadier general, and so, not liking (for the moment) the brigadier general at all, we said good-by and went to dine with him.

That dinner was interesting. In the midst of it a lively cannonade shook the close-shuttered window, and the general, nodding to one of his young aids, said: "Go find out." The young man disappeared through the door. I had a vision of him mounting a horse and dashing away, dashing to and fro at the gallop over an immense and dark battle field, from battery to battery. But he came back so soon I knew he had not done this, and his nice uniform, besides, was unsullied of mud and unflecked of foam. "It was a French battery, general," he reported. "It let loose at something—nobody knows what. It has ceased firing." And I knew that he had merely stepped across the hall and used the telephone.

#### Is War a Game?

BESIDES the general's staff, there were several guests at the table, officers on mission or inspection, among them the son of one of our ex-presidents, a kindly, humorous, very conscientious and tranquilly strong officer, I thought, as I watched him and listened to him. The talk was mostly of the business. These men, you could see, were not men, or were no longer men, who discuss the rightness or wrongness of war in itself. They accepted war fully, and their concern was as to the carrying on of it.

And listening to them, I could not help thinking that war is, after all, a game, terrible and engrossing, but a game, and that men are boys. I could not help thinking that there will always be war, because men are boys who like games—unless women finally take hold of things, for women are not boys, but are much more serious and have not the same fondness for games.

Dinner being over, we replaced our helmets upon our heads, tightened our masks up under our chins, and went out and on toward the boche.

Mr. Hopper's next story will appear in an early issue.

# Prest-O-Lite Battery

A correct size  
for every car  
—at District Service  
Stations everywhere

Annabel Lee of the Prest-O-Lite Clan

## She drove the family car 12,000 miles in 18 months

**O**F course Annabel had help—good help—from two sources.

—Help from the little Prest-O-Lite Battery which started the big engine and fed the bright headlights.

—And help from a proud father who caught her what she should know about the rules of the road and the folly of exceeding the speed limit.

Thanks to the surplus power of the Prest-O-Lite, Annabel never experienced a minute when that little helpmate failed to spin the husky old engine at a touch of her toe.

And thanks to the skill acquired from her clever tutor, she backed the car into only one ditch—killed only one chicken, and barked only one telegraph pole, in all that time.

To keep her faithful little Prest-O-Lite Helper in one hundred per cent condition, Annabel relied solely on the Prest-O-Lite service man down on Main Street.

For Annabel herself, dreadful as it may seem, did not even know what kind of grids were inside of that battery.

And not once has she found it necessary to take even a peek at the hieroglyphics in the battery booklets which came with the car.

You who read this, and envy Annabel, certainly can't do better than to follow her lead—join the Prest-O-Lite Clan while the joining is good.

Write us today for name and address of the nearest Prest-O-Lite service man, who will be glad to welcome and install you as a member of the clan in good standing.

The Prest-O-Lite Company, Inc.,  
Indianapolis, Ind.

The Oldest Service to Automobile Owners in America

now, you see! You know what a long way we are from any such condition as I saw. That blind man here was proof enough in his way. Why, we're rotten with good fortune!

"In a flash I realized what was wrong. We're all wretched cowards. We keep looking down. To look up is the very essence of youth and vigor, but we all miserably look down. I tell you, Leighton, cheerfulness is the first duty we owe to humanity. Remember Kipling?

*If you can meet with Triumph and Disaster,  
And treat those two impostors just the same,*

There is the way to live, my boy!"

"How long did all this take you," smiled Leighton, "out there in that gale?"

"About ten seconds," Teddy answered promptly. "It was just an intuition, an overpowering flash of light, that took my breath away."

"The wind must have done that," interrupted Leighton.

"And the curious thing is," Teddy ignored him, "that just then you came into my mind. I wanted to see you immediately, to talk to you. And there you stood a few feet away from me, with—"

"With this," said Leighton quietly, taking the pistol from his pocket and laying it on the table. "You certainly saved me from that," he added gravely.

"You can laugh all you like," Teddy pursued, though Leighton was far from laughing, "but if that blind man and his story don't prove my point, however illogically, I'll eat my hat and pay for your overcoat too."

"No," said Leighton more cheerily than he had spoken before, "you won't do that. I'll go so far as to say that I endorse your conduct—what more can I do?"

"Much more!" cried Teddy, "a thousand times more! That might be good enough for a nobody like me, but it's oceans too biggishly for you. You see, you, Leighton, have power in your hands. You owe it to your people, to your country. Give them faith, give them courage. Take your hat and go down to your office to-night and see that your readers to-morrow morning have a little less of blues and blacks in their lives and a little more of cheer and gratitude, courage and faith—that's what they need, that is what we all need. That's your job, Leighton."

"Too late to-night," protested Leighton with smiling regret. "It's ten o'clock."

"I say it's not too late," insisted Teddy. "Besides, there is to-morrow, and heaps of to-morrows to follow. But begin to-night. Take my word for it—it's best for your own peace of mind. Shirk anything but your pleasures. And, mind you, this will be the greatest game even a sybarite like you has ever enjoyed. To give people courage to live—take it from me, it's worth while trying."

"Well," responded Leighton, gazing at Teddy good-humoredly, "I don't know that I can do that to-night. I believe it is the coldest night of the year. But if I can find a coat I'll carry out your prescription and at least drop down to the office for an hour or so." He touched a bell.

"Burke," he said to the grim-visaged servant in the doorway, "see if you can find an overcoat for Dr. Smiley and bring me one too."

"I hope"—Teddy shook Leighton's hand warmly at the door of the Orduna—"I hope your wife and children have better weather than this at Miami."

"I certainly hope they have," said Leighton, "but they are not at Miami. They're at the Polciana, Palm Beach. They've had some cold there too, I hear."

Teddy made a mental note of the address, for that had been the chief object of his remark.

SOME days had elapsed when Teddy received a telephone call from Rosalind. "And this," she began reproachfully, "is the man who asked for only one dispensation—to be allowed to see me occasionally!"

"May I come to-night?" he asked joyously.

"I ought to say no," she told him, "but I think I shall let you come. I have heaps to tell you. Come to dinner if you can. No? Well, then, come as soon after dinner as possible."

"Perfect miracles have happened," she informed him as soon as she had greeted him. "Winifred Leighton is

back with the children, and she's happier than she's ever been. Sometime very wonderful has come over Jack Leighton. It's as though he were another human being. He's become happy, cheerful, and it's making the greatest change in their lives, in papers, everything. And would you believe it, Teddy?" she added, laughing. "Winifred says a certain doctor did for him, but she won't tell me his name until she gets his permission. Isn't that amazing? I should like so much to know such a man!"

TEDDY'S heart sang within him. A vista of happiness opened before eyes. Should he tell her now? No, could not. He had no right to bet Leighton's secret, and as to his part in it, he could not talk about it. "Yes," said Teddy calmly, "but you probably find Leighton did it for himself. A man, you know, may be cured of drinking, smoking, drugs—anything except everlasting gloom and nervous irritation. That must take time, and a man has to do it for himself."

His words seemed to awaken a positive echo in Rosalind's mind, and she thought she detected a note of exultation in his voice and a definite twinkle in his eye.

"Why, Teddy," she cried suddenly, "you yourself look like a different man. Don't tell me! I believe you know something about all this."

"No, Rosalind," he met her composedly, "but I believe you must have been giving me some absent treatment."

"Very absent," she chided. "Three days!"

"Is that all?" he marveled incredulously. "It seems like ten years. Rosalind was appalled. But, truth to tell, he was not thinking of the time elapsed since he had last seen her. He was thinking of the change in Leighton and in Leighton's newspapers since the fateful evening.

For from that following morning when the story of the blind man and his soldier sons appeared in Leighton's papers, a very marked departure was discernible in them. There was the new department of everyday, unnoticed heroism, with concrete incidents of fine courage, but there was much else besides. The Leighton papers seemed to have crossed a kind of Great Divide. They still criticized and still drew legitimate attention to dangers and abuses, but their pervading atmosphere of menace and fear had been magically transformed. They carried daily messages of accomplishment, of foresight, of hope and courage. It was inspiring to glance through Leighton's morning paper, and his own signed editorials seemed to rise from the page on the wings of a high, undoubting courage. Almost from the first the circulation began to climb steadily upward as though a new vigor had been poured into it. Once you read the paper, you felt somehow that you couldn't do without it. And Teddy saw to it that Winifred Leighton at Palm Beach missed not a single copy from the very first day.

Leighton delightedly informed Teddy that in other newspaper shops they had suddenly nicknamed him the Happy Hooligan and his paper the "dope pill." But inevitably and under cover they were beginning to follow his suit.

LEIGHTON'S own city staff, perceiving the miraculous change in him, declared that "the boss was feeling his oats because his wife was away." But upon her return Leighton seemed to be happier than ever. Accordingly the older men, with some creaking, shifted from their old grooves into the new ones and with the adaptability of their trade sailed merrily on, realizing that they were creating another new era in journalism. The younger men had no difficulty in embracing the new spirit.

"You seem," Rosalind beamed upon Teddy, "oh, so much better; I can't tell you how much better!"

"Well, if I am, you've had everything to do with it."

"But I do think," she thoughtfully urged, "you ought to get Jack Leighton to tell you who his marvel of a doctor is, don't you, Teddy? He owes it to us not to keep such a man to himself!"

"He sure does," Teddy heartily agreed. "We'll track this Joy Doctor to his lair yet, never fear. But I warn you," he added with the mock of a threat, "once I apply my great mind to finding this bird, it's not going to take me any six months, Rosalind, nor half that time."

Rosalind laughed happily. Despite his alarming strangeness, he was still hers.

## Above the Smoke of Battle and the Dust of Violated Homes

*"Earth Under Them and Sky Over Them"*

**H**ERE we are, eating three times a day, homes clean and complete, friends near-by. Inconvenienced now and then, but independent and assured.

We have paid out some Red Cross money a while back, too.

Paid it out—and forgotten it. That's how much it hurt.

Might not be a bad idea to have a look at what that money has been doing?

Maybe it will be good business to sort of check things up?

(Maybe it will be good for our souls, incidentally.)

That money went, dollar for dollar, where it did a full day's work, wherever it was.

Three cents of it may have had the honor of disinfecting with iodine the three torn wounds of an American soldier on the French front. Or it may have had the less noble responsibility of pinning a warm flannel belly-band around six-year-old Antoine out back of Noyon.

No use,—we can't figure this Red Cross task in cents' worth.

There's the whole path of ruin from Belgium to Switzerland, just to visualize one thing at a time. Where our allied lines have advanced, the land has been swept clean by the enemy. If your Red Cross money went there it very likely provided pots and pans, food and clothes, beds and blankets, for the repatriated people.

And who are these people anyway?

Three years ago they were prosperous and contented—self-respecting, steady, saving, hard-working, everyday, small-town citizens; though living all their

lives under a half-formed dread of the thing that came at last.

Now they have "the earth under them and the sky over them"—not one thing else. Their sons are fighting, destroyed, or ill-used prisoners. Their daughters are "missing."

It's for you to say whether this great work of mercy shall stop. Whether the Heart of America will speak again in the same wonderful voice that poured forth the hundred millions of the first Red Cross War Fund. Those millions have fought the good fight—they are gone.

The Red Cross is yours, just as our Army and Navy are yours; yours to support with the same fervor and loyalty that leads you to the bottom of your purse for Liberty Bonds.

It's for your voice to say whether your Red Cross shall falter now or sweep onward, greater and more helpful than ever before.

And it's your dollars that must answer.

FOR THE WINNING OF THE WAR

## 'Nobby Cord' Truck Tires Over Here *and* Over There

On both sides of the Atlantic they are helping to win the war.

They have the proved ruggedness, vitality and long life that fits them perfectly for the heavy-duty work they are performing.

They make possible *greater speed at less cost.*

They multiply the life of the truck. Lessen wear and tear. Cut down repairs and replacements.

They give more miles per gallon of gas and oil.

They cushion the load—protect it from the hammering blows of rough roads and bad pavements.

They reduce tire expense.

To insure uninterrupted service and low running cost, equip with 'Nobby Cords'.

Remember, your truck is no better than its tires.

**United States Tires  
are Good Tires**

*For passenger cars: 'Royal Cord', 'Nobby', 'Chain', 'Usco' and 'Plain'.*

*Also Tires for Motorcycles, Bicycles, Aëroplanes, and Solid Tires for Trucks.*

*United States Tubes and Tire Accessories Have All the Sterling  
Worth and Wear that Make United States Tires Supreme*

## Help Your Wife Keep Down Expenses

Economizing to meet war-time conditions is a man's size job. Are you doing anything to help your wife solve this problem?

Have you thought that electricity can prove just as essential in the management of a home as it is in business?

Do the practical thing! Have your electric company or electrical supply dealer demonstrate the labor-saving Western Electric washing machine, vacuum cleaner, portable sewing machine and electric iron. You can easily satisfy yourself that they *do* enable housework to be done more quickly, more easily and more economically.

The portable electric sewing machine will help your wife make her own and the children's clothes—a real war-time economy. Then, too, clothes last longer if they are washed the electrical way—and best of all, your wife will be free from the drudgery of wash-day, with its vexing servant problem.

Housekeeping is becoming more and more a business. Why not help your wife run her home in an up-to-date business fashion?

*As a starter, write for our new Booklet No. 61-C, "To Lighten the Labor of Your Home," or drop in at your electrical dealer's and see these things for yourself.*

# THE DAY OF THE CANNON

BY JAMES HOPPER

COLLIER'S SPECIAL CORRESPONDENT

ON the eve of this day—the Saturday before Palm Sunday—the situation in Paris was thus: There had been several savage air raids of late, in quick succession, and a disastrous explosion of grenade stores in a suburb. The great German offensive had just started, and the news from it as yet was disturbing—suggestive of some great peril narrowly averted and still menacing. The city felt itself fought for; it felt upon itself the fixed malevolence of the evil god Boche. That very night an air alarm had held the children and the old people in cellars for two hours. But the morning that broke was a beautiful one, a fresh and gentle day of spring. A fog lay over Paris, a mist which was pure and white.

## "There's a Boche Up There"

AS I sat eating breakfast in my room, at about half past seven (which, I say it boastfully, really meant half past six, for the clocks had been moved forward on the first of the month), I thought I heard the explosion of a bomb. "Another air raid," I thought. But there had been no "alerte," no high shriek of siren and clear cry of bugle, and now, as I listened, I could hear no barrage fire and no other bomb. "I was mistaken," I thought. "It was some fool slamming a door within the building—I wish people wouldn't slam doors so, these days!" And I went on with breakfast. But as I was finishing it, and putting away the tray, some fifteen minutes later, again I thought I heard a sound of explosion, louder and clearer, if anything, than the first. This time I opened my window and stepped out on the balcony, six floors from the street.

As I have said, there was a mist over the city, a low and very pretty white mist. Looking upward, I could see nothing but this vapor, thinning in places to a suspicion of the sky's blueness, or now and then tearing swiftly in a sudden vision of the same blue immediately closed again. Listening, I could hear no detonation—nothing from the anti-aircraft cannon, no repetition of that which I thought I had heard. I was beginning to think myself the victim of a strange delusion, when I noticed that the pigeons, which roost in the trees of some old gardens hidden between high walls and buildings in this quarter of the city, were all awing, whirling, and whirling in a manner clearly of fear and bewilderment. Then, looking down below into the street, I saw that the keeper of a small restaurant down there was out in front of his door, his eyes turned toward the sky, and that the green-grocery lady, a little farther, standing before her artistically spread vegetables, seemed prey to the same aerial curiosity. At the same time the valet de chambre of our floor, a mere boy, came out upon the balcony from a window four or five removed from mine, and stuck his young nose up into the air. Evidently these had heard something.

But nothing was following. Nothing disturbed the city's silence but the sweet wing whir of the pigeons, who gradually, in diminishing circles, were eddying back to their roosts among leaves and gargoyles. I went back into the room, leaving this time the big French windows open wide, and read the morning papers, with their disquieting and reticent battle news. I was well absorbed in them when—Pang-ang-ang!—another burst startled me. This time it had sounded as though right over the roof,

and this time I was sure. Standing out on the balcony, and looking up into the delicate and shifting mists, I thought: "There's a boche up there. He's gotten through under cover of the fog. He's drifting about up there above the fog, and whenever there is a lift and he sees something, he drops a bomb." And I had no sooner thought this than the alerte came—the siren's scream, rising swiftly to the most unbearable limits of sound, then descending sonorously again, the horn's weird la-sol, la-sol, la-sol, la-sol, the clear high cry of the bugle: these three sounds intertwined, rushing about the city on the red fire engines. "It's an air raid all right," I said to myself. "The air defense has at last made up its mind to it," I thought ironically. "It's about time—I've heard three bombs already!"

R-r-r-r-r-r-r!—down below the restaurant keeper had dropped his iron curtain over his plate glass. R-r-r-r-r-r-r!—down went the green-grocery's iron curtain, the barber's next door: all along the street all the iron curtains came down on the run. The street emptied itself; timid noses peered out of portes-cochères. Standing high up here, I could imagine what was happening throughout the city. Everywhere people were winding down the stairs of the high houses to the cellars; the little children of the schools were being marched out singing to near-by shelters previously prepared; shops were closing, factories stopping. Below ground the subway trains were coming to sudden halt; above, the car lines, cabs, and busses. A huge paralysis was taking hold of the great city; it was holding its breath beneath the threat of the air.

## P-p-pang-ang-ang-ang!

NOW, the usual sequence in an air raid is as follows: First, the alerte is heard, then the booming and flopping of the defensive barrage. After that there is a moment's respite before a series of sharper and most tremendous detonations announce the arrival of the raiders over the city. I thought we were at that moment, and waited anxiously. But time passed, and nothing happened. The pigeons had settled down once more. The anti-aircraft guns were not firing. Down in the street the green-grocery lady opened the small door set in the iron curtain which she had let down stoically between herself and the best of her stores. She opened it just a little bit; she must be peering through the chink. Still more time passed. I knew what had happened now. There had been a German plane up there above the fog. He had thrown all his bombs, and had decamped. The alerte had come too late and was now a false one. Soon the Breloque. But: P-p-pang-ang-ang-ang-ang!

The pigeons went up into the air; down below, the little iron door went shut—and I withdrew with dig-

nity within my room, very red in the face I have never liked practical jokes.

I sulked a moment, in the farther depths of the room. Then I thought: "There'll be splinters flying soon; I had better close the shutters," and I did this. But a moment later I opened them a little to peer out, then a little later, wider, and let my whole self out to the balcony once more, for the silence outside was too tempting. It had tempted others too. The greengrocery lady was out on the sidewalk, and so was the restaurant man and small groups before the house doors. They were

all looking up into the air. I looked up too, but without trust. I knew what was up there. A fleet of Germans, floating about above the fog, peering down watchfully and letting fly whenever they caught a glimpse of a street or a building. Another disturbing factor was entering the game. The sun, as it ascended and grew stronger, was attacking our protective covering. Now and then a pale yellow light pierced the white mists and touched up the roofs with gold. "Soon the sun will come through altogether," I thought. "Then they'll see, and we'll get a shower. But where are the French planes? What are the French doing? How is it they are not driving them away?"

As if in answer, there came for a moment, above my head, a wide tear in the fog, and for just that moment I had a glimpse of three French planes. They were streaking toward the northeast, in the direction from which the aerial attacks come. They were at different heights, one quite low, the other higher, the third far, far up. The medium in which they moved gave them a fantastic appearance; they carried with them long streamers of the mist; their outlines were lost; they seemed to have sails; they looked like great galleons weirdly afloat up there. Then the mists met and closed—and they vanished.

## All Over?

A LITTLE while after the sun broke through definitely. The fog dissolved, and the city lay clear beneath the sky, like a relief map drawn in pale gold. "Now!" I thought. But there came nothing. Nothing at all at first, then one explosion, then again nothing.

I arrived now to my final and solid explanation. "They're coming high, very high," I thought. "They're coming, not with big, heavy bombing planes but with swift, small battle planes. Every once in a while one of those swift, small planes gets through, passing above all the defenses, invisible and extremely high, and from the heart of the sky drops a bomb—just one, for he can carry but one—a small one, for he can carry only a small one. That's how it is!" Scraps of knowledge picked up here and there returned to my mind and strengthened my conviction. I knew, for instance, that since the beginning of the war the rival air navies had been in a seesaw duel to decide which should go highest in the air. For a time the German had had a Rummpler which out flew the best the Allies had. That little machine could sit secure some five thousand meters up in the air, and take photographs by the hour, while five hundred meters below French machines leaped and leaped in unavailing efforts to reach it. Then the French had built a Bréguet, which had outflown the Rummpler. It was then the Bréguet which sat on its tail at five thousand five hundred while

Rumblers gnashed their teeth in unavailing rage below. Well, I thought: "Blast it, those Germans have a new machine which outflies the Bréguet. It can sit up there out of reach. That's what they are bombarding us with. Every twenty minutes or so they send one over with one bomb. It drops its bomb and then scurries off, and twenty minutes later another arrives with its little bomb."

I now found myself facing a problem. I state it, not because it is mine, but because it happens to have been the whole city's problem. You see, I had some work to do (I was beginning an article). Before, during the old air raids, I had done no work. But these old air raids had been concentrated affairs, lasting one or two or, at the most, three hours, and they had been at night. Here was a new form of raid, however, which took place in the sun and which seemed able, as far as I could see, to last all day—and maybe the next and the next. Plainly I must change my habits as to air raids. I must learn to live during an air raid as if there were no air raid. I must keep on working. I must work to-day, for instance; right now! Oh, curses! The old raids had been very good excuses; this new form afforded no excuse at all!

So I put myself to work. I made many adjustments before I got started. At first I closed the windows so as to be quiet. But then I reflected that if a bomb dropped near, all closed windows would fly to pieces, so I flung mine wide open again. My whole room then seemed scandalously vulnerable to shrapnel and splinters. I closed the iron shutters. But now I couldn't see to write. I compromised by folding back the shutter's central leaf, and then, after quite a while, I discovered that I was sitting exactly in line with the opening thus left.

I worked most fitfully. I'd write a few lines, then go out on the balcony and scan the city and scan the skies; then I'd write a few lines; then I'd go out on the balcony again. Doing this, I got altogether in the wrong swing. While I'd be inside, nothing would happen; then, when I'd be outside saying: "I guess it's all over now"—p-p-pang-ang-ang!—another explosion would give me the lie direct.

The city, meanwhile—I could see this through my observations from the balcony—was reacting to the phenomenon exactly in the same manner that I was (and that is the reason, of course, why I dwell at such length on my own actions). The play of the iron shutters in the street below was amusing to watch. The restaurant keeper, the greengrocery lady, the barber, had all brought their curtains down on the run at first. Then they had raised them. Then they had lowered them. This game went on for quite a while. There would be an explosion; the curtains would come down. Then nothing would happen, and they would go up. But they'd no sooner be up than another explosion would come, and down they'd come again. It was the greengrocery lady who first found a solution. She raised her curtain halfway and left it there. The barber took the hint, then the restaurateur; the three iron curtains remained at half mast.

### Business as Usual

ALONG the length of the long balcony on my floor similar scenes were taking place. It was that time of the day when the valets de chambre (in this hotel all young fellows below military age, which means less than eighteen) are normally busy with duster and broom. At first at the sound of the alerte they had all deserted the upper floors to go down below, as were their orders. Then, as the situation lasted, they had all been sent up again to do their work. But they worked just about as I did. Whenever I sallied out upon the balcony, I'd find them doing the same thing. Out of the windows to my right and my left they'd pop, armed with dusters, puns, and sweeping machines. They'd stand there against the railing, nose up in the air, talking and jesting, till—p-p-pang-ang-ang!—a new explosion would recall them to their duty. Sitting then at my typewriter, I'd hear vaguely the scratching and rubbing of their carpet sweepers in neighboring rooms. But soon they'd be out again—just about in time to be newly surprised by another burst.

Little by little, though, normal habits began to reassert themselves. I was working better. The

street became peopled once more. The greengrocery lady came out, and with a defiant and determined air turned the crank which raised her curtain till it was up full. A train arrived at the near-by station and turned its people out. Some made immediately for their homes or shelters; others, hearing what was happening, went loiteringly, stopping in groups to look up on to the sky and discuss. A dozen poilus on leave, laden with their steel helmets and their many bags, made for the little restaurant. The restaurant man met them at his door; I could see him argue with them with many gesticulations. But they were hungry; they were bound to have something to eat; they marched in as into a Hindenburg pill box and the restaurateur, surrendering, raised his curtain for good. Business was going on as usual. Right below me, six floors below, was the rear entrance of the hotel. A huge laundry wagon arrived, stopped, and disgorged great bundles of the week's wash. The ice wagon took its place. A truck brought baskets of fish freshly come from the sea. Upon one of the baskets were six big lobsters, still alive. In no time a circle of messenger boys, baker apprentices, cabmen, chauffeurs, was about these six lobsters, inspecting them curiously, teasing them to see them work their claws. P-p-pang-ang-ang!—a burst. No one looked up; the lobsters were far more interesting. I thought I had done

enough for the day; I went out. I don't know what made me do it—I suppose that the way we protect ourselves against the abnormal and the mysterious is by sticking fervently to the very ordinary acts of living. Anyhow, I went and had a haircut. I entered the little barber shop which I had been watching all morning. The assistant, at one of the two chairs, was shaving a customer, and the boss, at the other chair, had just sent another away, shaven and content. I thought it the moment to be jocular. "Is the factory working?" I asked. "Mals oui, monsieur," answered the barber—a rather solemn-looking man with a beard—"mais oui, on travaille." "Yes," I objected archly. "But if anything happens, do you

promise not to leave me with half my hair short and the other long?" That barber was a man utterly devoid of humor. He became quite vexed. "Enfin, monsieur, it is altogether drôle what you are asking me," he said with an offended air. "It is evident that if a bomb falls into my shop I am not going to stay at finishing your haircut! The bomb might wreck the chair, or I might lose my scissors—I can guarantee nothing. If you wish to try to have your hair cut, I am at your service. But I guarantee nothing, absolutely nothing!"

So I took my chair meekly, and said nothing more while he hacked away busily. It was he who, after a while, forgivingly spoke first. "Pour moi—as for me," he remarked, apropos of nothing, "they must be little planes that can fly very high. Every twenty minutes or so one starts out and comes over Paris, so high he cannot be seen, and he drops one bomb and goes away. Then twenty minutes later another one comes. As for me, that is the way it is." Admirable barber! Superintelligent barber! He had come independently to the conclusion which was mine. All resentment for the rebuff my innocent ribaldry had received now vanished from my heart. I would have shaken him by the hand had I not been afraid of the results: he was already cutting so fast and so furiously and so—yes, that is the word—so absent-mindedly. P-p-pang-ang-ang!—the windows rattled. His comb and his scissors rose together in a boring gesture toward the ceiling. "You see? It's a little plane up there, dropping a little bomb!" he shouted, delighted with his evidence.

### Ghost Explosions?

WHEN I had had my hair cut, I took a stroll along the Champs Elysées and the boulevards. The scene was an extraordinary one—one of great animation which might be termed festive. The day was a Saturday. Saturdays in France are not half holidays, but this Saturday afternoon had been turned into a holiday. I have said that the city had gone back to its normal activities by this time. As a matter of fact, this was true of only a part of the city—it was true of those who work for themselves or who employ others. The bosses and employers had gone back to work or were trying to get back to work, but those bossed understood the situation differently: they had taken their wives out for a walk. Add to them the rich and the luxurious, and the many soldiers still in the city (though in a day or two they were to be in the whirl of the great battle), and the promenades were filled with a slowly passing and eddying and happy throng. Along the Champs Elysées all the little iron chairs were taken by people who sat as if at a show, their eyes often turned up to the sky. Children were playing in the sand piles, the merry-go-round and the swings were working merrily, and the little puppet theatre was giving its *matinée*. Above, big French planes flew in the light-blue sky—flew, not as if on guard or in pursuit or harassed, but in great, billie, wide circles, as if also holidaying. The day was beautiful, and the magnolia near the Avenue Gabrielle, which for so many years has been for Paris the clock of the seasons, held on its black, leafless twigs the white and pink blossoms which announce the spring. At the Solferino Bridge a fisherman stood absorbed, his long pole over the water, waiting and waiting for a bite from that one fish which, no legend assures us, really lives in the Seine.

And above all this animation and ease and gaiety everyone in a while—p-p-pang-ang-ang!—the burst would come. Sometimes it was far, sometimes it was nearer. Even when near, it was not as loud as the terrific crash of the big air bombs now known to Paris, and when it was far, it was rather puny and puerile. The peculiarity of it was that it seemed to come from nowhere and to strike nowhere. Though later we were to know it was indeed striking, and though some persons that very morning had seen it strike—and tear and kill—to the large majority of the throng the sound was of something striking nowhere, of something that merely exploded up in the air, and which, exploding, dissolved and vanished like a big bubble. It was as if we were not

hearing real explosions, but ghost explosions—sounds of the past, long imprisoned in chambers of the air, and now released.

I landed finally at the Café de la Paix. The terrace was filled with people sitting at the little tables, drinking, chatting, and gazing; the Place de l'Opéra was filled with groups of strollers and onlookers. The early afternoon papers were out and being bought eagerly. The British communiqué was bad. It seemed the Germans had burst through west of Saint-Quentin. This injected a certain soberness in the crowd, but one, evidently, of resolution and confidence. As to the air raid, there was only (Continued on page 33)

# THE ORATOR OF THE DAY

BY SAMUEL HOPKINS ADAMS

ILLUSTRATED BY JAMES MONTGOMERY FLAGG

opinion to the urgency for action," said Ralph Waldo on finding himself unanimously elected to private life.

Having said "shall" in that flat tone (slightly through the kingfisher nose), Clyde proceeded to do it. He was helped along by a pull with the governor, who had married his aunt. So he went to uncle, and uncle wished

him on the Four-Minute Men, then just beginning their War Savings Stamps drive, and the Four-Minute chairman nearly had apoplexy. For, with all his brains as a spellbinder, Clyde was the original sample bottle of soothing sirup, and when he got up and began "In seconding the motion, Mr. President," you could bet there wouldn't be survivors enough left awake to make a quorum.

The Four-Minute Men gave him a tryout at the Magic Motion Picture Coliseum with strict instructions to talk exactly four minutes. He talked exactly four minutes. "And now, in conclusion, permit me to point out," says he, and talked fourteen minutes more while the audience besieged the window for their money back and the management wildly telephoned headquarters for a rescue party. After that he came to us with a note from the governor saying that the Loyalty Legion would doubtless be glad to avail itself of his special talents and patriotism in its speaking campaign; and he sat in the secretary's office, dressed with a sort of successful and offensive neatness, with spats and a neck wrap, looking calm and benignant and self-satisfied, and assured and a little patronizing, while the Committee on Speakers informally canvassed his qualifications in an inner room.

"A front!"

"A ringer!"

"Tell him our list is full."

"Can't. The governor is our honorary chairman."

"The governor ought to be impeached!"

"I heard him spiel at the Magic. He hasn't got a word in stock less than four syllables."

"Keep him out of my district."

"Send him into mine. The Gas-Housers will murder him."

After a long and gloomy pause an unidentified genius evolved a golden thought: "Assign him to Switzerville."

"Great idea!"

"Good business!"

"Serve him right!"

"Motion carried without vote," announced the chairman. "There's a meeting called for Saturday afternoon and no volunteers. We'll send him there, and let Switzerville and Mr. Clyde see what they think of each other—and may the Lord have mercy on both their souls!" He turned to me. "You'll be on inspection tour then, Simmons. Drop in at Switzerville and collect the pieces."

SWITZERVILLE, a thriving but unenthusiased town of fifteen hundred inhabitants in the rich dairy-farm district, had been a thorn in the Loyalty Legion's side from the start. It didn't know the country was at war. Or if it did know, it didn't care. None of our speakers had been able to wake it up. It had undersubscribed its Liberty Bond quota about 90 per cent. The Y. M. C. A. Camp fund had been a sickening failure and the Red Cross drive a scandal. It now became the pleasing duty of the eminent young jurist, Mr. Ralph Waldo Emerson Clyde, to arouse Switzerville to a burning fervor of patriotism over War Savings Stamps. He modestly expressed to our chairman the conviction that he was the lad to do it. It was only a matter of setting forth the facts in logical and readily comprehensible form.

"Exactly," said the chairman in a voice of gloom. "But, for Heaven's sake, hold yourself down to words they can understand." And he forced upon the reluctant Clyde a copy of his "Simplicity—Terseness—Simplicity" leaflet.

If ever I saw a stage set for failure, it was Switzerville on the Saturday of Ralph Waldo Emerson Clyde's oration. I got there early, inquired for the local manager of the Legion, and was directed to the president of the Farmers' Bank, one Chester Meek. In the window of this institution I noted a carefully hand-painted placard bearing this inspiring example of local patriotism:

Liberty Bonds pay 5% flat.

War Savings Stamps pay 5% compound.

We pay 5% on your money.

SWITZERVILLE FARMERS' BANK—Chester Meek, Pres't.

The author of this gem revealed himself as a brisk,

hand-chasing old snuffler with a beady eye who assured me that all arrangements were perfected.

"Op'ry House at one-thirty, Mr. Simmons," he explained. "We was to meet in the square, but the cold spell drove us to cover. It'll keep some of the farmers away too. But we'll have a likely crowd, I guess. The governor's well considered here, and I've let it be known that the orator of the day is his nevyeh. Magnus Lamson's promised to be present," he concluded with an air of triumph.

"Who is Magnus Lamson?"

"Don't know Magnus? Richest farmer in the county. And about the stiffest in the neck. Got a lot of influence, Magnus has. Whichever way he hops, lots of folk make out to jump."

"Which way does he hop in the war?"

"Ain't hopped yet," was the dry response.

As we passed out I stopped to read the window legend again.

"Mr. Clyde didn't seem to like my sign neither," said the bank president with a false cackle of laughter. "But I told him business is business, and my first danty is to my stockholders. He'll be at the Op'ry House now, I reckon. We're starting early, because there's a squad of volunteers from Wellstown marching through to catch the three-ten train, and the orator'd better be through by then unless he's a reg'lar fire eater."

IF Ralph Waldo Emerson Clyde had been a fire eater, he would have gone hungry that day, for the committee had neglected to provide any fire. The chill, stale frowziness of that Op'ry House was beyond expression. And the audience was as bleak and dreary as the place. There might have been a hundred and twenty all told, and they sat huddled about in small, uneven groups, about as inspiring to talk to as a load of cold turnips. In the center, surrounded by a group of his own, sat an elderly and shaggy gorilla, leaning on the crook of a war club. It was Magnus Lamson. From behind my pillar of concealment in the gallery I caught a glimpse of the Orator of the Day, standing in the wings. He was conning our chairman's words of wisdom: "Simplicity—Terseness—Simplicity." Unless he followed those golden precepts, I foresaw—not without a feeling of pleasant and spiteful anticipation—that his audience might avenge the sorrows which other and more urbane assemblages had suffered at his hands.

The presiding officer, revealed as Mr. Meek, contributed to the general depression by delivering a twenty-minute homily in a whiny monotone, at the end of which he introduced Clyde as "the brainy and eloquent nevyeh of our justly revered governor, who will address us on the subject of—of—of—" and he began to fumble helplessly for his misplaced notes.

"Modern Economic Principles as Exemplified in the War Savings Stamps System," supplied Clyde briskly.

"Simplicity—Terseness—Simplicity!" I thought between a grin and a groan. Below I could hear the shuffling feet of the first to escape making their timely departure. Clyde advanced in his most assured and quietly impressive manner, measured his audience, and began:

"Ladies and Gentlemen: My business to-day is to explain War Savings Stamps to you."

The simplicity idea had got to him! He stuck to it all through the introduction. Not a word in it that you couldn't find in the Fourth Reader. I could begin to see gleams of intelligence in the dead-fish eyes of assembled Switzerville. It sounded good. It sounded too good to be true. It was.

For at the end of his introductory paragraph Ralph Waldo Emerson Clyde paused and symptoms began to break out on him. He cleared his throat. He made three slow steps to the rear. He adjusted his eyeglasses with the air of one about to address himself to serious considerations; and when he tucked his right hand between the first and second button of his cutaway coat I knew that he had reverted to type and that it was all off. This is the sort of thing he proceeded to smear all over that audience of fish-eyed cheese makers:

"Before entering upon the technicalities of reversible discounts, which is the radical principle of the War Savings Stamps as differentiated from the more extended bond returns, it is essential that we comprehend the fundamentals of our nationalized indebtedness."

Well, a few more escaped. The rest sat tight. I couldn't make out whether they were hypnotized or just frozen. Later I learned that they were waiting—there as well as anywhere else—for the arrival

"What's the matter with Clyde?"

"He's all right!"

"Who's all right?"

"Clyde!"

"What Clyde?"

"Ralph Waldo Emerson. Turnip Clyde! Whoop-ee-ee!"

Mr. Clyde got to his feet at the speaker's table, looking nervous and conscious and rattled and happy, and began, with a slight lisp (for his three new teeth were not yet tuned to concert pitch): "You see, it was this way, boys." And then everybody yelled again, for such was not the orator's customary form of speech. —MINUTES OF THE LOYALTY LEGION.

PEOPLE who do not know Ralph Waldo Emerson Clyde marvel that one so spare and scholarly should wear a gold football on his watch chain. They're wrong. It isn't a football. It's a turnip. The Loyalty Legion presented it to him. Our chairman said it was blessed among vegetables as marking Clyde's Phoenixlike emergence from the ashen limbo of verbiage to the vital flame of action, which, from the author of Speaker's Leaflet No. 4: "Simplicity—Terseness—Simplicity," may be accounted a startling reversal of form.

Clyde grew up with a gift and a handicap. The gift was brains. At twenty-nine he was admittedly headed for the bench. His handicap was language in four and five syllables. A pained and wearied Supreme Court justice had once feelingly observed that, though Mr. Clyde's briefs were often remarkable, his remarks were seldom brief. However, he always managed to get away with it. He was of the "commanding" type of orator, with that air of deliberate gravity and cold self-confidence that makes an audience applaud a man when it wants to lynch him. He had nearsighted, peering gray eyes, spare, square shoulders, a spare, square jaw, and (at that time) a long, earnest nose like a kingfisher. That combination stands for obstinacy.

Well, the war came to America and messed up Clyde's plans considerably. For the first time he found that intellect could be a handicap. He had a surplus of it. Clyde was too intellectual to fight. Not that he didn't want to fight. He did. In a scholarly and deliberate way he aspired to slaughter Huns. But his brains prevented. Carrying all that top weight had flattened his feet, and that kept him out of the infantry. Overstudy of the law had given his eyes a line of slants that they don't use in the artillery. Besides, he had three dependent children, a wife too independent to take care of them, and a nervous cough, and the combination wrecked his chances with the active branches, beginning with the marines and ending with the medical. Oh, yes, he tried them all. There was nothing wrong with his heart. His trouble was higher up.

"I shall do my bit by helping to arouse public

of the contingent from Wellstown. The fact that he wasn't making a great hit failed to get to Mr. Orator Clyde. He went wandering around through the mazes of his own convincing and logical eloquence, lost to the outer world in a happy dream. The speaker who indulges in platform dreams is likely to be tripped up by any of a dozen of his own tricks of oratory. And one of the worst is the word or syllable that creeps in unsuspected, begins to repeat itself, and finally gets to the audience's consciousness. When that happens the orator is lost. It happened to Ralph Waldo Emerson Clyde.

His syllable of disaster was "cat." It began with a pet phrase—oh, the snare of the pet phrase—"the categorical imperative of direct taxation," which Clyde thought so well of that he rang it in several times. The frozen fish below began to take notice. Clyde's evil genius prompted him to another phrase, "the catastrophic cataclysm of Teutonic finance." There was a pronounced snicker from a group of high-school youths in a corner. They were on the lookout now for feline manifestations. "The German cat's-paw of pacifism" brought a laugh that would have warned a less engrossed orator. Not Clyde. He proceeded with a reference to the "national catalepsy of the Scandinavian nations" ("Mia-a-aow!" came a faint voice from the gallery) and the "cata-pult loosed against suffering Belgium" ("Sp-as-sst!"), and then reverted fatefully to his "categorical imperative." That broke the restraint.

"Why, here's the old cat back again!" whooped an exponent of rustic humor. "Come, kitty-kitty-kitty!" yelled another. "Miaow! Seat! Spast-sst! Wrr-rr-rraow! Nice kitty! Pussy-puss-puss!"

The air was full of riot. Those who weren't taking part in the show were laughing and stamping. I could see old Magnus Lamson's huge shoulders heaving as he bent over his curve-headed war club. And was I sorry for Clyde? I was not. It was his own fault. He had brought it on himself. I sat back in calm and holy enjoyment of the performance. Old Five Per Cent Meek was hammering the table for order, but there was a sort of grin on his face all the time. He wasn't shedding any tears over the evident failure of the campaign. The less money for War Savings Stamps the more for his bank. He was perfectly satisfied with the way things were going. So he banged away and yelled "Order! Order!" like a talking doll, until the cat chorus in front died down.

OF course Ralph Waldo Emerson Clyde was through. Through for the day. Anyone could have told that—but Clyde himself. He was for going on. He went on; and in the very first sentence he sprang the word "ratification." On that audience!

"Here come the rats!" yelled some other funny joker; and the row broke out again twice as bad as before.

The presiding officer tactfully retired. He knew his business and his audience. Which is more than could be said for the orator of the day. He continued to orate. His face grew redder and his nose bluer and his eyes colder and more set. He was going to finish if it took all winter. For ten minutes he talked against a menagerie. But the feline language is harsh upon the human throat. Steadily discouraging, Clyde wore down his tormentors. A score of them stamped out to the whistling of the rogue's march. Thirty or forty other people, seeing that the fun was over, drifted away in small sections, the last to go singing some ribald ditty with a delirium refrain: "Cat-in-a-rat-trap: Bigger-than-a-cat-trap: Boom! Boom!" It was to an all-but-vacant auditorium that the undismayed orator posed his culminating rhetorical demand, which was to have brought down the house:

"And what have you done, citizens of Switzerville, in this the hour of your country's crisis?"

It did bring down the house, consisting mainly of Magnus Lamson. "Well, what have you?" retorted that gorilla-like survivor in a formidable bellow.

"I!" said Clyde, taken aback by the sudden counter. "I—I am appealing to your collective—I mean your individual patriotism," he hastily amended, "to support the nation on the War Savings Stamps issue."

"If the nation wants my support, they can gimme 5 per cent like Chet Meek's bank advertises to do."

"Meek ought to be ashamed of himself," declared Clyde hotly, "for competing unfairly against his own Government."

"Why'n't you tell him so? You had him right here. Folks round here would understand that better'n your college-bred double-jointed words. So would Chet."

"I ought to have done it."

"Learnin' somethin', are ye? Another thing you ought to 'a' done is stay at home an' not come out here tellin' other folks their duty when you ain't done your own. Talk's cheap. You're young, an'

you look able-bodied. Why aren't you fightin' like a man instead of talkin' like a parrot?"

Clyde turned a deep, humiliated red. The shrewish old gorilla below misinterpreted that signal. "Ketched you there, didn't I?" he chuckled malevolently. "Listen!" The broken note of an inexpertly handled bugle came faintly through the doors. "There's the Wellstown boys. Come out and see some lads that are willin' to fight instead of tellin' other folks how to spend their money."

OUT hobbled the old boy, and out after him into the frosty air of Main Street stalked the audienceless orator of the day. I was waiting for him with a few well-chosen remarks on "Simplicity—Terse—Simplicity," but when I saw his face I decided to postpone them.

He looked to me as if he might be in the mood to say something unpleasant if his thoughts were tactlessly interrupted just at that time. That's where I underestimated him. I found a place in a window above Mr. Meek's bank, and presently Clyde came to a halt below me as the crowd massed in for the parade. His shoulder was jammed against the wheel of a cartload of turnips, and his nose—that long, earnest, intellectual proboscis of his—was pressed between the shoulder blades of a green-eyed Swede who towered a foot over him and shut off most of his view. Nobody was paying the slightest attention to him. Switzerville had had its fun out of him and was through. My fun was coming—when I turned in my report to the Legion!

Well, it wasn't much of a parade. Just a couple of dozen slouchy, self-conscious farmer boys with a band and a smart young artillery officer on horseback. At that, it was better than Switzerville deserved; there wasn't as much as a cheer. As the band struck up I got an angle on Clyde's expression, and I began to think maybe there wouldn't be as much fun in making out my report as I had anticipated. He had

Then and there Ralph Waldo Emerson Clyde achieved to the full the "Simplicity—Terse—Simplicity" advocated by our devoted chairman.

"You're a yellow dog," he said, and punched the Swede in the eye.

Of course he didn't have a chance. He went down before the first rush. When he got up his nose was a ruin. Down he went again, and this time what I could make out of his face was mere wreckage, but he managed to land another well-meant punch with nothing to it but good intentions. It looked like murder then, and I had got down the stairs to do what I could when something crashed against the big Swede's head and he went down. The crowd opened out before the gorilla charge of Magnus Lamson, whose war club had interfered just in time.

"Enough's enough, Axel," he said to the Swede.

"I'll kill 'im!" roared the infuriated victim of Clyde's assault, struggling dizzily up. "Where is 'e? [I]—"

"Shut up!" The crook of the gorilla's war club caught Axel by the collar and jerked him forward. "Do you want to fight me?"

Under the shaggy brows burned a flame that the Swede's eye could not endure. "N-n-no," he stammered.

The old savage turned to Clyde. "You've said your say," he observed grimly, "and look what it brought you to."

OUT of the mask of ruin which had been his highly intellectual countenance the Orator of the Day glared, undaunted, at the other. "I haven't half said it," he retorted; "either to him or to you."

"Do you want to go on?"

"Give me the chance."

A flicker of approval made the jutting eyebrows twitch queerly. "Good lad!" growled the deep voice. Clyde felt himself picked up like a child and set upon the footboard of the turnip cart. As he swung

Of course he didn't have a chance. He went down before the first rush

the corner of his lip tucked in between his teeth, and it was quivering there. It struck me sudden and hard that Clyde would have given all his eloquence and most of his brains to be in the place of that officer; yes, or of any one of the slouching volunteers headed for the front. Just then the officer's horse slipped on a bit of ice and came down heavily. The man lay stunned. The big Swede in front of Clyde burst into a heehaw. That was the final ounce of pressure that blew loose something in Clyde's overtaxed control. He grabbed the Swede by the shoulder and whirled him around.

"What do you mean by that?" he demanded.

A scowl took the place of the vacant mirth on the Swede's face. "Ef he stay home w'ere he belong an' don' mix up in war foolishness, he don' get into no trouble," he growled. "Serve him right."

through the air a whisper in his ear advised: "Straight from the shoulder now!"

Clyde faced a Switzerville audience for the second time that day. Within him burned a clear, resolute flame of wrath, and in that flame all his oratory was burned away. He wiped the blood from his face and with the same gesture pointed a hand as steady as an iron bar at the fuming Axel. "I called that man a yellow dog," he began.

"Stand still, you!" snapped Lamson, jerking the eager Swede back.

"That wasn't fair. He's no more a yellow dog than the rest of you. This is a town of yellow dogs."

He spoke in a cold-steel, passionless tone, as one dealing in simple, incontrovertible facts. Only, his eyes blazed and held them. "A town of yellow dogs," he repeated. "If you" (Continued on page 39)

### FRANCE HONORS FIGHTING AMERICA

*A French general in the Lorraine sector pins upon the breast of an American captain the French War Cross, awarded him for bravery in action. In the background American troops stand at attention.*

# "THEY'RE BUILDING SHIPS OUT THERE!"

BY WILLIAM ALMON WOLFF

WHEN I set out for the Pacific Coast, in February, all the slogans were being merged into one—"Ships Will Win the War!" We had heard that food would win the war, and fuel, and various other things, but by that time those at the center of things were beginning to decide that if we didn't get the ships we might as well call this a war and begin getting ready for the next one. Mark Sullivan's "Wake Up!" in *COLLIER'S* had stunned the country into a realization that American industry and American efficiency had been overpraised by zealous press agents.

There were ugly stories about shipbuilding on the Pacific Coast. There were reports that labor had the Government and the employers by the throat, and that its pound of flesh weighed about eighteen ounces. Riveters weren't doing their part; production was being deliberately and wantonly slowed up. Union labor, on the coast, so the stories ran, cared more for wages and its restrictive rules than it did for success in the war.

These were serious charges. If they were true, the shipbuilding program was in grave peril. If labor doesn't do its part, you can't build ships. If labor won't do its part, the composition of quarrels between General Goethals and Mr. Denman, the selection of a group of supercaptains of industry to direct matters in Washington, the appropriation of untold millions by Congress for building ships, will do no good. So I was sent to the coast, into the yards, along the water front, into the offices of the shipbuilding companies, to learn the facts.

Facts are curious things. They are often contradictory. Also they are often untruthful. Most of the really dangerous false conclusions are drawn from facts that no one can successfully dispute. It is so in this matter of shipbuilding on the Pacific Coast and labor's part in the work. You can assemble one set of facts, to the correctness of which everyone interested will certify, and prove conclusively that labor has been slacking ever since we entered the war. You can assemble another set of facts, quite as well substantiated, which will convince you that labor has been struggling against incredible obstacles, laid in its way by capital, to turn out the greatest possible number of ships in the smallest possible time. Or you can take both sets of facts and suggest, rather diffidently, that both labor and capital here made mistakes, have failed to do the best possible thing, and that the whole problem is one of getting together.

## The Race

TO begin with, there is one fact that stands out above all others. Chairman Hurley of the Shipping Board, a forthright person, states it with an air of complete dismissal when you ask him about labor on the coast.

"They're building ships out there!" he says.

They are. They are building ships faster than ships have ever been built in America before; they are building them faster than they are being built in the East. Whether they are building them as fast as they might be built remains to be seen. But, so far, the Pacific Coast is in the lead in the race to build ships.

In spite of all the strikes, of all the disputes and quarrels, of all the delays, some of the Pacific Coast yards are breaking world's records when it comes to getting ships off the ways. Ships

that were built in Seattle are in the submarine zone as you read this; a ship I saw launched there at the end of February should be, if schedules have been maintained since that time, somewhere on the Atlantic Coast, getting her guns, with her hold full of wheat consigned to England. On March 14 I saw three 2,000-ton steel ships launched at Oakland, Cal., in one yard—the first at half past one, the last at twenty minutes to three.

Yet even that fact of accomplishment isn't quite as absolute as it looks. The Pacific Coast has a right to be proud of the records it has made, but it has had certain advantages too. And they are advantages that emphasize the extraordinary variety of the factors that have to be taken into account in this war.

It will be a long time, probably, before the Eastern winter of 1917-18 is forgotten. The weather east of the Rocky Mountains last winter was worth a dozen divisions to the Kaiser. There would have been freight congestion on the railroads even in a normal winter; there would have been a fuel shortage. But the blizzards and the terrific cold made matters infinitely worse. The weather slowed up work in existing shipyards and delayed the completion of new yards, like the great ones at Hog Island and Bristol, by many weeks.

West of the Rockies the weather broke records in a different fashion. All winter long the weather favored work. There was less rain than there had been for many years; there were more good working days. From Seattle to Los Angeles, all winter long, conditions were nearly ideal. In the shipbuilding race the Pacific Coast had a fast, dry track; the Great Lakes and the Atlantic Coast had to run fetlocks deep in mud.

## "Let 'Em Go to It"

WHEN the shipbuilding program took form and, out of the confusion and turmoil of divided counsels in Washington, the stress and storm of the Denman-Goethals controversy, plans finally emerged, there was still much to be done before ships could be built.

There were only a few shipyards on the Pacific Coast. These had been in a more or less stagnant condition for a long time before the war. After 1914 business looked up, of course—even before the days of unrestricted submarine warfare. That German

policy gave the yards a further stimulus. They were growing, the curve of shipbuilding was a rising one, before the United States Shipping Board got to work last spring.

New yards had to be created. Shipbuilders had to be taught the various trades. Skilled labor, in the crafts involved, was at a premium from the outset. Riveting was the heart of the problem. The building of steel ships is, essentially, a matter of the driving of rivets. In the standard steel ship that is being built to-day, the cargo carrier of 8,400 tons, there are about 750,000 rivets. The bulk of the men who work on a ship are riveters. Other crafts are important, but the riveters are the supremely important men.

It takes more than good will to make a good riveter. It takes skill, and a certain knack, and practice. Ship work, moreover, is different from work on the framework of steel buildings. It is less straightforward, less a simple matter of driving rivets. There are portions of a ship's hull, where plates are curved and bent in the shaping of the hull, where the work is difficult and laborious in the extreme.

Shipwrights, pattern makers, men of all the crafts, have to have special training. The task of organizing the working forces of the new shipyards was a good deal like the task of organizing a new army. If you have a small regular or standing army, and you are called upon suddenly to make a new army ten or twelve times as large, you can use the army you have as the nucleus of your new army. Your veterans, your trained soldiers, can train and instruct your recruits, and, so far as you can, you scatter a leaven of old men among the new levies.

Theoretically that process should have been employed on the Pacific Coast in the organization and manning of the new yards. If the whole matter of shipbuilding had been organized from the outset upon the single basis of getting out the greatest number of ships in the shortest possible time, that process would have been employed. Some central authority would have compiled a register of trained men and a list of yards. A certain number of trained, experienced men would have been assigned to each new yard; the new men would have been broken in, with their aid, and the building of ships would have been hastened.

But the problem, as a matter of fact, was not attacked in that way. The theory was, I suppose, that the building of ships was essentially a manufacturing problem.

"We want as many ships as we can get," some one in Washington said. "Quantity production is America's long suit. Let's make the sky the limit as to price—guarantee the manufacturers their profit. And then let 'em go to it and build ships."

## Ships—Now!

AS the plan was worked out, building of ships was made an extremely attractive proposition, in two ways. It offered a good, substantial profit. And it offered also, to the

# A SISTER OF SHINING SWORDS

BY DONN BYRNE

ILLUSTRATED BY J. SCOTT WILLIAMS

SHE was looking at a piece of plate, fragile as milk, where the symbols of the one-winged birds and the tree with interwoven boughs, the Chinese symbols of love, were painted with the lightness of a butterfly touching a flower. All about her, in the shop that was Li Sin's, the light chatter of Fifth Avenue chirped through the somber, majestic store like the sleepy chorus of birds at dawn. Down in the front of the curio treasure house a trio of actresses were prattling of the latest play. A rotund judge of the Supreme Court was examining a carpet with a more fixed glance than he ever used at the minutes of a case. A Roman Catholic priest was dreaming over a cross of gold and rubies, treasure from Macao, where the sons of Portugal hold their outposts against the Golden Hordes. A sedate curator of a museum, a thin, white-faced man with a threadbare overcoat and a straggling black beard, was struggling against the temptation to steal a tiny vase. Again Jeannette Baird looked at the plate with its mystic romantic symbols. A queer flush ran over her face and a smile—the smile of brides—hovered in her eyes and lips for an instant.

Li Sin, square-faced, high-cheeked, modest in brown tweeds, was smiling also. She flushed again as she caught his eye. She put the plate down, and looked him squarely in the face.

"I am going to be married," she said.

Li Sin nodded. There was as much happiness in his face as though he had unearthed an unknown lyric of Po-Chin's.

"To Captain Patrick Burgoyne," he suggested.

"Yes, to Patrick Burgoyne," she answered. The Manchu was smiling broader than ever. She caught her breath and regarded him fixedly. She had the air of a mother who had discovered a child in the act of an innocuous prank.

"It was you who introduced Patrick Burgoyne to me."

"It was," Li Sin confessed.

"Li Sin," she said, blushing furiously, half laughing, a soft look in her eyes as though in an instant a veil of tears might come—"Li Sin, I believe you are nothing but a scheming old matchmaker!"

NOW, when Peter de Cuyler Baird had, through a sense of righteousness and no sense of politics, supported by his wealth the programs of three successive party administrations, the party heads, in grateful remembrance, decided that some honor must be shown him.

A tall, spare man, with fair hair and fair mustache, very much on the received conception of an English cavalry officer—nothing missing but the monocle; a minor poet of distinct imagination but of inability of execution, a dreamer, it was difficult to find exactly what to do for him. A place in the Cabinet was impossible. He seemed to fit into no distinct committee of public works.

"I've got it," the shrewd Secretary of State

rapped the table. "We'll make him an ambassador." Again commenced the process of elimination. Men of affairs, shrewd, hard-headed men, politicians of the first rank or men raised in the service, were required for the European courts. "Constantinople?" the President suggested.

"I don't think so." The Secretary of State frowned. "Something might happen."

"Greece," the Secretary suggested to Baird. "Where Byron died, and wrote poems, and—ahem, histories, and—ahem, essays, and things."

"I thank you, but I don't think I should care for Greece," Baird replied to the offer. "I really want no place at all. I was only too glad to help."

"I've got it," the Secretary exploded. "We need a good, capable man in Peking. You've got to go. It's your duty."

"I think I should like China," Baird answered.

So off to China went Peter de Cuyler Baird, taking with him a library of works on the Celestial millions, a desire to see the Porcelain Tower at Nanking, an ambition to write a history of China

in verse which he would entitle: "Cathay: An Epic," and lastly his daughter, Jeannette, an orphan of five years old.

His friends pleaded with him to leave her behind. They said it was practically infanticide to drag a child into a country where cholera and yellow fever and leprosy abound.

Old Peter looked about in his vague way. "She is a very healthy child," he said. And then: "I should be very lonely without her." And at the last sentence his friends gave way. He was such a gentle soul!

And healthy Jeannette Baird proved to be. In Peking, surrounded by a host of Mongol servants, she grew up strong and beautiful as she would have in her own healthy New York. She grew up speaking the Pekingese dialect of China much more fluently than English, as British children in India speak Bengali. A queer little figure in embroidered blouse and skirt—though with fair hair and blue eyes like her father's—she might have been one of the girls of Su, the darlings of the King. Everyone loved her. Placid mandarins in horn spectacles smiled with indescribable benevolence toward her. "Chai-Net," as her name was transposed, was adored by her attendants. The only flaw they found in her was that her feet were slim and healthily developed, instead of being bound in the lily form. But that, they agreed, was a custom of the barbarous Americans, something akin to the habit that other savages were said to have of wearing rings in the nose.

And little by little the graceful, poetic tentacles of the Yellow Land fastened themselves on Peter de Cuyler Baird, as they have done on other men—on Homer I can, if instances are wanted; on Sir Robert Hart, that shrewd Scots-Irishman from canny Belfast and on a great English general whose name must never be said. He lost himself in the study of Chinese literature and customs. He acquired much wisdom from owl-like Chinese mandarins, learning the futility of swimming furiously in the abyssal sea of time. For those terms the party left him in his peaceful ease, and in those twelve years his daughter grew up like a straight lily, knowing more about the Analects of Confucius than about the Epistles of Paul; more of Tu Fu, who is called the God of Verse, than about her rightful heritage of Longfellow; walking in a dream about the great wall that Tawak builded, instead of

hustling briskly up the Fifth Avenue of which Li Sin spoke.

For Peter de Cuyler Baird made the acquaintance and gained the friendship, which was no small thing, of Li Sin, the greatest merchant of Oriental objects *de vertu* that America has ever known. His place on Fifth Avenue has more treasures than have the silent Greek monks on Mount Athos. It is not a shop. It has more the feeling of a cathedral. From the Oriental tapestries on the walls, from the startling jewels in their cases, from the graven Buddhas, and the fragile vases, from the lutes of gold and lutes of jade, exhales a perfume of valor and romance, of brave deeds done, of fine chivalry, of ineffable wisdom—a dim, holy place which connoisseurs approach with awe, and of which pretty women make a fashion.

And to Peter de Cuyler Baird it was told, because he was a discreet man, that Li Sin was not Li Sin, but Hsieu Po, a great name, a Manchu noble of Tientsin. To Peter de Cuyler Baird it was also told that Li Sin was a great physician, ranking with Li Jo-Hu, and with On-Yang Hsiao of Jo-ch, and that his services were at the disposal of anyone, but he would take no fee for them, deeming them Heaven-sent. And Peter de Cuyler Baird, having been long in China now, understood how a Manchu noble could have a store, for it was deemed in wisdom that a fortune garnered honestly in the marts of commerce was equally noble with honors gained with chivalry on the field of battle by Western men.

And it came to pass that Peter de Cuyler Baird died quietly one sudden night with a smile on his lips, leaving his fortune to his daughter, and behind him a translation of the Tang Poets into metrical English verse—a crime more atrocious than the thing called mayhem, but pardonable to such a gentle, vague soul. And Li Sin, who was in Macao at the time, rushed northward, and brought home to Gramercy Park and the care of two gentle Old World aunts the young woman of seventeen, Jeannette Baird.

CAPTAIN PATRICK BURGOWNE, black- and curly-headed, blue-eyed, square of face, bulky of body and spare of flesh, groomed like a thoroughbred race horse from the shiny tip of his silk hat to his pearl-gray spats, strolled down Fifth Avenue from the Plaza. There was a subtle pleasure in the wearing of correct clothes after three years of furs in Greenland, a pleasure akin to the sting of a shower bath after a hard day's work in the city. Before Li Sin's store he paused and grinned—the losing grin of a good sportsman. He walked in. He looked over the squat Celestial as the spire of a church might overshadow the modest house alongside.

"Well?" asked Li Sin. He had not seen the Irish explorer for three years, but his greeting was as offhand as though they had parted yesterday.

"No luck!" Burgoyne laughed. "I don't believe there was ever a mammoth in Greenland."

"Too bad." Li Sin nodded his head. He had felt all along that Burgoyne's search for mammoth ivory would be in vain, but he was not the sort to rub it in with a tactless remark. "Three years gone!"

"Not quite altogether," Burgoyne laughed. "I did some exploring work up there, and I think I've got some new data on the upper inlet."

"Of course you have," said Li Sin, with a glint of admiration in his slant eyes.

If you look up Captain Patrick Burgoyne in that red Merce called "Who's Who," you will find his age, which is thirty-two. You will find details of his birthplace, Omagh, in the County Tyrone, Ireland—an abominable spot, with the worst golf course in the country. You will learn that he acquired a commission in the Leinster Fusiliers; that he transferred to the Rhodesian Rifles three years later with the rank of captain; that he left them to explore Africa; that he is a Fellow of the Royal Geographical Society.

Now, if you want to know of his standing as an explorer, you will consult the proceedings of the Royal Geographical Society—a series of the most uninteresting pamphlets ever written by the hand of man. You will find articles there signed: "P. Burgoyne," giving the depths and shallows of uninteresting rivers, the barometric pressure on the tops of mountains with weird, unpronounceable names. They are read occasionally by the sort of people who make encyclopedias.

And if you want to know anything about the real Patrick Burgoyne, you will have to ask Sven Hedin, or the Duca degli Abruzzi, or old Bill Snyder, keeper at the New York Zoo for so many years. They will tell tales of him in Africa, when he tracked down the pygmy people of the Congo, or when he set out alone, except for native bearers, into the vast alluvial swamp south of Leopoldville, where, the rumor goes, the pterosaur spreads its wings at night, and the unspeakable creatures that began with the creation of the world exist in that hot and damp inferno. Six months later he returned shaken and white—and afraid!

"What did you find out?" they clamored at him on his return.

"Nothing!" he answered grimly. But for months his life was fought for in a great hospital. And at his ravings the doctors shuddered and nurses grew pale as death.

Abruzzi will tell you that of all men he saw but one whom all natives of all lands helped because of his glorious, breaking smile. Li Sin, whom he had met in Damascus, in Bokhara, in Teheran, in Wadi-Halfa, in Lhasa in Tibet, will tell you of the occasion when Burgoyne rescued a leper from stoning by Turkomans. His arm about the unfortunate devil, his great revolver out, his jaw set, he drove the threatening Turkomans before him until he got the unclean one into safe hands.

"A Chinaman might have done it," Li Sin says, "a Bengali even, or any Oriental, but a Western man, who fears the silver plague more than death—that is Burgoyne!"

Over the cages of many zoological gardens, where queer arctic or tropical beasts are found, you will find the inscription: "The Gift of Captain Patrick Burgoyne," and if you are interested and can gain the confidence of that queer, close-mouthed fraternity who tend zoological exhibits, they will tell you with pride that Burgoyne's specimens were as happy and contented on arriving in alien lands as they were in their own icy homes, or in the bush of their native forest. There was something strangely tender in the way he handled animals. And there was something strange in the trust they gave him.

"The damndest thing I ever knew," used to begin poor Bonavita, who is dead; and he would tell of the small cougar which Burgoyne had found somewhere in Colombia. A blind kitten, it had wandered away into the Colombian forest. Burgoyne, knowing it would die if left unaided, picked it up and fed it on milk. At Cartagena, three months afterward, he tried to give it away. None would have it.

"Well, damn you! I suppose I've got to take you along!" he addressed the queer pet affectionately. He took it to New York, caged and protected. He handed it over to the Bronx Gardens officials. In three days they telephoned him it was dying of a broken heart. He had to take it with him to Dublin, to London, to Paris. In each city he had to exercise it on a length of chain, blushing all the time.

"I feel like a musical-comedy star looking for notoriety!" he swore. But he had the same affection for it that another man might have for a dog.

IN Glasgow, on a lecture tour, he left the cougar in charge of the Royal Botanic Gardens, but through the belief in its tameness, as they saw it with Burgoyne, the keepers were lax in turning it into a

cage. Somebody opened the door to feed it titbits. Like a flash, the cougar had leaped over their heads and had picked up Burgoyne's scent like a bird dog. It slipped through the thoroughfares, snarling, barking, now and then bewildered at the crowds. It arched its back as if to spring. A policeman pumped his revolver into it. It turned over on its back, clawing. It died.

"I'm sorry, Captain Burgoyne"—the lord mayor made a special visit to his hotel to see him—"from the bottom of my heart I'm sorry."

"It was the only thing to do," Burgoyne answered.

But never again did Patrick Burgoyne return to Glasgow.

"AND where are you going now?" Li Sin asked.

"War," replied Burgoyne. "Do you know I didn't hear about the darned thing until I came to the Danish settlement at Dvorhag?"

"I thought so," the Manchu nodded. "You had better stay in New York for a month or so first. You need something human between times. You can't go straight from Greenland to what France is now."

"Yes, I think I had better," Burgoyne nodded.

He was standing in the shadow of a great stone Buddha as he was speaking. There was the rustle of a dress, the patter of feet, and a tall, straight young woman came up to Li Sin. Suddenly she noticed Burgoyne.

"Oh, I'm sorry," she told Li Sin, and turned to go.

"Jeannette," the Manchu smiled. "I want to present an old friend of mine, an old friend in spite of his youth, Captain Patrick Burgoyne. Burgoyne, you have heard me speak of Peter Baird's daughter. This is she!"

"So you are Patrick Burgoyne," she said simply. "I have heard so much of you from Li Sin, and you are exactly what I thought you would be like."

Burgoyne stammered for an instant. Three years' residence with no women to look on except the flat-faced, thick-lipped, exceedingly greasy, incredibly fat, and amazingly filthy Eskimos had not kept him in training for the fair women of his own world.

"I have to go up to my laboratory," Li Sin told him cruelly. "I want you to take him out to tea, Jeannette, and tell him all that has happened in the world since he left it."

"I should love to," she said, with that smile of hers, the quick parting of lips that suggested a rosebud glistening with the dew of dawn.

The Manchu did not go up immediately to his laboratory. He watched Burgoyne pilot her to a hansom, and hand her in, as though she were a fragile piece of ling ware—something more tender than silk, more costly than rubies. Hong Kop, the lean, the silent Cantonese who was Li Sin's body servant, came silently into the store. He smiled as he saw the twain.

"Why do you smile, Hong Kop?" Li Sin came up behind him.

The Cantonese bowed. "The brook of Wang-hei-ho is wide," he quoted, and slipped through the shop like a shadow.

"But two outstretched arms can span it," Li Sin finished the proverb, and he too was smiling.

In a city where Patrick Burgoyne knew no women, beyond the staid wives of his explorer friends and the bespectacled, exceedingly proper but indubitably

ugly women who came to his occasional lectures, it was, by all manner of logic, inevitable that he should seek the society of Jeannette Baird, which she accorded him without stint. And, as for her, Patrick Burgoyne was a revelation. For her circle was bound by the love of two aunts (who dressed in black and lived in Gramercy Park and preserved the samplers of the Baird womenfolk, dating back to the days of good Queen Anne), by the affection of Li Sin, by the acquaintance of a young circle with whom she was not intimate—for she never could learn to smoke, abhorred cocktails, and dancing after one o'clock in the morning tired her, healthy girl as she was. When Burgoyne tucked his sport shirt up for golf, there was a tremendous scar from elbow to wrist. A leopard had made an unexpected jump at him, and he had broken its flight with his forearm, as a boxer would block an opponent's lead.

"You might have been killed!" She shuddered as he told her the story in laughing, staccato sentences.

"Nasty little beggar he

was," Burgoyne laughed, and he began to mangle up a bunker with his niblick.

And swimming—and it was a sight to see Pat swim, with that easy, flashing stroke of his learned from the Kroos of the Gold Coast—she saw the red depression about his left knee. A cobra had bitten him there in India, and the bite had to be hacked with a knife, filled with gunpowder, and a match set to it. Jeannette Baird grew white and sick at the story.

"It hurt," she said foolishly. "It hurt."

"It hurt?" He turned to her with his whimsical smile. "To be sure, it hurt. It's been my only operation, and I've been talking about it ever since."

I think they were indubitably in love with each other from the first instant they met. That woman with the slight athletic build, with the face of a spirit such as Bonda might draw; pale, regular, like some fine lily; with the dim background of mysticism in her that had been the gift of the Golden Empire to one who loved it, it was impossible that Burgoyne should not be smitten by her as by a fever. There had been no thought of women in Burgoyne's life, beyond an infatuation for a New York debutante, which faded quickly, and the affair with the Russian countess who wanted to elope with him—an insane, quixotic, romantic thing that ended in bathos, and which I would invite murder by telling. These two things faded into a dim horizon, scattered, vanished, when the glorious sunlight of Jeannette Baird came across his path.

AS for her, many-hued, delicate, the thing called love came like dawning. It burst into a red sweep of cloud and sun. And then gradually the clear brightness of it ran through her veins like a rare wine. Night after night, when she left Burgoyne, she would look out of her window over the moonlit Bishop's Garden and finger the lute that Li Sin had given her—the lute that had been an Empress's. Y'u, Kung, and Chih went the soft notes of the scale, now a murmur of drowsy birds and now thrumming boldly like the music of the Dragon-Boat Festival, and she would dream of the great epics of love, of the great Tang poem which was Ming Huang's and Tai Chen's of the Thousand Songs, of Yang-ti the Strong and of Fai-Yen the Beautiful One, vague honey-colored visions. (Continued on page 26)

## *Be Fair and Cooler!*

**WHAT** Attorney General GREGORY said about loyalty and lynch law, a few weeks back, is still true and will hold good till there is no such thing left as an American tradition or an American ideal. The Attorney General was commenting upon the case of ROBERT PRAGER of Illinois. From all the facts he could gather, Mr. GREGORY was inclined to doubt that the murdered man was guilty of any crime or any offense. The facts in this case included the confession of one of the leaders of the mob that murdered PRAGER. "We must set our faces," said Mr. GREGORY, addressing a national association of lawyers, "against lawlessness within our own borders. Whatever we may say about the causes of our entering this war, we know that one of the principal reasons was the lawlessness of the German nation—what they have done in Belgium and in northern France, and what we have reason to know they would do elsewhere. For us to tolerate lynching is to do the thing we condemn in the Germans. Lynch law is the most cowardly of crimes."

These statements by the principal law officer of the United States are more vital than ever, spoken just now. This war—essentially just as it is, and a war against dishonor and perverted national egoism—must not have as one result the relaxing of our own standards as a nation that believes in fair play and in free law for rich and poor, popular and unpopular, native and naturalized and alien. Much loose talking by pro-Germans, before we got into the war, failed to blind our nation to national interest and international right. Much loose talking by those who, following the line of least resistance, see crimes, spies, and plots on every side—as a frightened child sees bogeys and as a drunken man sees double—must not to-day blind us to realities and the right. Such happenings as the murder of ROBERT PRAGER of Illinois develop out of a state of mind in which people say: "The Government is giving us no protection; spies are blowing up our factories; they are giving information to Germany; our boys are being shot in the rear. Our constituted authorities are doing nothing to protect us against all this, and we will take the law into our own hands." It is the Attorney General of the United States who makes this analysis of the situation, and urges lawyers everywhere to do their best to maintain the sanity of well-meaning but excitable patriots.

## *What a Bond Is*

**WE** said rather flatly in connection with the campaign for the third Liberty Loan that every American not an idiot or a freak knows what a Liberty Bond is. One of our friends takes us to task for making so sweeping a statement. He reminds us of the farmer who wrote Secretary HOUSTON asking when the Government expected subscribers to pay interest on the bonds, and of the city woman enjoying an income from real estate of \$10,000 a year who didn't know what a coupon was or how a coupon bond worked. He says: "If you want to find out how many good Americans who are neither freaks nor idiots do not know what a bond is, ask the first ten of the rank and file you see." And he points out pertinently enough that ownership of a Liberty Bond doesn't prove knowledge of the Liberty Bond issue: thousands of Americans bought Liberty Bonds just because they believe in the country to the extent of giving it anything it asks for and didn't trouble to inquire closely into what it was the Liberty Loan meant. We hasten to admit that we were speaking loosely. We weren't using the phrase "know what a bond is" in quite so literal a sense as our correspondent assumes. The third Liberty Loan went over the top with a greater number of individual subscriptions than either of the others. In many communities the campaign was so highly organized that the quota was subscribed on the day subscriptions were opened. Naturally a great many Americans subscribed without precise knowledge of what they were buying. They believed in the country to the extent of handing over anything it asked for. Thousands of them would have given the money outright just as freely as they loaned it. Indeed, we know of cases in which subscribers supposed they had given the money and were much astonished to discover that they were going to get it back with interest. It is rather carping to complain of such a spirit as that. But, just the same, it is well to know what a bond is. One of the very real benefits of our participation in this war is going to be a more general knowledge of finance. Thousands of Americans may still be igno-

May 25, 1918

rant, after three Liberty Loan campaigns, of coupons, accrued interest, and the rest of it. But thousands of Americans are now saving money for the first time in their lives. If we keep on raising big loans, and those in charge make an increasing effort to explain precisely what a bond is, to show concretely what is being bought with the money, we Americans may eventually become the first nation in the world to understand money and second only to the French in the thrifty management of it.

## *Our Jimmy*

**WORDS** are being overworked these days. They are being charged with vast responsibilities. They are being drafted into Propaganda Regiments to win the war for Democracy, and go parading up and down the literary sidewalks chanting Liberty Loans and Food Saving and American Achievement and the Crimes of Our Enemies—the enemies of civilization. Now, every sensible citizen believes in the need of carrying through the Liberty Loans to a triumph, and of supporting the Food Administration, and of realizing the enormity of German crimes, and of appreciating, as well as speeding up, American war work in shop and camp, on land and sea. But—and maybe it is a weakness on our part—we sympathize with those poor overcharged words that have to carry as heavy a load as an infantryman with his full marching kit harnessed to his back. Those words, obliged always to transport large ideas and high purposes, get awfully tired sometimes—and then we sadly wish that war words, like our soldiers at Aix, could sometimes have rest and relaxation at a safe distance back of the lines: that they might have a vacation and a bit of sport. Words get tired of proving things: they sometimes like to be *just themselves*—very much as an army officer sometimes hankers after "cits" and irresponsibility. If we understand their nature, words have their innings when they fall into the hands of a writer who isn't trying to prove anything—but is just standing them on end to tell about things as they are. Words are particularly happy when they fall into the hands of somebody like JIMMY HOPPER (pages 6 and 7 of this issue). While so many folks are proving things with words, HOPPER is simply telling you and us and the rest of the American family what it's like to be in Paris when the Big Gun is barking. These words of JIMMY HOPPER's aren't working—they aren't carrying too heavy a load of care: they're happy, happy words, even though they are describing grim things. We congratulate those words of JIMMY'S.

## *The Victorious Headline*

**A**n advertisement of the New York "World" reproduces a variety of headlines from that journal, and announces:

THE "WORLD" IS THE ONLY NEWSPAPER IN AMERICA WHICH HAS SUCCEEDED IN PENETRATING GERMANY DURING THE LAST YEAR

Some of the headlines reproduced tell how "Birth Rate's Fall in Germany Threatens Future of Empire," how "Germany Suffers Coal Crisis," how "Crime Wave Sweeps Germany," how "Twenty-five Million Hungry Germans Eat Little"; "Germans Soon to Wear Paper Suits," how "Bread Line Marks German Boundary for Class Revolt," how "Germany Has Reached Her Limit in Human Material." These captions dramatize the New York newspaper's "penetration" of Germany and the desperateness of the German plight during those months, precisely, when Germany was preparing the big drive of March, 1918. For that matter, we newspaper editors won the war against Germany as early as 1915—and have been winning it over and over again ever since! Germany is defeated—no doubt about that; the New York "World" knows it, the gentlemen who are editing the Administration at Washington know it, COLLIER'S knows it. The only question is! Does Germany know it? While waiting for an answer, we overhear FRANKLIN D. ROOSEVELT of the Navy Department saying: "We cannot beat Germany by words." Sometimes the truth can be so very disagreeable!

## *Words and the War Machine*

**THAT** preceding paragraph of ours is meant to sound the confessional note and gently to hammer the bell of modesty. But it doesn't follow that the Germans can't be beaten. They can, and must. Only, words mustn't get into the way of the war machine. Neither the words of the New York "World" and COLLIER'S, nor yet the words of the Administration's Committee on Public Camouflage.

# Editorials

## Of Purely Historical Interest Now

LOOKING back over the records of the various schools of anti-war philosophy, we discover one main theme underlying the whole ingenious contrapuntal mass: to the effect, namely, that America is in the war because somebody in this country put something over on somebody else. There are four principal variations:

1. The war was put over by Wall Street on the rest of us. Under his theory Wall Street grew tired of making money out of the war in Europe without paying excess-profits tax and surtax, and succeeded in chloroforming and sandbagging Mr. WILSON and Congress into a declaration of war.

2. The war was put over by the East on the West. This would presumably be shown by the fact that our first large casualties, in the *Tuscania*, were from Wisconsin and Michigan regiments; also by the fact that the West has heavily oversubscribed the last Liberty Loan.

3. The war was put over by the old on the young. This variation was extremely popular in Washington Square circles. It implies that the round-paunched and heavy-jowled elder gentlemen in the lubs, looking about for a new cocktail with a kick in it to ward off satiety and arteriosclerosis, hit upon the slaughter of young men as something novel and exceptionally zippy, and compelled their sons to go to it.

4. The war was put over by the present on the future. This is a variation of No. 3. The present is out to have the time of its life and leaves it to the future to pay the bill.

As we have said, these happy improvisations are now of purely historical interest. They do, however, suggest an actual and pertinent generalization; namely, that America is now engaged in putting the war over on WILHELM and TIRPITZ. So that in a dim way, perhaps, our ingenious young ante-bellum anti-bellum philosophers were trying to utter the truth.

## Our Time

PHILOSOPHIC generalization is difficult or it is worthless, and whoever heard of an insurance man having any imagination save as to sudden death? Nevertheless a transplanted Scot, one FREDERICK RICHARDSON, who seems to have been caught young, as Dr. SAMUEL JOHNSON recommended, gave the Insurance Society of New York the best brief description of this present epoch that has come to our notice in many a day:

There was a time in the Middle Ages when a finer and more ethereal expression of the soul of man raised lasting monuments of art and faith, compared with which the skyscrapers of New York are like moonlight unto unlight and like water unto wine; but this was the flower and culmination of worship and belief. There have been moments in the vanished civilization of four continents when the colorful and pulsating streams of life have seemed to culminate in one glorious blaze of achievement like the dazzling climax of one stage pantomime. Not so the epoch which the Great War is now bringing to a violent close. Neither an age of faith, in spite of Dr. Dowse, Mrs. Eddy, or the Rev. William Sunday, nor an age of pagan splendors in spite of the Woolworth Building, the Grand Central Station, the Hotel Biltmore, or the *Ballet Russe*"; it has been essentially the age of Energy. If one tried to express it in a phrase, it might be said to have been the period when man harnessed up the dynamic and elemental forces of Nature as never before, aiming and directing to useful work the raging, tearing Calibans of the material universe. When you drive an eighty-horsepower car or an electric train up an incline at the rate of forty miles an hour, the demon Heat or the demon Electricity is pulling you up the hill because he hates to be cabin'd, cribb'd, confin'd. Propulsion being the means by which we achieve most of our darling objects, whether in firing a torpedo or trying to escape it, whether in driving a golf ball or in flying an airplane, we immediately put to use any discovery that will enable us to travel faster, produce faster, make money faster, shoot faster, destroy faster—in fact, anything that will give us more power and a more varied and abundant existence.

To have life and to have it more abundantly: that is what we moderns want—and we are getting it.

## The Meaning of Success

WE have referred rather often (and will again) to the late J. P. MORGAN'S maxim that character is the bedrock of business. When the biggest banker in Wall Street died last month, his biography, as given in a leading financial journal, closed with this bit of advice which he had impressed upon one of his men:

Above all else, get friends, cultivate them, and keep them. Without friendship, wealth and position will never mean much to you.

The financial writer adds in comment: "This from a man whose

fortune is estimated at close to \$100,000,000." Well, what would you have? Dollar marks are no evidence of success in that real world in which the human soul abides. Friendship is. The founder of our religion knew that in the dark hours that closed his earthly life. The men of the trenches know it every day as peril and hardship strip the sham from things and leave their meaning clear. It is for us, still clouded by the dust of our familiar ways, to see that truth and lay it to our hearts.

## The Red Cross War Fund

IN the week of May 20-27 the American Red Cross is going to raise its second war fund of \$100,000,000. See that you do your share. With over twenty million of us enlisted as members that ought not to be so much of a task. What did they do with the first war fund which was raised last year? Well, the Red Cross has a complete and accurate accounting system presided over by a long, lean, conscientious New Englander and a complete budget system run by able and broad-minded executives. With these advantages (which our National Government lacks as yet) they can answer such questions. Up to April 30, 1918, just about \$80,000,000 had been appropriated for the innumerable activities of war relief. About half of this went to the work in France and about \$15,000,000 was spent for stores of supplies, the remainder being expended in the United States, in Russia, Rumania, Serbia, Great Britain, and for those of our men now captive in Germany. JEAN FRANCOIS, muddy, tired, and hungry, on his way home for a brief furlough with his family, was taken care of at the railway junction behind the fighting lines. Thousands of him got a bath, got rested, got fed, and had some hours of companionship among those who believe in him and his heroism. That beats waiting alone in the rain on a railway platform. Refugee families are given a chance to start life again. Some of our own boys are amused, kept well, and sent on their way rejoicing. BILL JONES, sitting in a German prison pen, gets some real food sent him through Switzerland. That is what the war fund does, and it does nothing else, for all costs of running the Red Cross itself are paid out of the dues. The work costs \$8,000,000 a month, and is worth it. Government cannot do everything, and should not. The fighting man gets plenty of red-tape management as it is; what he really craves is to know for sure that the people back home care about him and his. So Tom, Dick, and Harry in Freehold, N. J., and in Brigham, Utah, are putting up their dollars for the Red Cross and putting their hearts into our cause. Keep the Red Cross blazing for another year!

## Horizon Blue

THAT swelling roar of cheers outside made the Little Man drop a paper weight on his ledger leaves and bolt to the nearest window. Down the street came the guard of honor, mounted police preceding some sunburnt regulars from our Mexican border, and behind them swung a half company of real French poilus, the sort that turned back the boche from Verdun and the Chemin des Dames. Short, quick-stepping, steel-built men of France they were, with keen dark faces under the lopping tam-o'-shanter headgear of the Corps alpin, rolling along with their Noah's Ark packs and bayonets set for action. The cheering actually seemed to shove the buildings back from the street. Long ago the Forum must have welcomed thus the legionaries who had saved Roman civilization from the barbarian in those bitter struggles through Gaul and Dacia. Every man's sleeves showed the stripes that mean wounds, and his breast the decorations that mean valor. "They did make one feel so old and useless and out of it," as the Little Man told his wife next morning. So he ground out the day's work with his teeth set hard, bought some more Thrift Stamps, took the first car for home, spent the rest of the daylight hours in caring for his beans, potatoes, and cabbage, got through a war-fare dinner, and put in the evening selling eight hundred dollars' worth of Mr. McAnoo's pet bonds to some boss metal workers whom he had met in the lodge last winter. Getting home at 10.50 p. m., he routed out that 1917 model straw hat, cleared it up for another campaign, and some time later fell into bed as if it had been a dugout. "If this gets much worse, I'll learn to knit," was his last waking thought, "and if they want to keep me out of this war, they'll have to put bolts on it." After all, things seen are mightier than things heard, and the Little Man and TENNYSON are both right.

May 25, 1918

# WHAT YOUR RED CROSS DOLLAR DID

BY MARY ROSS

**BY MARY ROSS**

**D**URING the long months of training in France the American army could be little more than a name and a hope to the French people; the immediate aid that was mustered for French civilians was a present proof of the friendship of America and France. The tale of the Red Cross dollars and what they have done is too great a thing to be told yet—but some of the stray ends that drift in when some one can stop working long enough to tell what he or she has been doing can here be knit together for a report to the board of managers of the American Red Cross—the American people. Because the civilian work was the task that could be started at once, more of the stories are those of what your dollar meant to the old men, the women, and the children of France.

Perhaps you wondered why civilians had gone back to the shell-torn villages of the Somme when there was always the possibility — now unhappily a reality — that the wave of the armies would sweep over them again. If you saw the refugee lodgings in Paris and other industrial cities where work is to be had, perhaps you might not ask. There have been no workmen to put up new buildings to match the mushroom growth of city populations, and every old hovel has been reclaimed; too often a family of four or five or six lives for months in a single squalid room. The Frenchman loves his *patrie*, the big country for whom the blue armies are fighting and the flags hung out and the speeches made; but even dearer to him is the special little bit of countryside, the *prope*, which means France and home to him; and every old grandfather or grandmother from the north of France who could get a cow stable patched together for a shelter crept back to what was left of home. France, official France at Paris, was glad to see them go, for every inch of the land so lovingly reclaimed and cultivated meant more food.

They went back to the life of the pioneer. Their precious copper kettles had gone into the melting pot for German munitions; the family stores of linen, the furniture, everything which could be of use had been carried off or destroyed. One Red Cross dollar bought a chair for a struggling farmhouse, or five dish towels for its courageous housekeeper.

Another bought a coffeepot, a kettle, and a frying pan, not of copper, but serviceable; still another a spade, a pitchfork, or a hoe, and you had only to stand at the door of the stations through which the refugees were passing back through Paris that last dark week in March to realize that few of these precious things were left behind. As for the rice flour or cornmeal (a dollar bought seventeen pounds), all of it that had not been distributed to Marcel X. or Jean Y. from the warehouses before the Germans came back went with other supplies to feed the stream of tired and wounded Tommies.

## Health, for the Children

**B**UT the real thing which the dollars did is better measured in the words of a Frenchwoman who came into Red Cross headquarters during one of the darkest days.

"When they fled back to Paris before, they said 'c'est fini—it is all over,'" she told the Red Cross. "But this time it is different. You would think it would be worse—but already they are planning to go back. It is the Americans—you American men and women who have shared the venture with them, lived with them, stayed with them through this terrible

second flight—it is you who have given them this courage. France never can thank you enough."

The Pavillon Joffre at Neale, the outpost of the chain of children's health centers that span

the line goes south through Saint-Etienne and Lyons to Marseilles. The French children who passed under the care of American doctors and nurses during one month—23,264—are an army division for

the future of which America may well be proud.

Not all the investment for the future is in medicine. When American doctors began the examination of Paris school children they said: "It is not medicine they need, but food."

Luncheon is an important meal in a French family, and too often the absence of the father at war has resulted in the absence of the mother at work—the children get luncheon at a school canteen. Beans, flour, meat, jam, sugar, and cocoa are on the list of supplies that go regularly to many of these canteens to supplement the fare that the city can give. In one ward of Paris there had been, before the war, the beneficent institution of an afternoon "gouter"—a roll and chocolate which helped

*(One Dollar, and Nineteen Others—*

WHAT a dollar does for the wreckage of war—for the refugees waiting to get back home, for the *mutilés* who are learning at an agricultural reeducational center that motor plows and other machinery will make it possible for them to go back to their farms—is another chapter of the same triumphant story. A dollar means three pairs of stockings for the children, three yards and a half of the black cloth from which are made the pinafores worn by little French boys to school. It means household linen and utensils—a hundred and one things that make the difference between miserable and reasonably bearable living. For no one, perhaps, a dollar—in company with nineteen other dollars—means as much as for the French soldier whose uniform has been horribly torn or burnt by shell or gas. The small sum of \$20 and the volunteered services of an American woman sculptor provide one of the marvelous facial masks of thinly rolled copper-painted to resemble flesh, which enable these pathetic and all mutilated men to go about as normal business and social life without causing the reflective horror which the seamed wreckage of a face must otherwise arouse.

## 23,000,000 Strong

**A**NOTHER chapter too, and a chapter so great and growing that at present it can only be hinted at, is the work of the Red Cross dollar for French and American soldiers. Coffee or cocoa to fill 439,000 tin cups, 475,000 meals to men on their way to and from the front, 234,722 pounds of supplies to French and American hospitals, 199,600 pairs of flannel pajamas are a few of the significant facts.

"We hope to succeed because we represent a picked body," a Red Cross man said recently at the meeting of an exclusive French club at which he, as director of the Red Cross, was a guest of honor. "We represent the Americans who wish with all their heart and soul to help France. There are 23,000,000 of us."

The American Red Cross finds that the children in certain parts of Paris need a school lunch more than medicine. It has invented the Red Cross bun, made from Minnesota flour, Louisiana sugar, and milk obligingly contributed by French cows

France, is in the hands of the Germans, but when the evacuation order came some hundreds of frontier children left Neule and the villages near by with a fund of health which no invading Germans could take away, given them by the doctors and nurses of this little twelve-bed hospital and its traveling dispensary for seven villages. A dollar kept a child for a day in one of the little white beds of the Pavillon Joffre; it still is keeping a child a day in the great hospital at Toul, or that at Evian or Sainte-Foy l'Argentière or in the tuberculosis "preventorium" near Paris where delicate children and the children of tuberculous parents get the strength to fight off the terrible bacillus.

Within a few weeks there will be other hospitals at Lyons and Saint-Etienne and Marseilles where American dollars—and American generosity—are giving to the coming generation of France a chance for health of which war otherwise would have deprived them.

# Clicquot Club

## GINGER ALE

Who boasts of a thirst that can't be quenched by anything that runs or trickles? Let him try Clicquot Club Ginger Ale. The first sip gives thirst a rude jolt of surprise. The first bottle drives thirst into oblivion. Clicquot Club should be served wherever thirst puts in an appearance. Purest of spring water, juices of lemons and limes, cane sugar and Jamaica ginger are so blended that the most fastidious palate is delighted and the most delicate system benefited. Buy by the case from your grocer or druggist.

THE CLICQUOT CLUB COMPANY, MILLIS, MASS., U. S. A.

# INNOCENT BYSTANDERS

One of the major tragedies of the war is the suffering and privation endured by the noncombatants—the old men, women, and children who are the innocent victims of a combat in which they have no part. The opening of the great German offensive this spring drove thousands of hapless French peasants to Paris, where the American Red Cross did magnificent work in helping to care for them. The first picture shows a group of refugees at table—notice the American oilcloth—in the Gare du Nord (North Station) at Paris. The American in the soft hat is a Y. M. C. A. worker who has contributed his services to the Red Cross for the occasion, while on the left is a French sailor busily giving aid and comfort to a youthful refugee.

Photographs by Harry B. Lachman

This picture shows the first American to reach the Gare du Nord from the invaded district: an Ohio engineer named Harry Stone. Shrapnel carried away his thumb. His wound was dressed at the front, and upon his arrival in Paris he was taken to an American Red Cross hospital. As you see, he is telling the story of his battle experiences to an American medical officer.

Here is one of the Red Cross trucks used to transport the refugees from the Gare du Nord. Some were on their way south, some to Normandy, and some to Brittany. Before leaving, many of them spent the night in the station, where the Red Cross had installed rows of cots, and were then carried in trucks across the city to the stations of their departure.

A family of tireless from Lassigny brought its proud possession: a gentlemanly goat. He obligingly walked part of the way, but only till the family found the train. Then he came by train to Paris and rode across town on a Red Cross motor truck with the eleven other members of the family.

The Standard Spark Plug of America

## Selected After Scientific Tests

To the eye all spark plugs seem alike. The average motorist lacks the scientific knowledge and apparatus to make discriminating tests. Therefore it is but natural to ask—how can I, with so many different makes to choose from, be sure which spark plug is best?

Let the manufacturers of America's finest cars be your guide. Guess work can play no part in their selection of spark plugs for original equipment.

They cannot afford to be influenced by extravagant claims. For the spark plug plays too important a part in the successful functioning of their cars.

They base their choice on exhaustive scientific tests made by their chief engineers in their laboratories.

Glance through the list of 93 manufacturers shown below. There you will recognize the name of practically every fine car made. Each one is plant-equipped with AC Spark Plugs.

Consider this when tempted by unproved claims: every other spark plug had the same opportunity to qualify for standard factory equipment.

Yet more builders chose AC than all others combined.

You take no chance when you buy AC Plugs. Your judgment is backed by the endorsement of these leading manufacturers.

There are various types of AC Spark Plugs especially designed for every make and style of motor.

Look for the letters AC. They are the initials of the originator, glazed in the porcelain of every spark plug he manufactures.

Write for booklet, "The Unsuspected Source of Most Motor Ills," by Albert Champion; also for information on new AC Carbon Proof Plugs especially designed for Ford, Overland and Studebaker cars.

Champion Ignition Company, FLINT, Michigan

# Why Italy came to Waltham for Time

Italy turned first to Switzerland. Naturally, since she was a neighbor—and Swiss watches were famous. Then on to Paris and London. But the horological experts of this sunny kingdom were "time-scientists." Watch-fame meant little to them—beauty even less.

They had been commissioned by their government to select Italy's official timepiece. Their sole aim, then, was to look through the surface of a watch, into its works—to discover why some watch was the most accurate time-keeper in the world.

With Europe's finest watches at her disposal, why did Italy come to Waltham for time? Because she discovered there, inside the walls of America's oldest and the world's largest watch factory, the most dependable time-keeping masterpiece known to science.

## Why Your Watch Selection should be a Waltham

Because—Waltham Watches are bought for their works, not on faith. That is why the horological experts of the most progressive nations have chosen the Waltham Watch in preference to any other watch in the world.

Then, connoisseurs of watch-artistry will tell you that in the elegance of design and the refined beauty of their ensemble Waltham Watches are not surpassed even by the finest timepieces of Geneva, London or Paris.

Because—the natural feeling of time-confidence and certainty which comes with the possession of a Waltham is enhanced by the knowledge that your watch is guaranteed to give you enduring, punctual and faithful service.

Guaranteed by the House of Waltham, from whence have come inventions that have revolutionized the art of watchmaking, and where neither time nor expense is spared in the constant search for improvement.

**COLONIAL A**

Extremely thin at no sacrifice of accuracy  
Maximum movement 21 jewels  
Riverside movement 19 jewels

The jeweler who specializes in Waltham Watches is worthy of your confidence, no matter what article he recommends, because his business has been built on the enduring foundation of quality. He will be pleased to explain the many exclusive advantages of the Waltham Colonial A—illustrated on this page. This beautiful masterpiece is one of the supreme triumphs of more than a half-century of watch-making experience. It has established Waltham supremacy in the achievement of extreme thinness—without the sacrifice of that standard of accuracy which has made

# WALTHAM

THE WORLD'S WATCH OVER TIME

# YUGOSLAVIA: A NEW NATION

BY PIERRE DE LANUX

EVERYBODY knows that Poland exists. Still, you could not find the real Poland on the map.

There are over twenty million people who call themselves Poles, who speak the Polish language (when they are left free to do so), and who contribute to civilization a number of valuable things. And the other day, in New York, I met a body of Polish volunteers leaving for the front to fight for our cause, which is also theirs—the cause of national freedom. Still, politically, Poland was divided 150 years ago between Germany, Austria, and Russia, so that it has no "legal existence."

Everybody (I assume) knows that Bohemia exists, that it wants to be free from Austro-Hungarian rule, and that its people, the Czechs-Slovaks, number eleven million—with one soul.

There is another strong national body of over thirteen million people who have been divided and persecuted according to the worst policy of oppression that the world has ever known. Austria, Hungary, and Turkey have kept them dependent for five centuries. In spite of which, these people are to-day frankly and openly standing up for unity and freedom. Nevertheless, a special map is needed in order to show the position of their territory, because they are not yet officially recognized as a nation.

They are the Southern Slavs or Yugoslavs (Yug meaning south in their language). They include the Serbians, the Croats, and the Slovenes, and their country is about the size of England, Scotland, and Wales. My acquaintance with them began in 1912, at the time of the First Balkan War, when Serbia and her Balkan allies freed the Christian subjects from Turkey in Europe.

Few people then knew anything about the Serbians. But the victory they won over the Turks, at Kumanovo, was the starting point of a new epoch. It was the victory of a little democratic nation over an old empire, the victory of French military training over German methods and armament; and, besides being a disaster for Turkey, it was a terrible blow to the other empire, Austria-Hungary, where millions of subjects of Serbian race were living under oppression. The Serbian victory of Kumanovo created a hope that was never again to be extinguished—the hope for the liberation of the whole Serbo-Croatian race.

That Serbia's sacrifices have been immense, that her bravery and faithfulness to our cause are beyond praise, everybody knows. But does America realize that as far as democracy, culture, and civilization are concerned, Serbia was before this war much in advance of more Occidental countries? In Serbia the peasant's field and tools could not be taken away from him, and begging did not exist. I attended sittings of the Skupshtina, or National Assembly, where half of the deputies were dressed like peasants; the dignified tone of these meetings was far above the standard set by bigger nations.

The Yugoslavs have produced many scientists, writers, artists. M. Pupin, president of the Academy of Science in the State of New York, and N. Tesla, are Yugoslavs. So is Messtrovitch, the celebrated young sculptor from Dalmatia.

## Austria Grows Desperate

WHAT are the historic facts concerning the Yugoslavs?

As early as the fourteenth century the Serbian nation was conquered by the Turks and its people divided between the neighboring empires.

After four centuries, in 1804, a national insurrection led by the peasant Kara-george, the grandfather of the present King, freed a part of Serbia from the Turks. In 1878, at the Treaty of Berlin,

With a country about the size of England, Scotland, and Wales, the Yugoslavs, who include the Serbians, Croats, and Slovenes, to-day stand openly for freedom

As early as the spring of 1916 the Serbian army reappeared on the Saloniki front

The children who have fled from their homes in France are being taught in French schools new to them, for loving their beautiful country

Serbia became an independent kingdom, but Austria had managed to take control of Bosnia, which is peopled by Serbians. In 1908 she formally annexed Bosnia, and this move violently irritated the national feeling of all the Yugoslav race. After the war of 1912 Austria could plainly see that the will of her Yugoslav subjects was tending more and more toward reunion with their glorious brothers from independent Serbia. Austria tried harder than ever to ruin Serbia, and provoked the Second Balkan War of 1913, encouraging Bulgaria to attack her former allies. But Serbia inflicted upon the Bulgarians on the River Bregalnitz, a crushing defeat as Kumanovo had been over the Turks the year before.

Of course after that the prestige of Serbia was tremendously increased, and the Yugoslavs of Austria grew prouder of belonging to that

same race, which Germans and Magyars had always belittled and kept in a miserable economic condition. (For instance, there was not one railroad connecting the two sister countries of Bosnia and Serbia in spite of their long common frontier, for fear of a fraternization that would imperil the empire. All trains had to pass through Hungary.)

In 1913-14 the national movement in the Yugoslav provinces of Austria-Hungary grew more and more intense, and the worst thing was that the rulers at Vienna could not accuse these people of either violence or revolt; but schools, newspapers, societies were being multiplied, and in 1914 the entire younger generation was won to the idea of national unity with Serbia.

The Austrian Government then became desperate. It took as a pretext the murder of Archduke Francis Ferdinand at Sarajevo, Bosnia, in June—a murder accomplished by an isolated fanatic, and surrounded by circumstances which put the Austrian authorities themselves under strange suspicion. The sudden ultimatum to Serbia, the war declared in spite of Serbia's yielding to the ultimatum, the world set ablaze by the consequences of that aggression, are facts which I need not retrace here. But how many people remember that the first three attempts made in 1914 by Austria to invade and "punish" little Serbia met with disastrous failure?

## The Declaration of Corfu

THE first two scarcely endangered Serbian territory. The third, led by General Potiorek, with a large army, penetrated into Serbia, and Belgrade, the capital, fell into the hands of the aggressor. For a moment hope was lost. But on the Kolubara line there happened for Serbia what had happened for France on the line of the Marne. Old King Peter took the head of his troops in a desperate offensive, and the day ended with a new and historical licking to be written on the flag of Austria. Fifty thousand prisoners, with their guns and flags, were abandoned

by Potiorek, who had to leave Belgrade in such haste that his baggage, including his many decorations, fell into the hands of the victorious Serbians.

It needed the combined effort of Austria-Hungary, Bulgaria, and Germany, under the high command of Field Marshal von Mackensen, in 1915, to curb the resistance of Serbia on the battle fields. The little army resisted heroically, then had to retreat through the desert mountains of Albania to the coast. There it was sent on French ships to the island of Corfu, where it was reorganized. And as early as the spring of 1916 the Serbian army reappeared on the Saloniki front, where it is fighting now, receiving reinforcements from the voluntary (Continued on page 30)

TRADE MARK

# Model 90—Everything I

Follow this infallible test in the selection of your car, based upon the experiences of tens of thousands of car owners—

—who unanimously agree these five essentials are imperative for complete satisfaction;

First for consideration, if not first in importance, is the *Appearance* of your car.

Consult your wife and she will agree this Overland Model 90 leaves nothing to be desired, with its big-car stylish design, correct color scheme and exquisite finish.

*Performance* is the foundation of every car's reason for existence.

It is the powerful, sweet-running motor and efficient performance of this easy-to-handle Model 90 that, more than anything else, is responsible for its great popularity.

More than 100,000 are already sold.

It is sparing with fuel and saving of tires and above all, is consistent and adequate.

Its control is convenient and simple.

Women find this Model 90 especially handy to drive because of its easy-to-operate clutch, its narrow turning radius and because it is simple to handle.

The longer you drive, the greater grows the necessity for comfort.

This is why the *Comfort* of the Model 90 is best appreciated by veteran motorists. Experience teaches that nothing can do more to spoil satisfaction in a car than the absence of comfort.

Model 90 has wide, extra-cushioned seats, deep upholstery, spacious interior.

se who have owned cars for years you nothing is more important Service the company behind the le and willing to render.

his respect Model 90 again offers d advantages. No matter where or tour, expert Overland service is accessible. This guarantees

satisfaction in your car and protection of your investment.

The fifth essential that must be satisfactory is *Price*. Perhaps this should be listed first, but price is only an advantage if the other four essentials are properly provided.

*Because Model 90 does completely give the desired appearance, performance, comfort and service, its modest price makes it even more of a remarkable bargain.*

Increased demands mean the time

and energy of people magnify the value of Model 90 cars as business entities.

With one you can commandeer time. With one you can exact the greatest amount of work out of a day.

With one you can save hours and energy, benefit your health and make your life richer and fuller.

Order your Model 90 now. Let the Willys-Overland dealer save you money.

*Appearance, Performance,  
 Comfort, Service and Price*

man who could build good ships and build them quickly, a chance to glow with patriotic pride and the sense of something done for his country, a blow struck in the war. He was put upon his mettle, with the double incentive of making money and doing his bit.

Immediately certain shipbuilders began to try to corner the labor market. In Seattle, Skinner & Eddy, who had turned shipbuilders on a large scale since 1915, took advantage of a strike that had tied up the plant of the Seattle Dry Dock and Construction Company. They got Dave Rodgers, who had been with the Seattle Dry Dock and Construction Company, and gave him a free hand.

"Finish the yard," they said to him in effect, "and build ships. Get the men you need—and get them quickly."

Rodgers didn't hesitate. He went up and down the Pacific Coast. He raided every yard from Seattle to San Diego. He put into effect a wage scale that paralyzed every shipbuilder on the coast. Labor couldn't ask for anything that Rodgers wasn't ready and willing at least to discuss; it asked for few things he wasn't prepared to grant. And so, while other shipbuilders were wrangling with labor, Skinner & Eddy were building ships. They broke a world's record when they launched one ship in just sixty-four days from the laying of her keel; they expect to launch two ships a month for the rest of this year.

From Puget Sound to San Diego Skinner & Eddy are being denounced by shipbuilders. Men sat in their offices and told me things about Skinner & Eddy which, were I to set them down here, would furnish grounds for a score of libel suits. Boiled down and denatured, these things come to this: Skinner & Eddy disorganized labor conditions along the whole coast. They forced wages up out of all reason. They made labor discontented with good, average working conditions in other yards. They were responsible for strikes last summer. By "pirating" men, by hiring men away who were doing good work for good wages by promising them more money, they upset the balance everywhere and crippled a good many yards which lost the few skilled men they had.

Now, there is a certain degree of truth in these charges. Proper foresight, proper planning for the economical distribution of such skilled labor as there was, under some cooperative system, would have produced better results, almost unquestionably—and would have made the methods Skinner & Eddy pursued unprofitable, and, therefore, impossible. But, as matters were, Skinner & Eddy committed only one crime—they looked farther ahead and moved more quickly than their rivals. What they did was exactly what always has been done and always will be done under a competitive system.

Here was a big public job. Deliberately it was decided to have it done by private persons: by individuals, so to speak. There was money in doing the job quickly; that was the stimulus offered for quick quantity production. Harley's answer to the daily complaints that poured into him about the way Skinner & Eddy had gone about their business was, very simply: "They're building ships. We've got to have ships—now."

#### Dealing with the Union

FRANK L. SKINNER of Skinner & Eddy is no more a believer in unions and the closed shop than most of his fellow shipbuilders, who denounce him so bitterly. But he decided that the way to build ships quickly was to deal with the unions.

"That was all there was to it," he said when he explained his policy to me. "There was a shortage of highly skilled labor. Dealing with the unions, satisfying the men, was the proper way, the quick way, to get results. So we sat down with the men and worked out our agreement. We've lived up to our word; so have our men."

Thanks to Skinner & Eddy, Seattle is a closed-

shop town now, so far as the shipyards are concerned. The labor problem there is practically out of the way. There is a central employment office, organized and maintained by the Department of Labor of the United States. When I was in Seattle Frank A. Silcox was in charge of it, and, rather to the bewilderment of everyone concerned, the dove of industrial peace was very much in evidence.

#### Making a Joke of Foremen

THIS employment office was functioning extremely well in Seattle. Silcox either has been transferred to Los Angeles, or soon will be, to organize a similar office there; such offices are needed in every shipbuilding center in the country. In San Francisco

When it comes to getting ships off the ways Pacific Coast yards are breaking records

there are two big steel yards—that of the Union Iron Works and that of Moore & Scott. Men go back and forth between the two plants now; both plants charge that the other offers wages above the scale to good men. Apprentices, taken on at one yard, work long enough to get a smattering of their trade, and then offer themselves, and are hired, at the other as skilled hands.

In Seattle that was impossible. Silcox's office kept records; through it all men were being hired by all yards. If a man was dismissed from one yard, he found it hard to get work at one of the others if his dismissal had been for cause—and most of the few dismissals in Pacific Coast yards are, emphatically, for cause in these days.

In San Francisco, where there was no central employment agency, and where the two yards weren't working together, a man fired by Moore & Scott in Oakland could go to the Alameda or San Francisco plants of the Union Iron Works and be hired at once. That sort of thing makes a joke of the authority of foremen.

#### Rivets, Figures, and Wages

THESE are general matters. Specific charges have been made against the men who are working in the Pacific Coast yards. It has been said, and figures have been cited in support of the charge, that

riveting gangs have failed to drive as many rivets as they could and should. In the "Sunset Magazine" Walter V. Woehlke has written articles, denouncing labor, that have aroused a storm of bitter protest all along the Pacific Coast. Especially severe was the attack upon him for his statement that a good riveting gang could average 400 rivets a day, and should drive not less than 300 a day, and that twenty-five gangs, which, he implied, represented a fair average, had driven an average of only fifty-one rivets in a day.

His figures were obtained from a San Francisco yard. They represented rivets driven by twenty-five gangs, on a day early last October. They showed that these gangs had received \$277.50 for their work, and had earned, on a piecework basis, only \$50.74 for their total of 1,277 rivets. He contended that they should have driven 10,000 rivets.

I shall quote here what a man in the executive department of another shipyard said to me about Woehlke's statement.

"In the first place," he said, "you can't say how many rivets a gang can or ought to drive in a day of eight hours. There is no way of striking an average. The number depends on all sorts of things—and I don't know what the conditions were under which the gangs included in his figures were working on that day. I don't know what sort of weather it was. I don't know on what part of the ship they were working. I don't know how much they had to move about. I don't know whether they were getting enough air pressure for their guns."

Parenthetically it may be well to explain that riveting is done with a pneumatic hammer, known as a "gun," driven by compressed air. From Puget Sound to San Diego there has been complaint, for months, that in many shipyards the air pressure was insufficient. It has been hard to get the compressors that were needed, and to get them installed. Pipes have not been properly protected. Details of management have been poorly cared for. Chairman Hurley confirmed these statements when I talked with him in Washington; he said that much of the blame that had gone to riveting gangs belonged properly to executives who, like the men, were new at the work and had much to learn.

"And then, too," my informant went on, "I think Woehlke got his figures as to the number of rivets a gang—that is, the riveter, the holder on, and the heater boy—ought to drive from old-established Eastern yards, like the Cramps at Philadelphia, and the Newport News people. We have developed an entirely different way of building ships out here. In the East a riveting gang doesn't go to work until everything is ready for it. Then, when it starts, it can go straight through a day's work. In any given week, in the East, a riveting gang may lay off for three days, and then work straight ahead for three days. Here, instead of making ready three days, we let a gang work right along. It may drive thirty or forty rivets at one end of a hull, and then move along to the other end, or even to another hull, on another ways. That moving about takes part of the eight hours. We figure that, in the long run, we do more work in less time the way we do it. But, of course, when you make up tables of rivets driven per day per gang we show up poorly."

This same man supplied me with charts and figures that tell a much more encouraging story than do Woehlke's. In his plant the fixed wage scale for riveters is a guaranty, based on a certain number of rivets driven. If fewer rivets are driven, the gang gets the day's-work wage; if the minimum is exceeded, the piecework rate is paid. The guaranty system is fair because there are certain parts of a hull where driving of rivets is necessarily slow; where men have to work in cramped and unnatural positions.

(Continued on page 35)

More than 200 giant sawmills, subscribers to the SOUTHERN PINE ASSOCIATION, are producing enormous quantities of America's most useful lumber to supply the unprecedented demands of the Nation.

## Houses for Workmen and Build Them Quickly!

ADEQUATE housing for labor is the paramount need of industrial America. Progressive manufacturers everywhere recognize that this must be their dependence in attracting efficient workmen, holding them and reducing the costly labor "turnover."

The question is: How can suitable, serviceable, living quarters for workmen be provided on an extensive scale most rapidly and most economically?

### Uncle Sam Points the Way

In the wartime building of cantonments, barracks, camps, naval quarters and supply stations, as well as in the construction of extensive military housing accommodations in Europe, Uncle Sam has used wood almost exclusively. And in the great majority of instances, in this country and abroad, the wood specified has been

## SOUTHERN PINE

"The Wood of Service"

Uncle Sam's choice was the wise choice of the experienced builder. Southern Pine is strong, durable, workable, and adapted to more varied uses than any other wood that grows. It is the ideal material for general homebuilding uses—and it can be had NOW, in any desired quantity. Furthermore, Southern

Pine lumber, manufactured by any of the more than 200 giant sawmills subscribing to the Southern Pine Association, is absolutely guaranteed as to grade.

Manufacturers who are confronted by the Industrial Housing problem are invited to write to this association for advice and suggestions.

# Southern Pine Association

NEW ORLEANS, L.A.

They might never have spoken to each other of the thing born in them, she because of her innate modesty, and Burgoyne because he could never believe that such a vision of beauty could be his. A very modest man is Patrick Burgoyne. Monarchs have pinned orders on his breast, and he has hastened from their presence to hide them in the bottoms of trunks. "Wear them?" he would stutter if the thing were suggested. "Is it a fool you want to make of me, or a sandwich man for a jeweler's shop?" But he was happy to be near her, happy to be noticed by her. And this he testified to by singing in a cracked, falsetto voice, off-tune, an Irish ballad in which he stated he was an orphan (which he was not—Sir Kevin and Lady Burgoyne being the haldest people I know) and an exile (he had the freedom of the city of Dublin somewhere in his pockets), and that he was about to lay his aged bones in a pauper's grave. This was a sign he was enjoying himself supremely.

They had gone down one spring morning to Cold Spring Harbor for a day with some friends. They were returning in the evening. They were standing on the edge of the platform waiting for their train. A special came crashing down the track from Wading River. A porter trundled a truck along the platform. Unconsciously Burgoyne stepped out of the way. Fifty yards distant the express thundered.

"Look out!" some one called.

He lost his footing, stumbled, and fell on the track. Like a conjurer's trick, he whirled around on his face, his legs and arms outstretched taut, every atom of air expelled from his huge chest. Some one caught Jeannette Baird as she leaped forward. Like a crash of ordnance the train went past. Her scream cut through the air like a jagged bolt of lightning. As the last car passed Burgoyne jumped up. He began dusting the collar of his coat.

"I've got a red-hot cinder on the back of my neck," he half shouted. "Where is that porter until I murder him!"

He looked around for Jeannette Baird. She had slipped fainting to the platform. In one prodigious sweep he had gathered her into his arms.

"Oh, machree, machree," he crooned to her. "Oh, machree, machree!"

THERE is no need to describe those first months of the marriage of Burgoyne and Jeannette Baird. To every man and woman in this world at some allotted time comes that sweeping golden flood that carries them whirling onward past the solid banks of material things. There is that time when one awakens suddenly to the glory of the universe—to the wonder of the depth of blue in the heavens and the marvels of flowers, and the brown body of the homing bee. The ragged fleecers of the clouds seem the work of some Titan silversmith, and clearly, for an ineffable instant, one hears the mighty harmony of the fixed and wandering stars. There is no man or woman who at some time does not experience it. No, not one!

So, for two months, Patrick Burgoyne and his wife Jeannette lived in a world as much apart from the hustle and rage of New York as the world of the little folk of the hills is from the solid world of men. If such a thing as adoration can be given to a human being, Burgoyne gave it to that beautiful, mystical wife of his. If such a thing as worship is proper for men, it was lavished on Patrick Burgoyne.

"I'm so happy I will die," Jeannette used to tell him with tears in her eyes. "Can it last, Patrick, can it last?"

"When the war's over," he would tell her, "I'll come back to you. And together we'll roam the wide world, machree. And we'll never see the time passing until we're white-haired and drowsy with sleep. And we'll die together, and it will begin again among the stars."

It might have been her early love of Chinese wisdom and Chinese poetry that made war a vague, intangible thing to Jeannette Burgoyne. It might have been the strain of her dreaming father in her. Though she said nothing, she could never believe Burgoyne would leave her side.

There came a day when Burgoyne frowned viciously, began pacing the room, began tapping his fingers on the table. She felt a queer terror grip her heart. "Is there anything wrong?" she asked.

"Oh, no! Nothing. Nothing at all," he told her. She looked at him with dumb, stricken eyes.

A month before Burgoyne had offered his services to his country through the medium of his embassy. He was glad in the heart of him, though a trifle ashamed at that feeling, at the delay in the answer. It meant so much longer with Jeannette.

Came the day when he lunched with an attaché at Sherry's. The diplomat hailed him with forced humor. "Got a job for you!"

"Is it with the Leinesters?" Burgoyne asked eagerly. The attaché shook his head. He looked away.

## THE TRANSPORT

BY BEATRICE WASHBURN

*I watched your transport sail away for France,  
And tried to tell you then how brave you were,  
How much I loved you, how the coming years  
Were glorified; how all our little dreams,  
That we had built together, sailed with you;  
And of that winter day when we first met,  
And how there was a new moon in the sky.  
Do you remember when like splintered ice  
It lay upon the surface of the lake?  
Of how I loved you and the wasted years  
We might have spent together, but it still  
Was something to have had, those happy years,  
Something to hold, something to thank Him for,  
Something most people die with never having known,  
Something the war can never take away!  
All this I would have told you, but so much  
Was left unsaid. We only talked of ships  
And why the gulls could dip their wings so deep.  
And how the sky line changes with the years,  
And of the city, and be sure to write  
And tell me everything you think of France—  
And don't forget!—and then the whistle blew. . .*

*Now when they talk of war I only see  
The harbor flashing in the sun, the dipping gulls,  
The ragged edge of rope that tied the ship,  
A little crack upon the painted rail  
Where you last laid your hand.*

"Is it the Rhodesian Rifles, then?" asked Burgoyne. "The fact of the matter is," the diplomat stated uneasily, "the Government would be glad if you'd investigate the African situation up in Mashonaland. There's something queer going on there."

Burgoyne laid down his knife and fork.

"Any intelligence officer can do that," he said.

"I'm sorry, old man," Barrett, the attaché, said.

"You won't take it, then."

"I'm damned if I will!"

"I don't blame you," the diplomat told him. He had been at school at Portora with Burgoyne. "I'll try again."

So, impatient and restless, now frowning in anger, now in violent demonstrations to Jeannette, Burgoyne raged about like a panther in a cage. And Jeannette, looking at him fearfully, felt a tugging at her heartstrings.

"His love is drooping and dying," she thought to herself, "like a plucked rose."

When he was out, no longer did the tapestry of melody breathe itself about the cherished lute. She held herself upright and tears rolled down her face.

"The birds have quit the hushed hillside," she sang the mournful melody of Li Hua. "The east wind wails like troubled ghosts who go hither and thither in ominous gloom. Athwart the trampled grass the sunlight pales. The warm blood in my veins is like chilled water in the frozen brooks."

There was somewhere in the Baird family a grandfather—or was it a great-grandfather?—who belied the family standard of quietude and gentleness, and who had quadrupled the fortune by canny work in the shipping business. There was talk of his blackbirding to the French and English Indies. There were tales of his whaling ships leaving New Bedford armed to the teeth, and of their coming back laden with oil, while the barks of competitors came back not at all. These things may not be true, for lies attach themselves about strong men, as barnacles foul a ship.

But, true or not, a flare of the old man's blood and spirit glints forth occasionally in a Baird. It may lie dormant, and then a word, an occasion, may set it aflame. It dies out after, but that is a dangerous minute.

And now, while Patrick Burgoyne paced the floor, looked this way and that, drew paper toward him and threw it away again, the spirit of old Hell-Fire Baird began to light softly like the first glow of tinder in the breast of Jeannette. She began to brood with her eyelids half closed.

IMPATIENTLY Burgoyne went out of the house one day, and uptown to his club. He wanted to keep all worry from his wife until the last moment possible. He told her nothing of his plans. "Good God!" he thought, "poor child! That will come soon enough!"

From his club he got the embassy on the long-distance, Barrett talking.

"I just got word this minute, Patrick," the attaché told him. "You're appointed, if you'll take it, to the staff of a diplomatic mission coming across here. Go out and buy a hat with a red band. Congratulations, my boy!"

"My compliments to the diplomatic mission to the United States," Burgoyne's words dropped into the receiver like icebergs, "and they can go to the devil. I'm a fighting man, and not a pink-tea liar."

He rushed back to the house and began alinging his things together. He called for Jeannette.

"Mavourneen, I've got to run up to Canada in an hour," he told her. There was a tremor in his voice.

"Well, why not?" she said coldly.

He looked at her strangely in a sort of daze. He couldn't understand her. He had expected her to cry, to throw her arms about him, to plead to be allowed to come. He remembered the words of some man at the club, a man who had had much experience with women, which Burgoyne had not. The saying was to the effect that women acted strangely at times, and when they acted strangely the best thing to do was to let them alone.

"Well, I'll be going," he said weakly.

"Go, by all means," she told him politely.

The door had hardly closed when her rage began. So this was love, she told herself bitterly. So this was what she had dreamed. The whole fabric of her dreams and visions had been ripped ruthlessly from bottom to top. She had given herself all to this man, body and heart and the faint aromatic precious thing which was her soul. He had pawed it, mauled it, played with it, amused himself with it, and then suddenly tired of it, as a man will of a flower worn all day in his buttonhole, of a certain tie, of a pair of spats. A sort of fierce modesty flamed within her. She, Jeannette Baird, to have been treated thus! She thrust her hands to her burning face.

"Let him go back to his bears and wolves," she said scornfully. "Let him go back to his savage lands. It is what he is fit for!"

All that night she lay awake, at times cold with scorn, and at times her face wet with tears. She held her pillow to her mouth to choke her sobs. Dawn came and the day drew on with leaden, lagging feet. Another hideous night, and Burgoyne came with the morning. (Continued on page 28)

## Why the Franklin Car Delivers Service Without Waste

**T**HERE was a time when peace and plenty fostered a "hang-the-expense" attitude on the part of the automobile owner. That time has gone.

The national need of economy has brought the whole motor car proposition squarely down to a basis of: Service without Waste.

With the Franklin Car, this standard of Economy is not a new phrase, lugged in to meet the demands of the times.

From the beginning, the Franklin has held to the truth that heavy weight in a motor car is bound to mean heavy expense to run it—that needless *weight* directly results in needless *waste*. And today the car that is too heavy for a man's needs, is recognized as making unnecessary demands on the Nation's resources.

For sixteen years, the Franklin has been built on the principles of Scientific Light Weight, Direct Air-Cooling and Flexible Construction. For sixteen years, the Franklin has been piling up remarkable

economy records as proof of the correctness of those principles.

Franklin efficiency has *always* been a recognized fact; the exacting nature of the times has simply extended that recognition.

For the average motorist no longer has a mere academic interest in gasoline economy. *He's hunting for it.* No longer is he satisfied with five, or even six thousand miles, to the set of tires. *He's looking for more.*

In sharp contrast to *claims* of economy—to mere assurances—he finds the strongly supported *facts* of Franklin *daily performance*:

20 Miles to the gallon of gasoline—instead of 10;  
10,000 Miles to the set of tires—instead of 5,000;  
A high resale value—instead of a firesale price.

And he inevitably develops a new standard of motoring. He will never again tolerate the wastage of an inefficient car

For it is not unusual to own a fine car; nor even unusual to own an economical car; but to own a car that is both fine *and* economical, is so unusual that it is possible in only one automobile.

**ELECTRIC PRIMER** insures ready cold weather starting, even from low-grade gasoline. Minimizes spark plug fouling and loading up.

**MASTER VIBRATOR** produces fat, hot spark for starting even when battery is "low." Another assurance of motoring satisfaction.

**STARTING DEVICE**—Simplest, surest; large capacity; controlled by ignition switch. No meshing of gears and pushing of pedals.

**LARGER TIRES** increase already remarkable tire mileage. 33 x 4½ inch cord tires now on all types assure utmost tire reliability.

**NEW OILING SYSTEM** with reservoir and wick eliminates messy grease-cup troubles. Surer; requires less attention.

**AIR INTAKE STRAINER** keeps road dust, grit, etc., out of engine internals. Prevents wear in cylinders, valves, etc. Lessens repairs.

**PISTON CONSTRUCTION** automatically takes up cylinder wear. Maintains compression. Engine indefinitely retains responsiveness.

**INTAKE YOKK HEATER** quickly warms up mixture by use of exhaust gases. Original with Franklin; perfected in today's car.

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N. Y.

**T**HERE are many imitations of Raybestos Brake Lining—*Thisbestos* and *Thatbestos*. Similar in name, but lacking in quality. They may imitate the name, but they can't duplicate Raybestos WEAR. Genuine Raybestos is quickly identified by the Silver Edge. Genuine Raybestos is *guaranteed* to WEAR one year. Why not pay a few cents more and get real—

**Raybestos**  
BRAKE LINING

### Enamolin Satisfies Even Boat Owners!

**T**HIS is the strongest endorsement of Enamolin's wearing qualities and beauty. For there is no severer test to which an enamel can be put than use on the outside of boats.

An Enamolin-finished boat is always a gloriously white one, with a surface as hard and smooth as porcelain.

It may become dirty, oily or grimy, but a scrubbing with sapollo and water will instantly restore Enamolin's pure whiteness.

There is no "turning color"—no checking, cracking or peeling—no refinishing for at least two seasons, if Enamolin is used.

Because of this marvelous durability, this porcelain-like smoothness, this radiant whiteness and this economy in use, Enamolin has long been recognized as the leading enamel for use on the interior and exterior of homes.

Ask for "The White Spot Booklet." A sample can of either Enamolin or Namolin Finer Finish sent for 10 cents. Address: Domestic Dept.

## A Sister of Shining Swords

Continued from page 26

He ran—he could not wait to walk—into the little morning room where she sat before her untasted breakfast.

"Look at me!" he shouted joyfully.

His shoulders were bulging beneath a khaki tunic. Riding breeches glared out from his knees. Puttees wound upward from his heavy boots.

"I'm a Tommy," he gurgled. "I'm a plain private in a Canadian artillery regiment." He dived forward to catch her in his arms. "I've got two days' leave, and I've come all the way down to spend a few hours with you."

She stopped his spontaneous rush with a cold glance. "Well?" she asked frigidly.

"It was the only thing to do," Burgoyne explained. "When I get over to the other side—"

"I'm not interested. I'm afraid."

Burgoyne looked at her blankly. "Are you cracked, Jeannette?" he exploded.

"I'm not crazy, if that's what you mean. I know what I'm saying. We've been married three months now, and for a month and a half you've been trying to get away. Now, you've got away. You ought to be satisfied."

"Look here, Jeannette, for God's sake! You—"

"Patrick Burgoyne," she faced him, "if you had really cared for me, you'd have stayed here, where we were so happy for those two months. But you never cared for me. You were eager to get away."

"But you don't understand, girl"; he threw his hands apart. "I had to go. Would you have me stay here while my old comrades and my old friends are being killed—"

"I don't care," she said cruelly. He came toward her.

"And as for not caring for you, Jeannette," he told her; "if I could take my heart out of my body and lay it at your feet, I'd do it, by God! girl! if anything—"

"Well, here's something for you, Patrick Burgoyne," she said fiercely. "I care as little for you as for the fly on that windowpane. If there's one person on earth I detest, it's you. And I want you to know it!"

"Jeannette!" he implored.

"Please go!"

"For Heaven's sake, Jeannette, think of what you're saying. You're not meaning it, surely!"

"Will you please go?" There was a tried frown on her forehead, and she turned her head away. She made an impatient gesture with her hand.

He straightened himself suddenly and, swinging around with a click, went out through the door. She heard the big front door close and his firm, swiftness tread going down the street. Every stride away from her seemed to tug at her heart as though a rough cable were tearing at the delicate organism of it, but she would not call him back. She would not. Never! Never! No!

**F**OR a month, now, the reports that the silent Cantonese, Hong Kop, had been bringing to Li Sin were steadily growing more and more serious. The Jeannette Baird of the days before Burgoyne appeared seemed to have vanished into thin air, and a feverish, hardened woman to have taken her place. The younger set, who had found her to be such a prude, as they termed it, now welcomed her with open arms. The abhorred cocktail had no longer any repulsion for her. The dances that lasted until morning found her going rhythmically at dawn. And men congregated about her as buzzards might over a dying man. There was John Van Rensselaer Adams, half decent. There was Major Lefferts, rotten to the core. And there was Rodney Keston, a slimy, cunning thing.

And, strange to say, it was to Rodney Keston, of all men, that Jeannette Burgoyne seemed to incline. A pale, soft, slight man, with a neat black beard and an ironic manner, and with something utterly effeminate about him, he was of the type which honest men feel should be stamped under heel as they crush the loathsome thing. One would fear hitting him, lest, instead of the swinging fist striking honest flesh and bone, it should plunge into some ulcerous mass, revolting, unthinkable.

"The only thing to do with a man like that," some one said, "is to bury him alive in lime! And yet, somehow, women like him. It's unbelievable!"

He did something for a living, did Rodney Keston—painted miniatures, or was an interior decorator, or something obnoxious of the kind. His talk was continually of art and letters, and he spoke offhandedly of strange, exotic works, of poets who used words for painting instead of writing, of novelists who created their heroes out of devil worshippers. Perhaps it was her reaction from Burgoyne—Burgoyne with the clean eye and the set jaw, Burgoyne with the two swinging arms, Burgoyne the smiling, that drove her to companionship with the flaccid, pale, and melancholy charlatan with his eternal twaddle of superart. And of the new set with whom she had come in contact, who knew vaguely that her husband had gone for a soldier, there were some who sneered openly and some who were disgusted and some who laughed.

"He's not such a fool as he looks," they told one another. "He's after her money. He'll get her to divorce this soldier gink—and then, oh, boy!"

**T**HERE is something incredible in how the Chinese come to know matters which seem out of their ken. Hong Kop, the mysterious, had no entry to the places affected by Jeannette Burgoyne and her protégé, or admirer, or whatever the beast might be called. By some intuition he appeared to know of every occurrence, and every word between them. To Li Sin he reported faithfully and in detail.

"Am I to kill this man Keston?" he suggested gently to his master. He felt longingly at the knife in his sleeve.

"Umm," Li Sin pondered for an instant. A twinge of scorn ran across his face. "No," The Cantonese bowed.

"You will go down to Chai-Net, Hong Kop," Li Sin ordered. "And you will tell her that I want her to take an automobile ride with me in the morning. I want to show her something. At six o'clock, Hong Kop."

**T**HE big gray touring car slipped westward from Gramercy Park. Faintly the noise of traffic had begun, a dull, rumbling sound like a drowsy sleeper walking. It swished through the grimy West Side, Hong Kop, the inscrutable, drove her with the easy motion of a gondola. In the rear Jeannette Burgoyne, erect and watchful, was studying the grave features of Li Sin.

"I knew you, Chai-Net, when you were hardly the size of the child in the street there," he pointed to a pig-tailed girl of eight, bringing in milk from a doorstep. He was silent for a moment.

"I knew you when you were a young girl, Chai-Net, when I used to bring you presents from the New York you never knew, and I brought you back here, Chai-Net. And I introduced you to your husband, Chai-Net."

She made a quick, abrupt gesture.

"No, you will listen to me, Chai-Net, to Li Sin, who am old, to Li Sin who knew you all your life. And who picked you a husband, Chai-Net."

They had run through the slips to a ferryboat and were crossing now. The fresh caressing wind of the East River came to them with a shock as of sprayed water.

"You do not know Patrick Burgoyne, Chai-Net. Look! There is dawn still in the sky. I have often seen Burgoyne look at it; get up and laugh. 'Here's a bid for fortune,' he used to say, and that day he was off to find the lost Oasis of Sahara, or to chart the Azof Sea. A great poet and a great wanderer, and a great man, Chai-Net."

"That's all he wants—that! Not me!" she said chokingly.

"He will share all that with you, Chai-Net."

They had emerged on the Jersey shore. Hong Kop swung the car southward along the water front. "But you have got one rival, Chai-Net. And that takes him from you now."

She sat erect as if struck in the face. She flushed red. "A rival?"

"A rival, Chai-Net."

She sat back limply. A flood of color came into her face. "Oh, shamed me!" she cried softly, reverting to the soft-toned Pekingese of her youth. "Never again can I raise my head, Li Sin" (Continued on page 30)

"Every Miller Cord  
Specialist Has Had  
10 Years' Training"

# Tiredom's Great Feat—the Uniform Cord

*Chief of the Miller Tires—All Built By Champions*

**T**HE Miller Rubber Co. has successfully applied to the building of Cord-type Tires their championship system that gave the world Uniform fabric tires.

And no motoring sensation is comparable to the buoyancy of riding on Miller Uniform Cords.

Size for size they have much greater air capacity than ordinary tires. And their hand construction makes them wonderfully flexible.

The big strong cords fairly float in new, live rubber.

## Geared-to-the-Road

Miller Uniform Cord Tires are made with two treads—the conventional ribbed type and the Geared-to-the-Road. Only Miller Tires have this latter feature, for this is a patented design. It has the advantage of caterpillar feet that engage the ground like cogs.

Geared-to-the-Road gives positive traction, with practically no skidding, hence great security on roads.

It also prevents the wheels from spinning as

you start the car, saving your tires from being scuffed and "burned."

## 99 Per Cent Excellent

No other tires can ever be as uniform as Miller until the men who build them are as uniform as Miller tire builders. For tires contain much hand-work—Cord tires most of all.

This is why we developed the body of Cord Tire Champions. Each man is a specialist of 10 years' training or more. Their average efficiency is 96 per cent, notwithstanding that every man signs each tire he builds and is penalized if ever one comes back.

That is why 99 Miller Tires in 100 outrun standard guarantees.

Not 1 per cent ever need adjustment. Under like conditions, Miller Tires—Cord-type or fabric—wear the same.

This year, our output must be limited. Only about one man in 25 can make good here.

To be sure you'll get Millers, speak to the authorized dealer now for your supply.

**Miller**  **Tires**  
GEARED-TO-THE-ROAD

Distributors, Dealers and others desiring a profitable tire agency with an assured future should write for attractive proposition. A few exceptional territories to be awarded soon.

**THE MILLER RUBBER COMPANY, Akron, Ohio**

Makers of Miller Rad and Gray Inner Tubes, The Team-Mates of Uniform Tires.  
Miller Tire Accessories are the life-savers of old tires and the "first aid" to injured ones.

# Williams' Shaving

Sift the powder  
from the  
hinged-top can

## Powder

**J**UST being a powder doesn't get a shaving soap anywhere. It isn't the form that wins against a stubborn beard. It's the quality of the soap. Williams' Shaving Soap is a powder, a stick, a cream, or a liquid, as you choose, but what brings men back for more of the form they like is the creamy, softening, lasting lather—that made Williams' Shaving Soap famous long before powder was thought of.

Williams' Shaving Powder in its hinged-top, sifting can, gives you a flying start on the shave. But it's the lather that carries you through a comfortable and economical shave and leaves you wonderfully refreshed at the finish.

### Four forms of Williams' Shaving Soaps

Send 20c. in stamps for trial sizes of the four forms shown here. Then decide which you prefer. Or send 6c. in stamps for any one.

The J. B. WILLIAMS COMPANY  
Dept. A, Glastonbury, Conn.

After the shave or the bath you will enjoy the comforting touch of Williams' Talc Powder. Send 4c. for a trial size of the perfume you prefer—Violet, Carnation, English Lilac or Rose.

**Williams' Shaving Soap needs no military training  
It is ready for service anywhere  
—the same efficient service it gives at home**

Never again. Oh, shamed me, Li Sin! Oh, shamed me!"

"Look up, Chai-Net," Li Sin told her. "There is something I want you to see."

The rapid, shuffling steps of troops shuddered down the street. An officer came into sight, his revolver dangling at his thigh.

"You have never seen troops before, Chai-Net, troops going into war. I want you to see them, Chai-Net."

THE regiment swung down the street, their jaws set, their faces drawn. There was no sound of bugles, no flurry of drums. "Look at them, Chai-Net," Li Sin went on. "They are not laughing. They are not enjoying themselves. No bands are playing. They are going into war!"

She was looking at them curiously. Somehow she had imagined a display of blue and gold lace, of people cheering, of bands playing, of hand-clapping, and waving handkerchiefs. Somehow the grim silence thrilled her, the set faces, the determination, the glint of the sun on rifles, the air of deadly business to hand.

"Look at the boy there, with the chubby cheeks. He should be laughing or dancing with girls. Look at the seriousness of the sergeant, the lean fellow with the scar. I know the white-haired major there; he leaves his wife and three children behind."

He saw a dawn of wonderment on her face; a sort of awe, such as one might feel in front of elemental forces.

"They may never get over, Chai-Net. They may be drowned as dogs are drowned. There are those who will never return. They have to go. Every fighting man has to go. Patrick Burgoyne has to go."

He laid his hand on hers for an instant. "There is your rival, Chai-Net."

A short rasping order and the troops stopped. The sun had risen over the tops of a ridge of clouds. He flashed on the burnished pieces and turned suddenly into a forest of silver swords.

"Do you remember, Chai-Net, the song of Yang Kwei-fei:

*In hearts and gems I entertained my Lord.*

*I danced to the Rainbow Skirt and Feather Jacket air.*

*In the clouds, he said, he saw my light robes trail.*

*And roses were as nothing to my cheeks. The tireless shuttles of the eternal stars Should never see him leave me, so he said.*

*The dragon flag is floating in the sun: The drum is throbbing and the trumpets blow:*

*My Lord is leaving me; my king; my own.*

*I mount the Gibbons' Tower and I watch The tall spears glitter by the Lake of Shang.*

*My Lord is gone!*

*There was naught else could bring him from my side*

*But the roll of battle chariots and the Tatar knives.*

*No weeping from me, now I know myself*

*The sister of shining swords. Chieh! Chieh!*

He paused for a minute. He held her hands. "Will you telegraph to Canada, Chai-Net?" he asked.

A gray-haired colonel came toward the car. He shook hands with the Manchu. "This is no Boxer picnic," he told Li Sin—"nor sailing into Santiago with the bands playing. This is the most serious thing we've seen since the Revolution!"

They talked for a few minutes. The grizzled officer waved good-by. Li Sin turned around to Jeannette. She was not there. "Where is Chai-Net, Hong Kop?" he asked.

"She went up the street a little way," Hong Kop replied in his Cantonese singsong. "She was crying, but her head was high. And her eyes were like a young queen's."

## Yugoslavia: A New Nation

*Continued from page 21*

enlistment of Yugoslavs from all parts of the world. America has contributed several thousands, mostly recruited among the Yugoslavs of Pennsylvania, Cleveland, and Chicago. Their departure from Johnstown, Pa., was the most impressive scene I have ever witnessed in this country.

At the same time conflicts were growing more and more acute in Austria. The Serbians, Croats, and Slovenes inside the monarchy rapidly united in a common policy under their common name of Yugoslavs. The Government forced a terrible campaign of deportations, trials, hangings against them; but fortunately the Yugoslavs were represented abroad by their most prominent statesmen, who had been able to escape, though with the loss of all their belongings, and who founded the Yugoslav Committee in London.

On the 20th of July, 1917, a historical event took place. The Serbian Government, in the name of the five million people of Serbia, and the Yugoslav Committee, in the name of the seven million southern Slavs of Austria-Hungary (plus one million emigrants in various parts of the world), issued a joint declaration, known as the Declaration of Corfu.

### A Free Nation

THE Declaration of Corfu is for this new nation, Yugoslavia, what the Declaration of Independence was for the American Colonies. In splendidly simple and frank terms it states the indomitable will of the thirteen million Yugoslavs to live as a free nation with equal rights for all, absolute religious freedom, a democratic constitution, and a peaceful program of activity, with the Adriatic Sea open and free to all.

Since the Corfu Declaration the national policy of the Yugoslavs in Austria has extended and intensified so much, together and in accord with the national policy of the Bohemians and Poles, that the Austrian Government has entirely lost control of them. To silence them would require the hanging of half the population of the empire. Here is their program:

"(1) . . . Immediate, general, and democratic peace, complete disarmament, international guaranty and assurance of the free development of all people, great and small. (2) . . . Recognition and assurance of the complete and freely applied right of self-determi-

nation for the people, especially as regards their wish of a free state and the form of its constitution. (3) . . . We want for our nation nothing that belongs to any other people; we want only the territory solidly inhabited by Serbs, Croats, and Slovenes." (Korshets, leader of the Yugoslavs, to the Austrian delegation to Brest-Litovsk, January 31, 1918.)

### Their Principles Ours

MANY fear that to-day the Serbian race has been "annihilated" by the Germans. It is true that methodical measures have been taken in order to weaken or disperse the race. Thousands and thousands of families have been deported to other provinces. The Serbian prisoners in Germany are subjected to a special régime of starvation (we possess many documents about this) and frequently British or French prisoners are punished for trying to share their rations with their unfortunate Serbian comrades. But one cannot suppress a whole nation. The new generation rises with a renewed hope. The children who took refuge in France are being taught in French schools new motives for loving their beautiful country, which they were forced for a time to abandon. They have not forgotten the legends and songs of old Serbia. They carry with them that national genius for music which they share with other Slavic races. They worship the memory of those heroes who fought for independence—especially those "tchetnitsi" or irregulars who made war in Macedonia, and were recruited among the young men of the best families. (I have known personally many of them and could tell you many strange things of their adventurous life.)

The case of Yugoslavia is the same as that of Poland and Bohemia. What these nations want is so exactly the application of American principles, as stated by the Colonists, by Lincoln, and by Mr. Wilson, that there is scarcely any need for a plea in their favor. Knowing that claim, can Americans disavow it without disavowing the very origin and basis of America's existence?

The author of this article has been four times a war correspondent in the Balkans and is the author of "La Yugoslavia" and "Young France and New America."

# PORTO RICO DOES HER BIT

BY GRACE PHELPS

"VAMOS! Zumben-selo, muchachos!" Out of the ground sprang a detachment of soldiers. Yelling what were meant to be blood-curdling cries in a language that perhaps is better adapted for other diversions than war, they leaped over the entanglements, and dashed, with glittering bayonets, toward a dangling row of "Kaiser Billa."

"Go to it! Down with them, boys!"

I had just crossed the drawbridge of El Morro, the fort built in Ponce de Leon's time to guard the walled city of San Juan. I had been following a flickering candle through underground passages connecting with the Palacio del Gobernador and San Cristobal, another old Spanish fort. I had looked down to the sea over parapets of walls thirty feet thick which had withstood the attacks of Dutch and English pirates when buccaners roved the Caribbean. I had peered into dark dungeons where the executors of the Inquisition had strung up unbelievers by their thumbs. I had been listening to tales of the Spanish conquistadores and the beautiful women of Borinquen (Porto Rico) who had made San Juan a Mecca of gay social life when wild onions grew on Fifth Avenue.

In short, I had been back in the sixteenth century, steeped in its romantic atmosphere of love and adventure. And this return to the twentieth century, with its harsh machine-gun warfare, was a bit startling.

But if I found the twentieth century less romantic, the descendants of these same conquistadores and beautiful women were no less interesting because they wore drab khaki instead of shining armor, and dug their own trenches instead of fighting behind walls built by hordes of cringing slaves. And the three companies of men in the Porto Rico officers' training camp, who were occupying the trenches before me, showed in their faces and bearing all the pride and valor of their race.

Back in the reserve trenches, the First Company was resting after a spirited attack on the "enemy." A tanned, black-haired, black-eyed candidate for an officer's commission was holding his gun gingerly between the fingers of one hand and surveying his palms ruefully.

**Pascara O'Neill**

"CARAMBA!" I heard him utter. "Quiera Dios que cuando llegue a Francia, encuentre las trincheras listas!"

"The gentleman seems distressed about something," I remarked to the handsome young lieutenant who was acting as my official guide. (Lieutenants are always handsome in stories, but in this instance truth was even handsomer than fiction.)

The officer grinned. "He has been digging trenches for two days, and I gather from his remarks that he is in hopes of finding the trenches already dug by the time he arrives at the front!"

"Mr. Pascara O'Neill, fall out! The lady wants to look at your hands."

"O'Neill?" I asked, as a well-blistered palm went up in salute. "A Porto Rican with an Irish name?"

My doubts of his right to the name were soon settled.

"It's the custom here!" said Private O'Neill.

After he had returned to the "trincheras," the lieutenant went on to explain: "There are many Spanish

It took Col. Orval P. Townshend, "El Viejo" ("The Old Man") of Porto Rico, just three days to recruit 640 men

Irishmen here. Several ships of the Spanish Armada were wrecked during Drake's time on the coast of Ireland, and many of the soldiers married among the Irish. Some of them stayed in Ireland, but most of them returned to Spain and later came to Porto Rico, bringing their Irish wives with them. It is a Spanish custom to keep the wife's name as part of the surname, which explains why the Irish names have been perpetuated. And let me tell you," he added enthusiastically, "the Spanish-Irish combination makes a good fighter!"

## A Cantonment!

THE island's status is an anomaly; it is neither a State nor a Territory. A citizenship which does not carry with it the privilege of citizenship in the States was granted to the people of Porto Rico only a short time before the Selective Conscription Law went into effect.

There was little opposition to the draft in Porto Rico, but a suspicion had been aroused of a sinister coincidence in the fact that a citizenship, delayed twenty years, should be granted just in time for the Porto Ricans to assume the most extreme duty for which a citizen can be called: to fight for and if need be lay down his life for his country.

To cap the climax, a report got abroad that the Porto Ricans would probably be taken to a cantonment in the States for training.

How Porto Rican sentiment was swung around into enthusiastic support of the war is an interesting story. The War Department announced a change of plans—a cantonment would be established on the island. Immediately the planters and business men came forward with astonishingly liberal offers.

Besides declaring that they would give the drafted men every form of hospitality, they have given the Government a cantonment site of 400 acres of the most desirable suburban real estate at a yearly rental of only \$2,000—the property is valued at something like \$500 an acre in peace times.

## Another "Papa Joffre"

PORTO RICO'S Hoover, Alberto E. Lee, did invaluable work in allaying the suspicion that Porto Rico was being handed an unfair deal. With his slogan, "With munitions of the mouth we will win this war," he has stirred the patriotism of every man, woman, and child in the island.

One evidence of this vivid patriotism is the fact that the Porto Rico regiment of infantry was the first in the United States regular army to be recruited up to full war strength. Three weeks after war was declared Colonel Orval P. Townshend went on a recruiting trip around the island. In three days he had returned to San Juan, bringing with him a train of 640 men!

He is an American who has been in Porto Rico since the American occupation, and he understands the language and the people thoroughly. The United States has not always been fortunate in the type of men selected to represent us in the island. But Colonel Townshend, who omits none of the courtesies which are the heritage of a Spanish-speaking people, is popular alike with Porto Ricans and Americans.

The colonel is known affectionately among his men as "El Viejo" ("The Old Man").

Officers and men are devoted to him with a devotion hardly less than that

# The AutoStrop Razor

## sharpens its own blades

YOU do not take the blade out. The Razor sharpens the blade in place. Sharpening the blade insures a clean, smooth shave. Every razor blade should be sharpened before shaving, but the AutoStrop Razor is the only one that sharpens its own blades.

Sharpening keeps the blade free from rust. You do not have to take the blade out to sharpen it, nor do you have to take the Razor apart to clean it. Self stropping makes the blades last longer—500 shaves from 12 AutoStrop blades guaranteed.

## JUNIOR CLASSICS

Dr. Eliot, President Emeritus of Harvard, says  
of these volumes:—

"The boy or girl who becomes familiar with the charming tales and poems of THE JUNIOR CLASSICS will have gained a knowledge of literature and history that will be of high value either in school or home work. Here are the real elements of imaginative narration, poetry and ethics, which should enter into the education of every English-speaking child."

Thousands of parents can testify to the truth of Dr. Eliot's statement.

Why not hear more of these valuable books NOW?

The FREE booklet describes in attractive form the vital necessity of children's reading well chosen and shows how admirably "The Junior Classics" meet that requirement. Use the coupon—today.

mail this—

Address \_\_\_\_\_

given "Papa" Joffre by their equally emotional French cousins.

As we watched a detachment of men go "over the top" in a practice attack, one of the colonel's young officers observed:

"You know a man would be court-martialed if he stopped in a charge to help a fallen comrade. But let me tell you, if it was 'El Viejo,' I'd rather be shot than leave him to 'los Hulanos'!"

One has only to mention "el coronel" to hear similar tributes expressed in varying language but with equal fervor in camp and barracks. Like "Papa" Joffre, "El Viejo" has risen—if not exactly from the ranks, from a first lieutenant to his present post.

### A National Army of 12,000

THE cantonment, which is now in the process of construction, was named Las Casas, in memory of a Spanish monk whose life was spent in civilizing the Carib and Arrowak Indians who originally inhabited the island, and from whom many of the families of the interior are descended. The cantonment site is on the ocean front near San Juan and is a place to inspire anyone with patriotism. Private Smith, shivering in a northern cantonment under a pile of blankets and overcoats, will envy Private Cabrera, soothed to sleep by the rustling fronds of coconut palms under the starry Porto Rican sky, with the Southern Cross low down on the horizon.

And when Private Smith hikes through the snow with the north wind whistling around his ears and the temperature sometimes 30 degrees below zero, he may be excused for thinking bitterly of Private Cabrera's luck in

with the other American troops when they get to France.

The Porto Ricans would not be soldiers if they did not use slang. Already they are accumulating a choice vocabulary for use "over there." The demerit list is "la daga" (the dagger); the soldier's burden, the 42-pound pack which he carries is "el nene" (the papoose); and when reveille sounds "Diana" is calling.

### Training for Democracy

THE Porto Ricans have a hospitable custom of saying to a visitor: "Esta su casa." It is a short phrase, but it means a great deal: "My house is yours and all that is in it is at your disposal."

They are saying that now to the United States. The island, with its 1,350,000 inhabitants, and its 3,606 square miles of territory, is ours, and their sons and their wealth are at our disposal. This is our chance to cement the feeling of loyalty that has been aroused and make Porto Rico truly an integral part of the United States.

Horrible as war is—and the Porto Ricans are a peace-loving people—they believe that out of this terrible bloodshed and suffering will come a democracy which the world has hitherto considered a beautiful but impossible Utopian dream.

And Porto Rico, small as she may seem in the vast issues at stake, will come in for her full share of the rights of small peoples.

Porto Rico's civilians are making the island self-supporting and learning the lessons of Americanization through the word of Lee and the food campaign. While this is going

Porto Rico's own "Pittsburgers." A company from their officers' training camp marching across the drawbridge of El Morro above the moat

being able to hike through mangrove-shaded roads and to pick juicy grapefruit and oranges at will in the groves at Camp Las Casas.

The candidates in the training camps, many of whom were educated in the States, speak English as well as Spanish. But of the 12,000 men constituting Porto Rico's National Army many understand no English.

Therefore, in order that nothing shall interfere with the Porto Ricans' ability to do their bit, Captain Luis R. Esteves, a West Point graduate, has prepared a manual of arms in Spanish and English which is part of the course in the training camp and will be used later in the cantonment.

An interesting supplement to the manual includes common phrases in French, as well as in Spanish and in English, so that the Porto Rico contingent will not be at a disadvantage

on at home, her soldiers in the training camp and cantonment, in Panama and abroad, will be gaining an education and a vision that will bring them back determined to have for their own the democracy for which they will have fought.

### Full Rights of Statehood

WHEN they return, it is an observation of simple futurity to say that Porto Rico will no longer be content with a colonial government, handed down from a far-off Washington, but will demand—and receive—the full rights of statehood.

And when full statehood comes, the Porto Ricans, civilians and soldiery alike, will be ready for it and worthy of it.

So much is Porto Rico doing to help the war. And so much is the war doing to help Porto Rico.

**SELECT** shoes according to quality, not price—that's the way to get satisfaction—the sure way to make your shoe money go farthest. The name *Florsheim* identifies shoes of superior quality—dependable today as heretofore.

Eight to twelve dollars—irresistibly priced, value guaranteed.

## The Wonderful Mill

During the period of the War, we will not sell an American Midget Roller Mill unless its purpose is to supply the local needs of a nation at war, or for Government, with flour and feed.

**DO** your bit. Help the Government by saving the freight on wheat and flour. Relieve the Railroads of their unnecessary congestion by establishing in your community one of these wonderful American Midget Roller Flour Mills.

## And Make Money, Too

\$150 to \$1,000 per month can be made with this permanent, substantial and dignified business.

This wonderful self-contained roller mill is revolutionizing milling. Makes splendid flour at a better yield than the Government requires. One man without previous milling experience can run it successfully. Small cost, small power, easy operation enables it to make a "Better Barrel of Flour Cheaper." You can sack your flour under our nationally advertised brand "FLAVO."

Our Service Department inspects your products each month free and keeps you up to quality. Sizes of mills from 15 to 100 barrels per day. You can start with the small size if you have \$1,000 in investment. Sold on 30 days' free trial.

Write for our catalog and experience of successful owners all over the United States.

## The Day of the Cannon

Continued from page 1

one official communiqué, issued early in the morning: It said: "At eight-twenty a few enemy planes, flying at a great height, passed our lines and attacked Paris. They were immediately pursued by our aviators. Several bombs fell. There are a few victims. A later communiqué will give a more precise account of the nature of the raid and its results." Poor old Mr. Communiqué—caught at last!

It was while I sat thus on the terrace of the Café de la Paix, drinking lemonade (I wanted to be sure I was seeing and hearing well), that the Breloque came. Across the place of the Opera, going slowly, the red fire engine glided, its brass-helmeted bugler blowing his brass trumpet. He played the Breloque's gay notes rather discreetly and gently—but the crowd cheered. "But how can it be known it's all over?" I asked a man at the table next to mine. "They can't be certain, I suppose," he answered. "But they do know there has been no bomb for the last hour." And for the first time I realized that indeed I had heard no explosion now for an hour.

### "An Official Bulletin"

THAT evening I was dining at a little restaurant of Montparnasse with three friends, one of them a French lieutenant who had been wounded and crippled in the French offensive of April, 1917. I had read meanwhile all the evening papers except the "Temps," and of the raid they had all had the same news—the official communiqué announcing that at eight-twenty in the morning several enemy machines, flying very high, had dropped a few bombs on Paris. That and nothing more. The "Temps" I had been unable to buy. At many booths where I had asked for it I had been told that it was not out yet, that it was coming out late, and I had finally given it up. In the middle of the dinner I went into another of the restaurant's rooms to see if there was in that room anyone I knew. I found the war correspondent Wythe Williams sitting there, and he immediately greeted me with: "Well, have you heard the terrible news?" "Do you mean about Saint-Quentin?" I asked him. "No, no, no," he answered with some impatience. "I mean about the great gun. We have been under the fire of a gun all day." "Where did you get that?" I said, profoundly skeptical. "It's official," he replied. "It's in the 'Temps'—an official communiqué. We've been under fire of a long-range gun. It's true!" His manner was so earnest that I believed him while I was within the sound of his voice, but I had no sooner taken three steps away from him when again I was unable to believe. So I turned back toward him. "Tell me, Wythe," I whispered confidentially. "You're joking, aren't you?" He looked at me solemnly. "I am speaking the gospel truth," he said. His manner was so impressive that once more I believed him. But when I got back to my table and announced the news everyone showed such amusement that immediately I felt I had been made the victim of a hoax. People at the table next to mine, who had overheard me, were also sniggering. My lieutenant guest was especially recalcitrant. "Such a gun," he remarked, "would be shooting three times as far as any gun has ever shot before." And no one about had a copy of the "Temps." "By Jove," I said, "I'm going out to buy one." I went out, but after a few attempts gave up. Everywhere the "Temps" had been sold out. I went back to my table. But it was hard to sit still, and after a while I went to Williams again. "Go ask Duranty," he said. "He knows about it." So I went to see Duranty, an English journalist, in still another room. "Yes, it's true," he assured me. "It's in the 'Temps'—an official bulletin." But he didn't have the "Temps" with him; no one had the "Temps." I went back to my table and tried to be good. My friends there had their theory about the business. "Can't you see," they whispered warningly, "that those fellows *font en train de nous mener un bateau*—are fixing a game up on you?" I was inclined to believe them, except that there dwelt at the back of my mind an agreement between the story and what had happened during the day—the regularity of the explosions, their strange sound, the lack of barrage fire, the inactivity of the French aerial fleet. Finally we caught Williams as he was going out, and I tackled him firmly.

## Why Berries Call for Puffed Grains

Once mix Puffed Grains with your berries and you'll never want berries without them.

These airy, toasted bubbles seem to complete the blend—just as crust does in a shortcake.

Puffed Grains are flimsy morsels. They crush at a touch. Never was a crust so flaky. But their savory granules, as they melt away, multiply the berry dish delights.

With Strawberries

Serve Puffed Grains as you always do—with sugar and cream, in bowls of milk or crisp and dry. But at berry-time mix them also in the fruit dish.

Try them tomorrow. The Puffed Rice or Corn Puffs are usually best-liked with fruits.

**Puffed Rice    Corn Puffs    Puffed Wheat**  
Each 15c Except in Far West

## The Milk Dish Needs These Bubble Grains

Here are whole grains steam exploded—puffed to eight times normal size. They are crisp and toasted—airy morsels, four times as porous as bread.

For wheatless days there are Puffed Rice and Corn Puffs—just as delightful as wheat.

They are ever ready. They are flimsy and savory. Every food cell is exploded so they easily digest.

All that you want—nutrition, enjoyment, ease of digestion—are here in a matchless way.

For summer luncheons and suppers serve Puffed Grains in milk. In the afternoons when children are hungry, crisp the Puffed Grains and lightly butter. Let children eat them like peanuts.

At dinner, scatter them on your ice cream.

Keep the pantry shelf filled in hot weather.

In Milk

# B&B

## Adhesive Plaster Tape

Stops any leak, big or little, and usually for good. Apply when the hose is dry.

## The Universal Mender

Thousands of people by its use make old hose last another season.

## Every Day Brings Uses Which Nothing Else Will Serve

Every home has a thousand uses for B&B Adhesive Plaster Tape.

People are now using millions of yards per year. And every year the use is doubling as people find it out.

It is a strong tape, with tensile strength of some 45 pounds per inch width.

It is rubber-coated, and thus practically waterproof.

It sticks to anything that's dry—to wood, metal, china, glass, flesh, rubber, cloth or paper.

It sticks without wetting and it stays stuck.

It stops almost any sort of leak—mends nearly every break or tear. Make a single wrapping or as many as you need. It is always ready, instantly attached. And it holds.

Not a day goes by without some service for it.

This is the tape that surgeons use for attaching splints, for retaining dressings, for relieving sprains, etc. It is standard in hospitals everywhere.

So it must be strong and clinging. We have spent 25 years in perfecting this ideal adhesive.

**INSULATES WIRE**  
Wrap electric wires or wire connections with it.

**RUBBER MENDER**  
It sticks to rubber and, being rubber-coated, is practically waterproof.

**A PERFECT GRIP**  
Both a mender and a grip. It sticks like glued-on canvas.

A 50-cent spool may save ten dollars for you on lawn hose alone.

Even tires and inner tubes can be temporarily mended by it. Carry it in your car.

Rubber articles and rubber garments are instantly mended by it.

Attach it underneath a cloth tear and the tear will hardly show.

Leaky water pipes or faucets can be patched with it.

Broken articles of any material can be mended with it.

Fruit jars can be sealed with it.

When you find out its many uses you will wonder how you ever got along without it.

Get a spool today. Get the right kind—B&B Adhesive Plaster Tape. That is adapted to this all-round service.

Get the larger spools. They are most economical. We recommend the five yard lengths.

We have a book which pictures many uses. It is full of good suggestions. Write and we'll send it to you Free.

Buy 5-Yard Spools for Economy  
**Sold by All Druggists**

**PREVENTS CHAFING**

Apply to hands or heels where rub comes. It saves blisters.

and publicly. "Come," he growled. "I'll get you a 'Temps'!" He began to go all about the restaurant, and finally found a "Temps" which an aged Frenchman, in a corner, was reading at the first page. And on the last page of the "Temps," the first page of which the aged Frenchman was reading—there it was:

### Communiqué Officiel

March 23, Fifteen O'clock: The enemy has shot on Paris with a long-range gun. Since eight o'clock this morning, every quarter of an hour, shells of 210 caliber have reached the capital and its suburbs.

There are about ten dead and about fifteen wounded.

Countermeasures are being taken against this gun.

Underneath this official bulletin, in small type and within parentheses, was the following editorial comment:

"The point of the front nearest Paris is one hundred kilometers distant."

And that was all! I have said that the statement was on the last page of the "Temps." It was not only on the last page, but on the last column, and not only on the last column, but at the very bottom of the last column. Evidently it had been squeezed in at the last moment just on going to press. There was nothing after it, there could be nothing after it. There was the thing—and nothing more. First, "The enemy has shot at Paris with a long-range gun"; second, "The point of the front nearest Paris is one hundred kilometers distant." And go to bed or that, children, and sleep; that is all you'll know till to-morrow!

### A Big Toad! On Fire!

LATER in the evening—it was a beautiful moonlit night—we were walking down the Boulevard Saint-Michel (the old Boule Mich, past haunts of departed Bohemianism) when, on the Place de Médicis, we were stopped by a strange sight. I must add that there had been a new alert, that the barrage fire had announced an attempted raid, then had stopped, and that we were edging homeward with the intention of taking shelter at the sound of the first air bomb. As we were crossing the Place, a light dropped from the sky—from an airplane, we would like to believe. At first it looked like some sort of a signal rocket, and descended swiftly. But when it reached a height not very far above the roofs, it suddenly stopped falling and began to fly a very level course westward.

It was an extraordinary thing. It looked like a big toad; it was all on fire; it had a long, sputtering tail. It flew very straight and swiftly to the west, then abruptly turned and flew toward the east. It seemed possessed of intelligence, it seemed to know where it was going and what it was doing. We stood there transfixed, exactly in the center of the wide square. When the thing had gone east, it turned again, and this time it was coming toward us, right directly for us! It came for us as with a will of its own, sputtering and in great haste. We couldn't move; we could only look. Thoughts went through my head which, I found later, were also going through the heads of my three companions. The thoughts were: "This is the cannon. It's no cannon at all. They've a small flying thing which steers by wireless and comes over and drops a bomb. This is one of them. It's going to drop a bomb."

### Monster or Rocket?

WHEN the thing was almost over our heads, it changed its mind once more, and its course. With a switch of its sputtering tail, it turned narrowly then streaked it for the north. Two more we saw it change—to the east, then the west—then finally it vanished altogether behind the line of roofs to the north.

Now, I haven't been able to find out what this monster was. Had I not three witnesses with me, I would think I hadn't seen it. I suppose it was some sort of rocket—some cunningly devised firework which travels through powder combustion and which at certain points in the combustion turns tail. But as a finishing flourish to rather a surprising day, I say it solemnly, it was a success.

Mr. Hopper's next article will continue the story of his trip to the American front, begun in COLLIER'S of May 18. It will appear in an early issue.

**BAUER & BLACK, Makers of Surgical Dressings, etc., Chicago and New York**

## "They're Building Ships Out There!"

Continued from page 24

for example. Here is a table of results for four months in this one yard—which is typical (A, average per day—piecework; B, average per day—day's work; C, general daily average):

	A	B	C
November, 1917	345	113	191
December, 1917	346	121	177
January, 1918	344	121	173
February, 1918	420	134	197

For the first week in March the general average of rivets per gang per day was 218.

Woehlke, with his figures, said that rivets were costing an average of 21½ cents apiece. The figures in my informant's yard were somewhat different. There, in January, rivets paid for on the piecework basis cost 6.2 cents apiece; on a day's-wage basis, 15.4 cents apiece; on a general average, 12½ cents. In December the figures were, respectively, 5, 12, and 9 cents. In February they were 5, 11, and 8 cents.

I do not say that these figures could be confirmed and repeated in every shipyard on the Pacific Coast. I do say that they are at least as fair and as typical as those which have been used to sustain the charge that labor on the coast is slacking. They cover a period of four months; Woehlke's figures, which I cite so often because they have, as a matter of fact, formed the basis for most of the attacks on shipyard workers on the coast, are for a single day. Woehlke's figures, moreover, represented twenty-five riveting gangs; the ones I give represent the work of about a hundred and fifty.

### Restriction of Output

THERE have, unquestionably, been slackers in the yards on the Pacific Coast. Men have hidden, when they were supposed to be working, in out-of-the-way parts of a hull and played cards, or slept. I. W. W. agitators have obtained work in shipyards, as almost any able-bodied man was able to do, and preached against war, and specifically against furthering this particular war by hastening work on the particular hull upon which they were supposed to be working.

There has been trouble, moreover, about restriction of output—especially in the yards engaged in building wooden ships. The calkers' union, a strong, old, conservative union of highly skilled men, had become, before the war, a real labor trust. It was made up of old men. When a standard day's work was established the work done by men of seventy and more was taken as the standard. In order to hasten work on Government contracts the union, as a special concession, permitted two days' work to be done in one day—at a doubled wage, of course. And plenty of men have done that double stint in six or seven hours, collected their pay for two days, and gone off, whistling, to the movies!

The unions have fought, successfully, for a great increase in wages. Skinner & Eddy started the ball rolling. When the Wage Adjustment Board of the United States Shipping Board went to the Pacific Coast it had to adjust wages to the Skinner & Eddy scale. And it found little real opposition among the shipbuilders. Their contracts with the Emergency Fleet Corporation protected them; the Government had to pay the difference between prevailing wages when the contracts were made and any new scale that might be established. Moreover, there were a certain number of what were, practically, cost-plus contracts—contracts, that is, in which the contractor received a certain percentage above cost. The more he job cost the greater his net profit. Would he fight for lower wages under those circumstances? He would not!

### "To Win the War"

THERE are certain facts which cannot be evaded in considering the part labor has played in shipbuilding on the Pacific Coast. You have to go back to the very inception of the whole shipbuilding program. That was based on the theory that the way to get quick results was to put up the task of building a great quantity of ships in the shortest possible time

## —for Fifteen Hundred Telephones or Fifteen

"There is no progress so considerable and so cheap as that made through profiting by the experience of others."

THE automatic telephones of the Private Automatic Exchange—the P. A. X.—give you instant, secret, and unfailing service on interior calls, give it night and day without operators.

The P. A. X. removes from 50 to 80% of the burden otherwise carried by private operators. It speeds the handling of city calls and makes inside telephoning quick, easy and inviting.

In these days of few men and much work telephoning from desk to desk—from factory unit to factory unit—saves more time and money than ever before in bringing production to a maximum.

Whether you use fifteen telephones, fifty, or a thousand, the P. A. X. can give your business the same time-saving and economical service that it is giving the following typical organizations:

**Banks**  
Federal Reserve Bank of New York  
Continental & Commercial National Bank, Chicago

**Hospitals**  
Bellevue Hospital, New York City  
Mayo Bros. Hospital, Rochester, Minn.  
Mercy Hospital, Pittsburgh, Pa.

## How a \$150 Repair Job Cost a Motorist \$1.50

ONE day Mr. Robert Hoffman of Pittsburgh discovered a cylinder of his engine cracked clear through! It leaked so badly that water filled all the cylinders, making his car useless. A \$150 repair job stared him in the face!

Someone told him about "X" Liquid, the Scientific Process of repairing leaks in the cooling system. He bought a \$1.50 can of "X," poured it into the radiator—and saw that the water soon stopped leaking! Today this "X" Liquid repair is standing up under 2,000 pounds explosive pressure!

### "X" Repairs Leaks Without Solder or Welding!

Thousands of motorists now know that "X" Liquid is the only process for making quick, permanent and economical repairs everywhere in the cooling system—in radiators, pumps, gaskets, hose connections, etc.

"X" is simply poured into the radiator. It immediately becomes part of the water, flows through every leak—and hardens right in the hole. "X" repairs every leak with one application, and if left in the water absolutely prevents future leaks.

### "X" Eliminates Rust and Scale!

In addition to repairing leaks—"X" Liquid loosens the rust and scale now present. It absorbs all free oxygen in the water and prevents new rust from forming. Moreover "X" Liquid prevents scale from depositing itself on the metal walls. In this way "X" Liquid keeps the water passages free and clear. This gives better cooling, more power and a saving of oil.

Don't confuse "X" Liquid with cements, powders or flaxseed meals in liquid form. "X" is a pure LIQUID—and is guaranteed to do the work without injuring the cooling system.

"X" is the only Scientific Process for making cooling systems Leakproof—Rustproof—Scaleproof.

"X" LABORATORIES  
642 WASHINGTON STREET, BOSTON, MASS.

to American industry, with its competitive organization. In effect, this view was taken:

"We want this thing done. American industry has led the world. It is the most efficient thing the world has ever seen. It has won its triumphs under a competitive system, with the hope of profit to goad it on. That system has produced all our marvels of efficient organization. That system will give us the ships we want better than any untried system involving cooperation and collective action."

So, reducing things to their simplest terms, American industry was invited to go into the business of building ships as a profitable operation. But, at the same time, an appeal was made to labor on patriotic grounds.

"To win this war we must have ships," labor was told, substantially. "Get busy. Go into the shipyards. Give up your restrictions on output, your apprentice rules. Allow all the dilution of labor that may be necessary. Postpone the adjustment of wages and hours and all the other things you and your employers have been fighting about until after the war. The threat of a strike that delays the building of a single ship a single hour is treason and a deliberate attempt to help the Kaiser."

Now, in the main, labor was fairly acquiescent. But it didn't acquiesce utterly. I can summarize a hundred formal statements, a thousand informal conversations, about like this:

"Why should we make all the concessions?" Thus labor. "Why should we give up everything we are fighting for? After the war we may be down—we may be facing unemployment and a condition when we can't effectively demand anything. You aren't asking capital to wait until after the war to adjust its profits. You are negotiating with capital until it is entirely satisfied. Capital won't sign contracts with you until every detail has been adjusted. Why should we make agreements to wait until after the war for the adjustment of our demands?"

That attitude wasn't justified in every case. Far from it. But in a good many instances it was, absolutely. There were labor leaders who sought to take advantage of the national emergency. But there were capitalists who did that too—just as, on the other side, there were plenty of capitalists who rushed in with a single-minded eagerness to help in the winning of the war, regardless of their profits.

In certain places labor took advantage of the emergency to fight for the closed shop. But in Seattle the closed shop was forced, not by labor, not by the strikes of last summer, but by Skinner & Eddy and their demonstration that the closed shop was a good, practical, working proposition in Seattle.

### The Closed Shop

THE closed shop—the shop, that is, in which only union men can work—is not an absolutely standardized thing, like a Ford motor car. The closed shop means one thing in Seattle; in San Francisco it means something entirely different. In Seattle there has been give and take. Union restrictions lie lightly there. In San Francisco they are onerous and, in many cases, unfair. In the San Francisco shipyards the unions have opposed bitterly, and hitherto successfully, the admission into the shipyards this coming summer of

a lot of young college men, anxious to put in their vacations at this vitally important work.

### Hammond's "Open-Shop" Policy

IN San Francisco, at the Union Iron Works, union men have refused to install machinery in the hulls of wooden ships classed as "unfair." There is a story behind that refusal—of which much has been made. These wooden hulls were built at Eureka, Cal., by the Hammond Lumber Company. The Hammond Lumber Company has been fighting organized labor for years. It has maintained an "open-shop" policy. But its interpretation of the open shop has been, not that all men, union or non-union, should be allowed to work at will, but that union men should be kept out.

Hammond, a four, two-faced fighting man, resents bitterly the idea that any union can come between him and the men who work for him. But if I were to say that he is, as a matter of plain fact, more interested in beating the unions than in beating the Germans, he would resent that statement furiously, and with a perfectly honest conviction that I was both unjust and untruthful in making it. The operations of the Hammond Lumber Company in the spruce district, where wood for airplanes is being obtained, are vitally important. Hammond interests control a great deal of spruce. And up there it proved to be so utterly impossible to bring about a working agreement between the company and its men that Colonel Disque took over the whole business.

There is absolutely no desire on the part of Hammond to hamper the production of ships. He would cut off his right hand rather than do anything of the sort. But he is firmly convinced that his way is the right way—his way being to beat the unions into submission. And it is a question as to which he hates most—the unions and their leaders or the shipbuilders, like Skinner & Eddy and the Union Iron Works, which have decided that the best way to build ships quickly is to come to terms with the unions and eliminate the possibility of strikes by removing every grievance as fast as it is stated.

### More Work for More Men

ORGANIZED labor on the Pacific Coast feels that one absolutely untrue belief has been spread over the country. That is the belief that there is a shortage of labor for the shipyards. It maintains—and the records of Silcox's employment bureau at Seattle bear it out—that the contrary is true. It defends its restrictive rules on the ground that more men ought to be employed; it regards those rules as a means of reducing unemployment. It wants to make more work for more men. And so it has resented hotly the statement that its rules restricting output sprang from laziness and slackness on the part of the men. It expressed willingness to remove restrictions whenever the necessity for doing so was proved—and in Seattle, where the best work in shipbuilding has been done, it has gone more than halfway to meet employers along these lines.

So, on the whole, you will do well to accept any tales you hear of labor slackers in the Pacific Coast shipyards with a liberal dose of salt. Hurley's comment is, after all, the ultimate reply to all such charges.

"Well," he says, "they're building ships out there!"

## TRANSFORMING PORTSMOUTH NAVAL PRISON BY FLORENCE WOLCOTT

WHEN Thomas Mott Osborne, U. S. N. R. F., with the rank of lieutenant commander, was made commanding officer of Portsmouth Naval Prison by Secretary Daniels he was told to stop the "scrapping" of human beings. For, with the declaration of war, courts-martial have necessarily become much more stringent; men are being sent to naval prison for offenses hitherto punished aboard ship.

Lieutenant Osborne had himself previously served a two weeks' voluntary imprisonment at the Portsmouth prison. He knew therefore the attitude of the Portsmouth prison toward society. He knew the stigma attached to the inmate of a naval prison. He knew that the naval prisoner's return to the navy was not looked upon with favor by naval

officers. He knew too that the men went out from the naval prisons bitter and eager to spread ill feeling toward the Government, and particularly toward the naval officers who had sent them there, and this at a time when posters were crying: "Join Now—The Navy Needs You!" He had discovered also the root of the evil—these boys were being discarded for lacking a sense of responsibility.

"If a man overstays his leave through carelessness," said Lieutenant Osborne, "if he fails to look up return trains in advance and finds himself in a place where it is impossible for him to return on time, it has frequently been considered desertion; or if, realizing his carelessness and being fearful of its results, he does not return, that too is deser-

## These volumes contain a liberal education

They are the crowning life work of Dr. Eliot, for over 40 years President of Harvard University. They contain that literature of the world which broadens the horizon, liberalizes and inspires the mind and enables the busy Twentieth Century American to become the well-read and well-posted man that the business world of to-day requires. Read the remarkable words with which Dr. Eliot characterizes them in the FREE Harvard Classics Book. This FREE Book is a literary guide to all books, a summary of the world's essential literature for everyone interested in his own development and success.

## Helpful Shoes

More widely than ever before in our 50 years of making helpful shoes these models are worn today:

### Coward Arch Support Shoe

Gently and gradually remodels the delicate bony span that forms the arch and renews its normal usefulness.

### Coward Bunion Shoe

Guards the bunion from outer bumps and knocks and permits it perfect comfort inside the shoe. Fits and shelters the joint.

### Coward "Good Sense" Shoe

Foot-shaped, friendly, conforming, clasping the foot and instep gently and giving the toes their full rights.

### Coward "Nature Tread" Shoe

Has the straight inner line of the natural foot giving perfect balance. Supple, willing, considerate in shape.

We are experienced in fitting by mail.

tion! In times of peace the sentence is about a year. In times of war it is a much longer period—three, five, or ten years, perhaps. But these boys are not criminals; they have committed no crime.

It needed, therefore, just the two words "Teach them" from Secretary Daniels to enable Lieutenant Osborne to commence his program of education that is making of the Portsmouth Naval Prison a school of rehabilitation, a school from which the scholars shall return to their duties in the navy.

### Osborne's Innovations

UNDER his guidance a Mutual Welfare League, similar in purpose to the famous Welfare League of Sing Sing, was immediately organized.

"The ordinary prison system consists in giving the men a larger dose of the medicine which failed to cure them. The problem must be solved in an entirely different way. When the Welfare League was organized the men partially took over the responsibility of their own discipline, a committee of ten making themselves responsible for the actions of their fellow prisoners. These men wear green chevrons on their sleeves and are sergeants of the league. To them is left the discipline of the prison." So Lieutenant Osborne explains the simple workings of the league.

But the league is only one improvement! There is, for example, a little manual which was to have been distributed among the naval prisoners containing this passage: "Prisoners shall not gaze at visitors, other prisoners, men marching at drill, passing vessels, or at anything else."

"That," said Lieutenant Osborne, "was one of the prison rules so recently adopted that the new manuals have not yet come from the printer. And oh, the foolishness of it all! Such regulations act merely as a stimulus to men to try to break them!"

For the first time in the history of the prison its inmates were allowed out on the green in front of the prison for a half hour of play and recreation after the noonday meal. For some of the men it was the first time they had been out and allowed to enjoy themselves in many months. Old navy men looked askance, but Osborne was in command.

### Back to the Navy

WHEN Lieutenant Osborne took command of the Portsmouth prison there were 160 marines guarding its 170 prisoners. On the 1st of March there were in the Portsmouth Naval Prison 1,525 prisoners guarded by four marines. Each week groups of discharged prisoners are resuming their places in the navy among their mates. And each man of the reinstated groups knows that the eyes of the navy are on him—an ex-prisoner—that he will be judged more harshly than his neighbor, and that it is for the good of the thousands of men in the naval prisons that he win the respect and regard of his companions and superiors.

Thomas Mott Osborne is stopping the "scrapping" of human beings at the Portsmouth Naval Prison.

### "An Old Club But It Looks Like New"

"When I put away my clubs last fall I had the locker boy give them a dose of 3-in-One. This spring they looked so good I now have him 3-in-One them every time after playing.

"First he cleans them thoroughly. Then he gets them to shine—particularly the metal. Then he rubs the metal with a rag well oiled with 3-in-One. This positively prevents rust. Next he rubs the

### 3-in-One

oiled rag on the shaft. This keeps the wood from getting brittle and preserves the finish.

"Last of all, he rubs a good deal into the leather handle. This not only preserves the leather but keeps the handle soft. Makes it hold good when you grip it. Just feel that handle yourself. Isn't it great? And cost a bit only. Take my advice and keep your clubs young with 3-in-One."

3-in-One is a perfect preservative for all kinds of leather, wood, and metal. It is the best thing you can use to keep your things in good condition. It is sold everywhere.

**FREE** Circulars and Samples of 3-in-One. Write for them to P. F. Collier & Son, Inc., 145 Ann Broadway, N. Y.

# The Smoke of the Republic

After a FLIGHT, HIKE OR BATTLE—in camp or trench—on land or sea, there is no cigar so restful and soothing as a Flor de Melba.

Flor de Melba is the result of years of careful study to produce the Cigar Supreme at 10c.

## FLOR DE MELBA THE CIGAR SUPREME

is made of the highest grade of imported Havana tobacco blended to give it the rich aroma and mildness which you find only in cigars that cost 15 cents and upwards. Our experience of over 40 years in manufacturing high grade cigars, and our reputation as the most progressive cigar manufacturers in the United States, are back of the Flor de Melba, The Cigar Supreme.

Send your boy a box of FLOR DE MELBA cigars today. He will be the first to try them. Go to your dealer and buy a box of Flor de Melba—the cigar supreme. If he hasn't them, please write us, Dept. B, and we will send you a box of Flor de Melba cigars at once. A box of 10 cigars costs \$1.00. A box of 20 cigars costs \$2.00. A box of 50 cigars costs \$5.00. A box of 100 cigars costs \$10.00. A box of 200 cigars costs \$20.00. A box of 500 cigars costs \$50.00. A box of 1000 cigars costs \$100.00.

# WAR LEADERS FOR YOUNG AMERICA

BY WILLIAM HEYLIGER

SHORTLY after Congress passed the draft law, a New York man came to Theodore Roosevelt.

"Colonel," he said, "I am above the draft age, and my wife and children make it impossible for me to enlist. Isn't there some war work I can do?"

"Certainly," said Mr. Roosevelt. "You can become a scout master."

"But, Colonel, do you mean—do you really mean that mere boys will play a part in this war?"

"I do," Mr. Roosevelt said emphatically. "By George, I know those boys."

Mr. Roosevelt's faith has been justified. The Boy Scouts of America, 314,607 strong, have become one of the positive factors of the war. "They are one of the greatest of our war facilities," Secretary of the Treasury McAdoo said; "they are helping us to win."

Their work for the Government, since we entered the war, has been effective and efficient. Their labors have touched almost every angle of the nation's need. They have acted as messengers for the Food Administration, and have secured hundreds of thousands of food pledges. Without their aid the Red Cross would have been handicapped in its campaign for funds. They posted almost 1,000,000 army and navy recruiting posters. Cooperating with the Department of Agriculture, they cultivated thousands of acres of beans, corn, and potatoes last summer. In the war against German propaganda their aid was sought by the Government, and President Wilson named them Government dispatch bearers.

It is safe to say that their work in distributing War Savings Stamp cards has been one of the outstanding features of the war. Maurice Wertheim, one of Secretary McAdoo's dollar-a-year men, has charge of the Scout War Savings Stamp drive. Before the campaign opened, Mr. Wertheim asked James E. West, chief scout executive of the Boy Scouts of America, how many stamp cards the scouts would need.

"Send us 10,000,000," Mr. West answered. "That will be enough for a start."

Perhaps the Treasury Department, having in mind the fact that the average age of these boy scouts is from fourteen to fifteen years, feared that, boylike, they would tire of the steady grind of war work. They had been on the job for almost a year—helping Hoover, helping the Red Cross and the Y. M. C. A., and the Knights of Columbus; helping the Government to recruit the army and the navy, and helping, as you will see later, to put over the first and second Liberty Loans. At any rate, Mr. Wertheim decided that 5,000,000 cards would be enough—not for a start, but for a year.

These cards were not the folders used for saving Thrift Stamps. They were red post cards, in reality order blanks by which the signer ordered the local postmaster to deliver to him, C. O. D., a given number of Thrift Stamps or War Savings Stamps. They were not to be distributed by the scouts. They were to be sold.

If a scout came to John Smith's house and induced John Smith to buy stamps, John Smith signed the red post card. It bore a Government frank. The scout dropped it in the nearest letter box; and next day the letter carrier on John Smith's route brought him the stamps he had ordered and collected the money.

### 20,000,000 Cards for 1918

WITH these red post cards, these order blanks, the scouts went into action. Soon Washington was sitting up and rubbing its eyes. The scouts of Waterbury, Conn., used 10,000 cards in one week. The scouts of Springfield, Mass., sent in an order for 100,000. The drive has been on only a few months, but already between 3,000,000 and 4,000,000 cards have carried their orders for stamps.

Now Mr. Wertheim has revised his figures. He believes that the Government will have to print 20,000,000 cards to supply the needs of the Boy Scouts for 1918.

It is hard to realize what such co-operation means. We on the outside, who see small groups of khaki-clad boys on the street, can scarcely conceive the tremendous power their work has added

to our war machinery. But at Washington, where the country's leaders are grimly working out the destinies of a nation, the services of the scouts are valued at its true worth.

"Anything that is done to increase the war efficiency of the Boy Scouts of America," President Wilson said last January, "will be a real contribution to the nation and will help win the war. I hope that all who can serve as scout masters will feel it their duty to help to organize the hundreds of thousands of boys who need the leadership and the impulse of the Boy Scouts in order that the nation may have their intelligent service."

### Personal Appeal

ABOUT 1,000 boys are joining the scout organization each day. National Headquarters, at 200 Fifth Avenue, New York, has had to establish a night force of clerks. Each boy adds potentially to the war strength of the organization, for there is still important work that the Government counts on these boys to do.

And yet, without adequate leadership, these scouts will be powerless. Scout masters already serving the organization are taking boys, and boys, and still more boys into their troops. But experience has proved that there is a limit to the number of boys a scout master can handle if he is to do a good job. Then, too, scout masters are entering the army or the navy and leaving their troops leaderless. Men are needed to fill these places. Men are needed to handle the overflow of scouts in many troops. In short, 100,000 men must come forward to counsel, to advise, and to direct the war energies of this juvenile, but highly effective, force. For the scouts are more than mere boys. They are in substance and in fact soldiers behind the lines.

All of their dealings have the drive of personal appeal. Whether it has been selling bonds, or selling stamps, or distributing war literature, they have gone straight to the homes with their messages. No other organization was equipped or prepared to make a house-to-house nation-wide canvass in aid of the Government.

An incident that happened in an Eastern town is directly in point. First let it be understood that in selling Liberty Bonds the Boy Scouts have not tried to do the work of the banks or of the local Liberty Loan committee. In a sense it was left for them to secure such subscriptions as slipped past the banks and the committees. They were sent out to get the stragglers—and they got them.

In this Eastern town, near the end of the second Liberty Loan, one of the scouts remembered that there were ten Chinese laundrymen in the town. Up to that time not a soul had thought of trying to interest the Celestials.

"Can I try those fellows?" this scout asked.

"Certainly," said his scout master. The following night, when the scouts met again, the boy reported jubilantly that he had sold bonds to seven of the ten.

And while this was taking place Troop 61, of New York City, composed of Chinese boys under a Chinese scout master, was carrying on the work of selling \$5,000 of those same Liberty Bonds.

In a New Jersey village a physician halted his automobile abruptly as a scout stepped out into the roadway.

"What's the matter with you?" the man demanded crossly. "Want to run over?"

"No, sir; I want to sell you a bond. I've already bought bonds at the bank. I have enough."

"Doctor," the scout said seriously, "suppose Washington's army had been enough at Valley Forge?"

The doctor bought another bond.

### One Out of Every Eighteen!

IT is doubtful if the Treasury Department had much faith in boy-scout operation when the first Liberty Loan campaign was planned. But the department was willing to try any agent that offered even a slight chance to sell the bonds. And so when Mr. West, chief scout executive, tendered the 40

## Holding the Hun—

For the first time the American Troops in France have been engaged in a real action. After hours of preliminary shelling, the Germans stormed our trenches at the village of Seicheprey with a force of 1,000 seasoned troops, thinking to win an easy victory over the "untrained" Yankees.

The small force of Americans holding the front-line trenches fought desperately until literally overwhelmed by superior numbers, when they were obliged to fall back; but the German triumph was short-lived, for our reserves speedily came into action and drove the Germans from the village, leaving 300 of them dead behind them.

The German prisoners captured in the fray said that it was meant to teach the Americans a lesson which would discourage them from tackling more important operations in the great Western battle. If that was the case, the result must have been exceedingly disappointing to the German High Command, for not only did our men fight like seasoned veterans, but they inflicted twice the loss on the enemy that we ourselves suffered.

This is only the first of hundreds of similar engagements in which the American Troops will be engaged from now on. Half a million men are in France now and a million more will be there by the end of the year. They are the reserves on which each army is based to turn the tide against the Germans.

Every American will want to follow their fortunes fully and in detail. Every American has a vital interest in knowing the complete story of the war—what led up to it, how it began, through it all—and how here can you get this so interesting, incomplete, and so authoritative book as—

### THE STORY OF THE GREAT WAR

Published only by P. F. Collier & Son

Send for free booklet  
describing this wonder-  
ful War History.

P. F. Collier & Son, 416 West 53rd Street, New York, N. Y.

Please send me the free booklet describing "The Story of the Great War," showing samples of paper and size of the pages and the color, and give me full information about the plan of subscription.

Name

Address

of the Boy Scouts of America, the fact was accepted.

There can be no mistaking the fact that the scouts had hard sledding. The people refused to take seriously the idea of mere boys in the business of selling war bonds. Then, too, a mistake was made in sending the scouts singly. Very often the boy, feeling roughly the strangeness of his position, would lose his nerve when an adult closed the door in response to his knock. But the scout masters encouraged, and the boys persisted. When totals were in it was found that scouts had taken 139,654 individual subscriptions for a total of 238,250. Then and there the Boy Scouts became a war-time asset. During the second Liberty Loan the scouts were sent out in pairs. One boy moral support to the other. This is how they knew their ground, for the campaign had taught them how. In total for the second drive is still wonder of official Washington. For the boys, of an average age of four and a half years, sold \$102,084,100 bonds, and took 533,280 individual subscriptions.

Out of every eighteen bonds sold in the second Liberty Loan, one was sold by a boy scout.

In many communities the scouts sold more bonds than any other single group. In Granite City, Ill., a town between 9,000 and 10,000 population, sold almost 3,000 bonds. In the West, in the heart of what was called in the early days of the war "German belt," one troop that had been collecting dues to pay for a campaign trip used the money to hire four automobiles. With these cars they covered their county as Liberty Bond salesmen. In another county pairs of scouts foot covered assigned territories five miles square, and slept in dog houses and in barns while on the road. In Memphis, Tenn., Charles Jones, a sixteen-year-old scout, took 2 individual subscriptions for Liberty Bonds for a total of \$445,500.

#### "Be Prepared"

With its record with the second loan, the Treasury Department made the boy scout a feature of the third Liberty Loan. A striking publicity poster was drawn by Leyendecker and printed at the Government Printing Office at Washington. It showed a scout kneeling at the feet of Liberty and holding a sword, and on the sword he Scout Motto: "Be prepared." One million copies—think of it, 1,000,000 copies—of this poster represent the government's appraisal of the boy scout as a war asset. These 1,000,000 posters were displayed the length and breadth of the United States. Aside from the Red Cross, these boys form

the only outside organization to be honored with a special war poster. The figures on boy sales for the third Liberty Loan are not available at this writing, but everything points to a tremendous increase over the second loan.

#### Combating German Propaganda

WHEN the Committee on Public Information decided that the poison of German propaganda should be combated with President Wilson's Flag Day Address, it became imperative that this address, sounding as it does the keynote of American ideals, should go into the homes to be read and pondered. Then it was that President Wilson called upon the Boy Scouts to act as Government dispatch bearers. It was an important mission; one of the most important, perhaps, of the war. Five million copies of this address were given to them. Quietly, without any fuss or feathers, they went about their business. Not only did they place that message in the homes, but they secured the name and address of every person to whom they delivered a copy.

On the back of each copy was a list of other pamphlets the Committee on Public Information was anxious that the people should read. These pamphlets were the antidote for enemy propaganda. Men and women were urged to write for them. The more of them that were read, the clearer would be the national understanding of why we are at war.

For several months now the requests for this vital literature have averaged 30,000 a day. The Committee on Public Information has stated that to a large extent this demand can be traced to the effective distribution of President Wilson's Flag Day Address by the Boy Scouts.

#### Wanted—Scout Masters

THIS, then, is the organization that appeals to men to serve as scout masters. Any man who can give at least three hours of his time a week can safely offer himself as a scout master. First aid, and knots, and signaling, and life in the open need not scare him. The steps in scouting are progressive, and with his adult mind it is easy for him to keep one jump ahead of the boys. The National Council has prepared a Scout Master's Handbook for his use that goes so far as to plan and outline his first twenty-six weekly meetings. All he needs, if he has the time, is a love of the outdoors, a belief that scouting is the finest system of character building yet discovered, and a love for that fascinating branch of humanity known as the boy. Given these, he will make a success of his work. Given these, he will help to win the war.

Scouting is ready. The boys are ready. It is leaders who are needed.

## The Orator of the Day

Continued from page 2

"n't, you'd have had your hats off in the flag went by. You'd have seen those boys marching to fight, you step they took. You'd have cheered with them, you boys that are big enough."

A query came from the crowd. "Why you marching, young feller?" "Because they wouldn't let me." Two zing tears welled out of those steely eyes, but the eyes themselves never creased. "They rejected me. I wasn't to serve as I wanted to." "Who? Who?" "Oho!" mumbled the gorilla in ludicrous self-communion below him. "I'd think myself a yellow dog if I hadn't tried every way to get in," conceded that grim, chilly voice. "Maybe come here to live with the rest of us." "Some one started to hiss, but got support. "You don't like that person. If you weren't a town of yellow dogs, would you let that sign insult your country for another minute?" His arm swung to indicate Mr. Chester's ingenuous bid for business.

HEAD was thrust from a second-story window opposite. "What would you do about it?" queried the owner of the head.

Clyde half turned to look up. Still y from his beating, he swayed a bit and put back his hand to steady himself. He rested upon a turnip, round, shod, hard-frozen; a sentient opponent of a turnip, instinct with diabolical suggestions. The providential vegetable nestled into his hand, an answer to the challenge from the window. Ralph Waldo Emerson Clyde remembered that he was a member of the

bar, a pillar of the law of the land, sworn to maintain and uphold it—and hotly he discarded that niggling consideration. He straightened up. The turnip tempter was in his grasp. He made a swift motion. The turnip tempter was no longer in his hand. Crash! The 5 per cent solution of disloyalty was no longer in Mr. Chester Meek's window, but flat on its back upon the floor, and where it had been yawning a large, jagged, and expensive hole in Mr. Chester Meek's plate-glass front. Yes, I know: a turnip won't go through good plate glass. But maybe Mr. Meek's plate glass wasn't good enough. Or perhaps the turnip was too good. Besides, Clyde used to pitch ball a little in college.

A large and appreciative roar rose from assembled Switzerville, for the Farmers' Bank was not a popular institution. Out rushed President Chester Meek waving frenzied arms.

"Arrest him! Arrest him! He's an anarchist!" he shrieked.

"You arrest him," bellowed Magnus Lamson, "and I'll pull \$50,000 out of your rat's nest before sundown!" Then in a sharp whisper to Clyde: "Talk. Give 'em hell! You've got 'em!"

"Yellow dogs," continued the orator of the day in the calm, unimpassioned tones of absolute conviction. "How many men did you enlist? Seven. Just seven! Too good for the town, so they left. What did you do on Liberty Bonds? Made the worst record in the State per capita. The very worst. What did you do on Y. M. C. A.? The same. And Red Cross? Practically nothing. I am here to tell you cate-

# Have You Ever Owned a Good Fountain Pen?

Avoid writing troubles with the always dependable CONKLIN. Its superiority is proven by the following facts:

- it's the original self-filler and still the leader, with 2,000,000 satisfied users.
- it is the only pen having the famous "Crescent-Filler."
- it has the strongest and simplest filling device.
- it will not leak, blot nor drop ink.
- it will not "balk"—writes at the first stroke.
- it will not scratch—pen action is smooth and easy.
- it will not roll off the desk—"Crescent-Filler" prevents it.
- it's backed by the strongest and broadest guarantee in the fountain pen field.
- there's a Conklin point to suit every style of handwriting.
- sold by leading stationers, jewelers, druggists and department stores at \$2.50, \$3.00, \$4.00, \$5.00 and up. In Canada 50c additional.

Try one today—and you'll never be without your CONKLIN.

## 'Ever-Ready' Radio Blades

'Ever-Ready' blades have stamina. They have the edge on any blade made. In battling with any beard you'll find the "Radio" Blade good for a hard and long campaign of shaving. The steel is tempered to take an extraordinarily keen edge and hold it.

Each 'Ever-Ready' blade is hair-tested and critically examined. Then it is separately sealed in a patented package which protects it from dulling, rust or exposure. Look for the Trade Mark face and guarantee on the carton and each blade.

Adopted by Uncle Sam for Army and Navy. The only popular priced blade with thorough, guaranteed supply in France.

Sold everywhere and at all Canters of the Army and Navy.

The American Safety Razor Co., Inc.  
Brooklyn, New York

## SOMETHING HERE MAY INTEREST YOU

THOSE LITTLE ADVERTISEMENTS ARE LISTED FOR YOUR CONVENIENCE

## Invention—Patent Attorneys

**Wanted New Ideas.** Write For List Of Patent buyers who wish to purchase patents and what to invent with list of inventions wanted. Send sketch for free opinion as to patentability. Write for our four Guide books sent free upon request. Patents advertised free. We want inventors to sell their inventions. Write J. Evans & Co., Patent Attys., 411 Ninth, Washington, D. C.

**Your Idea Wanted.** Patent Your Invention. I'll help you market it. Send for 4 free books with list of patent buyers, hundreds of ideas wanted, etc. Advice free. Patents advertised free. Trade Marks registered. Richard E. Owen, Patent Lawyer, 17 Owen Bldg., Washington, D. C., or 226K West 42d St., New York.

**Patent-Secret.** The Book That Contains More Information of real value to inventors and more than all other patent books combined. Free. Write Larry A. Lacey, 144 Spring St., Washington, D. C. Box 1009.

**Patent What You Invent.** It May Be Valuable. Write me. No attorney's fee until patent is allowed. Balance 1921. "Inventor's Guide," Free. Franklin H. Hough, 130 Loan & Trust Bldg., Washington, D. C.

**Don't Lose Your Rights.** Before Proceeding Further send for our book form "Evidence of Conception" to be signed and witnessed. Book, suggestions and advice free. Lancaster & Allwine, 244 Outing Bldg., Washington, D. C.

**Inventors Should Write For List Of "Needed Inventions."** Patent Buyers and "How to Get Your Patent." Free. Write Randolph & Company, Dept. 14, Washington, D. C.

**Patents On Easy Payments.** Send Sketch For free search. Free book gives ideas and full information. Liberty Bonds accepted. Hines & Co., 140 Loan & Trust Bldg., Washington, D. C.

## Personal

**Cash For Old False Teeth.** Don't Matter If Broken. We pay up to \$100 per set, also cash for old gold, silver, platinum, dental gold and old gold jewelry. Will send cash by express and will hold goods 10 days for sender's approval of our price. Mail to Master Tooth Specialty, 207 N. 5th St., Phila., Pa.

**Wanted—Your Ideas For Photographs, Stories, Etc.** We will accept them in any form—completely revised, torn, well on completion. Big rewards! Make money. Write us Now! Writer's Service, Box 21, Auburn, N. Y.

## Male Help Wanted

**Civil Service Examinations Open The Way To good Government positions.** I can coach you by mail or small cost. Full particulars free to any American citizen of eighteen or over. Write today for booklet C E 302, Earl Hopkins, Washington, D. C.

## High Grade Salesmen

**A Steadily Expanding National Organization** offers high-grade salesmen a chance to establish themselves in free, clean, profitable, permanent business yielding from three to ten thousand dollars annually; opportunity afforded to work into important executive positions. Experience in calling on grocers and butchers very desirable. Applicants must be now employed in a position which they have held for at least one year and able to prove that they have been and are successful in their work; they must be between the ages of 25 and 40 and of such high character that they would have no difficulty in furnishing fidelity bond. Address for full particulars, D. H. K., Toledo Sales Company, Toledo, Ohio.

**Salesman—City Or Traveling.** Experienced Or inexperienced. Send for our valuable free book "A Knight of the Trip," list of openings and full particulars. We propose to open the big picture (\$2,500 to \$10,000 a year). Prepare to spend time to make a success like thousands of our members have done. Our course includes careful training with practical experience. Immediate and unlimited employment wherever desired. Address: Western Office, Dept. 341, Natl. Salesmen's Tr. Assn., Chicago—San Francisco, New York.

**One Of Our Men Made \$7,000 During 1918.** Selling the "Enlarged System of Visual Instruction" to banks and libraries. We assign exclusive territory under permanent contract to high grade educated men with sales factory experience; must also make cash deposit guarantee International & Underwood, Dept. B, 413 Fifth Avenue, N. Y.

**Salesman—Become Independent—Own Your Business.** Experience unnecessary selling our "Enlarged System of Visual Instruction" to banks and libraries. \$100,000 territory. \$25,000 weekly income. \$5,000 profit. Half amount \$25,000 guaranteed steady income from business. (See 1918) deposited Insurance Department. Registration Dept. 1, Newark, N. J.

**I Want A Man Who Can Talk Intelligently** to call on a list of our customers and learn the sales end of our business with a view to advancement; right man can make big money while learning. Write with full particulars. J. M. T., Collier's Weekly, New York City.

**Stickers Pay Many Commissions.** Thousands of varieties and new advertising, utility. Picket samples upon request. St. Louis Rubber Co., 20, St. Louis, Mo.

**Salesmen: Cut Our Plan For Monogramming** Autos, traveling bags, etc. by transfer method. Very large profits. Molineux's Accessories Co., Marshall, Ohio.

## For Office and Desk

**The Ray Adding Machine Saves Time, Money, Labor.** Costs less than the average machine. Only \$25. Adds with speed and accuracy of highest priced machines. Also directly subtracts. Used by U. S. Govt., International Harvester Co., R. & O. Ry. Thousands of professional men everywhere. Handmade desk stand free. Sent anywhere by mail upon request, for 30 days free trial. Ray Company, 3121 Casside Bldg., New York.

**"Modern" Duplicate—A Business Getter.** \$1 Up. 50 to 75 copies from pen, pencil, typewriter. No line of confusion. \$5.00 from use in 30 Days Trial. Free information. Booklet Free. J. D. Durkin & Reeves Co., Philadelphia, Pa.

## For Auto Owners

**Ford Can Burn Half Cost Oil Or Cheapest Gasoline.** Using our 1919 Carburetor. 24 miles per gallon guaranteed. Easy starting. Great power increase. Attach at yourself. Big profits selling for us. 30 days trial. Money back guarantee. Copies will be sent upon request. Air Purifier Carburetor Company, 10 Madison St., Dayton, Ohio.

## Of Interest to Women

**Five Bright, Capable Ladies To Travel.** Domestic and foreign. \$7.00 to \$150.00 per month. Railroad fare paid. Goodrich Drug Company, Dept. 12, Omaha, Neb.

## Business Service

**Incorporate in Arizona.** Least Cost. Greatest Advantages. Incorporation completed in one day. Stock made full paid non-assessable. Clients of over 50,000. Get our book. Standard Incorporating Co., Box 4-K, Phoenix, Ariz.

## Motorcycles

**Save 80% On Your Motorcycle.** Get Our Price list of motor bargains in guaranteed rebuilt machines. \$25 up. 10's Free. Extra special bargains now. Western Supplies Co., 154 Haystack Bldg., Denver, Colo.

## Coins, Stamps, Post Cards

Write for the story of Ben Hur and the "Red Streaks Of Honesty Exist In Everybody." Booklet free. Francis M. Lums, 1001 Nat'l Bank Bldg., Salt Lake City, U. S. A. "Some People Don't Take Us."

## Where to Go to Live

**\$10 Down, \$5 A Month For A Fine Little Farm** of your own. 10 acres, 200 ft. poultry front, truck make good money. Michigan's best County. Near towns, schools, churches. Also larger tracts. Full information free. Postpart. R123, 26 N. Dearborn, Chicago.

**We Will Build You Your Home On A Rich Farm** within twelve miles of Jacksonville and you can pay for it at the rate of \$10 monthly. Write today for full particulars. Jas. Hughes Co., Jacksonville, Florida.

## Agents Wanted

**Sell The S And H Gas Saver—Increases Mileage** on any automobile 2 to 10 miles per gallon. Kills carbon. Popular priced. quickly and easily installed on any car. Big margin for you—irresistible field. A picture article—this valuable item in use. Write today. S and H Bldg. Co., Dept. 1, 44 Palmer Bldg., Minneapolis, Minn.

**Hosiery And Underwear Manufacturer Offers** permanent position supplying regular customers at mill prices. Large monthly income. All expenses paid. Fred C. Parker Mills, 221 So. 12th St., Philadelphia, Pa.

**Good Agents Easily Make \$5 To \$10 Daily Selling** the new Whitely carbon paper and other office novelties for every business. Fine the big profits. Help furnished. H. M. Stamps Co., 11 Vandewater St., New York.

**Agents—Newest Invention "Inklesspen" Makes** every pen a fountain pen. Simple, durable, practical. Millions in use. Large profit. Exclusive territory offered. Sample free. H. M. Stamps Co., Dept. M, 11 Vandewater St., N. Y.

**Agents! Screen Door Check. Stops The Heat** and saves the door. Wonderful summer seller. 100% profit. Demonstrating sample free. Thomas Hfg. Co., 1217 North St., Dayton, Ohio.

**Agents—We Have One Of The Best Paying** agency propositions in the U. S. If you are not making as much as \$100 a month write to Monthly Outlets Co., 10 Bar St., Canton, O.

**Agents Write For Our Sales Plan Ho-Ro-Co** Mechanical chain, soap tray and toilet stand. Easy profits and sales. A Winner. Ho-Ro-Co, 111 Laurel St., St. Louis, Mo.

gorically—categorically"—he paused and his hot eyes defied them, but there wasn't even the suggestion of a "Miaow"—"that up to date you rank at the very bottom of the list in every call of patriotism. And now you have another chance to make a bad record worse. We look to you, led by Mr. Chester Meek, to turn back the War Savings Stamps without a purchase. You'll do it."

"You lie!" piped a voice from a far corner. "I'll take a hundred for the hole you put in Chet's winder."

"I'll raise that fifty!" shouted some one else.

"Come on! Come on!" bellowed Magnus Lamson. "I'm in for two thousand."

"Ye can't," squawked President Meek, foreseeing a sudden diminution in his cash on hand. "One thousand's the limit to any one subscriber."

"Then I'll take a thousand for the old lady and a couple o' more for the girls. That'll make four," retorted the gorilla. "Maybe I'll think of some one else later," he added viciously.

"I'll come up with fifty if you'll bust Chet with another of them turnips!" yelled a wag.

President Meek hastily disappeared, escorted by an appreciative howl. The offers had broken out again when Lamson mounted the turnip cart beside Clyde and motioned for silence.

"Now we're started let's do this in order!" he shouted. "There'll be a meetin' at the Op'ry House to-night at eight o'clock, at which Mr. Clyde will address us on the war and what Switzerville had oughta do about it. Will ye?" he said to Clyde.

"Yes," said the Orator of the Day, and went down and out among the turnips.

The big Swede who had reduced him to wreckage picked him up in his arms and carried him to the nearest doctor, who patched and bandaged and gave strict injunctions against his doing anything but going to bed and staying there until further orders. Notwithstanding which he appeared at 8 p. m. with his nose (never there after so long, earnest, and kingfisherly in a sling, before an audience which packed the Op'ry House to suffocation and for over an hour and a half talked a man should talk whose heart has gone to war while his body is left behind.

And Switzerville woke up.

IN the records of the Loyalty Legion, although it is duly set down that Switzerville "went over the top" with a 5 per cent surplus on the War Savings Stamps, nowhere shall you find as much as a mention of that humble but useful vegetable, the turnip. Such are the bald and uninspired limitations of his story. But—

"What's the matter with Clyde?"

"He's all right!"

"Who's all right?"

"Clyde!"

"What Clyde?"

"Turnip Clyde. Whoo-copee!"

And Ralph Waldo Emerson Clyde—fingering the little gold turnip watch charm which the chairman had just presented him on behalf of the Loyalty Legion in solemn banquet assemblage to do him honor—began: "That's the way it was, boys."

All in words of one syllable.

## FRED COOPER

THERE are three kinds of self-made men. There is the kind that make you wish they had done a better job while they were doing it, and the kind that have done well enough but have got rather soured on the world in the process, and then there is the kind Cooper is.

Cooper was born in McMinnville, Ore., about the time the real-estate agent superseded the red Indian as the only serious obstacle to a peaceful life in the West—that is to say, in 1883. He went down to San Francisco at seventeen, determined to earn a living. At twenty-one he had acquired an education as a commercial artist and saved enough money to buy a ticket East. When he arrived in New York he had no work, no money, and nobody owed him anything. He called on Will Irwin, who was then star-reporting for the "Sun." Cooper had never met Irwin, but Irwin was from San Francisco, so Cooper thought he would do well to call on Irwin and introduce himself. Irwin was in the middle of a two-column story. He looked up from his typewriter, shook hands, heard Cooper's story, and observed: "This town loves a bluff. Give it what it wants. The higher the better," and went on writing.

The next day Cooper looked over the morning papers and decided he would like to make the drawings for the New York Edison Company's advertisements. It looked like an able concern; able to pay, that is. So he made a drawing, and got his friend Hal Marchbanks to introduce him.

"I think you ought to see some of this young man's work," said Marchbanks. "He has been doing some good stuff out on the coast."

"Well," said the advertising manager, giving the lean and hungry Cooper the once over, "we have about all the drawings we can use just now. We aren't in the market."

Cooper, with a tight grip on Irwin's advice of the day before, broke into speech. "I couldn't possibly show you anything for a week," he said. "But I might be able to draw you up something when I'm not so busy."

"It's hardly worth your while," the advertising manager answered, "we are taken care of."

"Oh, I'm too busy to do anything now," Cooper went on. "In about a week I may have time to draw you up something."

The advertising manager was angry. "You needn't bother," he said crisply. "We don't want any drawings."

"I guess you will when you see them," said the imperturbable Cooper.

And having followed Irwin's advice to the extent of making his prospective employer sore as a boil, Cooper waited a week and then took the drawing down to him. The advertising manager was still mad, but he liked Cooper's stuff so much that he gave him all the work he could do.

Cooper hurried off to thank Irwin for his good advice and tell him his luck. Irwin listened, round-eyed. "You mean to say the bluff worked?" he asked.

"You bet," said Cooper.

"Gosh!" said Irwin. "Who'd a thought it?"

Since then Cooper has done about every kind of drawing you will find in a magazine. His lower-case initials fgc have become famous. For one thing, they are always signed to bold, original work. For another, he is always varying them with some implish flourish, changing the lower loop of the g, with an extra stroke of his pen into the body of a man, and adding an impudent but pertinent phrase for the man to speak.

Cooper delights in hand lettering, and does it with the knowledge of an expert and the enthusiasm of an artist. One of his first posters for the Government, the one that was done wholly in lower case and began with the word "food," must be familiar to every citizen in the United States.

Sometimes COLLIER'S is in luck and Cooper does a full-page cartoon. Sometimes it is a series of small cartoons to illustrate an article. Sometimes it's a piece of lettering fine enough to make a cover out of. The title "Collier's" across the top of the cover of this issue is a piece of Cooper's hand lettering.

COLLIER'S has been giving Cooper commissions for a dozen years, but nobody can ever guess what will be sent over from his studio. As a man Cooper is always the same—smiling cheerful, and bubbling with ideas—you'd never think he was an artist.

## COLLIER'S CLASSIFIED

Tells of many opportunities known to be of distinct merit.

These advertisements are small only because of the fact that COLLIER'S does not accept or publish big advertisements on this page, thus giving every advertiser the same chance his neighbor has to attract your attention.

The advertisements, in most instances, tell only a part of the story; letters, sometimes interesting booklets and other "literature" being necessary to complete the presentation of facts.

The firms here represented will gladly and promptly answer your inquiries, and send you full details of what they have to offer.

## Shur-on EYEGLASSES AND SPECTACLES

### A Real Economy

**YOU** may be willing to pay more for the same comfort, style and optical correctness that Shur-ons give, but why should you, when Shur-ons combine all these qualities at reasonable cost?

The genuine, made only by Kirstein, bear the name Shur-on (no Shurtens, if shirk-imined) in the bridge. Look for it at your dealer's.

**E. KIRSTEIN SONS CO.**  
114 Anderson Street, Rochester, N. Y.  
Shur-on-rimmed and rimless Shur-on eyeglasses and spectacles. Established 1884.

## A Snapshot of Life in Paris

AN American girl who last summer exchanged the peaceful charms of a New York office for hardships of war-time Paris writes to a girl friend in this country:

"The other day we had a most awful fog, one of the kind that just comes down like a blanket and you can't see more than four or five feet from you. I was tripping along to the office (a little late, I must admit), and just before I got to the Seine, which I have the pleasure of crossing every morning, I was held up with a lot of other people in a congestion of traffic. There were two big army camions standing still, joined together by a rope. The rope was slack on the ground and the crowd was passing over it. When the time came for little me to step over it the old thing tightened up, the first truck started up, and the valuable steno of the Red Cross was thrown in the horrid mud right in front of the second truck, whose driver, of course, was helpless, as he was being pulled along slowly but surely by the first machine. Well, I sure did let out a few squeals (no more than squeals—you know me, how reserved I am), and I lay there fascinated, watching the wheels of the first truck receding from my sight in the fog, and figuring just where the wheels of the second would strike on my leg, when I was grabbed by the back of the coat and dragged out like a drowned kitten. When I cleared the mud out of my eyes there was the big, comfortable Frenchman who had saved me holding my hat and smiling and bowing. Very few people had seen it, because, as I say, the fog just closed in around everything.

"THE funniest part of this funny accident was what happened next. The Frenchman and I started back along the way to my hotel, and I don't think we had gone more than fifty feet when he had kissed me on the cheek in the fog (also in the mud, as there was some mud on my face) and insisted that I 'embrace' him, which, in my gratitude at being saved, I did. He had a lovely square black beard which just lay gently on his plump chest. I kissed him on the cheek just underneath his black eye above where the black beard began. It was a great sensation, as the fog had left a sort of dew on his beard, and it mixed with the mud on my face and made it lovely and moist and streaky. He asked me my name and was overjoyed to find that it was 'Madeline.' He almost led me two or three times on the way back to the hotel into little restaurant cafés to get something to brace myself avec. I told him I had to hurry back to the office, and he replied that I had a good excuse—had I not saved myself this morning? I thought that was a typically French way of putting it. I roused myself to talk a little French to him, and he gave me his name and address. He was in uniform, a member of the staff of the Ministère de la Guerre.

"WELL, if I have received one note from that man I have received six or seven, day after day. Of course he is a nice, comfortable, fat papa, but he thinks it's wonderful to have a little flirtation on the way to work in the morning, or after six, and I have to dodge in and out doors at noon and at night to escape him. 'He means me no harm,' he says in the last 'billet doux,' but he would so like to have a nice little 'amie' like me to take a little promenade with in the morning or sip the vin rouge with on the boulevard at six o'clock.

"I am keeping the letters in my archives of the war. They are good. He writes them all out in the labored longhand during office hours, and if all the staff of the French War Office do the same, well—"

Doesn't it sound—we quote the recipient of the letter—as if she were "having the time of her life"?

# GEM DAMASKEENE RAZOR Khaki Service Outfit

"Over there" in the trenches and training grounds—"Over here" in the big camps—everywhere—most of our boys are shaving with the **GEM—New Khaki Service Outfit**. Strong enough to stand the hardest service, but marvelously light, neat, compact—fits in anywhere—makes shaving easier, quicker, more comfortable.

**Note**—The indispensable stropping handle is included in every set—keeps blades smooth, sharp—doubles their life—saves expense of new blades. Blades in sealed waxed paper wrapped package, repelling any attack of rust or dust—no conditions of heat, cold or dampness affect them.

**\$1.00** without Trench mirror

Gem Military Outfit includes razor complete with seven Gem Damaskeene Blades and Stropping Handle.

**\$1.35** with Trench mirror

Ask for the GEM at your dealer, or the Post Exchange, Camp Canteen, or Quartermaster's Depot.

# Big Increase in Porcelain Efficiency

## *The Romance of Experiment 3450*

**T**EN YEARS of constant research and experiment—day after day of unremitting laboratory work—with the laboratory furnaces glowing night after night!

Thousands of different combinations and mixtures of materials gathered from all over the world!

Each carefully recorded formula tested in the laboratory furnaces under different degrees of heat!

Steady improvement in spark plug porcelains all this time—but no great gain upon the increasingly severe requirements of new developments in gasoline motors!

3449 different experiments—until—finally—the startling results of Experiment 3450 showed a long stride ahead in all the essential requirements for spark plug insulators.

Champion 3450 porcelain is so far ahead of any other insulator that it stands today clearly and distinctly in a class by itself—unchallenged.

Literally, Experiment 3450 has developed undreamed-of qualities in porcelain for spark plug insulation.

Even the startling qualities recently developed in steel, by scientific heat treating, are no more romantic.

The microscopic views below show a great similarity in the recent development of new superior qualities in steel and the development of this new superior Champion 3450 porcelain.

So Champion Dependability takes on new meaning—for no spark plug can be more dependable than its insulator.

# Takes out all glare—Legal everywhere

## Gives you 500 ft. range

**BOTH** these cars are equipped with Noviol (yellow-tint) Conaphores. This scientific headlight glass is legal everywhere because it controls the light within the law's requirements, without diffusion and without glare.

The photograph shows the two cars as they meet at a dangerous turn on a dark road.

No confusing glare strikes the eyes of either driver. Both pairs of headlights direct the light where it is most effective—full on the road. Both drivers can see perfectly.

The main shafts of light illuminate every inch of the dangerous going for 500 feet ahead. Ample side-light shows the treacherous ditch at one side of the road, and the sharp, rocky turn at the other. Possibility of an accident is reduced to the absolute minimum.

### Signals "Safety" to others

The yellow-tint Noviol Conaphore is a recognized signal of safety on all highways. The instant a driver sees the yellow-tint Noviol lights he knows they will not blind him—and feels

perfectly safe. The soft, mellow light is easy on his eyes, and helps him to see past the oncoming car.

The Conaphore has a smooth front surface. Easily cleaned. Does not clog with mud or dust

Manufactured by the World's Largest Makers of Technical Glass

# CONAPHORE

No Glare -- Range 500 feet -- Pierces Fog and Dust

### Reasons for Conaphore efficiency

Four major advantages make the Conaphore the ideal headlight glass under all driving conditions.

1. **Kills all glare.** The Conaphore uses all the light, but patented corrugations control it within legal limits. Height of beam is not more than 42 inches from the road.

2. **Range 500 feet.** Corrugations throw a shaft of strong driving light along the road for 500 feet ahead of the car.

3. **Pierces fog and dust.** Projects a beam that is easy for the eye to follow through fog and dust. This is because yellow-tint Noviol Glass (patented) absorbs the blue and violet light waves, thus minimizing diffusion and "back-glare."

4. **Ample side-light.** Cylinders fan strong rays out over both roadsides. Light spreads 25 feet at each side of the car 75 feet ahead.

**Help make highways safe.** Equip your car with Conaphores. They safeguard you, and make for the safety of others. Legal everywhere. Dimming unnecessary. Made in both Noviol and clear glass. Easy to install. Sizes to fit all cars. Order from your dealer; if he has not received his supply, write us.

# “How I Save 51% on Typewriters”

## An Expert Buyer's Statement

“Formerly the typewriters used in our office were priced at \$100 each. Now we buy Oliver's at \$49. This saving of half means a great deal to us because we use so many machines. If any typewriter is worth \$100, it is this Oliver Nine, which we buy direct from the maker. After using Oliver's we will never go back to \$100 machines. It is pure waste.”

### YOU Can save as Much

The Oliver Typewriter Company now sells direct. It has discarded old and wasteful ways. We no longer need an expensive force of 15,000 salesmen and agents or costly offices in 50 cities. These, and other expensive practices, amounted to \$51, which the purchaser had to pay. Our new way saves this \$51, and so we sell brand new Oliver Nines for \$49.

This is the exact \$100 machine—not a change has been made. Such is our \$2,000,000 guarantee.

The entire facilities of The Oliver Typewriter Company are devoted exclusively to the manufacture and distribution of Oliver Typewriters.

### Free Trial

Merely mail us the coupon and we will send you an Oliver for five days' free trial. Try it at your office or at home. If you decide to keep it, pay us at the rate of

\$3 per month. If you return it, we will gladly refund the transportation charges. Old machines are accepted in exchange at fair valuation.

We hope to be able to maintain the \$49 price. But, if the cost of materials and labor continues to go up, we may be forced to increase this price. We do not wish to. We do not expect to. But we advise you to act now to be certain of getting your Oliver Nine at \$49.

The Oliver Nine has the standard keyboard. So any operator may turn to it without the slightest hesitation. And it has a dozen other features which attract. It is greatly simplified in construction, having far fewer parts. It is noted for its freedom from trouble, great durability and easy operation.

### Why Be Wasteful?

Whether you use 1 typewriter or 100, this new Oliver plan saves you.

### PREFERRED BY

U. S. Steel Corporation	Montgomery Ward & Co.	Baldwin Locomotive Works

# A New Factory Built by a Revolution in Writing

*The* fine, deliberate writing of past generations is no more. And the hurried scrawls and pot-hooks, which we of busy to-day call handwriting, grow less legible with each year.

But in prompt American fashion the solution comes with the problem. Already one hundred and fifty thousand men and women have abandoned the pen for Corona, the Personal Writing Machine. And this is interesting not merely because it is another step forward by another American industry—but rather because it is evidence of a revolution in the writing habits of a nation.

Because it meets your twentieth-century needs, Corona has grown out of its first little loft, has overflowed its next factory, and now has taken a new home in this big modern plant of 3-acre floor space. The reasons are obvious when you know the machine.

Its light weight and ready portability make Corona instantly available, anywhere—at the office, at home, on train or ship or afield. It's so simple to operate that you can dispense with a third party to private correspondence—can put your personal or business affairs into legible, business-like, permanent form, whenever convenient. And Corona stands the grind of heavy daily service, for all its 6-pound compactness.

*Changing the custom of years is a big job for a little machine—but Corona bids fair to accomplish it.*

## THE GUNS ARE IN THE OPEN

A French 140-mm. (5 1-2 inch) gun firing over a wood. Overhead is a "saucisse"—an observation balloon—whose pilot, looking over the German lines, gives the range by wireless to the gunners below.

HAS the great German offensive in the north of France been a surprise for the Allies? The Allied General Staff foresaw it. The event did not catch them unprepared. But we cannot aver that there was no surprise in the violence of the attack, in its suddenness, in the new means employed by the Germans. Perhaps there may also have been some astonishment because of the sector chosen for the offensive. And yet the German press had been announcing the offensive for several weeks. The most authoritative military critics had been asserting that the Germans would break through the elaborate system of trench defenses and resume the old-fashioned war in the open of which (according to them) the Germans were "passed masters."

Since the offensive started, the German press has been unwearied in its eulogy of Ludendorff's genius. It is claimed that Ludendorff was able to concentrate secretly an overwhelming number of divisions at the points chosen for the offensive, and that the Allies were in the dark until the very day the battle began. These divisions are said to have been gathered in the Ardennes and in the region of the Sambre where they were carefully trained for several months in the new methods of attack. They are said to have been brought by autotricks and by night marches several days before March 21 to the centers from which they were to storm the British lines.

#### Anticipating America's Aid

THE Allied general staffs were not ignorant of the return to the western front during several months of dozens of divisions that had been occupied for more than three years in the East. They knew that the armies of the Crown Princes of Germany and Bavaria were growing steadily in numbers and in artillery. It seems impossible, moreover, that the Allied chiefs had not been informed of special concentrations of troops and of the movements of the last few days to the centers from which the offensive was to begin. Our air service has always been tireless and constant in its reconnoitering activity—and armies have other means of knowing what is going on behind enemy lines. Aside from the movements of troops, the Allied general staffs knew also that in addition to an important increase in heavy artillery, the German divisions trained for the spring offensive were provided with a special mobile artillery, manned and transported by the infantry.

And with this knowledge, our chiefs certainly realized that, if the offensive was undertaken at all, it would be pushed with the greatest violence and without regard to sacrifice in view of a decisive victory. Everything indicated this: the failure of the pacifist maneuvers undertaken by Germany in the Occidental Allied countries, which remained united in the implacable will to conquer in spite of the methods of corruption employed by Germany; the economic and food crises, which were growing worse from day to day in the Central Empires; the bitter disillusionment concerning revictualment at the expense of Russia; the imperative necessity of obtaining from the German people, starving though satiated with victories, a last moral effort, capable of forcing

General Mahebert, Governor of the Invalides, was a professor at the Military School before the war. He was on the staff of General Joffre, and was wounded at the Marne. He is a recognized authority on tactics and strategy and is the military critic of the Paris "Temps"

the Allies to conclude finally the kind of a peace which would prevent Germany from ruin.

In the councils of the Allies, then, there could be uncertainty only on two points: the date and the place of the German offensive.

Berlin newspapers assert that the date of March 21 was decided upon long in advance and that Hindenburg and Ludendorff gave the signal at the exact hour at which they had foreseen that everything would be ready. (The fine weather was probably also arranged for in advance, for it certainly helped their plans!) But since the Allies appeared to have resigned themselves to leave the initiative to the Germans, the question of date mattered little. A discussion of the reasons which dictated this policy cannot be undertaken at the present moment. One of them at least was very logical: to await the effect-

enemy's reason for not waiting. The German General Staff preferred to take the offensive once more before the American aid could make itself felt. A new offensive had become necessary to clear up a political and military situation which was becoming menacing to the Germans. Whatever information may have reached the Germans concerning the military situation in France on the other side of the lines, it was certainly of a nature to impose upon them the policy of going ahead, immediately and without counting the cost.

#### The Weakest Spot

HINDENBURG and Ludendorff had, then, the choice of date and place. The date once decided upon, against which sector could the attack be directed with best chances of success?

When we study the German strategy since 1914, we must acknowledge that the Germans have always known how to put their finger upon the weak spot in the armor of their adversaries and that they have struck that spot without hesitation and with all their strength with the one idea of obtaining a decisive victory. Thus it was that in 1914 the principal attack was made across Belgium against the northern frontier of France, which was poorly fortified, turning at the same time the left of the French armies and the fortified regions from Verdun to Toul. In 1915, as a result of the failure to pass the Marne and the Yser, the Germans were compelled to remain on the defensive on the western front. The Russian menace was pressing the Central Empires hard, and the Imperial General Staff turned its attention to the East. Poland was recognized to be the weak spot of the Russian armies, and all the forces that could be mustered were used to stop the famous "steam roller." Then, to go to the aid of Turkey, Serbia was crushed. In 1916 the Verdun attack was probably inspired by the fear of a French offensive starting from Verdun and the Woevre against the region of Briey and the Lorraine mineral deposits, which were indispensable to the German war-material factories. During the summer of 1916, on the Somme, the Carso and in Galicia, the initiative passed to the Entente, and Rumania believed the moment was favorable for entering the war. Once again the Imperial General Staff saw a weak spot. They knew that Russia, undermined by corruption and on the eve of a revolution, was at the end of her rope. Rumania was invaded and put hors de combat. The Allies, in the face of Russian weakness and treason, were powerless to aid her.

Finally in 1917, when the retreat from the Somme and the intervention of the United States seemed to indicate that Germany was weakening and allowed us to believe in a certain victory for the Allies, German strategy returned vigorously to the weak point offered by "Sovietized" Russia, and by corruption much more than by arms. Germany imposed upon the Bolsheviks the ignominy of a separate peace. And immediately with the divisions that were withdrawn without delay from the Russian front, in spite of the obligations of the armistice, aid was given to the Austrians.

After the British rout the French saved the day at Noyon, and the Anglo-French front remained intact

tive participation of the Americans. We may say, however, that passive waiting is always regrettable, because it leaves to an adversary, who is bold and convinced of his force, the benefit of a surprise, at an hour and place which he has been free to choose.

Our reason for waiting was without doubt the

In several days a German army, which was not larger than a hundred and fifty thousand men, broke the Italian line at the weak point, and brought about the debacle of the victorious armies of the Isonzo.

This vigorous offensive policy, resulting in great military successes everywhere except on the French front, has sustained the morale of the Germans for more than three years, and has induced them to endure the tortures of the stomach through the hope of a supreme and decisive victory. And it will be one of the astonishing facts of history that this superior intelligence in strategy, coupled with a military organization which has been able, in the course of four years, to get the better of each adversary singly, has achieved only Pyrrhic victories, and cannot prevent the final defeat of Germany.

### The Unconquerable Coalition

IN the present offensive we see reproduced the same intelligence in strategy, the same success in tactics, the same inability to obtain a decisive victory.

Among the German chiefs there was uncertainty and hesitation in deciding upon the weak spot that would lend itself to a new and successful offensive and to the forcing of a decision. To renew the attack against Italy was undoubtedly a temptation. The breaking of the lines of the Piave would have led the Germans into the rich plain of Lombardy and to Genoa: if Italy were cut in two, she could be forced into a separate peace. A victory over Italy would have an unquestioned moral effect, and would be extremely useful by securing Italian cereals and giving to submarines a powerful base in the Mediterranean. But the coalition Great Britain-France-United States would remain intact and unconquerable.

To finish the war in a whirlwind and to force the Allies to recognize the invincibility of Germany and to resign themselves to a peace of mutual concessions, it was necessary to destroy the Occidental coalition by breaking the Anglo-French front, before the arrival of the American army, in such a manner that it could not be reestablished.

### Ludendorff Strikes

HAVING once decided to attack where alone victory could be found, Ludendorff sought for the weak spot of the western front. The arrangement of the British and French armies pointed out to him this weak spot. He knew that the British army had recently taken over the lines up to the Oise, and that the Oise thus separated the front into two great sectors, the British army occupying the one on the left between the Oise and the Channel. The British had remained a long time on a front much more limited, first as far as Arras, then as far as Saint-Quentin, and in the last operations in Flanders they were still supported by a French army. The regular increase in the size of the British army and its progress in fighting value had permitted little by little the diminution of the aid that the French General Staff was lending generously to its ally, and it is thus that in February last the French army was able to narrow its front to the lines of the Soissonnais, Champagne, Lorraine, and Alsace. Ludendorff knew all this, and also that unity of com-

mand had not been realized on the western front because of the unfortunate pride of certain Englishmen. The Inter-Allied Council of Versailles, established after the Italian defeat, was succeeding in coordinating the operations under the leadership of General Foch: there was the beginning of a real offense between the English and the French General Staffs. But recent incidents, such as the affair of Cambrai, had shown that the British intended to keep their independence of action in certain circumstances. Do we not remember the British tanks which swept over the Hindenburg line before Cambrai and brought the Tommies to the gates of the city—a success unfortunately not sustained by reserves? It was a sporting chance, an experience which ended in a German counteroffensive very costly for the British. The surprise would have become, on the contrary, disastrous for the Germans if it had been exploited in concert with the French General Staff. But the French had not been notified beforehand that the attack was to be made.

After Cambrai the British army had its own front, wholly autonomous, in Picardy and in Flanders. The little Belgian army was faithfully guarding the Yser. The liaison with the French army was effected on the Oise, between Noyon and Tergnier. The left wing of the French army held the northern slopes of the hills of Saint-Gobain, north of the Aisne. The weak spot was at the junction of the two Allied armies, in the region of Saint-Quentin, classic battle field. But, for Ludendorff, the weak point was especially the British army, which he believed to be inferior to the French. These considerations led him to strike it. He saw on the map the possibility of repeating, in almost the same proportions, the maneuver of 1914 in Belgium.

In this region of the north of France, between the valley of the Oise and the Channel, the British army was spread out from the Yser to the Oise in an oblique line of which the pivot was in the Pas de Calais, and whose future advance was toward the north, with the right wing on the Oise, to liberate, in conjunction with an advance of the French army, the invaded portions of France and Belgium. This army, with revictualment bases in the ports of Havre, Calais, Boulogne, and Dunkirk, was, in fact, backed against the sea. Were it overthrown by a powerful attack, were it compelled to bend, to retreat, it ran the danger of being thrown into the sea, and that under conditions very serious if the victorious attack crowded it into the narrow triangle of the Artois and Belgian Flanders, north of the Somme against Calais and Boulogne. But it was necessary to forestall the intervention of the French armies going to the aid of the British. The new arrangement of the Allied lines, after the first period of the German offensive, showed how the

attack and force the lines of Arras and complete the encirclement of the British center—what a conception! Even if the British were to re-form and propose a desperate resistance north of the Somme, the disintegration of the British army would be such that the German General Staff could hope, by using all its reserves, to push the British to the sea. This was the plan, with its incalculable consequences, of the German statesmen and military leaders.

### A Solid Anglo-French Front

INDEED, we have reason to believe that the present offensive intended to carry out this strategic conception. But it has not had the "kolossal" consequences that were hoped for. Begun on March 21 by an impetuous attack on a front of sixty kilometers, between Croisilles and the Oise, the offensive did push back the British right wing, first south of the Somme, then in the direction of Montdidier. In several days the Germans won back the ground abandoned a year ago by Hindenburg. There was a moment, on March 24 and 25, when the German General Staff was able to believe that it had indeed found its way between the two armies in the district between Roye and Noyon. For the retreat of the Fifth British Army took a wrong direction toward Montdidier, leaving uncovered the way to Compiègne by Noyon and an undefended strip up to Lassigny. Von Hutier, commanding the right of the group of armies of the German Crown Prince, pushed in here immediately, to form the defensive line planned for against the French left wing. But the French General Staff was watching. Warned immediately of the violence of the attack and of the retreat of the British right, Generals Pétain and Foch threw on the bank of the Oise infantry divisions brought in autotricks and a cavalry division. These troops took their position on the heights north of Noyon. The battle was engaged so brusquely that the autotricks were landing the poison within rifle range, and the infantry entered the struggle almost without the support of artillery.

This rapid movement surprised the Germans. They attacked to the limit of their reserves with the advantage of numerical superiority. But the defense of the French divisions was more than heroic: it was intelligent. The soldiers, fully as much as their leaders, understood the value of the sacrifice they were making.

Photograph taken in the recent offensive of a battery of French "howitzers" massed along a trench to meet an attack

This group shows that German strategy failed to separate the Tommies from the Poilus

French divisions were obliged to cross the Oise and to assume the protection of the region between the Oise and Amiens by Montdidier to menace on the flank or behind the advancing Germans.

On the map this strategy appeared splendid. To overthrow and crush the British right wing by a very powerful effort in the direction of Saint-Quentin-Montdidier, to interpose immediately a defensive line along the Oise as far as Compiègne, to prevent the intervention of the French, and then with the principal attacking mass, fighting in the open, to continue driving back the British right by Amiens and Doullens, while another mass would

The British recovered themselves, and the liaison was maintained.

On April 1, if the strategic plan of the Germans had been realized, we should have seen the mass of their armies crossing the Somme between Piegny and Corbie, and the Ancre between Albert and Arras, and a decisive battle engaged in the neighborhood of Doullens, while the French armies would be hurling themselves in vain against the Crown Prince's defensive line between Breteuil and Noyon. But this did not happen. The Germans were holding with great difficulty Noyon, Roye, Montdidier, Albert. Amiens was not taken. They had failed before Arras. The Anglo-French front remained solid.

The first phase ended on April 1. None would deny the tactical success of the Germans, but their strategical failure was equally evident. The British army was neither outflanked nor disorganized. The French army remained in liaison with the English army and successfully resisted the Germans.

When the battle began again on the night of April 4, the Germans could no longer hope for more than to enlarge their tactical success. They could still fight for Amiens. They could still try to threaten Paris. They could undertake a new offensive against Calais, or make

(Continued on page 21)

**TOP**—Going and coming. A detachment of French troops hurrying up to the firing line meet and pass a squad of German prisoners on their way to the rear. A second squad of newly captured prisoners is seen approaching on the road ahead of them.

**CENTER**—The fearful strain of uninterrupted fighting is plainly evidenced in the attitudes of these German prisoners. The man on the right, utterly exhausted, has fallen asleep where he sits. Beside him is another German, finding what rest he can on the pile of bare planks. The helmet of a third exhausted man may be seen at the top of the pile on the left.

**BOTTOM**—The war began in the open. The Battle of the Marne was fought behind shallow breastworks, hastily thrown up, and from the shelter of trees, bushes, and walls. Then came the retreat to the Aisne, where the German army dug itself in. For three years the armies on the western front faced each other from the shelter of elaborate earthwork systems, each side launching an attack only after terrific artillery preparation had blasted the enemy's trenches to pieces. Several attempts were made to break the deadlock and carry the fighting once more into the open. The French tried it in the Champagne district, the British tried it on the Somme, the Germans tried it at Verdun. All failed. Now the deadlock is broken at last. The war of movement has come. Here is a French front-line trench along the present battle front. It is a shallow ditch, just such a one as might have sheltered Joffre's men when they turned back Von Kluck's hosts at the Marne.

**TOP** The French cavalry has long been waiting its chance to fight in the open. Here is a company of dragoons in the Oise district on the way to the front. Notice the long, wicked-looking lances they are carrying. In the hands of a cavalryman the lance is a much deadlier weapon than either the rifle or the saber.

**CENTER**—A German trench in the Oise district. The start of the great German offensive was marked by a reckless disregard of human life hitherto unparalleled even in the annals of the German general staff. Men were sent by thousands to certain slaughter. In an attempt to cross the Crozat Canal, in the Oise region, where this picture was taken, the enemy launched seventeen distinct assaults in close formation against a storm of machine-gun bullets, until the men in the last waves had to advance over a roadway of corpses. This photograph shows an enemy firing trench after a counterattack. Two bodies may be seen lying in the trench, while the litter of clothing and accouterments that cover the ground is evidence of the terrific nature of the struggle.

**BOTTOM**—A wonderful bit of camouflage along a road in the present battle district. Two French 75-mm. guns, mounted upon auto trucks, have been placed in position before a row of ruined farm buildings. The wheels and bodies of the machines have been screened beneath a covering of planks and broken boxes, while the guns themselves have been so cleverly painted they are scarcely distinguishable even in the photograph. What chance would an enemy airplane observer have of distinguishing them?

**SUPERCILIOUSNESS** is not so safe after all, because a person who forms the habit of wearing it may some day find that his lower lip has become permanently projected beyond the upper so that he can't get it back, and must go through life looking like the King of Spain. This was to be the culmination of Florence Atwater's still plastic profile, as foretold by her mother, if Florence didn't change her way of thinking; and upon Florence's observing dreamily that the King of Spain was an awfully handsome man, Mrs. Atwater retorted: "But not for a girl!" She meant, of course, that a girl who looked too much like the King of Spain would not be handsome, and her daughter understood without difficulty; nevertheless, with an air of happy refutation, made the gratuitous statement:

"Why, he's my Very Ideal! I'd marry him to-morrow!"

Mrs. Atwater paused in her darning, letting the stocking droop in her work-basket. "Not at barely thirteen, would you?" she said. "It seems to me you're just a shade too young to be marrying a man who's already got a wife and several children. Where did you pick up that 'I'd-marry-him-to-morrow,' Florence?"

"Oh, I hear that everywhere!" returned the damsel lightly. "Everybody says things like that. I heard Aunt Julia say it. I heard Kitty Silver say it." "About the King of Spain?" Mrs. Atwater inquired.

"I don't know who they were saying it about," said Florence, "but they were saying it. I don't mean they were saying it together; I heard one say it one time and the other say it some other time. I think Kitty Silver was saying it about some colored man. She probably wouldn't want to marry any white man; at least I don't expect she would. She's been married to a couple of colored men, anyhow; and she was married twice to one of 'em, and the other one died in between. Anyhow, that's what she told me. She weighed over two hundred pounds, the first time she was married, and she weighed over two hundred and seventy the last time she was married to the first one over again, but she says she don't know how much she weighed when she was married to the one in between. She says she never got weighed all the time she was married to that one. Did Kitty Silver ever tell you that, mamma?"

"Yes, often!" Mrs. Atwater replied. "I don't think it's very entertaining; and that's not what we were talking about. I was trying to tell you—"

"I know," Florence interrupted. "You said I'd get my face so's my underlip wouldn't go back where it ought to if I didn't quit turning up my nose at people I think are beneath contempt. I guess the best thing would be just to feel that way without letting on by my face, and then there wouldn't be any danger."

"No," said Mrs. Atwater. "That's not what I meant. You mustn't let your feelings get their nose turned up, or their underlip out, either, because feelings can grow warped just as well as—"

**BUT** her remarks had already caused her daughter to follow a trail of thought somewhat divergent from the main road along which the mother feebly struggled to progress. "Mamma," said Florence brightly, "do you believe it's true if a person swal-

lows an apple seed or a lemon seed or a watermelon seed, for instance, do you think they'd have a tree grow up inside of 'em? Henry Rooter said it would, yesterday."

Mrs. Atwater looked a little anxious. "Did you swallow some sort of seed?" she asked.

"It was only some grape seeds, mamma; and you needn't think I got to take anything for it, because I've swallowed a million, I guess, in my time, and—"

for she had indeed known moments of apprehension concerning the grape seeds. "Nothing but an old thing—what he is!" she repeated inaudibly.

"Florence," said Mrs. Atwater, "don't you want to slip over to grandpa's and ask Aunt Julia if she has a number three darning needle? And don't forget not to look supercilious when you meet people on the way. Even your grandfather has been noticing it, and was the one that spoke of it to me. Don't forget!"

"Yes'm." And Florence went out of the house somewhat moodily. Afternoon sunshine and the sight of the shady street restored her, however; and she opened the picket gate and stepped forth upon the sidewalk with a fair renewal of her chosen manner toward the public, though just at that moment no public was in sight. Miss Atwater's underlip resumed the position for which her mother had predicted that regal though Spanish fixity, and her eyebrows and nose were all three perceptibly elevated. At the same time her eyelids were half lowered, and the corners of her mouth somewhat deepened, facial maneuvers which added a veiled mirth to the superciliousness already accomplished, so that this well-dressed child strolled down the shady sidewalk wearing an expression not merely of high-bred contempt but also mysteriously derisory. It was an expression which should have put a pedestrian (no matter of what fancied status) in his place, and it seems a pity that the long street before her appeared to be empty of all human life. No one even so much as glanced from a window of any of the comfortable houses, set back at the end of their "front walks" and basking amid pleasant lawns—for, naturally, this was the "best residence street" in the town, since all the Atwaters and other relatives of Florence dwelt thereon.

"I believe the one to this side's a he," she said

"In your time?" her mother repeated, seemingly mystified.

"Yes, and so have you and papa," Florence went on. "I've seen you when you ate grapes. Henry said maybe not, about grapes, because I told him all what I've just been telling you, mamma, how I must of swallowed a million, in my time, and he said grape seeds weren't big enough to get a good hold, but he said if I was to swallow an apple seed a tree would start up, and in a year or two, maybe, it would grow up so't I couldn't get my mouth shut on account the branches and leaves."

"Nonsense!"

"Henry said another boy told him, but he said you could ask anybody and they'd tell you it was true. Henry said this boy that told him's uncle died of it when he was eleven years old, and this boy knew a grown woman that was pretty sick from it right now. I expect Henry wasn't telling such a falsehood about it, mamma, but prob'ly this boy did, because I didn't believe it for a minute! Henry Rooter says he never told a lie yet, in his life, mamma, and he wasn't going to begin now." She paused for a moment, then added thoughtfully: "I don't believe a word he says!"

She continued to meditate disapprovingly upon Henry Rooter. "Old thing!" she murmured gloomily,

would meet. He was a stranger—that is, he was unknown to Florence—and he was well dressed, a person who might well be noticed; while his appearance of age (prob'ly at least forty or sixty or something) indicated that he might have sense enough to be interested in other interesting persons.

An extraordinary change took place upon the surface of Florence Atwater: all superciliousness and derision of the world vanished; her eyes opened wide, and into them came a look at once far-away and intently fixed. Also, a frown of concentration appeared upon her brow, and her lips moved silently, but with rapidity, as if she repeated to herself something of almost tragic import. Florence had recently read a newspaper account of the earlier struggles of a now successful actress; how, as a girl, this unmitigable genius went about the streets repeating the lines of various rôles to herself—constantly rehearsing, in fact, upon the public thoroughfares, so carried away was she by her intended profession and so determined to be famous. This was what Florence was doing now, except that she was not rehearsing any rôle in particular, and the words formed by her lips were neither sequential nor consequential, being, in fact, the following: "Oh, the darkness . . . never, never, never! . . . you couldn't

... he shouldn't ... Ah, mother! ... Where the river swings so slowly ... Ah, no!" Nevertheless, she was doing all she could for the elderly stranger, and as they came closer, encountered, and passed on, she had the definite impression that he did indeed take her to be a struggling young actress who would some day be famous—and then he might see her on a night of triumph and recognize her as the girl he had passed on the street, that day, so long ago— But by this time the episode was concluded; the footsteps of him for whom she was performing had become inaudible behind her, and she began to forget him; which was as well, since he went out of her life then, and the two never met again. The struggling young actress disappeared, and the previous derisory superciliousness was resumed. It became notably emphasized as a boy of her own age emerged to her view from the "side yard" of a house at the next corner.

The boy caught sight of Florence in plenty of time to observe this striking change in her manner, all too obviously produced by her sensations at sight of himself; and after staring at her for a moment, he allowed his own expression to become one of pain. Then he slowly swung about, as if to return into that side-yard obscurity whence he had come; making clear by this pantomime that he reciprocally found the sight of her insufferable. In truth, he did; for he was not only her neighbor but her first cousin as well, and a short month older, though taller than she—tall beyond his years, taller than need be, in fact, and still in knickerbockers. However, his parents may not have been mistaken in the matter, for it was plain that he looked as well in knickerbockers as he could have looked in anything. He had no visible beauty, though of course it was possible to hope for him that by the time he reached manhood he would be more tightly put together than he seemed at present; and indeed he himself appeared to have some consciousness of insecurity in the fastenings of his members, for it was his habit (observable even now as he turned to avoid Miss Atwater) to haul at himself, to sag and hitch about inside his clothes, and to corkscrew his neck against the swathing of his collar. And yet there were times, as the most affectionate of his aunts had remarked, when, for a moment or so, he appeared to be almost knowing; and, seeing him walking before her, she had almost taken him for a young man; and sometimes he said something in a settled kind of way that was almost adult. This fondest aunt went on to add, however, that of course the next minute after one of these fleeting spells he was sure to be overtaken by his more accustomed moods, and his eye would again glow with the fundamental aimlessness natural to his years. In brief, he was at the age when he spent most of his time changing his mind about things, or, rather, when his mind spent most of its time changing him about things—and this was what happened now.

AFTER turning his back on the hateful sight well known to him as his cousin Florence at her freshest, he turned again, came forth from his place of residence, and, joining her upon the pavement, walked beside her, accompanying her without greeting or inquiry. His expression of pain, indicating her insufferableness, had not abated; neither had her air of being a duchess looking at hogs.

"You are a pretty one!" he said; but his intention was perceived to be far indeed from his words.

"Oh, am I, Mister Atwater?" Florence responded. "I'm awfully glad you think so!"

"I mean about what Henry Rooter said," her cousin explained. "Henry Rooter told me he made you believe you were goin' to have a grapevine climbin' up from inside of you because you ate some grapes with the seeds in 'em. He says he scared you into fits, and you thought you'd have to get a carpenter to build a little arbor so you could swallow it for the grapevine to grow on. He says—"

Florence had become an angry pink. "That little Henry Rooter is the worst falsehooder in this town; and I never believed a word he said in his life! Anyway, what affairs is it of yours, I'd like you to please be so kind and obliging for to tell me, Mister Herbert Illingsworth Atwater, Esquire?"

"What affairs?" Herbert echoed, in plaintive satire. "What affairs is it of mine? That's just the trouble! It's got to be my affairs just because you got to be my first cousin. My goodness, I didn't have anything to do with you being my cousin, did I?"

"Well, I didn't!" Florence interposed hotly.

"That's neither here nor there," said Herbert. "What I want to know is, how long you goin' to keep this up?"

"Keep what up?"

"I mean, how do you think I like havin' somebody

like Henry Rooter comin' round me tellin' what they made a cousin of mine believe, and over thirteen years old, goin' on fourteen ever since about a month ago almost—"

Florence shouted: "Oh, for goodness' sakes!" then moderated the volume but not the intensity of her tone. "Kindly reply to this. Whoever asked you to come and take a walk with me to-day?"

Herbert protested to heaven. "Why, I wouldn't take a walk with you, of my own free will, unless I had to be killed. I wouldn't take a walk with you if every policeman in this town tried to make me. I wouldn't take a walk with you if they brought a million horses and—"

"I wouldn't take a walk with you."

Florence interrupted, "if they brought a million million horses—and cows—and camels—"

Herbert looked incredulous. "Oh, no, you wouldn't—not if I could help it!"

But by this time Florence had regained her derisive superciliousness. "There's a few things you could help," she said; and the incautious Herbert challenged her with the inquiry she desired.

"What could I help?"

"I should think you could help bumpin' into me every second when I'm takin' a walk on my own affairs, and walk along on your own side of the sidewalk, anyway, and not be so awkward a person has to keep trippin' over you about every time I try to take a step!"

Herbert withdrew temporarily to his own side of the sidewalk. "Who?" he demanded hotly. "Who says I'm awkward?"

"All the fam'ly," Miss Atwater returned, with a slight, infuriating laugh. "You bump into 'em sideways and keep getting half in front of 'em, whenever they try to take a step, and then when it looks as if they'd pretty near fall over you—"

"You look here!"

"And besides all that," Florence went on, undisturbed, "why, you generally keep kind of snorting, or something, and then making all those noises in your neck. You were doin' it at grandpa's last Sunday dinner, because every time there wasn't anybody talking, why, everybody could hear you plain as everything, and you ought to've seen grandpa look at you! He looked as if you'd set him crazy if you didn't quit that chattering and cluckling!"

Herbert's expression partook of a furious astonishment. "I don't any such a thing!" he burst out. "I guess I wouldn't talk much about last Sunday dinner, if I was you, neither. Who got caught lickin' the ice-cream freezer spoon out on the back porch, if you please? Yes, and I guess you better study a little grammar, while you're about it. There's no such words in the English language as 'cluckling' and 'chuttering.'"

"I don't care what language they're in," the stubborn Florence insisted. "It's what you do, just the same—cluckling and chuttering!"

Herbert's manners went to pieces. "Oh, dry up!" he bellowed.

"That's a nice way to talk! So gentlemanly—"

"Well, you try and be a lady, then!"

"Try!" Florence echoed. "Well, after that, I'll just politely thank you to dry up, yourself, Mister Herbert Atwater!"

Herbert's eyes gleamed with fierce triumph. "You couldn't if you did try! You couldn't if you tried till you were a million years old! You couldn't if—"

"I said 'Dry up!'" shouted Florence.

At this Herbert became moody. "Oh, pfuff!" he said; and for some moments walked in silence. Then he asked: "Where you goin', Florence?"

The damsel paused at a picket gate, opening upon a broad lawn which was evenly bisected by a wide brick walk leading to the ample frame porch of a fat and honest old brick house. "Right here to grandpa's, since you haf to know!" she said. "And thank you for your delightful comp'ny which I never asked for, if you care to hear the truth for once in your life!"

Herbert meditated. "Well, I got nothin' else to do, as I know of," he said. "Let's go around to the back door so's to see if Kitty Silver's got anything."

Then, not amiably, but at least inconsequently, they passed inside the gate and went up the brick walk together. Their brows were fairly unclouded; no special marks of conflict remained. For this was but their customary way of meeting.

They followed a branch of the brick walk and passed round the south side of the house, where a

small orchard of apple trees showed generous promise; hundreds of little round apples among the crisp leaves glancing the high lights to and fro on their infantile green cheeks, as a breeze hopped through the yard, while the shade beneath was filled with sunshine flecks that moved coquettishly. This shifting of orange light and blue was laid like a fanciful plaid over the lattice and over the wide, slightly sagging steps of the elderly back porch; and here, taking her ease upon these steps, sat a middle-aged colored woman of continental proportions. Beyond all contest, she was the largest colored woman in that town, though her height was not unusual, and she had a rather small face. That is to say, as Florence had once explained to her, the face was small but the other parts of her head were terribly wide. Beside her was a circular brown basket, of a weave suggesting arts-and-crafts; it was made with a cover, and there was a bow of brown silk upon the little handle at the apex of the cover.

"What you been up to to-day, Kitty Silver?" Herbert asked genially. "Anything special?" For this was the sequel to his "so's we can see if Kitty Silver's got anything." But Mrs. Silver discouraged him.

"No, I ain't," she replied. "I ain't, an' I ain't goin' to."

"I thought you pretty near always made cookies on Tuesday," he said.

"Well, I ain't this Tuesday," said Kitty Silver. "I ain't, an' I ain't goin' to. You might deas well g'on home ri' now. I ain't, an' I ain't goin' to."

Docility was no element of Mrs. Silver's present mood, and Herbert's hopeful eyes became blank as his gaze wandered from her head to the brown basket beside her. The basket did not interest him; the ribbon gave it a quality which at once almost excluded it from his consciousness. On the contrary, the ribbon had drawn Florence's attention to it, and she stared at the basket eagerly.

"What you got there, Kitty Silver?" she asked.

"What I got where?"

"In that basket."

"Nemmine what I got 'n'at basket," said Mrs. Silver crossly, but added inconsistently: "I deas wish somebody ast me what I got 'n'at basket! I ain't no cat washwoman fer nobody!"

"Cats!" Florence cried. "Are there cats in that basket, Kitty Silver? Let's look at 'em!"

THE lid of the basket, lifted by the eager, slim hand of Miss Atwater, rose to disclose two cats of an age slightly beyond kittenhood. They were of a breed unfamiliar to Florence, and she did not obey the impulse which usually makes a girl seize upon any young cat at sight and caress it. Instead, she looked at them with some perplexity, and after a moment inquired: "Are they really cats, Kitty Silver, do you b'lieve?"

It was a voice almost of passion. "You grab it!"

"Cats what she done tole me," the colored woman replied. "You betta shet 'at lid down, you don' wan' 'em run away, 'cause they ain't yoosta livin' 'n'at basket yet; an' no matter whut kine o' cats they is or they isn't, one thing true—they wile cats!"

"But what makes their hair so long?" Florence asked, still keeping the lid lifted. "I never saw cats with hair a couple inches long like that."

"Miss Julia say they Berjum cats."

"What?"

"I ain't tellin' you no mo'n she tole me. You' aunt say they Berjum cats."

"Persian," said Herbert. "That's nothing. I've seen plenty Persian cats. My goodness, I should think you'd have seen a Persian cat at your age. Thirteen goin' on fourteen!"

Florence frowned. "Well, I have seen Persian cats plenty times, I guess," she said. "I thought Persian cats were white, and these are kind of gray."

At this Kitty Silver permitted herself to utter an embittered laugh. "You wrong!" she said. "These cats, they white; yes'm!"

"Why, they aren't either! They're as gray as—"

"No'm," said Mrs. Silver. "They plum spang white, else you' aunt Julia gone out her mind; me or her, one. I say: 'Miss Julia, them gray cats.' 'White,' she say. 'Them two cats is white cats,' she say. 'Them cats been crated,' she say. They been livin' in a crate on a dirty express train fer th'ee fo' days,' she say. 'Them cats gone got all smoke up thataway,' she say. 'No'm, Miss Julia,' I say. 'No'm, Miss Julia, they ain' no train,' I say. 'they ain' no train kin take an' smoke two white cats up like these cats, so's they hair is gray clean plum up to they hide.'—You betta put that lid down, I tell you!"

Florence complied, just in time to prevent one of the young cats from leaping out of the basket, but she did not fasten the cover. Instead she knelt, and, allowing a space of half an inch to intervene between the basket and the rim of the cover, peered within at the occupants. "I believe the one to this side's a he," she said. "It's got greenish eyes than the other one; that's the way you can always tell. I b'lieve this one's a he and the other one's a she."

"I ain't stedyin' about no he's an' she's!"

"What did Aunt Julia say?" Florence asked.

"Whut you' aunt Julia say when?"

"When you told her these were gray cats and not white cats?"

"She tole me take an' clean 'em," said Kitty Silver. "She say, she say she want 'em clean' up spick an' spang befo' Mista Sammerses git here 's even' to call an' see 'em." And she added morosely: "I ain't no cat washwoman!"

"She wants you to bathe 'em?" Florence inquired, but Kitty Silver did not reply directly. She breathed audibly, with a strange effect upon vasty outward portions of her, and then gave an incomparably dulcet imitation of her own voice, as she interpreted her use of it in the recent interview.

"Miss Julia, ma'am, I say—'Miss Julia, ma'am, my bizness cookin' vittles,' I say. 'Miss Julia, ma'am,' I tole her—'Miss Julia, ma'am, I cook fer you' pa, an' I cook fer you' fam'ly year in, year out, an' I hope an' pursue, whiles some might make complaint, I take whatever I find, an' I leave whatever I find. No'm, Miss Julia, ma'am, I say—'no'm, Miss Julia, ma'am. I ain't no cat washwoman!'"

"What did Aunt Julia say then?"

"She say, she say: 'Di'n' I tell you take them cats downstairs an' clean 'em?' she say. I ain't nobody's cat washwoman!"

Florence was becoming more and more interested. "I should think that would be kind of fun," she said—"to be a cat washwoman. I wouldn't mind that at all: I'd kind of like it. I expect if you was a cat washwoman, Kitty Silver, you'd be pretty near the only one was in the world. I wonder if they do have 'em any place—cat washwomen."

"I don't know if they got 'em some place," said Kitty Silver, "an' I don't know if they ain't got 'em no place; but I bet if they got 'em any place, it's some place else from here!"

FLORENCE looked thoughtful. "Who was it you said is going to call this evening and see 'em?"

"Mista Sammerses."

"She means Newland Sanders," Herbert explained. "Aunt Julia says all her callers that ever came to this house in their lives, Kitty Silver never got the name right of a single one of 'em!"

"Newland Sanders is the one with the little mustache," Florence explained. "Is that the one you mean by 'Sammerses,' Kitty Silver?"

"Mista Sammerses who you' aunt Julia tole me," Mrs. Silver responded stubbornly. "He ain't got no mustache what you kin look at—dees some blackish whut don' reach out mo'n halfway todes the hofe en'a of his mouf."

"Well," said Florence, "was Mr. Sanders the one gave her these Persian cats, Kitty Silver?"

"I reckon," Mrs. Silver breathed audibly again, and her expression was strongly resentful. "When she go fer a walk 'long with any them callers

she stop an' make a big fuss over any lil ole dog or cat an' I don't know whut all, an' after they done buy her all the candy from all the candy sto's in the livin' worl', an' all the flowers from all the greenhouses they is, it's a wonder some of 'em ain't sen' her a mule fer a present, 'cause seem like to me they done sen' her mos' every kine of animal they is! Firs' come Airydale dog you' grampaw tuck an' give away to the milkman; 'n'en come two mo' pups; I don't know what they is, 'cause they hofe had dees sense enough to run away after you' grampaw try learn 'em how much he ain't like no pups; an' nex' them two canaries hangin' in the dinin' room now, an' nex'—di'n' I holler so's they could ahear me downtown? Di'n' I walk in my kitchen one mawnin' right slam in the face of ole warty allagatuh three foot long alookin' at me over the aidge o' my kitchen sink?"

"It was Mr. Clairdyce gave her that," said Florence. "He'd been to Florida; but she didn't care for it very much, and she didn't make any fuss at all when grandpa got the florist to take it. Grandpa hates animals."

"He don't hate 'em no wuss'n whut I do," said Kitty Silver. "An' he ain't got to ketch 'em lookin' at him outen of his kitchen sink—an' he ain't fixin' to be no cat washwoman neither!"

"Are you fixing to?" Florence asked quickly. "You don't need to do it, Kitty Silver. I'd be willing to, and so'd Herbert. Wouldn't you, Herbert?"

HERBERT deliberated within himself, then brightened. "I'd just as soon," he said. "I'd kind of like to see how a cat acts when it's bathed."

"I think it would be spehshly inter'sting to wash Persian cats," Florence added with increasing enthusiasm. "I never washed a cat in my life."

"Neither have I," said Herbert. "I always thought they did it themselves."

Kitty Silver sniffed. "Ain't I says so to you' aunt Julia? She done tole me, 'No,' she say. She say, she say Berjum cats ain't wash theyself; they got to take an' git somebody else to wash 'em!"

"If we're goin' to bathe 'em," said Florence, "we ought to know their names, so's we can tell 'em to hold still and everything. You can't do much with

an animal unless you know their name. Did Aunt Julia tell you these cats' names, Kitty Silver?"

"She say they name Feef an' Meemuh. Yes'm! Feef an' Meemuh! Whut kine o' name is Feef an' Meemuh fer cat name?"

"Oh, those are lovely names!" Florence assured her, and, turning to Herbert, explained: "She means Fifi and Mimi."

"Feef an' Meemuh," said Kitty Silver. "Them name don' suit me, an' them long-hair cats don' suit me neither." Here she lifted the cover of the basket a little, and gazed nervously within. "Look at there!" she said. "Look at a way they lookin' at me! Don't you look at me thataway, you Feef an' Meemuh!" She clapped the lid down and fastened it. "Fixin' to jump out an' grab me, was you?"

"I guess, maybe," said Florence—"maybe I better go ask Aunt Julia if I and Herbert can't wash 'em. I guess I better go ask her anyhow." And without more debate she hopped up the steps and skipped into the house through the kitchen. A moment later she appeared in the open doorway of a room upstairs.

It was a pretty room, vaguely scented with the pink geraniums and blue lobelia and coral fuchsias that poised, urgent with color, in the hearty sunshine streaming upon the window boxes at the open windows. The forms of pale-blue birds and lavender flowers curled up and down the cretonne curtains and over the chairs and the chaise longue whereon fluffily reclined, in garments of tender fabric and gentle colors, the prettiest twenty-year-old girl in that creditably supplied town.

It must be said that no stranger would have been apt to take Florence for her niece—though everybody admitted that Florence's hair was pretty. ("I'll say that for her," was the family way of putting it.) Florence did not care for her hair herself; it was dark and thick and long, like her aunt Julia's; but Florence—except in the realistic presence of a mirror—preferred to think of herself as an ashen blonde, and also as about a foot taller than she was. Persistence kept this picture of herself habitually in her mind, which, of course, helps to account for her feeling that she was justified in wearing that manner of derisive superciliousness deplored by her mother. More middle-aged gentlemen than are suspected believe that they look like the waspen youths in the magazine advertisements of ready-made clothes—and it is this very impression of theirs which accounts (as with Florence) for much that is seemingly inexplicable in their behavior.

Florence's aunt Julia was reading an exquisitely made little book which bore her initials stamped in gold upon the cover, and it had evidently reached her by a recent delivery of the mail, for wrappings bearing canceled stamps lay upon the floor beside the chaise longue. It was a special sort of book, since its interior was not printed, but all most laboriously written with pen and ink—poems, in truth, containing probably more references to a lady named Julia than have appeared in any other poems since Herrick's. So warmly interested in the reading as to be rather pink, though not always with entire approval, this Julia nevertheless, at the sound of footsteps, closed the book and placed it beneath one of the cushions which assisted the chaise longue to make her position a comfortable one. Her greeting was not enthusiastic.

"What do you want, Florence?"

"I was going to ask you if Herbert and me—I mean: Was it Newland Sanders gave you Fifi and Mimi, Aunt Julia?"

A look of weariness became plainly visible upon Miss Julia Atwater's charming face. "I do wish you'd hurry and grow up, Florence," she said.

"I do, too! What for, Aunt Julia?"

"So there'd be somebody else in the family at an eligible age. I really think it's an outrageous position to be in," Julia continued with languid vehemence—"to be the only girl between thirteen and forty-one in a large connection of near relatives, including children, who all seem to think they haven't anything else to think of but Who comes to see her, and Who sends her flowers and things, and Who came to see her yesterday, and Who was here the day before, and Who's coming to-morrow—and Who's she going to marry! You really ought to grow up and help me out, because I'm getting tired of it. Yes, Mr. Sanders sent me Fifi and Mimi—and I want you to keep away from 'em!"

"Why?" asked Florence.

"Because they're very rare cats, and you aren't ordinarily a very careful sort of person, Florence, if you don't mind my saying so. Besides, if I let you go near them, the next thing Herbert would be over here musing around, and he can't go near anything without ruining it! It's just in him; he can't help it."

Florence looked thoughtful for a brief moment; then she asked: "Did Newland Sanders send 'em with the names already to them?"

"No," said Julia,

"It's what you do, just the same—clucking and chattering!"

# WHAT ABOUT GUNS?

BY  
**ARTHUR RUHL**  
COLLIER'S STAFF CORRESPONDENT

DOWN on the Maryland shore, a little below the mouth of the Susquehanna and Havre de Grace, is a stretch of salty marsh and farm land and a gray, shingled house on a hill where the duck hunters used to come. It is a peaceful neighborhood, and until last October nothing broke its silence except the report of an occasional shotgun or the distant whistle of a train on its way to Washington. Now it is a sort of soldierless battle field. White shrapnel puffs show out above the oak trees, and along twenty-five miles of shore and out over the bay there is a more or less continuous booming and banging.

There is what they call a "front," with 3-inch guns and "75's," and semiheavies. I spent a day there recently and saw more cannon fired than I ever saw in action during visits to half a dozen European fronts, though, to be sure, battery positions are not spots to which war correspondents are generally hurried. There is a trench-warfare section, where they are testing all sorts of trench mortars, bombs, and hand grenades, and there is another place where bombing aviators are, or, at any rate, soon will be, practicing.

## Doings at Aberdeen

THERE are barracks like those in the training camps and enlisted men drilling, and there are several hundred young officers, most of whom were yesterday technical men in electrical plants or engineers on construction work—especially recommended young Americans, two or three years out of college, who are building railroads and barracks, and working over the delicate and interesting business of measuring the muzzle velocity of shells, accuracy of time fuses, relative dispersion of different sorts of shrapnel, penetrating power of heavy shells, and so on. They are not men who went into the Ordnance because they couldn't or didn't want to go into the Line, but have been

taken directly from their ordinary work for special qualifications, and they have a corresponding enthusiasm and esprit de corps.

They—the Army Ordnance Unit, that is to say, of which such reserve officers are a part—are pushing a railroad down to tidewater now so that material can be shipped abroad directly, and they were working on the other lines of railroad all winter when they had to blast through frozen ground, and when the cannon which they began to test in a January snowstorm had to be hauled on sledges by caterpillar tractors through waist-deep snow and mud.

They showed me a chart with curved lines indicating work done and planned for during the next few months, and this line started at the lower left-hand corner of a sheet and ran up to the upper right-hand corner at an angle of about 45 degrees. They were firing hundreds of rounds of shells a day, and they will be firing soon, if they are not doing so already, about a hundred thousand rounds a month, as much in a day as they used to fire at the old Sandy Hook Proving Grounds in a year. In short, here is a big and important piece of work, costing millions of dollars and absorbing the energies of a lot of specially trained, first-class men. It is being done, and done well, apparently, yet I must confess that I never heard of the Aberdeen Proving Ground until an ordnance officer suggested going there, and I don't suppose that one American out of a hundred has ever heard of it either.

I give this as one example of progress, decidedly real, yet not to be put in terms of finished cannon

British 18-pounders—a field gun similar to the French "75's"—all ready even to the green and yellow camouflage paint. And so on—at some twenty big plants, and many small ones.

## Difficulties

IT would be no use denying that there have been serious delays and disappointments in our gun program. There are still delays—maddening ones. At Watervliet, for instance, the other day, I saw about half the machines idle in one shop, not for lack of men, nor of capable officers to direct them, nor, as sometimes has happened, because the work demanded was unfamiliar and difficult, but simply because the rough steel forgings, the mere potter's clay of gunmaking, had not been delivered from Bethlehem. The officer showing me about was fairly tearing his hair.

"Why," he said, "we ought to have rough forgings piled up here like coal and cordwood!" Whoever was to blame, the steel makers themselves, the railroads, the cumbersome "paper work" in Washington, the lack of fundamental raw materials in the Government's principal arsenal seemed inexcusable: more cause for complaint than the fact—for which there were reasons given long ago—that our forces in France have, for the time being, been supplied with French cannon.

When, however, people isolate some such dramatic fact as this from all its context, as Mr. Lodge recently did in the Senate, and, regardless of the enormous amount of work that has been, and now is, being done, talk as if we had done nothing, their words are more useful as a contribution to a partisan "drive" than informing or just. Very few civilians have any notion of the difficulty and delicacy of modern cannon making, nor of the particular difficulties faced in this country, where, at the beginning of the war, the art, or craft, of gunmaking was known only to a handful of men, and everything, in what will soon be a huge industry, had to be done from the beginning, from making drawings for the guns themselves to making blue prints for the unbuilt shops that were to hold the unbuilt machines that were to make the guns.

Any civilian who takes the trouble to look into the matter a little will, I think, be struck by these difficulties. The ordnance officers with whom I talked in Washington impressed them on me very quickly, and this impression was not lessened by subsequent visits to the Bethlehem Steel Works, Watervliet Arsenal, and the Aberdeen Proving Ground. I shall not, even now, attempt an exposition of the Ordnance Department's complete cannon program, but endeavor rather to give a general notion of it, and a few first-hand observations which may, perhaps, clear up a little a subject much talked about and little understood.

There are, it might be recalled in the first place, three general types of cannon used in modern land warfare—the light, mobile, rapid-fire guns intended mainly for attack—

(Continued on page 25)

Trying out two French "75's." Gun on left is about to be fired; gun on right has just been fired and is in the extreme recoil position

actually delivered at the front. There are innumerable others. We are making cannon, complete, and sending them to France. But the completed cannon, with caissons and limbers, which you would find at any one place give a small idea of the amount of work being done. At Watervliet Arsenal, for instance, they are making cannon—the gun barrels—carriages and other parts for these guns are made elsewhere. A sewing-machine company is making recoil mechanisms for the "75's"; an automobile company recoil mechanisms for the 155-millimeter guns; another automobile company gun carriages. At the Bethlehem Steel Works you will find a little of everything, guns complete, big and little, with caissons and limbers, and parts of guns to be assembled elsewhere.

The rough forgings for some of the "75's" loaned us by the French very likely came from Bethlehem. Bethlehem has been sending such rough forgings over right along, and also finished carriages to be fitted with guns made in France by the French. Bethlehem is making and sending

## General Malleterre Explains the Battle

IN Paris one would not have to tell an audience like that of COLLIER'S how authoritative is anything said about contemporary warfare by General MALLETERRE, one of the victors of the Marne. American readers are, however, entitled to a word of comment on the article with which this issue opens. For, unlike some military "experts," MALLETERRE is a modest writer. Also, he can afford to talk conversationally, without raising his voice or straining his language, precisely because he has something to say, and speaks from a knowledge of the facts, and what he asserts in his quiet way will be heard above the Biggest Guns of the penny-aliners. For instance, General MALLETERRE says of last year's French offensive ("The Battle of 1917," described in COLLIER'S opening article of January 5, 1918):

Our offensive of April 17, 1917, which had certainly been conceived and organized to break the German lines and to exploit strategically the success of the rupture in the open field, did not succeed for reasons that were probably not of a military order.

In writing that sentence the general does not use italics; but the reader, remembering "The Battle of 1917," will smile and realize the implications which, in an article like this, are often fully as significant as more detailed statements on subjects of less controversy.

## The Price of Pride

THE Battle of 1917 is ancient history now; the Battle of 1918, General MALLETERRE's real theme, is yesterday's history, and to-day's—and, as we shall see, to-morrow's. Significant to a degree is his statement (on page 7) that LUDENDORFF could strike with greater force, and could rout the Fifth British Army, and nearly ended the war in March, 1918, largely because "unity of command had not been realized," on account of "the unfortunate pride of certain Englishmen." This is franker language than France usually speaks, sparing, as France likes to do, the feelings of all her allies; and it is welcome frankness because, that unity of command having now been realized under FOCH, it must be maintained, at whatever cost to pride, insular or American, to the salvation of us all. The lesson of Cambrai, which General MALLETERRE does not hesitate to draw (though he refrains from underlining it) was surely expensive enough in men and mileage no less than "unfortunate pride." So were the opening days of the Battle of Picardy, or the "Kaiser's Battle," or whatever you call the German offensive of 1918. One may recall the London "Times's" editorial comment upon the Anglo-French agreement to make FOCH commander in chief of the Allied armies in France. "It is the natural outcome of the events of the last few days," said the "Times." "The decision was clearly not premeditated, but has been rendered imperative by the military position. Until recently the French and British armies fought, for all practical purposes, in watertight compartments."

Water-tight, perhaps, but not boche-proof.

## America at Bat

"AMERICAN AID will be the decisive factor," says MALLETERRE, looking to the future. Already we knew this—now we must also realize it. Thus far our far-famed industrial ingenuity and speediness must have seemed, to our allies, legend rather than reality. The Administration has now mobilized the industrial brains of the country as, until within a few weeks, they had not been mobilized. The hope of the world hangs upon the increasingly effective functioning of those industrial brains, and upon the equally effective functioning of American labor. Take it proudly or humbly—the simple fact is that it's up to America.

## Tickets or Taxes?

THE railway problem is by no means the least of our tasks of war. Regulation, on the basis of enforced competition and pared-down profits, had already brought the growth of our railway structure to a standstill. Competition is no longer required, and regulation, once parceled out among all the States, is now practically unified in the Federal Government; but the shortcomings of the old method are still with us. Operating under rates rigidly fixed, the leading railways of the country (114 of them) earned about \$54,000,000 net in the first three months of this year—a sum which will not meet the interest on their bonded debt. The nation

is under contract to make up the difference so that dividends and interest can be paid. Now comes the Railroad Wage Commission with a great (and just) scheme for raising the wages of transportation workers. The trackmen, station men, clerks, and others who have not had powerful organizations to fight for them are to get increases to meet the increased cost of living, and these wage advances grade down from the previously least-favored classes to those who in 1916 secured the benefits of the famous Adamson Act. The amount involved is some \$300,000,000 per year (including certain advances recently made). What, then, becomes of the slender net earnings as noted above? Will the still larger difference between present deficits and previous average profits be made up by more taxes and more bond issues—which here are merely delayed taxes? In our opinion, railway service ought to pay fair wages to the worker and a fair return to the investor, for it takes men and money to run trains. Those just costs can be financed, under Government authority, in various ways, but the only solid way is to have the railway user foot the bill. If he doesn't, some one else must—the some one who pays the necessary taxes. One great weakness of all democratic countries in handling the national railways has been just that weakness for making their administration look better by tucking some of the transportation costs off into the safe obscurity of general public finance. The report of FRANKLIN K. LANE's Railroad Wage Commission brings the country face to face with the fatal results of the Interstate Commerce Commission's folly of years past in fixing inadequate freight and passenger rates. We do not see how Director General MCADOO can refuse railway workers the fair deal which Mr. LANE has shown they should have. That done, the railway user must be made to pay the cost of the service he is now getting. That is the only honest solution.

## Our New Memorial Day

ON this anniversary the national heart is looking forward rather than back. Not merely in remembrance, but in actual fellowship, we pray for victory as our ancestors prayed before Yorktown and before Appomattox. Our sacrifice and loss and suffering are not yet as theirs were, but our country's cause is the same. In time and in the threat of hostile attack we are not as far from those battle fields of Flanders and Picardy and the Atlantic as New England was from WASHINGTON's final campaign in Virginia. The actual menace of our enemy's purpose to all that we hold dear is actually greater and deadlier than ever before known. One cannot imagine GEORGE III and his easy-going, stupid Prime Minister, Lord NORTH, plotting that remorseless enslavement of other peoples which is now the avowed purpose of Potsdam. The massed evils of a hundred years of Prussian despotism are striving now to strike down the liberties of our world. If the Kaiser wins his battle, our Memorial Day will be henceforth a day of somber mourning for all who love freedom, of mourning for freedom lost and, we know, of undying resolve that it shall be won again. But if we see our duty in the stern light of truth and win victory, as we must, then this Memorial Day will be hereafter a remembrancing time for those who established peace on earth and good will among men.

## Politics in a Nutshell

SPEAKING of the Kaiser, the British "Saturday Review" gets a complete essay on personal government into this one sentence: "The truth is that the most absolute monarch is no more his own master than the constitutional king or the republican president; each is the servant of those who keep him in his place." To prove that, read history and watch LUDENDORFF.

## Decoded

NOT altogether devoid of imagination or humor, these Germans. In BERNSTORFF's secret code, which one HUGO SCHMIDT, the Kaiser's paymaster in this country, attempted to destroy in the furnace of a German club in New York—and made a poorer job of it than the Kaiser did of Louvain—the gentle HUGO SCHMIDT was "SIDNEY PICKFORD." Whether the suggestion came from the guilelessness of our own MARY PICKFORD, or we find an echo there of SIDNEY PICKLOCK, as the eighteenth-century dramatists might have put it, the thing is illuminated by a thin, Prussian, glint of fun. Humor plus a touch of the daredevil appears in the German

# Editorials

Foreign Office described as "WILLIAM FOXLEY." When BERNSTORFF or SCHMIDT wanted to say "Remittance of German war bonds mentioned in your wireless received," he wrote: "A boy was born yesterday, both well"; as one might say, "principal and interest both doing well."

This latest discovery rounds out our knowledge of the Kaiser's secret code, with the principal elements of which we were already pretty well acquainted. Thus:

Code—"The sword has been thrust into our hands by those who would crush Germany." Translated—"Tell that fool Lichnowsky that we can't bother about Grey's proposals to give us the colonies we want."

Code—"Lusitania loaded with deadly ammunition." Translated—"Lusitania loaded with women and children; all the greater effect on those idiotic Yankees."

Code—"I did not will this war." Translated—"I did not will a war of more than four months, confound it."

Code—"This battle means victory." Translated—"This battle of anywhere from six months to ten years means victory perhaps."

Code—"Freedom for Ukraina." Translated—"Rush over a lieutenant with a squad to Kiev and throw out the Rada."

Code—"It is the will of Gott." Translated—"It is the will of Tirpitz and Ludendorff."

## Patriotism at Headquarters

USING the war to swell one's own bank account belongs in the very bottom circle of profiteering. The last place where it has any excuse for being is at our fountainhead of patriotism—Washington, D. C. The District of Columbia has been like a tenement house where there are no inspection regulations: it is so full that it is spilling humanity over into Maryland and Virginia. To find a roof for one's head, whether in a boarding house or apartment, has come to be a stern task for any but the wealthy.

Of course the landlords of Washington are patriotically striving to make the situation as endurable as possible. Here is a letter which the occupants of one apartment house recently received, five months before the expiration of their leases:

WASHINGTON, D. C., May 1, 1918.

We beg to announce that we are now making leases of apartments in the — for twelve months beginning October 1, 1918.

Owing to the increase in operating cost due to the great advance in the price of coal, labor, and other commodities, we have been obliged to raise rents in this property.

The rent of apartment No. —, which you are now occupying, will be — per month, on yearly lease, from October 1, 1918.

Should you decide to occupy your present apartment for another year, kindly call at this office on or before May 10 to sign lease.

Respectfully, —

The raise specified is exactly 33 1-3 per cent. And the tenant, instead of being permitted to wait until the customary one month before the expiration of his lease in order to decide whether to release, had his dilemma thrust upon him five months ahead, with a ten-day limit for his decision. We do not assert that the action of this particular Washington landlord is typical of them all—and we're glad to note that rent-regulating legislation is actually under discussion in Congress. Certainly counsel against profiteering in the nation at large loses some of its force in coming from a city where such practices are, as we write, unabated.

## The Weed Philosophy

DO the young men who pursue the science of ministering to the wants of American smokers cultivate humor as a side crop? Not long ago we chronicled the tobacconist who, asked if he had some cigars, said: "He would look and see." And now HOMER JOSEPH DODGE tells us how an Elderly Person Who Doesn't Smoke Himself marches up to the cigar stand in the Home Life Building at Washington, announcing that he wants some cigarettes. "Nothing too expensive, and yet not too cheap either," is his order. The clerk names off several brands, and offers one at fifteen cents for a box of ten. "That is reasonable enough," agrees the Elderly Client. "I believe I'll take the whole box." "Several of our customers buy cigarettes in quantities like that," says the clerk—and, Mr. DODGE adds—"with not even the ghost of a smile on his face." After all, there must be something in tobacco that makes for Chesterfieldian suavity and a sense of humor. Mr. LANSING ought to try the cigar stores—if there still are vacancies in his State Department.

## "Mail Twenty-four Cents an Ounce"

WHEN we saw that headline in the morning paper—mail twenty-four cents an ounce—we assumed that Congress had been revising the second-class postage rates again. Our assumption was most unjust. Congress is not going to charge magazines and newspapers twenty-four cents an ounce for carrying; not yet. Congress is fixing the rate at which mail will be transported by airplane. If everything goes as planned, airplane mail service will be established between Washington, Philadelphia, and New York by the time this paragraph is printed. Which brings sharply to mind the fact that when the war is over and we have thousands of fast machines and thousands of trained pilots, we will be carrying not only letters but passengers 'cross country at more than one hundred miles an hour.

## C'est la Guerre!

SHELL SHOCK is a human malady incident to war, recognized by all medical authorities. But it seems not yet to be recognized (at least not legally recognized) as an animal malady. Here is evidence from the London "Times":

At a police court in a Kentish raid area James Kendall was charged with selling adulterated milk. He urged in defense that the milk was sold exactly as it came from the cows, which were suffering from shell shock. A fine of £8 3s., with costs, was imposed.

## That Garden of Yours

IN the old whaling days the harpoon men used to get away from the ship to the urge of a cheerful slogan that ran: "Bend your oars and break your backs!" DANA mentions it in his "Two Years Before the Mast." We've just about reached that stage now in this war-garden business. It's fairly easy to be a digging patriot in April, what with the warmth of the new sun on your shoulder blades and the smell of the new earth in your nostrils, but May brought great growing weather for all parasitic flora and fauna. The little green weeds mat up our neatly dug beds almost overnight, and bugs of divers forms and hues, but one in evil intent, are thicker than Pan-Germans around the Kaiser. Now is the time to remember that planting is only the initial blurb and perhaps of no more use in October than the Administration's last year's predictions as to airplane production. The food that counts is the food that gets into the family larder and on to the family table in due season. Having made your brag, back it up. Get your garden clean for growing, and as fast as you get one crop out (radishes, lettuce, etc.) prepare the soil for the next and different planting. Nature is no shirk, and most of us amateurs are only beginning to find out what can be done by wise cooperation with her. Gardening, like mathematical physics or any other abstruse science, is a matter of correct principles and then close attention to detail. In plain words, that means: do not cut off plant roots when you cultivate, thin out everything so it has a real chance to grow (most of us will not!), and use sense along with water, fertilizer, and other aids to vegetable life. Above all, keep steadily and cheerfully at it. Hoe the Hun under!

## Fear

A FRENCH officer wrote some letters, and now, after his death, they come out in English under the title: "A Soldier Unafraid." Very likely that makes a good title for the book, and then again perhaps not. You see, we haven't read it. Certainly the typical French soldier—or most any soldier at all—celebrates the conquest of fear as his first, if not his hardest, victory, and an American who is commanding a destroyer off the British coast writes in a letter home, printed in the "Atlantic Monthly":

If you find son timid in some things [the officer is writing to his wife], just remember that I was too. Lots of things he will change about automatically. At his age I had small love for firecrackers or explosives of any kind. Try to get him to realize that the very highest form of courage is to be afraid to do a thing—and do it!

Sound doctrine, this. If the cat is to be let out of the bag, the point of it is this: The man who "never knew fear" is either a person who never had much imagination anyway, or who simply didn't tell the truth about himself. We remember the British soldier in France who was asked: "Was he ever frightened out there at the front?" "Ever frightened?" he echoed. "Why, I'm frightened half of the time! But I'm never afraid!"

June 1, 1918

# HEBE

PATENTS PENDING

E. T. H. CO.

## The New Food Product

**H**EBE has its own place as an economical, satisfactory, healthful feature of the food supply of your home. Combining the healthful properties of evaporated skimmed milk with the nutritious fat of the cocoanut, it is ideal for cooking as well as for use over cereals, with coffee, etc. It has the approval of domestic science experts and is used by thousands of housewives.

Hebe has been tested and recommended as follows:—

for

### Coffee

Hebe gives coffee a tempting, golden-brown color and enhances its flavor. Hebe helps to make delicious cocoa and chocolate.

for

### Cooking

Dilute Hebe with pure water to the richness desired. Use it in all recipes for soups, oyster stews, gravies, sauces, creaming vegetables and fish, making custard, cookies, puddings, desserts, etc.

for

### Cereals

Pour Hebe diluted, or undiluted if preferred, over corn flakes, wheat flakes, puffed grains, porridge, oatmeal, etc. Cereals cooked with Hebe are most appetizing.

You may live in a section where Hebe cannot be obtained. As production increases, the needs of your section will be supplied through your local retail grocer.

THE HEBE COMPANY, CHICAGO AND SEATTLE, U. S. A.

**Guaranteed to be pure and wholesome**

# THESE THING BANE GOT TO STOP!

BY WILLIAM SLAVENS MCNUTT

IT took us a long time to make the Alaskan talk. He was just out, after eleven years in the wilds above the Arctic Circle, and he was as shy and timid as any newly captured wild thing. The quality of his voice and his accent told us that he was an educated Norwegian. The high, fine forehead marked him a thinker. The large, straight, thin nose, finely modeled, the sensitive mouth, the wide-set deep-blue eyes, assured us that he was a gentleman. As the train made its way southward through the green Oregon valley, I learned something of him. I have never seen a man so pitifully, painfully hungry for music, plays, books, pictures, exchange of thought. The Viking in him had driven him to eleven years of exile in the Arctic wilderness, where the artist and thinker in him had starved. He had been on the road for over three months. Imagine that! For three months he had been devoting his entire time and energy simply to coming south. He had started from a point on Bering Strait, far above Nome.

"Why didn't you wait till the ice went out and come down from Nome by boat?" I asked him.

He sat hunched up in his seat, this long, lean, lathy man of the trail, staring rather amazedly out at the pleasant green of the fields to which his eyes had become so unaccustomed.

"Ay tell you how it is," he said slowly, after a long interval of thought: "When the war broke out, Ay don't think much about it, one way or the other. Ay think maybe both sides are very much wrong, and it is little difference to me which wins. Sometime Ay get some paper, and Ay read about the terrible things the Germans do in Belgium and in France, but Ay don't believe it. Ay think it was some lie. It makes me very mad when they sink some Norwegian ship; but still, Ay think perhaps they got some right. Then when America get into the war, Ay keep on thinking about it. Last fall Ay say to myself: 'Well, Ay guess next spring when the ice go out Ay will get on the boat, and Ay will go below and enlist in the army.' You see, by that time, Ay think Germany is more wrong than the rest. Ay am not very mad about it. Ay do not think that she is much more wrong, but Ay think it is better she should not win. So Ay am coming out next spring on the boat to fight against her. On the 7th of November Ay am up on Bering Strait, and a man bring me a letter from Nome from my people in Norway. My people have tell me about a sea captain that Ay once knew, and his wife. A German submarine had sunk his ship. They tell me that the German is very drunk. They take this captain and his wife from the small boat and tie them both together to the periscope of the submarine and then the submarine runs along for a little time and goes down. Ay read this letter, and Ay say to myself: 'Well, by God! These thing bane got to stop!' So Ay hitch up my dog and Ay come!"

I hitch up my dog and I come! How easily said! Yet the process involved absenting himself from a considerable industry of the Arctic that he had spent years in building up. It involved a trip of 1,700 miles on foot, over the snow, behind his dog team,

to the nearest ice-free port where he could get a boat for below. He had done all this because he had become convinced that these things the Germans do had got to stop.

"Ay have many friends in Germany," he told me. "When Ay know Ay am coming to go to war, Ay feel bad to think Ay should be fighting them. But Ay do not feel bad now. You see, it is this way: If Ay am up in the north and Ay have a pardner to travel on the trail with me, and we are together very much, we are very good friends; that is fine. He does many friendly things for me, and Ay like him very much. Then some day we are holed up in some shack for the winter, and the nights are very long, and it is not nice. We sit and think very much. And we do not feel good. Suppose my pardner, my good friend, cannot stand it. He get shack fever. He goes crazy in his brain. And he rushes at me with an ax to kill me. Ay cannot stop then and think of the time my friend pulled me out of the rapids. No! My friend is no longer my friend; he is a crazy man. First Ay must protect myself from the crazy man. Ay must not let him kill me, and Ay must not let him loose in the north to wander about and perhaps let him kill some other musher who would not know he is crazy, and welcome him in. If Ay got to kill this crazy man to protect myself and other people, that is bad, but it is all right. That is got to be done. If Ay can get him down, and tie him up without killing him, that is

good. Ay keep him tied up and Ay take him to camp and Ay turn him over to the marshal, and they send him outside to an asylum. Perhaps he will get well in the asylum. If he does get well, then he is no longer a madman, and he is my friend some more. And we shake hands and we laugh about the time he is crazy, and the crazy thing he tries to do. Yes! But when he is still crazy, he is not my friend. Ay think the Germans are very crazy. Maybe some day they will not be crazy; but we cannot think about that now."

There was another interval of silence. The Norwegian was staring hungrily out of the car window.

"Ay can't tell you how pretty it is, to see something that is pretty and sweet like those fields," he broke out passionately. "Ay wish Ay could have time to hear some music and read some books and be friends with some people that Ay like to know. Ay have been so long away where there is nothing. Nothing!" He drew a long breath and shook his head regretfully.

"But there is not time for those things now. No! First we must fight. When the German is beaten, then Ay hope Ay shall have time to do some of the things Ay should like to do."

## To Go the Limit!

IN America during this past year I have seen hundreds of thousands of Americans transformed by the realization of the fact that "these thing bane got to stop!" The Americans to whom I refer were soldiers. The majority of the soldiers differ from the majority of the civilians only in the degree of their realization of the absolute necessity for the successful accomplishment of the task which they have laid aside their civilian habits of life to perform. I have seen hundreds of thousands of soldiers going willingly, eagerly, knowingly into the most frightful war of all history—for what? Booty? Glory? No! A civilized people will not fight for a selfish end. Civilized man, the majority, will go forth to die only for an ideal. Even the Kaiser must give his people an elaborate counterfeit of an ideal to insure himself of their support on the battle field. Germany spent forty years preparing for this war, and a goodly portion of the effort of that time was spent in convincing the German people that the counterfeit idea was genuine, demoralizing their minds with the poison of the madness that must be stopped.

There is in humanity an unquenchable spark of pure heroism, and it has never blown to so fine a flame as now. Only those leaders live who lead heroically. The people worshiped Lincoln because they knew that he understood them. Lincoln was simply one of those great enough to recognize and rely upon the nobility of the mass. It is related of another and a greater Man that "the common people heard him gladly." Jesus was not over the heads of the common people. It was the rulers, the educated men of the time, the brainy men who were above the people, that compassed His crucifixion.

Lincoln knew that the will of the people was for the heroic thing, the great thing, and the people loved him

"Well, he's all wrong, see?"

# Muzzling the tiny teeth of friction

*How to prevent the wear caused by sediment in ordinary motor oil*

**S**UPPOSE you could see the apparently smooth working parts of your automobile engine under a strong magnifying glass.

You would find the surfaces of each covered with millions of microscopic teeth.

Ordinary oil breaks down quickly under the intense heat of the engine—200° to 1000° F.—forming voluminous black sediment.

Sediment is the greatest cause of friction in an automobile engine. Sediment has no lubricating value and crowds the oil with good lubricating qualities away from points where it is most needed.

When sediment prevents the formation of a protecting film of oil, these minute teeth grind together, producing rapid wear.

## How motorists' eyes were opened

Up to four years ago, very few people realized the importance of choosing carefully between motor oils.

Motorists took whatever kind of oil was offered, and trusted to luck that it would do its work correctly in the engine.

The reason is quite apparent. Everyone took lubrication for granted.

Naturally, under these conditions, every kind of oil was offered for sale—good, bad and indifferent. Many faults were ascribed to the motor, when the real trouble lay only in the improper choice of oils.

The Sediment Test first showed to the motorists of America how much sediment is formed in ordinary oil.

It brought home to them how dangerous to the engine is this excess of sediment and how any oil that decreases

*Tests of evaporation loss made in this durability oven prove that Veedol gives 25% to 50% more mileage per gallon than ordinary oil.*

*Part of the special laboratory of the Tide Water Oil Co. for testing engine lubricants under actual service conditions. Constant scientific research of this character is largely responsible for the unusually high lubricating value of Veedol.*

sediment increases power, reduces gasoline and oil consumption, and prolong the life of every working part.

## Be sure you know what kind of oil goes into your engine

You cannot afford to use ordinary oil at any price, for the damage caused by the sediment in ordinary oil cannot be repaired. Sediment in your oil means costly replacements.

As motorists discover that cheap, ordinary oil is the real cause of 90% of their troubles, they begin to insist on knowing what kind of oil goes into their engines.

## What the Sediment Test means

The striking superiority of Veedol to ordinary oil in this respect is clearly illustrated by the Sediment Test, shown in the two bottles at the top of the page.

Notice that the ordinary oil, in the left-hand bottle, contains fully seven times as much sediment as Veedol.

The average motor oil acts like water in a kettle. When water is subjected to intense heat it evaporates as steam. Under the terrific heat of the engine ordinary oil evaporates very rapidly through the oil-filler in the form of vapor.

Your engine will give years of efficient, dependable service—if you lubricate it properly.

Over a million motorists keep their cars running like new and avoid the heavy expense of a course in repair shop experience by scientific lubrication with Veedol. You will be doing your bit by saving the time of mechanics needed for war work.

Millions of tiny teeth cover the apparently mirror-like surface of a bearing or other working part of an engine. These teeth tear and grind each other unless kept apart by a protecting film of lubricant.

and make a test run over a familiar road including steep hills and level straight-aways.

You will find that your engine has acquired new power, hill-climbing ability and snappy pick-up. It will run more smoothly and quietly and will give greater gasoline mileage.

### Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

### Send for this 80-page book on lubrication

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

# VEEDOL LUBRICATION CHART

## AUTOMOBILES—Continued

For use of other than the above, see the following pages: 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000, 1001, 1002, 1003, 1004, 1005, 1006, 1007, 1008, 1009, 1010, 1011, 1012, 1013, 1014, 1015, 1016, 1017, 1018, 1019, 1020, 1021, 1022, 1023, 1024, 1025, 1026, 1027, 1028, 1029, 1030, 1031, 1032, 1033, 1034, 1035, 1036, 1037, 1038, 1039, 1040, 1041, 1042, 1043, 1044, 1045, 1046, 1047, 1048, 1049, 1050, 1051, 1052, 1053, 1054, 1055, 1056, 1057, 1058, 1059, 1060, 1061, 1062, 1063, 1064, 1065, 1066, 1067, 1068, 1069, 1070, 1071, 1072, 1073, 1074, 1075, 1076, 1077, 1078, 1079, 1080, 1081, 1082, 1083, 1084, 1085, 1086, 1087, 1088, 1089, 1090, 1091, 1092, 1093, 1094, 1095, 1096, 1097, 1098, 1099, 1100, 1101, 1102, 1103, 1104, 1105, 1106, 1107, 1108, 1109, 1110, 1111, 1112, 1113, 1114, 1115, 1116, 1117, 1118, 1119, 1120, 1121, 1122, 1123, 1124, 1125, 1126, 1127, 1128, 1129, 1130, 1131, 1132, 1133, 1134, 1135, 1136, 1137, 1138, 1139, 1140, 1141, 1142, 1143, 1144, 1145, 1146, 1147, 1148, 1149, 1150, 1151, 1152, 1153, 1154, 1155, 1156, 1157, 1158, 1159, 1160, 1161, 1162, 1163, 1164, 1165, 1166, 1167, 1168, 1169, 1170, 1171, 1172, 1173, 1174, 1175, 1176, 1177, 1178, 1179, 1180, 1181, 1182, 1183, 1184, 1185, 1186, 1187, 1188, 1189, 1190, 1191, 1192, 1193, 1194, 1195, 1196, 1197, 1198, 1199, 1200, 1201, 1202, 1203, 1204, 1205, 1206, 1207, 1208, 1209, 1210, 1211, 1212, 1213, 1214, 1215, 1216, 1217, 1218, 1219, 1220, 1221, 1222, 1223, 1224, 1225, 1226, 1227, 1228, 1229, 1230, 1231, 1232, 1233, 1234, 1235, 1236, 1237, 1238, 1239, 1240, 1241, 1242, 1243, 1244, 1245, 1246, 1247, 1248, 1249, 1250, 1251, 1252, 1253, 1254, 1255, 1256, 1257, 1258, 1259, 1260, 1261, 1262, 1263, 1264, 1265, 1266, 1267, 1268, 1269, 1270, 1271, 1272, 1273, 1274, 1275, 1276, 1277, 1278, 1279, 1280, 1281, 1282, 1283, 1284, 1285, 1286, 1287, 1288, 1289, 1290, 1291, 1292, 1293, 1294, 1295, 1296, 1297, 1298, 1299, 1300, 1301, 1302, 1303, 1304, 1305, 1306, 1307, 1308, 1309, 1310, 1311, 1312, 1313, 1314, 1315, 1316, 1317, 1318, 1319, 1320, 1321, 1322, 1323, 1324, 1325, 1326, 1327, 1328, 1329, 1330, 1331, 1332, 1333, 1334, 1335, 1336, 1337, 1338, 1339, 1340, 1341, 1342, 1343, 1344, 1345, 1346, 1347, 1348, 1349, 1350, 1351, 1352, 1353, 1354, 1355, 1356, 1357, 1358, 1359, 1360, 1361, 1362, 1363, 1364, 1365, 1366, 1367, 1368, 1369, 1370, 1371, 1372, 1373, 1374, 1375, 1376, 1377, 1378, 1379, 1380, 1381, 1382, 1383, 1384, 1385, 1386, 1387, 1388, 1389, 1390, 1391, 1392, 1393, 1394, 1395, 1396, 1397, 1398, 1399, 1400, 1401, 1402, 1403, 1404, 1405, 1406, 1407, 1408, 1409, 1410, 1411, 1412, 1413, 1414, 1415, 1416, 1417, 1418, 1419, 1420, 1421, 1422, 1423, 1424, 1425, 1426, 1427, 1428, 1429, 1430, 1431, 1432, 1433, 1434, 1435, 1436, 1437, 1438, 1439, 1440, 1441, 1442, 1443, 1444, 1445, 1446, 1447, 1448, 1449, 1450, 1451, 1452, 1453, 1454, 1455, 1456, 1457, 1458, 1459, 1460, 1461, 1462, 1463, 1464, 1465, 1466, 1467, 1468, 1469, 1470, 1471, 1472, 1473, 1474, 1475, 1476, 1477, 1478, 1479, 1480, 1481, 1482, 1483, 1484, 1485, 1486, 1487, 1488, 1489, 1490, 1491, 1492, 1493, 1494, 1495, 1496, 1497, 1498, 1499, 1500, 1501, 1502, 1503, 1504, 1505, 1506, 1507, 1508, 1509, 1510, 1511, 1512, 1513, 1514, 1515, 1516, 1517, 1518, 1519, 1520, 1521, 1522, 1523, 1524, 1525, 1526, 1527, 1528, 1529, 1530, 1531, 1532, 1533, 1534, 1535, 1536, 1537, 1538, 1539, 1540, 1541, 1542, 1543, 1544, 1545, 1546, 1547, 1548, 1549, 1550, 1551, 1552, 1553, 1554, 1555, 1556, 1557, 1558, 1559, 1560, 1561, 1562, 1563, 1564, 1565, 1566, 1567, 1568, 1569, 1570, 1571, 1572, 1573, 1574, 1575, 1576, 1577, 1578, 1579, 1580, 1581, 1582, 1583, 1584, 1585, 1586, 1587, 1588, 1589, 1590, 1591, 1592, 1593, 1594, 1595, 1596, 1597, 1598, 1599, 1600, 1601, 1602, 1603, 1604, 1605, 1606, 1607, 1608, 1609, 1610, 1611, 1612, 1613, 1614, 1615, 1616, 1617, 1618, 1619, 1620, 1621, 1622, 1623, 1624, 1625, 1626, 1627, 1628, 1629, 1630, 1631, 1632, 1633, 1634, 1635, 1636, 1637, 1638, 1639, 1640, 1641, 1642, 1643, 1644, 1645, 1646, 1647, 1648, 1649, 1650, 1651, 1652, 1653, 1654, 1655, 1656, 1657, 1658, 1659, 1660, 1661, 1662, 1663, 1664, 1665, 1666, 1667, 1668, 1669, 1670, 1671, 1672, 1673, 1674, 1675, 1676, 1677, 1678, 1679, 1680, 1681, 1682, 1683, 1684, 1685, 1686, 1687, 1688, 1689, 1690, 1691, 1692, 1693, 1694, 1695, 1696, 1697, 1698, 1699, 1700, 1701, 1702, 1703, 1704, 1705, 1706, 1707, 1708, 1709, 1710, 1711, 1712, 1713, 1714, 1715, 1716, 1717, 1718, 1719, 1720, 1721, 1722, 1723, 1724, 1725, 1726, 1727, 1728, 1729, 1730, 1731, 1732, 1733, 1734, 1735, 1736, 1737, 1738, 1739, 1740, 1741, 1742, 1743, 1744, 1745, 1746, 1747, 1748, 1749, 1750, 1751, 1752, 1753, 1754, 1755, 1756, 1757, 1758, 1759, 1760, 1761, 1762, 1763, 1764, 1765, 1766, 1767, 1768, 1769, 1770, 1771, 1772, 1773, 1774, 1775, 1776, 1777, 1778, 1779, 1780, 1781, 1782, 1783, 1784, 1785, 1786, 1787, 1788, 1789, 1790, 1791, 1792, 1793, 1794, 1795, 1796, 1797, 1798, 1799, 1800, 1801, 1802, 1803, 1804, 1805, 1806, 1807, 1808, 1809, 1810, 1811, 1812, 1813, 1814, 1815, 1816, 1817, 1818, 1819, 1820, 1821, 1822, 1823, 1824, 1825, 1826, 1827, 1828, 1829, 1830, 1831, 1832, 1833, 1834, 1835, 1836, 1837, 1838, 1839, 1840, 1841, 1842, 1843, 1844, 1845, 1846, 1847, 1848, 1849, 1850, 1851, 1852, 1853, 1854, 1855, 1856, 1857, 1858, 1859, 1860, 1861, 1862, 1863, 1864, 1865, 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 22

because he led them unerringly to their destiny. Our men ask definite assurance of what? Assurance that they are not fighting for a selfish end! There is no cry of: What is there in it for us? What are we going to get in booty, lands, or money in return for the hazard of our lives and the gift of the very golden best of our life's time? No! The questions are these: Is it really true that the Germans did such things? Is it really true that we are not in the war for purposes of gain? Is it really true that we are fighting an absolutely unselfish war, purely for the establishment and preservation of the right? Is it true that no group of men is egging us on for a personal, mercenary reason?

The men in the army believe the affirmative answer to these questions, and because they do so believe they are willing to go the limit!

### The Army Understands

I THINK I know that, in the last analysis, this is, for us, a war of self-preservation. I do not think that the majority of the soldiers really feel that. Is it a goading spirit of revenge, then, that urges them on? No! If revenge were the motive, the supreme topic of conversation would be the *Lusitania*. The *Lusitania* is not the supreme topic of conversation. There is far more discussion of the damnable things done to France and Belgium. The average American soldier feels, not that he is going to Europe to fight purely in self-preservation, but that he is offering himself as an aid to France; that he has a mission to help free Belgium, and that he must "get the Kaiser," not for any personal or national reward, but in order that the barbaric deeds for which the Kaiser stands sponsor shall stop!

There's a widespread assumption that the average American fighting man is not at all capable of understanding the principle of fighting to make the world safe for democracy. Those who assume that he is not capable of thoroughly understanding that principle draw their conclusion largely from the fact that he would not, could not, state such a principle in the elegant language of the President. To those people I would like to say: The lack of a vocabulary wherewith to express a sentiment is not conclusive proof of inability deeply to feel and thoroughly to understand that sentiment. Ours is not an army of adventure; ours is not an army of plunderers; ours is not an army blindly seeking territorial expansion, unconsciously expressing a land hunger. No! Ours is not a driven army. It is an army that goes willingly, quietly, without fuss or feathers, without thought of glory or gain. To accomplish what? To accomplish the establishment of justice in the world. To aid a stricken comrade of the federation of democracies. To make the world safe for the democracy that they represent. You tell me that they don't understand that principle? Oh, don't they? Then why do they go with the spirit which they are manifesting? There must be a motive, and only one is possible. However much the average American fighting man may lack the ability to express the high principle for which he is offering himself, he has a basic, unshaken understanding of that principle.

A colonel of my acquaintance had command of a regiment of colored rookies. Going about one bitter winter night, on a Stealthy Steve quest for whatever he might happen to find about the camp, he approached the quarantine barracks in front of which a newly drafted colored man was stationed as sentry. He left the road and started cater-corner across the area between himself and barracks, toward the front entrance.

"Hey there, you!" the colored sentry shouted. "You get on back into that road! If you want to come up todes this heah place, you come up by this heah walk an' see me fust!"

The colonel did as he was bidden and saw the sentry "fust."

"What are your orders?" the colonel inquired of the colored soldier.

"Ordehs, suh, colonel? I ain't got no ordehs, suh, colonel."

"You haven't got any orders?" the colonel quizzed him. "Are you sure of that?"

"Yes, suh, I'm right suah, suh, colonel. I ain't heah no talk 'bout no ordehs."

"Are you out here in the cold and snow for your health?" the colonel inquired caustically. "Do you walk around of nights this kind of weather for your personal pleasure? If you haven't got any orders, what are you doing out here, walking up and down in the snow this time of night?"

"Oh, yes, suh, colonel, whut is I doin'? You-all wants to know whut fo' I'm out heah? Well, dey's some folks in dat buildin' there with some kind of a fever sickness that's catchin'; an' I'm walkin' up an' down heah to see that none o'

"Hey there, you! You get on back into that road"

dem folks inside that's sick gits out to give it to nobody, an' nobody outside that's well gits in to git it from anybody. Yaa, suh, colonel, dat's whut I'se heah foh."

"That man had his orders all right," the colonel said after telling me the story. "He didn't know they were orders, but he had 'em, and he couldn't have executed them any better if he'd known them under the proper name in forty-seven different languages."

### "So We Got to Give Him the Gate"

LIKE that colored rookie with his orders are the majority of the American fighting men of to-day in their understanding of the high principles for which they are offering themselves. I was talking to a New York selected soldier not long since, a man who was a driver of a milk wagon before he put on the olive-drab. I was trying to get his conception of the war and why he was perfectly willing to fight.

"I tell you how it is," he said laboriously. "I fig-

ure it that the Kaiser just simply wanted to hog the whole show, see? So he went an' bullied these Dutchmen of his along till they believed anything he'd tell 'em, do anything he'd ask 'em to do, an' then he starts in to clean up, see? Well, he's all wrong, see? He stands for a lot o' rough stuff that a reg'lar guy won't stand for, get me? So we got to give him the gate. 'Cause if he gits by with this stuff o' his, a reg'lar guy won't have a chance in the world any more, see?"

To be sure. I saw what he saw; and he saw with sufficient clarity what President Wilson meant when he spoke of making the world safe for democracy. Go ahead, Mr. Phrase Maker; build on that New York driver's statement of the case! You can write a million fine words about the cause of the war, and what we are fighting for, and when you are through you have only said what he said, and you only mean what he meant.

And there is one thing that the soldier knows that the civilian must learn: that these things of which the Norwegian spoke must be stopped by an American victory. They must understand that it is not humane to hope and work for an inconclusive compromise of the definite question of right and wrong, for which so many millions have died, and for the righteous settlement of which so many other millions are willingly offering themselves. Binding up a wound that is infected may stop the immediate flow of blood, but the action is ultimately fatal. We cannot put an end to the evil for which Germany has stood in this war by permitting her to go free with even the semblance of victory, for that were evidence that the method of evil is the method for success. That is only binding up a badly infected wound to stop the immediate flow of blood, to hide the ugliness of the wound from our eyes; if we do that, the patient, Civilization, will die. The wound is ugly, believe me! But it must not be bound up by the bandages of peace until it is cleansed with the antiseptic of a righteous victory.

### Our Arteries

FOR the last six months I have been much with the National Army in camp. I have been with it in camps all over the United States. I feel that I know something of the National Army. It is for us a new army, raised in a new way.

The American volunteer is a known quantity, vouched for by tradition. The American selected man is a new element in our military organization. To determine the quality of that element is to estimate the chances of victory or defeat. For the regulars and the guards are our major volunteer organizations; they form our emergency line. They had skeleton organizations in peace time that could be hastily clothed in time of war. To them falls the honor of enduring the first shock. As I write this they are in the line on the western front, but the two major volunteer organizations are practically at the top of their strength now. Their combined strength totals some few hundreds of thousands; and unless there is a sudden and miraculous disintegration of the German military machine, we are going to need several million soldiers to do the job that we came into this war to do.

When we speak in terms of the millions that must march in the uniform of the American soldier in order to carry this country's voice to the ears of those who listen only to steel, we speak in terms of the National Army. We've only got our feet wet so far, but our time of paddling about in the shallows is short. We've got to swim in bad water, and the blood power to keep afloat must come to us direct from the heart of the American people through the National Army arteries. The selective draft must furnish the material to win the war. Therefore I have sought in the

(Continued on page 30)

## Who Discovered *RICORO*?

Ricoro? That's what the doctor ordered!" said the Traffic Manager. "My nerves were jumping from overwork, so I phoned the doctor and told him my trouble.

'A common complaint,' he said, 'You're smoking too many heavy cigars again. Cut them out. Come see me tomorrow.'

Next day, when I called, I found the doctor hiding behind a regular after-banquet cigar.

'Ah Ha! Physician, cure thyself'—I laughed.

Nonsense, man!' he rejoined, 'I said no *heavy* cigars. This is light and mild, and you can smoke as many as you wish. Take one, it's a Ricoro!'

Doc,' said I, after a puff or so, 'Ricoro is the pleasantest prescription a doctor ever ordered!'

*Sooner or later you'll discover—*

# Ricoro

*the "Self-Made" Cigar*

Ricoro is *softly mild*—you can smoke them all day without feeling them. Their fine, mellow, tropic fragrance and pleasant flavor are thoroughly satisfying. The prices are low because Ricoro is *imported* from Porto Rico *duty-free*.

Win Savings  
Stamps sold  
in all United  
Cigar Stores

Ricoro is made in a dozen sizes and shapes, from 6c to 2-for-25 cents—simply the question of size. The quality is the same in all.

Sold only in United Cigar Stores—"Thank You."

## Improved Summer Underwear

**R**EGARDLESS of your size or form, there is a Rockinchair Union Suit to fit you with absolute comfort.

After studying statistics showing the varying sizes, shapes and figures of thousands of men, a leading designer of men's clothes developed the new, unique Rockinchair method of sizing—which means that the short, the tall, the lean, the stout, are as perfectly fitted as the "regular"!

The difference in comfort between Rockinchair and other underwear is the same as the difference between a comfortable rocking chair and the plain, straight-backed chair.

Rockinchair not only fits perfectly, but it is also built for comfort. The full natural blouse above the waist permits perfect ease in all bodily movements—no binding, anywhere. The waistband that snugly fits the waist, like that of your trousers, keeps the garment in position. The one-piece closed seat (just like your trousers) is both comfortable and sanitary. It means a really closed crotch. There is no complicated drop seat to sag, or gaping split seat to bunch and annoy you.

The patented side leg opening has only two buttons, placed where the eye can see them. They bear no strain; they won't tear off. This opening allows easy, quick adjustment and a broad, wide sweep that extends clearly across the back. Simplicity!

A model to fit every figure—a quality fabric for every purse.

Try it. Money back if not satisfied. If your dealer hasn't it, write us.

## "WE'LL GET THEM YET!"

BY MARY ROSS

I DON'T know where she picked him up. When I came upon them he was clinging to an iron railing and trying to sing—and the streaks of mud on his horizon-blue overcoat seemed to show that part of his progress along the wet streets had been on all fours. Every now and then he would make a hopeful sally from the railing and stagger back to its support. She was standing dejectedly beside him, pressing back into shape the lace frill of her hat, which the drizzling winter rain had wilted to a soggy mass about her painted cheeks.

"But, monsieur," she was protesting, "I can take you no farther. We should never reach the gare. There are no taxi-autos, and—but look at my hat: it is ruined."

Then she saw me, and as I reached them she caught hold of my sleeve.

"Monsieur the American," she pleaded, "surely you will be so good as to help this poor brave militaire. He has had his permission, and to-night it is up, and he must get to the gare and sleep there to go out early in the morning. I found him some ways back, and I have helped him here—but he is very heavy. Surely you will take him to the gare?"

The gallant militaire himself turned from a profound study of the railing and attempted a salute. Undoubtedly he was heavy to anyone as tiny and as precariously perched on high heels as the little cocotte, but from an American five feet eleven he looked like an appealing little old terrier. At some time or other he must have been with the Tommies, for he eyed me, then murmured solemnly in perfectly intelligible English: "Be a good boy."

### "We Must Not Be Too Late"

I TOOK his arm, and the little lady began thanking me as we started our shuffling march in one direction and she clicked off in the other. The streets were empty—war-time Paris after ten o'clock. Occasionally a taxi hissed past over the wet pavement, but it always was full. There was nothing to do but button up our coats against the rain, which was getting thicker, and walk the mile or more to the station.

Mr. Pollu was still unsteady but rather gay. He tried to chirp a couple of French songs in my ear, of which I got nothing but a refrain:

*Annette, Annette, elle est si belle . . .*

and every now and then he tried a precarious dance step, when only my sustaining hand kept him from sprawling again in the mud. But he wanted to get to that station all right.

"It cannot be that we will be too late, monsieur. We must not be too late," he would keep saying, worriedly. I asked him if he wanted to get back, and he said yes, with a firmness that did not seem part of his drunken babblings, but when I asked why his only answer was

*Let's a long way to Tipperary.*

rendered with creditable accent and tune.

You know you don't often see poilus drunk in the streets in Paris—this was my second in three months—and I began impertinent questions. Did he live in Paris before the war, and had he spent his permission with his family, and wasn't it tough to clear out and leave them again? Asinine stuff like that. And where had he been with the army?

At first he didn't answer much, but the cold rain seemed to be sobering him up, and he began to talk about Saloniki. He'd been there two years, he said, and he didn't quite see how he had come through it alive. He never had been very strong, and it was all heat and dirt and disease, but every letter from

his good Sophie said: "I am praying for you that the good God will let you come back to us and to see your little Jean," and he thought it was because of that that he had come through.

You mustn't think that he said it all straight off like that. Only a phrase now and then, which I had to patch together as best I could. Then he began to talk about the kids.

"There is the little Marie, monsieur," he said, "who could hardly walk when I left. Now she must be a big girl—but always with brown eyes—and such curls! She is very fond of her papa—my wife wrote me that she had kept five sous that an American soldier gave her, to buy bombons for me when I came home."

"And Luisette is now in the school. She once wrote me a letter. You should but see, monsieur," and he stopped right there in the rain and began going through bag after bag until he found a dirty, pulpy scrawl by a child. "She has six years," he said. "There was another between the two, but she died."

"And Jean," he went on; "him I have never seen. He was born three months after I left, monsieur, and now he must be able to walk. We had always wanted a son, and the good God sent us three little girls. But now at last there is Jean. And think, he will not know his father, and I shall have to teach him to say 'papa' to me!"

Of course the thing that got me was that he kept talking about going to see them, when here he was, his permission over, on his way back to some front or other.

"Do you live in Paris?" I asked him. There are stories of men who come hundreds of miles to see their families and then miss connections with them in some way or other, and have to go back before they can find them. But no, he did not live in Paris; he lived in one of the towns up near the present front. It was a soldier town, with lots of troops always there en repos, he said, and his wife had written him that some of the neighbors' wives had not been all they should have been while their husbands were away at war, but of her he was sure. She had written him what they would have for dinner when he came home, and how Marie had broken one of the blue bowls, how he was needed to look after the garden, which wasn't as good as it had been in former years, and how some one had stolen three hens.

"It is not a big terrain, monsieur," he said, "but so nice."

You must keep remembering that all this that I've written in a few pages came out in the course of a mile or so. At first I'd had to put my arm around his waist, almost dragging him, but by the time that we could see the blue lights in front of the station he was almost walking by himself—just clinging to my sleeve and stumbling along as a tired child might. Those lights seemed to remind him of something, for he stopped and muttered a sentence I didn't get and rubbed his hand across his face. "You had a long way to come from Saloniki. You must have been tired when you got here," I said, like a cheerful idiot.

"It was a long way, monsieur," he replied, "and sometimes we were very tired in those cattle cars, and sometimes there was not enough to eat and drink. But it was coming home."

"Yes; then you got home to Luisette and Marie and Jean?"

### "Yes, Monsieur, I Got Home"

A MINUTE later I would have given my commission and everything else to unsay those words. That little terrier of a man straightened up and looked at

me with more patient pain than I ever had seen in two eyes. He just looked for a minute or two. We were standing in front of the station all ready to begin a formal French good night. From within came singing in the canteen where vaudeville entertainers come every Thursday night to joke away the men's last evening before they go back. A great gust of laughter swept out, then they all swung in together:

*Il n'pass'ront pas,  
On les aura, ils n'pass'ront pas...*

"Yes, monsieur," my little man was saying: "I got home. Near the station I saw old Anton, the barber, and he said: 'Have you heard about last night?' but I did not stop. I walked as fast up the street as I could walk, because I was thinking about them. The street looked different, for there were English soldiers everywhere. Then I got out that street and turned down another and then into the little passage of our terrain."

"And there was a crowd of soldiers, and I could not understand. Some one

was saying: 'Well, they got only four here; it's good it wasn't one of the big houses.' And I pushed through, and there, monsieur, was not my little house, but only a heap of stones. Two bombs, monsieur, on one little house! And I looked all the next day, but there was not even anything I could bury!"

He stretched out his hands helplessly. Tears were running down his cheeks, and there was a wetness in my own eyes that wasn't rain.

"On les aura," came from the canteen. ["On les aura" is a popular catch phrase. It is equivalent to "We'll get them yet."]

"But mine, monsieur?" he almost sobbed.

Then he pulled himself together and stood quite grimly and saluted.

"Bon soir, monsieur, et merci mille fois, monsieur. Vive l'Amérique et vive la France!"

I was still standing there in the rain like a stupid dolt when the door opened and for a moment I saw him silhouetted against the dim smoky light as he shuffled into the canteen.

## ARTHUR RUHL

OUTSIDE of soldiering there's only one really romantic calling left in the world and that's being a star reporter. It seems sometimes as if modern improvements have done away with star reporting—with the Richard Harding Davis kind of thing. Time was when it was common in any big newspaper office for a good man to go out on a good story all by himself and see all there was to see and then write the story the best he knew. It was growing less common before the war changed everything. Big papers had more and more adopted the plan of sending three or six or a dozen men out to get the story and telephone it to a rewrite man in the office, who did his trick at the typewriter without ever seeing anything more exciting than the copy readers. Then the war came along and all the best reporters went out on the biggest story of all and met the censorship and were defeated. At least that's the way it seems—and then you remember Arthur Ruhl.

Arthur Ruhl has been star reporting for COLLIER'S for nearly fourteen years, and he sailed the other day for France on his fifth trip to the war zone.

Ruhl came out of Harvard with an excellent mark in the half-mile run and that strange desire which marks off one man in every ten thousand from the other 9,999—the desire to be a newspaper reporter. He joined the staff (a man who subsequently becomes a star reporter is always said to have "joined the staff," though at the time he called it "getting a job")—he joined the staff of the "Evening Sun" immediately. And between 1899 and 1904 he did about all the kinds of reporting there are except star reporting. Then he came over to COLLIER'S WEEKLY to do that. In view of what happened we should like to record that it was owing to our editorial perspicacity that he came over here to be a reporter. But the facts are against us. We hired him to edit a department in the paper, a kind of review of the week's events. He did it so badly that we had to let him do what he had come to do, and he did that so well that he has been doing it ever since.

ONE morning he read in the paper on his way to work that there was trouble in Haiti. By ten o'clock he and Jimmy Hare, who was COLLIER'S staff photographer in those days, were at the bank exchanging paper money for gold. And before lunch they calmly sailed for Haiti. Another morning Ruhl read that Sarah Bernhardt was playing in Buenos Aires. It occurred to him that South America was no longer composed wholly of the Amazon River, the Andes Mountains, and Patagonia—the general impression in North America to the contrary notwithstanding. Ruhl mentioned this happy thought in the office. We asked him if he would like to go to

South America. Ruhl said calmly—Ruhl is always calm—that, on the whole, he would. We said: Why don't you go? We were going to say more, but Ruhl had started on the word "go." He stayed six months and wrote the colorful series of articles that were published in COLLIER'S and afterward in book form under the title "The Other Americans."

Ruhl was one of the men who heard that the Wright brothers were flying at Kitty Hawk. That was about the time the scientific debate was hottest as to whether it was really practicable for a man to fly. Ruhl stalked the Wrights across the uncharted dunes of North Carolina, saw without being seen, and came calmly home to write that he had seen a man fly. Two years later, in 1910, Ruhl had his first flight in an airplane. Orville Wright took him up from that cow pasture near Dayton, Ohio, which is now immortal.

THAT was the year of the Jeffries-Johnson fight. You will remember that there were more correspondents in Reno than would now be permitted on the whole western front. Reno was full of writers, from Jack London to Battling Nelson. The favorite theme—and some newspapers had more than a dozen men playing on it at the same time, but of course in different keys—was how in the last analysis the best black man couldn't beat the best white man.

All the correspondents—the popular novelists and the sob artists and the sporting experts—agreed that the white man had a superior stamina—a tradition of courage going back thirty centuries—which would win. And besides Johnson was a good-natured coon who had still to learn what real fighting was like. You remember, more or less, what happened. That night delirious darkies marched up and down South State Street in Chicago bearing slabs of bacon impaled on long poles until the police got worried and called out all the reserves.

And the popular novelists and the sob artists and the sporting experts sat beside telegraph operators in Reno explaining themselves to the country. But Arthur Ruhl found his train in the railway yards and put his bag aboard and, having nothing to explain, calmly sat down to write just what he had seen—with the result that COLLIER'S WEEKLY published the only memorable story of the occasion.

In the summer of 1914 he was in Wisconsin fishing. He packed his bag the day war was declared, arrived in New York thirty hours later, and calmly sailed on the *St. Paul* with the first group of correspondents to leave New York. He has spent about ten months a year on one battle front or other ever since.

## The Test of War

THE crucial test of war service is the most rigid test to which a motor truck can be subjected.

In war service a truck must have the vitality to perform its duty against odds—without hesitation—with increased speed—over rough roads—day and night—with absolute certainty. It must be dependable to the last degree.

Selden Trucks have proved equal to the test of War. In France—in England—in Russia—in army camps in this country—wherever there has existed a need for positive, efficient, dependable motor haulage—Selden Trucks can point to a long list of accomplishments.

Thousands of business concerns know the economy of Selden Trucks—for they are profiting daily by their use.

1 to 5 Ton Worm and Internal Drive Models. Write for full information on your haulage problems.

## Force— Force to the utmost!

**A**FTER all the bloody carnage in Flanders and Picardy, after throwing away hundreds of thousands of his best men in a vain attempt to break through to Paris or the Coast, the Kaiser has given up hope of that much-vaunted march to victory, and now merely seeks a "German peace." Of course he wants to keep all of Russia he can lay his hands on, as well as Serbia and parts of Rumania, but he is willing to give up Belgium if he can keep her under his economic control.

*"There is but one response possible from us: Force, Force to the utmost. Force which shall make right the law of the world and our own. Right dominion comes in the end."*

WOODROW WILSON

All that we have is staked in the war—our men, our money and our boundless resources. If we lose the war, we lose everything. If we allow the Kaiser to make an inconclusive peace, all our sacrifices have been in vain. So it is up to us to win, and one of the first steps necessary is to know all about the war—what led up to it, how it began, through it all. The fragmentary accounts in the newspapers are fine as far as they go, but it is only in a real history that you can see things in their proper perspective.

## "THE STORY OF THE GREAT WAR"

Published only by P. F. Collier & Son

Is just such a history. A whole army of noted authors and correspondents assisted in its compilation, taking advantage to the full of the world-wide news-gathering facilities of the Collier organization.

It gives you historic perspective, digging out the roots of the war for the past fifty years; vivid description, covering in detail the thrilling events of the war; expert analysis, a resume of the net results. In short, it is a real history written to keep pace with the conflict. A work that every man should read now for his own sake and that of his country.

Send for free booklet describing this wonderful War history.

## German Offensive and American Aid

Continued from page 7

a diversion on the French front. But the day had passed for the realization of their great strategic plan.

### German Megalomania

**T**HE danger is over. It would be idle to deny that a danger did exist. One cannot write now the full history of Passion Week and Easter Week of 1918. But it is our duty to seek without delay the lessons of the critical period through which we have passed. There are tactical lessons, which have to do with the methods of combat, and there is the lesson of general strategy which concerns the possibilities of counteroffensive now and of the supreme offensive later in which the aid of the United States must play a decisive rôle.

Generally speaking, the German plan of 1918, like that of 1914, had only one serious defect. It was on too large a scale. Moderation in conception, economic as well as military, has luckily never been a German characteristic. For, in executing their plans, we must acknowledge that the Germans know how to make use of all the means of action that their genius for organization and discipline furnishes them. If the Germans fail in what they undertake, it is because of their fatal tendency to megalomania. In spite of all they have in their favor, the means of which they dispose are not in proportion to the goal they set before themselves.

In the present offensive, as in the offensives of 1914 and 1916, the German General Staff has been able to attain on the point of initial attack numerical superiority which it has known how to conceal up to the last moment, and even superiority of artillery. It is in the latter especially that the Allies have to confess the surprise.

The German attack began by a short and extremely violent bombardment, the effectiveness of which was due to the intensity of toxic gases. Then the waves of assault swept over the British lines, not blindly in the desperate madness of victory or death, but methodically organized and powerfully equipped with mobile artillery. We know now the new composition of the German battalions, and just how they are armed with Minenwerfer, mitrailleuses, and demountable cannon of 77 millimeters, all manned by the infantry and transported by the infantry. The new German infantry cannon suddenly revealed itself as the decisive factor in the assault.

Thanks to the ability of this cannon to be moved quickly and at will and to fire with precision at short range, the British, already half asphyxiated, had to evacuate their trenches.

### Light Infantry Cannon

**I**T seems that orders had been given to the first and second lines to hold their positions to the bitter end, relying upon the usual support of barrage fire. With the intention of holding at all costs, the British probably used their reserves. The Germans broke through, in spite of the heroic resistance of the British, as much by the unexpected short-range fire as by the mass of assailants. This explains the retreat of the Fifth British Army, which was overwhelmed as a result of new methods of attacking. It would be difficult to lay too much stress on this proof of the value of the German mobile infantry cannon. Even in 1915 we and our allies had not sufficiently developed the use of heavy artillery. It is the same now with infantry cannon. We shall soon be amply equipped—but we are late. Will not this lesson teach us?

No longer can one affirm the impossibility of breaking through trench defenses. For the present battle has taken the classic form of war in the open which the belligerents have been seeking for three years on the western front.

The Allies, in 1915, and in 1916, in Artois, Champagne, and on the Somme, failed to force the fighting into the open. The German retreat of March, 1917, was voluntary. Our offensive of April 17, 1917, which had certainly been conceived and organized to break the German lines and to exploit strategically the success of the rupture in the open field, did not succeed for reasons that were probably not of

a military order. But all these offensives, like those of Verdun, were preceded by long and careful heavy artillery bombardments. This means alone was believed capable of destroying trenches and barbed wire, of leveling the ground for the assault. Trench cannon, mortars, crapouillots, light cannon manned also by the artillery, worked in conjunction with the 75-millimeter and the field artillery, but as barrage and complement fire more than as destructive fire.

Little by little our old traditions of the bayonet had given place to grenade fighting in our infantry training. Because of the bloody and deplorable sacrifice in men necessitated by attacking lines insufficiently broken, the rôle of the heavy artillery had become of prime importance. The formula of General Petain, a formula to economize men, was: "The artillery conquers, the infantry occupies!" But the play of the artillery was limited by distance and especially by the difficulty of moving forward the heavy artillery to keep pace with the progressive occupation by infantry columns. The ground torn by the heavy shells became impracticable for the advance of heavy artillery. Successive lines of trenches, skillfully made on counterslopes and extending far to the rear, escaped more and more the effect of the shells. The infantry stopped after a gain of several kilometers at the most. It was all to begin over again! And it goes without saying that the expense of shells of all sizes was taking fantastic proportions.

Heavy artillery had to be supplemented by cannon that could accompany the infantry and aid each storming party in destroying whatever obstacles were in the way. It was necessary that these cannon be small enough to escape destruction by heavy shells and light enough to be transported and served by the infantry. The new conditions of fighting gave birth to the idea of light and mobile infantry cannon, demountable, easy to feed, accurate in its fire. At the same time, to avoid the effect of barrage fire and the enormously increased use of mitrailleuses, the idea of armored cars was conceived. The problem of using them to advance in the torn-up ground of the battle line was solved by adopting the American caterpillar device.

The first armored cars, called tanks, were used by the British in 1917 for offensive work. The British tanks were equipped with mitrailleuses and cannon. But last year the armored car not only transported cannon—it became a means of attack directly with the infantry, carrying soldiers, mitrailleuses, and special cannon.

There were competition and rivalry between the two new ideas. The infantry cannon pure and simple, working in the open air, and the tank, both had ardent advocates. After much argument, the rather tardy conclusion was to manufacture both. But the Germans got ahead of us. They adopted a light infantry cannon, of the Minenwerfer type, but more easy to manufacture and more accurate in action. They also made tanks, but these were designed rather for revictualment than for attack. We have not yet had enough perspective on the Battle of Picardy to form a fixed opinion on the use of the new engines of war. However, it is certain that the German light infantry cannon have aided powerfully the attacking troops, and it is regrettable that the Allied armies have not yet been sufficiently provided with them.

### The New Warfare

**B**UT the logical conclusion is that the new inventions and the new developments in heavy artillery are all of service. We must not accord an exclusive privilege to any one of them.

Heavy artillery, even the cannon shooting 120 kilometers, field artillery, infantry artillery, grenades, tanks, all contribute their part to the battle. The great lesson of the new inventions and development is that we now have the proof that the fronts protected by trenches and barbed wire no longer form invincible defenses. They can be broken through if sufficient forces of destruction are employed.

For our comfort and encouragement, and to our satisfaction, this battle has

equally demonstrated the peculiar power of aviation in the clash of opposing armies. We have the right to say that the British aviators, supported by French aviators, have contributed to save the perilous situation of the British during the retreat. The airplanes have fought near the ground, with mitrailleuses and bombs. By bold swoops they have surprised German columns on march and in their assembling places, have cut the lines of re-victualment, have blown up depots. The Germans recognize this themselves. Their aviators have not been able to oppose successfully their adversaries in the air. British and French losses in airplanes are far less than those of the Germans.

### Aerial Strategy

THIS rôle of aviation in the battle and behind the front does not date, of course, from to-day. The Germans, like ourselves, have made large use of airplanes during an offensive movement.

But present events reveal the vital rôle that aviation ought to play. It is possible that aviation may be the decisive factor in the war, not only by bombarding at great distance industrial regions, war factories, railways, but also in contributing its share in the war of movement within the zone of operations.

(The splendid results of Franco-British aviation in the present battle, however, must not cause us to lose sight of the fact that aerial warfare is as much strategic as tactic. The Allied aviation has been hampered from lack of a definite aerial strategy. For two years I have been sustaining the point of view that if our bombing machines had struck continued blows in the mining regions of Lorraine and the Valley of the Rhine, the war would be perhaps finished. The Germans have had an aerial policy, shown by their Zeppelin and airplane raids on London and Paris. The British have been more advanced than we in formulating a strategic aerial policy, and we have shown some indecision in following them. Raids require a great number of airplanes,

particularly of bombing machines. Bombing is the final aim in aerial warfare.)

From the tactical lesson of the battle of the north, we pass to the strategic lesson. It is not for us to examine and to foreshadow the strategy by which the Allies will respond to this new check of German strategy; but from what we have just set forth, who can fail to see very clearly—and I believe that our American friends will understand me—that the United States must hurry in coming to take its great part in the final battle which will crush Germany?

General Pershing has acted nobly and with a grasp of realities in bringing the American army directly under the French high command. He has contributed powerfully to the realization of unity of command, so long opposed, and which was putting us really in a state of inferiority to Hindenburg. American soldiers are now shoulder to shoulder in the battle with the soldiers of the Marne, of Verdun, of the Somme.

But, although men are necessary, although we are certain that obligatory service in the United States is going to put on the field of battle millions of men, we must say to the United States that it is especially necessary to speed up the sending of war material, of engines of destruction. Airplanes as well as ships must be constructed. Too much time has been lost in discussion of types and in experimenting. We need thousands of airplanes and thousands of ships. We need infantry cannon and tanks. The marvelous industrial resources of the United States are already mobilized to aid us. American industry must measure up to the task that is expected of it.

### The Decisive Factor

AMERICAN aid will be the decisive factor in the war. By furnishing us soldiers to fill up our depleted ranks? Yes! But equally by furnishing us war material and tonnage.

Airplanes and cannon, come without delay from across the Atlantic, come en masse to the battle of France!

## What About Guns?

Continued from page 12

on personnel—men and horses—the semi-heavy guns, also more or less mobile, which take up the work where the light guns leave off and are intended mainly for use against enemy batteries and trenches; and the heavy siege guns, not mobile in the sense of being horse-drawn, and designed for attacks on more or less permanent fortifications. The light guns are close up—are fired generally, that is to say, at ranges varying from about fifteen hundred yards to two or three miles, although their maximum range may be greater than that. The semi-heavy guns are farther back, while the siege guns are miles in the rear—far enough away so that no enemy advance is likely to threaten them.

In actual fighting, the theoretical uses of the various types are a good deal modified. With high-explosive shells a light field gun may be effective for counterbattery work. With the help of motor tractors and railway mounts heavy guns can be made almost mobile, and in the frightful mêlées preceding or following an infantry attack on the French front, when it is a question of deluging the enemy with as many tons of explosives as quickly and cheaply as possible, everything, big, middle, and light, may be cut loose at once. And some of the trench mortars, though scarcely more than chunks of steel pipe, sawed off and plugged at one end, yet contrive to hurl a heavy shell far enough almost to entitle them to be included among the "guns."

If cannon were really as simple as that—and a good many people seem to think they are—mere logs of steel with a hole bored into them, set on wheels—an artillery program would be easy enough.

As a matter of fact, a modern cannon is a rather complicated machine which combines some of the qualities of a smoothly working engine with those of a burglar-proof safe. A little consideration of the 3-inch or 75-millimeter rapid-fire field gun—the "normal" field gun, so to speak, of all the armies—will make this clearer.

This rapid-fire gun is really only about twenty years old. The type originated with the French, about 1898,

but it was not until the Balkan wars, fourteen years later, that its effectiveness was demonstrated in the field. The characteristic feature of the rapid-fire gun—leaving out of consideration the panoramic sight, by which the gun can be "laid" on an unseen target by sighting some other visible object, and various other details—is the automatic recoil and counter recoil, by the use of which the barrel of the gun is returned after firing almost to the same position it had as originally "laid." This is accomplished by permitting the gun, or the gun and the carriage to which it was fastened, to slide back and forth on a cradle, the recoil to be taken up and the barrel thrown back into position by means of a piston-and-cylinder arrangement similar to that with which doors are closed without slamming.

### Twenty 15-Pound Shells a Minute

THE jump backward and the return "into battery" takes only an instant, and the change in the position of the gun is so slight that the gunners seated on either side of the barrel do not need to leave their seats and can simply pull open the breech, slam in another shell, and fire again. A crack gun crew, working at top speed with a French "75," can fire twenty 15-pound shells a minute. The existence of such weapons as these, which in a few seconds can spray thousands of shrapnel bullets on advancing infantry several miles away, go far to make open warfare impossible.

A shrapnel shell, it is perhaps unnecessary to explain, is a shell containing both explosive and bullets—about 300 of them generally—and exploded by a time fuse which can be set with surprising accuracy. When the fuse explodes the shell in air over the heads of troops, the bullets are thrown out with the velocity of the shell itself plus that of the explosive in it, exactly as they were thrown out from an old-fashioned blunderbuss, and they have killing force over a space of several hundred square yards.

All armies have rapid-fire guns of this type, differing in details—especially the recoil mechanism—rather than in general purpose or behavior.

## BULL-DOG DIE-STOCKS

THE OSTER MFG. CO. - CLEVELAND, OHIO  
Manufacturers of Bull-Dog Die-Stocks and Oster Power Threading Machines

The famous French "75," the British 18-pounder, our own old 3-inch gun and our 1916 model now being made for 75-millimeter shells (about 2.9 inches), are all cannon of similar function and action. A battery made up of them, all firing at once, would look to the average uninformed civilian very much alike, and he might easily mistake one for the other.

The French type—the much-talked-of "soixante-quinze"—is the most famous of these. The French put their imagination and intellectual charm into their cannon, as into so many other things. They felt that their "soixante-quinze" was the best gun of its kind in the world. They guarded the secret of its recoil mechanism; they talked about the gun and its work and wrote verses about it as if it were a person, and gave it finally a kind of glamour and personality not shared by its less-heralded sisters. It is not a fact, however, as many seem to think, that the French "75" is in a class quite by itself, a different sort of weapon altogether. Other guns of the same general type do similar execution. Artillerymen have their pets and enthusiasms like automobile owners, and while a majority of them will very likely agree that the "75"—which we are now preparing to make in large quantities for our own troops—is the best gun of its type, it is not impossible to find American artillery officers who have seen both guns working side by side, who, for one reason or another, stoutly hold to their preference for our own 1-inch guns.

One artilleryman with whom I talked out it in this wise: "The French gun may be the best, but when it comes right down to fighting if you armed a thousand men with the French '75' and another thousand with either our gun or the British gun, their functioning would be near enough alike so that the side would win which served their guns best. It would all come down to a question of men."

#### Recoils and Carriages

THE main difference between the French "75" and other cannon in the same class is in the recoil mechanism. The French use a hydraulic-pneumatic recoil, a combination of oil and compressed air; our old gun, and most of those the British have been using in France, depend on a combination of oil and springs. The recoil in our gun, that is to say, is taken up by a piston with holes in it pushing through a cylinder filled with oil, on the same principle as that used in a door check, and also by a series of springs inside the cylinder which push the gun back into place again.

In the French gun the oil is pressed back against air, and this air is sufficiently compressed to throw the gun back into place again. Oil is used in both recoil systems, but springs in our gun, compressed air in the French gun, return it to battery.

The French gun has another important feature—the "axle traverse." As the gun is "traversed," swung, that is to say, to left or right, it slides along the axle and the angle of wheels changes with it, so that the recoil is always toward the point of support and never oblique to it. This means that the gun will remain longer "on the target" during prolonged periods of rapid fire.

There are certain features in our 916 model—the split trail, for instance—worth noticing. This split trail, which the French themselves have adopted for their long 155-millimeterannon, differs from the old-fashioned single trail just as a man standing faced, with legs apart, differs from one standing with his legs together. With the split trail the gun can be swung much farther to the left or right—"traversed," as artillerymen say—and fired without causing the carriage to lose its stable equilibrium. And as the breech can be lowered without striking the trail, the gun can be given a much higher elevation. This greater elevation and traverse are important, though of course it would remain to be seen just how important—with the comparatively short ranges at which these light field guns are generally used—they would be in service.

According to ordnance officers with whom I talked, there was no basis for Senator Lodge's accusation that "Six million months had been wasted while we were trying to improve the recoil of the best gun in the world." No attempt, they said, had been made to improve the French recoil. There had

been delays in getting the French drawings, and on the general use of parts of these drawings there are still certain minor, though doubtless necessary, restrictions. And there was much difficulty in finding manufacturers to make the recoil mechanism. The gun itself, indeed, was a comparatively simple matter. It was the carriage and recoil which held things up. There was a kind of packing, for instance, made of leather soaked for two years in a certain solution. We had no leather of this sort and had to experiment for some time before getting a rubber substitute for it. The two recoil-mechanism tubes had to be bored exactly parallel, with a very thin wall between them, through six feet of steel with practically no "tolerance." It was a kind of job few of our commercial manufacturers knew anything about—either such boring itself or how to bore with so thin a partition without bending the chamber.

#### \$7,000 a Gun

ANY of these guns, the French model or our own, demand perfect materials and care and fine work from first to last. The steel itself is treated differently from the ordinary commercial forgings, and days of work may be spent on machining out a breechblock before some tiny check or flaw is uncovered which throws out the whole piece.

Boring the barrel is another pretty piece of work—and measuring its completed, mirrorlike inner surface with a "star gauge," an ingenious instrument with which the diameter and perfect roundness of the barrel can be measured along its full length to the ten-thousandth part of an inch. Then jackets must be shrunk on or—as in the British type—the barrel wire-wound. I saw them wire-winding these British field guns at the Bethlehem Works. This wire—really a narrow steel tape—exerted a pressure, so I was told, of 30 tons to the square inch. This pressure actually changes the character of the steel, squeezes it to the limit of its elasticity, and even reduces a hair-breadth the diameter of the barrel. Yet when your gun is finished and the wiring polished down, you would never know it was there. The breech mechanism is another neat job. It must be machined out of solid steel and fitted together again like a Chinese puzzle—easy enough to handle so that a gunner can yank it open and slam it shut with one hand, and yet strong enough to withstand the enormous strain of the discharge. There is about \$7,000 worth of work on each of these little guns, including the limbers and caissons to go with them. All along are finenesses and bignesses, a failure to meet any one of which might mean, months later in France, a gun that blew up or didn't function, and lives and perhaps a position lost. All these difficulties have been met by the other armies, of course, and there is no earthly reason why they should present lengthy delays for us, and these difficulties are being met, but it must be plain that even these light field guns are not the sort of thing that unprepared manufacturers and untrained mechanics can rush through in a few months by thousands as Mr. Ford, for instance, turns out his automobiles. And even he could not turn out his standardized machine until years had been spent building up an organization for it.

#### Pushing Production

BEFORE the war, with the exception of the Government arsenals, Bethlehem and Midvale were practically the only companies equipped to make all parts of field artillery. A few other shops made gun forgings, or carriages, or other parts, but the men competent to direct the manufacture of cannon, complete, could almost be counted on the fingers of one's hands. The Bethlehem people, who make a little of everything for everybody, were making field guns for the British, and as they were familiar with this type, they have gone on making them, some to go to the British, and others, bored out to take 75-millimeter ammunition, for us. Some twenty other large plants are now working on field artillery—complete cannon or their parts; five specialize on railway mounts and seacoast guns, and three on anti-aircraft guns. New shops had to be built in both Government and private plants and in some cases a new organization altogether. One motor-car company, now building recoil mechanisms for the 155-millimeter gun—roughly speaking a 6-inch

cannon—has, for instance, built up a 13-acre shop, with some \$6,000,000 worth of machinery, from the ground since last November.

Some of the 155-millimeter guns to which these recoils will be fitted are being made at the Watervliet Arsenal, where a big shop has also been built since last fall especially for the manufacture of the big 155- and 240-millimeter guns. Another of Watervliet's new shops is intended wholly for new gun linings to be shipped to France and fitted to guns whose linings have been worn out in service. And so on. In some cases private manufacturers had to go ahead and spend millions in equipment in order to be able to fulfill contracts which, because of delays in recommending or in getting appropriations, they had only the informal notice they would eventually get. When the Ordnance Department had the money it assisted the manufacturers, and some \$46,000,000 was thus spent on shops and machinery intended for the guns themselves, as separate from battery equipment and other ordnance. Decisions as to type of guns have now all been made, so far as such questions can be fixed, contracts placed, enlarging work largely completed, and it is now simply a matter of efficiency in pushing production. Exact figures on production itself are not now given out, but it might be said, by way of illustration, that one Government plant is developing facilities to turn out cannon of various sizes up to 16-inch at a rate of 1,000 finished guns a year; or again that as many cannon of a certain caliber will be assembled from various plants in a month as used to be built in thirteen years. It does not appear that the efficiency of our own troops in France, nor the effective resources of our allies, were reduced by the temporary necessity of borrowing finished cannon from the French surplus. The Ordnance Department makes no prophecy whatever, but it is said by those familiar with the work done that in the matter of 3-inch and 75-millimeter guns—normal field artillery, that is to say—we should be completely self-sustaining within six, or at most, seven months.

### Watervliet

THE only plants of which I can speak from personal observation are Watervliet and the Bethlehem Steel Works—the one a Government arsenal, the other practically taken over by the Ordnance Department and now giving 95 per cent of its equipment to Government work. At Watervliet they are making "75's"; the "four-point-seven" so-called siege gun; a 3-inch anti-aircraft gun; a 4-inch navy gun, largely used nowadays for arming merchantmen against submarines; the huge 14-inch and 16-inch navy guns, and modifying various other heavy guns for railway mounts. Then there are the new shops for making gun linings and the long 155- and 240-millimeter guns. These last shops have all been built from the ground up and arranged so that, as far as possible, material will come in at one end and proceed straight down the line from one machine to the other until it is done. From an arsenal that had much the air of an old-fashioned army post, a sort of park decorated with piles of ancient solid shot, Watervliet has been transformed into a modern cannon mill, and the big shops for the 155- and 240-millimeter guns are on the ground where the officers used to play golf.

### Skilled Mechanics Needed

WATERVLIET merely makes guns. The steel forgings come from other plants, and while the difficulties at the moment I visited Watervliet seemed to be more those of getting steel delivered than of having men and machinery to work it, there is still need of skilled mechanics here as everywhere else. And several of the officers, who showed me the work of the plant, asked if something mightn't be done in such an article as this to call attention to this need and to encourage the transfer of skilled men now in nonessential work to such necessary work as theirs. There was sometimes a prejudice against an "arsenal," they said, because people associated it with explosives. This didn't apply to Watervliet, where not only there no powder making nor filling of shells, but the location of the shops themselves and the general working conditions are pleasanter than those of most commercial factories. The Employment and Welfare Department of the arsenal assists in finding lodgings for workmen, and its superintendent

## You know how the young folks just love a good story—

How they'd rather listen to one than eat, or play, or sleep—how they beg you, sometimes, to tell them a story—to read to them.

They will read something, you know, and it's what they read now that determines what they are to be. It's their heroes, their ideals, the men and women who are made to seem to them wonderful and worthy to pattern after, that form their characters.

It is in appreciation of this truth that we have published—

## The Junior Classics

Edited by famous educators and containing the 846 best stories for young folks from all the literature of the world.

Dr. Charles W. Eliot, President Emeritus of Harvard, says of these books:

"The boy or girl who becomes familiar with the charming tales and poems of THE JUNIOR CLASSICS will have gained a knowledge of literature and history that will be of high value either in school or home work. Here are the real elements of imaginative education, poetry and ethics, which should enter into the education of every English-speaking child."

### A FREE BOOKLET

A wonderful little book has been written. It tells how all the heroes and heroines of literature have been gathered together in one volume—how you may have them all in one volume—just the stories and poems that are best adapted to form character, to make life easier, to insure success.

**Use the Coupon—NOW**

will be glad to send information to any men who wish to apply. It is possible that the Rochester "community cooperation" scheme of supplying skilled mechanics, described in COLLIER'S for May 18, might be used effectively at Watervliet.

### "Paper Work"

IN a recent article in COLLIER'S on airplanes Mr. Mark Sullivan quoted a factory owner as saying that after the original design for the Liberty motor was in his shops he "received 520 telegraphic orders for changes—orders such as Numbers 432, 433, 434, 435, and 436 ordered replaced by Numbers 11,456, 11,457, 11,458, 11,459, and 11,460. Scrap all finished and unfinished material of original numbers and await new drawings and specifications." In the maze of "paper work" that goes on in Washington similar experiences are not unusual. Roaring about them is one of the favorite distractions of reserve officers not yet used to the formalities and red tape of the service. "The Government lost twenty-five cents back in 1941, some time, and they've spent ten millions on clerks and paper work trying to keep from losing another!"—so they run on when the day's work is done.

Here at Watervliet, for instance, I ran across a little example, in a shrinking pit in one of the new shops. A shrinking pit is a deep well into which a gun is vertically lowered to receive its jackets. These heavy bands of steel, made to fit tight around the barrel, are heated red-hot and, thus softened and expanded, are lowered over the gun as you would slip a ring on a finger. Water is sprayed on them, the bands cool and shrink and become practically part of the barrel itself. In this case the pit, a heavy piece of concrete construction, had been finished when another lot of specifications arrived, changing its dimensions, and the work had to be torn out and done over again. The officer in charge of the work, a man accustomed to big jobs and only recently called into the service, had no explanation for this change. He could only groan "Washington!"

There was, as a matter of fact, so I was told later, a reason. The pit was changed to meet certain proposed changes in the kind of guns eventually to be shrunk there, and it was not considered expedient that these proposed changes should be discussed. It was, in other words, a genuine military reason and not a mere mix-up in paper work which had caused the man on the job to tear his hair.

### Experts?

IN some parts of its huge task the Ordnance Department has been, naturally, more at home than in others. Work like that at the Aberdeen Proving Ground is work that the army knows how to do well. It has done the same thing before. This is an ordnance man's kind of work. A definite thing comes in to be handled in a certain way. It is his sort of thing and his sort of way—he is an expert at it. Factory management, "quantity production," on the other hand, the spending quickly and effectively of large sums of money, the correlating of all the multitudinous parts of our ordnance program and the various plants where it is being carried out—this is not the army's regular work, and the regular army ordnance officer, no matter how intelligent and patriotic and untiring, is not an expert at it. And he is further hindered by the cumbersome machinery he has to work with—the endless requisitions, permissions, signatures, and so on, inseparable from a military machine. If our distressed shrinking-pit man, for instance, wants to talk over his troubles with Washington, he may not jump on a train and go there. He must first get permission from Washington to leave Watervliet, and this may take a few hours or it might take a few days. On the other hand, it should be remembered that many of the civilians called into ordnance work are men who have had large experience in factory organization, some are army men who had resigned and now reenter the service after successful experience in civil life, and the second thousand ordnance officers only about 5 per cent were regular army men at the beginning of the war. And the latter work with some regularity, whether in civilian organizations could and had so large and rapid an expansion without similar difficulties.

Bethlehem is, of course, a different sort of place altogether from Watervliet—a huge commercial steel-

works, where you may follow all the processes from the ore dumps to the finished product. Somebody told me that one could spend three weeks merely walking through the aisles of its shops—and they will make you anything from hand grenades to skyscraper steel, or from a steamship propeller to a 16-inch gun. Our army and navy ordnance officers have large offices here; there is a British and French commission, and among those at lunch the day I was there were a Swedish naval commander and a young Costa Rican also following their own ordnance work. Mixed up with the other cannon in the shops I saw one little mountain gun lettered in Spanish and intended for Guatemala and half a dozen huge coast-defense guns built for Chile. The Chilean representative had been waiting a long time for his guns, and very likely he may have to wait a good deal longer, for just as soon as one was finished, it was said, somebody commandeered it.

Bethlehem is, in short, a sort of gigantic three-ring steel-making circus, where in peace times they are ready to undertake any sort of a job no matter how big, and a little of everything is done for everybody. Partly because of its size and the way it has grown—as an eccentric house grows by adding one addition after another, because it is, as one man put it, "really a huge jobbing shop"—it does not give an outsider the impression of planned and concentrated effort which one would doubtless find in the other plants built since the war for the special purpose of making some one gun or the parts of it. In a day's visit the outsider can scarcely more than "scratch" such a place, of course, but one does get a certain sort of impression, nevertheless.

### Women Munition Workers

THE shop in which they were making caissons and limbers for 3-inch guns and "75's"—a big place like a machinery hall in some world's fair—"Where you're standing now," the superintendent said, "was twenty feet underground a year ago!"—was built especially for this purpose, and the raw material comes in at one end and emerges at the other in limbers and caissons, finished even to their green and yellow camouflage paint. Even a caisson is not quite the simple tin bread box you might think. There is a lot of riveting, and the shells fit like phonograph cylinders into brass-lined holes—snugly, but not too tight, or the whole thing is rejected.

They were using many women in this shop—women from the neighborhood generally, some of them wives of workmen, in khaki and jumpers exactly like the photographs of women in the British munitions factories.

"They're better than the men, sometimes," the superintendent said; "for one thing because they really believe, when you tell them how a thing ought to be done, that you know more than they do about it. They'll do as they are told, but a man is always trying to do a job his own way. They're especially good on work they must repeat over and over—they get tremendously fast. There was one piece I tried to put a man on, and he said he never could do it that way. I put a girl on it, and in a little while she was earning seven dollars a day. There was another girl here who made \$200 in one month. The men tried to scare the women at first with stories about how hard and heavy the work was. They soon found they could do it well enough. We were afraid at first that the men might get fresh with the girls, and I called them all together and told them the women were coming and that the first man that tried anything on would go. We did fire one, and now they work along side by side as if they had always been doing it."

We spent most of our time in following the making of the British 3-inch guns and those of the same type which have been bored out for us into "75's." Theoretically they ought to have turned out in this part of the plant about fifty-five finished guns a month, but in the month just ended—partly because of labor troubles—they had only been able to finish between thirty and forty.

The lack of skilled mechanics is one of the causes of delays. In doubling the number of workmen to something like 25,000, men had to be raked and scraped in from everywhere, and a good many came from the near-by mines. Some of these latter could not speak English, and all of them were unskilled

"That this engine is designed on right principles, is proven by 18 years' practical experience."

## Train for a Bigger Job

The man who can direct the work of others is the man who draws the big salary. The only difference between him and the man who is a worker is training. The demand is for men who have special knowledge and who understand the fundamentals of modern business management. Learn how LaSalle training has helped thousands of men to better positions. Under the LaSalle plan you can get this special training at home by mail. No interference whatever with your present duties. Low cost, convenient terms. Mark with an "X" below the "better job" in which you are interested. We will send full information, also our valuable book for ambitious men. "Ten Years' Promotion in One," free and postpaid. Take the first step towards a bigger job by marking and mailing the coupon now.

—Coupon—

- ☐ **BUSINESS ADMINISTRATION:** Training for Offices, Managers, Sales and Executive positions in Business.
- ☐ **HIGHER ACCOUNTANCY:** Training for positions as Auditors, Comptrollers, Certified Public Accountants, Cost Accountants, etc.
- ☐ **INTERSTATE COMMERCE AND RAILWAY TRAFFIC:** Training for positions as Railroad and Industrial Traffic Managers, Traffic Experts, etc.
- ☐ **LAW:** Training for admission to bar and executive-business positions requiring legally-trained men. Degree of LL. B. awarded.
- ☐ **BANKING AND FINANCE:** Training for positions in Banks and Financial Institutions, Tellers, Cashiers, Trust Officers, Financial Managers, etc.

mechanics. And as a result a good deal of work is spoiled in the making.

The company's superintendent of cannon manufacture, a fine old Scotch-American who has been specializing on cannon for thirty years and knows the game, I was told, as well as anyone in the country, showed me a bench covered with rejected pieces. One was a complex breechblock on which there had been days of work, thrown out because the boring for a steel pin had been made a hairbreadth too large. It had to fit absolutely tight. Another heavy bit of machined steel, highly polished and all right to casual eyes, was rejected because the careless slip of a gouge had sliced off a shaving of steel which reduced the strength of the part about it beyond the permissible front.

"We have a hundred of these in a week, sometimes," said the superintendent mournfully. He was continually harassed between his craftsman's sense of what work should be, the responsibility he felt for the safety of the men who were to use these cannon some day in France, and his realization of the need of hurry and that the vital test, in times like these, was whether a thing would "function" or not.

### "They've Put Up Some Posters"

THERE is no great amount of love lost between the company and men at Bethlehem, and when, recently, the company thought it necessary to change the three eight-hour shifts into two shifts of ten and a half hours each, because so few men wanted to work in the early night shift that many of the machines were idle, the men struck. The trouble was adjusted when the men were made to understand that they would get time-and-a-half for overtime, but not until the output for the month had been brought below the normal level. To the question as to why the men had not been willing to accept this in the first place, the reply was: "Oh, I suppose they thought we wouldn't pay them extra for overtime." Why should they suppose so? Or why, if they were predisposed to suppose so, was not something done to make things clear before work was stopped, was not explained, nor, indeed, did my informant seem to think it a matter of any importance. That "company" and "men" were both Americans engaged in a common service, and that teamwork between them was just as important as teamwork between officers and men at the front, did not seem to have occurred to him, and possibly it had not occurred to the men either.

The Ordnance Department has organized a bureau of industrial relations, in charge of the experienced Dean Schneider of the University of Cincinnati, to handle this side of its work. In private plants the scope of such activity is, of course, more or less dependent on the attitude of the company itself, and in Bethlehem, at any rate, there seemed a good deal yet to be done. I asked several, both company men and ordnance officers, if anything were being done to strengthen the morale of the workmen and make them see that our men in France were depending on them and that they too were in the fight almost as directly here as if they were at the front. The reply was generally a look of puzzled surprise, but one man said:

"Oh, yes—the navy's doing something along that line. They've put up some posters."

Posters do no harm, and they might do some good, but something more than posters is needed to get hold of men who are working ten and a half hours a day in the heat and gas and hullabaloo of a steel mill. Many of these men do not speak English, a good many are of Hungarian origin, and very likely have cousins in the armies fighting against us. It would seem as if there were a chance here for live, humane, and tactful men to do some commonsense, get-together work of a very necessary kind.

### A Wider Democracy

THE labor problem is a story in itself which can scarcely be gone into here. But when one considers the importance of morale in any army and the efforts made to build it up and preserve it, and thinks of our training camps and how the young soldiers, already stimulated by discipline, teamwork, outdoor life, and the adventure and peril ahead of them, are talked to, lectured at, sung at, instructed with magazines and pictures, it seems grotesque that in the mills on which these soldiers depend,

# Value of the Swoboda Idea to YOU

The Swoboda Idea means to rely for every power and for every success and for every advantage upon self.

The Swoboda Idea means self-advancement, self-reliance, self-sufficiency, self-power, self-evolution, and self-advancement.

The Swoboda Idea means thorough and self-determination to win.

The Swoboda Idea means to succeed and to win in terms of energy, in spite of adverse conditions and in spite of obstacles.

The Swoboda Idea is opposite to the theory of dependency. Conscious Evolution—the Swoboda Science—means success because of the power of success—because of the power to command success—because of the power in abundance to create success and because of the super-power essential to compel success.

The Swoboda Idea has great potential powers and possibilities for you. Are you living an inferior life? Are you capitalizing and using the Swoboda Idea?

The Swoboda Idea holds unusual health, unusual energy and unusual power in store for you. With the Swoboda energy and power, you will become more positive, you will fear conditions less, you will convert your liabilities into assets, your dreariness into pleasure, your inferior life into full life, your feeble life into the abundant life. Can you afford to deny yourself the benefit of the Swoboda Idea?

The Swoboda Idea is to capitalize, increase and develop your own powers.

The Swoboda Idea is to be rich in energy, rich in health, rich in vitality, rich in every power.

The Swoboda Idea is to aid you to have Freedom from every weakness and distress and freedom from failure.

The Swoboda Idea is to have Liberty to live the superior life, the better life, the abundant life, the successful life.

Evolution has brought the entire human

race and you this far. The Swoboda Idea is to advance you further, through your own employment of evolutionary energy.

The Swoboda Idea is that the struggle for existence is personal and eternal.

You live because you compel the universe to tolerate you.

The Swoboda Idea means that the universe is your competitor and enemy, in terms of energy, and that you succeed only as you acquire the power to whip the universe, and to mold your department of the universe for your advantage.

The Swoboda Idea is to be super-prepared, through self-evolution.

The Swoboda Idea is to create for each individual freedom and liberty—the freedom and liberty of self-power and self-evolution.

## These New Copyrighted Books Free

"Conscious Evolution" and "The Science of Life" will show you how you can increase the happiness of life to a maximum—how to intensify it and how to make your life more profitable, pleasurable and joyous. They explain fully and in an interesting way the SWOBODA IDEA.

"Conscious Evolution" and "The Science of Life" explain Conscious Evolution and the human body as it has never before been explained. They explain the Swoboda Theory and the laws of mind and body. They startle, educate and enlighten. They explain as never before the reason for the evolution of the mind and body.

They tell how the cells and their energies build the organs and the body, and how to organize the cells beyond the point where Nature left off for you, and where you, as Nature, may continue your self-evolution.

These books will give you a better understanding of yourself than you could obtain through reading all of the books on all of the science and philosophies on the subject of mind and body.

These essays will show you the way to the full life, the superior life, the lively life. They will show you the Swoboda way to overcome the inferior life, the feeble life, the negative life, the unsatisfactory life.

"Conscious Evolution" and "The Science of Life" will show you how to increase your happiness to a maximum, and how to reduce your troubles of every character, mental, physical, physiological and conceptual to a minimum. Conscious Evolution will show you how to intensify, prolong, increase and magnify your pleasures.

"Conscious Evolution" and "The Science of Life" will show you that you have not as yet experienced the real and highest pleasures of life. Life will mean much more to you when you intensify your pleasures through Conscious Evolution.

### Why Deny Yourself Super-Pleasures, Super-Joys and Real Happiness?

"Conscious Evolution" and "The Science of Life" which Swoboda has written and copyrighted, will be sent to you free of charge and free of all obligation to Swoboda, if you will write for them.

Just write your name and address on this page, tear it out and mail it to Swoboda or draw a ring about your name on your letterhead, or merely send a postal, giving your name and address. Do it today! You will be surprised.

# WHEN YOUR SPRING BREAKS PUT ON VULCAN

**Wide distribution** throughout America has made it easy and convenient for every car owner to *replace* broken or weak springs with the sturdier, dependable Vulcans—whenever, *wherever* the need arises.

No matter where you are—in city or country—there is sure to be a Vulcan dealer within a reasonable distance who will promptly replace your broken spring with a satisfactory

Vulcan Springs willingly withstand intense punishment. They're made for that purpose. *Every* spring is strength-tested to treble its normal load. The steel is fine-grained; specially oil-tempered; fabricated with extreme care by men who do nothing else but make good springs.

**They are guaranteed to give maximum service-satisfaction.**

Ask your dealer to "Put on Vulcan."

Most dealers carry  
"Popular-Car Assortments"  
of Vulcan Springs.

To Dealers—Write  
us for full information,  
catalog, prices, etc.

**JENKINS VULCAN SPRING CO.**  
RICHMOND, IND.

employer and employed should drift along in the same old *laissez faire* relations as in times of peace. It is absurd that work so indispensable as cannon making should pause, that two or three months from now there should be twenty less field guns at the front than there ought to be, because the men in some shop or other "thought"—if that was what they did think—that the company was going to "do" them, and that they wouldn't be paid for overtime.

People keep saying that the world is never going to be the same after the war and act as if the mere killing of a few million men were in itself going to bring the millennium. It isn't necessary to wait until all the casualty lists are in. Some approach toward a wider democracy—without waiting for the Bolsheviks—and a more common-sense relation between human beings might begin right now. And there could scarcely be a more appropriate place to begin than in the great plants where we are making arms with which to fight.

## These Things Bane Got to Stop!

*Continued from page 20*

National Army cantonments for the spirit and strength on which we must depend to carry us steadily through this mad night of war to a victorious dawn.

In all the time I spent with the National Army I heard not one discussion on peace. The American soldier is not talking peace. He is not thinking peace. He is at a little job of work, and he's interested only in getting it done. The American civilian has been talking peace. He's been talking peace because he's been reading peace talk. What he has read has given him expectation of the early arrival of a vague millennial period when a miraculous panacea of words is to end the conflict with honor and profit to all.

In a fall and winter of travel all over the United States, en route from camp to camp, I heard only three civilians talk about licking Germany. The question, "When do you think the war will end?" was asked of me regularly, day after day, all over the country; not once did any civilian ask me this: "How long will it take us to win the war?"

Some way, some time, in mere justice to the men who fight for us, we have got to achieve that state of mind where, in discussing the probable duration of the war, we ask, not weakly, "Oh, when do you think it will end?" but calmly, "How soon do you think we can win?"

## Back Him Up

**VICTORY!** The people of the United States somehow have got to learn to think in terms of victory. It's unfair to our army to think otherwise. It is not only unfair, but it is dangerous. Our soldiers are the players in this deadly game of war. The civilians are the rooters. Translate the attitude into the language of the grand stand, and you get something like this:

"All right, old boy! We know you can't hit this pitcher, but we're with you. Of course, we know that your fielding is going all to pieces before such sluggers as those Kaiserites, but never mind, old boy, we're with you! Maybe it'll rain before the fifth inning. There isn't a cloud in the sky, but you can't tell. It might rain. Or maybe the cops'll stop it, or something. We know you can't beat those Kaiserites, and we don't expect you to. But maybe they'll all fall dead, or get hungry and go home to eat, or get tired of playing and call the game off; or there'll be a fire in the grand stand, or an earthquake. You never can tell! We're with you, old boy. We'll support you down to our last red cent; and we'll sit here and suffer while we get beat. We'll do most anything, old pal, except believe that you can win. We're with you."

The players on the American team in this game of war don't want it to rain before the fifth inning, believe me! They don't want this game postponed for any reason at all. They don't want to have to show up at the battle park on some later date to finish it. They've got to win or lose, or play it out at a later date. It's got to be finished some time, and they know it. They want to finish it now, while they're at it. If they can't win, then Abraham Lincoln was a fool, Christianity is history's funniest joke, and America is a ludicrously unsuccessful experiment that should

terminate immediately. If they can't win, then the might of evil that is Germany is right; and you can either Hoch der Kaiser or die disputing his rule of the world, as men and women have already died by the million.

Mr. and Mrs. American Civilian, back the American soldier to Victory! Back him with your labor, your money, and your will—to Victory! Back him to lick Germany! Don't waste your strength pitying him. Don't insult him by merely hoping that he'll be able to hold on until something happens to stop the war! Back him to win the war! If he doesn't win it to-day, don't argue from that that he won't win it to-morrow. No matter how strong Germany may be to-day, every time the clock ticks, she is a little weaker, and America is a little stronger. Believe in the necessity for Victory and its inevitability!

#### Back Him to Victory

THE fighting man must be backed up with ships, equipment, food, munitions. He must be backed up with a wise administrative policy. Very few of us can have a hand in the control of ship production; very few may aid directly in shaping administrative policy. Every last one of us can back up the fighting man with our confidence, our surety of Victory!

If your congressman hears that you are talking of peace, he's very liable to talk of peace, and if Germany hears him talk of peace she has a legitimate right to believe that if she holds out a little longer we'll want peace so bad that we'll let her get away unpunished for murder and with some of the profits of her pillage. That thought gives her people heart to fight so much longer, and so much harder, and as a result a certain percentage of our fighting men die who might have lived had you courageously talked victory instead of weakly pulling about peace.

If you want to help directly in winning the war, Mr. and Mrs. Civilian, back up the fighting man who must win it for you. Back him up with your confidence and courage as well as your sympathy and dollars. Learn to think about an American victory as the only possible end to this war, and you can help the fighting man bring about the end of the war by thinking, talking, and working for the victory that will end it. Don't pray for rain before the fifth inning as you sit and watch. Pray for an even break for the men who are playing the game, and believe that they can win. They can and they will, and the deadly game won't be over until they do!

#### To Lick Germany

I HAVE been with the National Army in the various stages of its development all over the United States. I have seen the selected men in training, from the New Yorker at Camp Upton to the cowboy at Camp Lewis; from the northwoods Yank at Camp Devens to the soft-voiced Southerner at Lee and Jackson. I have seen them all, and, having seen them, I know this: I know that we can select and train an army that can lick Germany. Hear that again: This country, through the operation of the selective draft and the National Army training camps, can and will supply enough good soldiers and good enough soldiers to lick Germany. They must and will. These things have got to stop!

CHALMERS

*Porosknit*

LETS THE  
BODY BREATHE

*The start of a perfect day—  
and the finish*

A TUSSELE with the surf before breakfast—into a suit of elastic air-cooled Chalmers—time enough for the paper over a cup of fine coffee, and then away to business!

About four o'clock when the heat of the street is still beating in through the office window, what item of his early morning start will count most for a steady temper and a cheerful finish to the day? His Chalmers air-cooled underwear.

Because Chalmers blots up perspiration. It lets air circulate freely *through* the fabric, which speeds up evaporation. And the evaporation does the cooling.

## Feef and Meemuh

Continued from page 12

emphasizing the patience of her tone somewhat. "I named them after they got here. Mr. Sanders hasn't seen them yet. He had them shipped to me. He's coming this evening. Anything more to-day, Florence?"

"Well, I was thinking," said Florence. "What do you think grandpa'll think about these cats?"

"I don't believe there'll be any more outrages," Julia returned, and her dark eyes showed a moment's animation. "I told him at breakfast that the Reign of Terror was ended, and he and everybody else had to keep away from Fifi and Mimi. Is that about all, Florence?"

"You let Kitty Silver go near 'em, though. She says she's fixing to wash 'em."

Julia smiled faintly. "I thought she would! I had to go so far as to tell her that as long as I was housekeeper in my father's house she'd do what I said or find some other place. She behaved outrageously and pretended to believe the natural color of Fifi and Mimi was gray!"

"I expect," said Florence after pondering seriously for a little while—"I expect it would take quite some time to dry them."

"No doubt. But I'd rather you didn't assist. I'd rather you weren't even around looking on, Florence."

A shade fell upon her niece's face at this. "Why, Aunt Julia, I couldn't do any harm to Fifi and Mimi just looking in at 'em, could I? I don't see what—"

Julia laughed. "That's the trouble; you never do 'just look' at anything you're interested in, and, if you don't mind my saying so, you've got rather a record, dear! Now, don't you care; you can find lots of other pleasant things to do at home—or over at Herbert's, or Aunt Fanny's. You run along now, and—"

"Well—" Florence said, moving as if to depart.

"You might as well go out by the front door, child," Julia suggested with a little watchful urgency. "You come over some day when Fifi and Mimi have got used to the place, and you can look at them all you want to."

"Well, I just—" But as Florence seemed disposed still to linger, her aunt's manner became more severe; she half rose from her reclining position, for emphasis.

"No, I really mean it! Fifi and Mimi are royal-bred Persian cats with a wonderful pedigree, and I don't know how much trouble and expense it's cost Mr. Sanders to get them for me. They're utterly different from ordinary cats; they're very fine and queer, and if anything happened to them, after all the trouble papa's made over other presents I've had, I go straight to a sanitarium! No, Florence; you keep away from the kitchen to-day, and I'd like to hear the front door as you go out."

"Well—" said Florence, and departed.

TWENTY is an unsuspicious age, except when it fears that its dignity or grace may be threatened from without; and it might have been a "had sign" in revelation of Julia Atwater's character if she had failed to accept the muffled metallic clash of the front door's closing as a token that her niece had taken a complete departure from the premises. A supplemental confirmation came a moment later, fainter but no less conclusive: the distant alarming of the front gate, and it made a clear picture of an obedient Florence on her homeward way. Peace came upon Julia: she read in her book, while at times she dropped a languid, graceful arm, and, with the pretty hand at the slimmer end of it, groped in a dark shelter beneath her couch, made a selection, merely by her well-experienced sense of touch, from a frilled white box that lay in concealment there; and then, bringing forth a crystalline violet, become scented sugar, or a bit of fruit translucent in hardened sirup, delicately launched it on the way to that attractive dissolution hoped for it by the wistful donor—and all without removing her shadowy eyes from the little volume and its patient struggle for dignified rimes with "Julia." Florence was no longer in her beautiful relative's idliest thoughts.

Florence was idly in the thoughts, however, of Mrs. Balche, the next-door neighbor to the south. Happening to glance from a bay window, she negligently marked how the child walked to the front gate, opened it, paused for a moment's meditation, then hurried the gate to a vigorous closure, herself re-

maining within its protection. "Odd! Mrs. Balche murmured.

Having thus eloquently closed the gate, Florence slowly turned, then moved toward the rear of the house, quickening her steps as she went, until at a run she disappeared from the scope of Mrs. Balche's gaze, cut off by the intervening foliage of Mr. Atwater's small orchard. Mrs. Balche felt no great interest nevertheless she paused at the sound of a boy's voice, half husky, half shrill in an early stage of change. "What she say, Florence? D'she say we could?" But there came a warning, "Hush up!" from Florence in a harsh whisper. Then in a lowered tone, the boy's voice said: "Look here; these are mighty funny, actin' cats. I think they're kind of crazy, or some'm. Kitty Silver's fixed a washtub full o' suds for us."

MRS. BALCHE was reminded of her own cat, and went to give it a little cream. Mrs. Balche was a retired widow, without children, and too timid to like dogs; but after a suitable interval, following the loss of her husband, she had accepted from a friend the gift of a white kitten, and named it Violet. It may be said that Mrs. Balche, having few interests in life, and being of a sequestering nature, lived for Violet, and that so much devotion was not good for the latter's health. In his youth, after having shown sufficient spirit to lose an eye during a sporting absence of three nights and days, Violet was not again permitted enough freedom of action to repeat this disloyalty—though in his advanced middle age he had been fed to such a state that he seldom cared to move, other than by a slow, sneering waddling of the tail when friendly words were addressed to him; and consequently, as he seemed beyond all capacity or desire to run away, or to run at all, Mrs. Balche had given him the run of the place. She found him now, asleep upon her back porch, and placed beside him a saucer of cream, the second since his luncheon. She watched him affectionately as he opened his eye and turned his noble Henry-the-Eighth head, with its great furred jowls, toward the saucer, and began the process of rising for more food, which was all that ever seemed even feebly to rouse his mind. When he had risen, there was little space between him anywhere and the floor of the porch.

Violet took his cream without enthusiasm, pausing at times and turning his head away. In fact, he persisted only out of an incorrigible sensuality, and finally withdrew a pace or two, leaving creamy traces still upon the saucer. With a multitude of fond words his kind mistress drew his attention to these, and, making a visible effort, he returned and disposed of them.

"Dat's de 'itty darlin'," she said, stooping to stroke him. "Eat um all up nice clean. Dood for ole sweet sin!" She continued to stroke him, and Violet half closed his eye, not with love and serenity, but rather, as he simultaneously curvingly gestured with his tail, in a kind of impotent menace, meaning to say: "Oh, for heaven's sake, take your hands off o' me!" Then he opened the eye and paid a little, instinctive attention to sounds from the neighboring yard. A high fence, shrubberies, and foliage concealed that yard from the view of Violet, but the sounds were eloquent to him, since they were those made by members of his own general species when threatening atrocities. The accent may have been foreign, but Violet caught perfectly the sense of what was being said, and instinctively he muttered reciprocal curses within himself.

"Wat a malta, honey?" his companion inquired sympathetically. "Ess, bad people 'frighten poor Violet!"

From beyond the fence came the murmurings of a boy and a girl in hushed but urgent conversation; and with these sounds there mingled watery agitations, splashing and the like, as well as those low vocalizations which Violet had recognized—then there were muffled explosions, like fireworks choked in feather beds; and the human voices grew uncontrollably somewhat louder so that their import was distinguishable. "Oo!" "Hush up, can't you? You want to bring the whole town to—oo!" "Hush up yourself—oh, good—ness!" "Look out—don't let her—" "Well, look what she's doin' to me—can't you?" "For Heavens' sake, catch bolt and—oo!"

## COLLIER'S CLASSIFIED

Tells of many opportunities known to be of distinct merit

These advertisements are small only because of the fact that COLLIER'S does not accept or publish big advertisements on this page; thus giving every advertiser the same chance to be brought to the attention of your attention.

The advertisements, in most instances, tell only a part of the story; letters, sometimes interesting booklets and other "literature" being necessary to complete the presentation of facts.

The firms here represented will gladly and promptly answer your inquiries and send you full details of what they have to offer.

# Which Would You Pick?

Which would you pick as a future winner? The young fellow who spends *all* his precious moments with the daily paper, or the other who, little by little, is gaining that knowledge of a few truly great books which will distinguish him always as a *really well-read* man?

What are the few great books—histories,

novels, dramas, poems, biographies, books of science and travel, philosophy and religion—that “picture the progress of civilization”?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—40 years of it as President of Harvard University—has answered that question in *The*

## HARVARD CLASSICS

*The Five-Foot Shelf of Books*

We want to send you by mail a copy of a little guide-book to books, absolutely free, describing “The Harvard Classics.” “To me,” writes an inquirer, “the little free book opened the door of a vast new world of pleasure.”

### Read the FREE Book!

It is the most valuable little book of its kind ever written. It contains Dr. Eliot’s best advice to you, on just what and how to read; besides this, twelve delightful little five-minute essays on literature; your copy is wrapped up and ready to mail; no obligation; merely clip this coupon now.

# KING "8"

## *for War-time* Transportation

The Government needs the railroads—you aid in traffic relief when you use a motor car.

The reliable automobile saves time and energy, serving the business man efficiently, to the nation's benefit.

Auto-recreation is more necessary than ever. The burden-bearers of the country's business must strain as never before to back up the men on the fighting line, and health is the first requisite.

The automobile's new responsibilities, scarcity of expert mechanics and the need for utmost operating economy makes RELIABILITY the most essential demand in motor car selection.

**There is no *safer* purchase than a KING.**

It was the second "Eight" in America. It is operating in sixty foreign countries, despite the war. It has been selected for armored car and war-ambulance service. Its low cost of upkeep, considering power and size, has astonished many veteran garage men. Its road performance will give you a new pleasure in driving. Ride in a King and you'll believe in King advertising.

*America's Standard  
Truck Motor. Look  
for the Red Seal  
Nameplate*

The Continental Red Seal, shown above, is universally recognized today as the mark of a known quantity in motors.

When you see the Red Seal on a motor, you see a motor that represents the accumulated experience of a generation of motor making—a motor not conceived over-night, but the sure result of the process of evolution.

This motor embodies neither the untried nor the spectacular—it has been *proved* in hundreds of thousands of motor vehicles.

This motor bears not merely the approval of its makers. Upon it over 160 manufacturers of automobiles and trucks stake the success of their product.

This motor you can rely on—not for power alone, not for economy alone, not for endurance alone, but rather for *all* the essential motor qualities.

This motor has stood the one real test of motor worth—the test of Time.

Such is the Continental, and such is the meaning of the Red Seal—the meaning that has made this motor America's Standard.

Look for the Red Seal in the car or truck you buy—it makes you sure of 100% motor value.

# Barrett Specification Roofs

Below is photograph (actual size) of a cross-section cut from Barrett Specification Roof on the National Aniline & Chemical Company, Buffalo.

## Above photo shows why we dare **Guarantee** Barrett Specification Roofs for 20 Years—

Above is a photograph (actual size) of a cross-section cut from a Barrett Specification Roof.

*Note its great thickness.*

*Note the five alternating layers of Specification Pitch and Felt Waterproofing.*

*Note the heavy wearing-surface of Slag bound with Pitch.*

No other type of roofing approaches a Barrett Specification Roof in the amount of protective waterproofing material used in its construction.

The weight of this waterproofing material is about 250 lbs. to 100 sq. ft., compared with 175 to 100 lbs. used in other types of roofs.

The wonder is *not* that we dare guarantee such a roof for twenty years, but that some people still buy lightweight, poorly constructed roofs and expect them to give long and satisfactory service.

### **Lower Cost per Year of Service**

The buyer naturally asks, "Do such roofs cost more than others?" Our answer is, "No, they do not."

The experience of many years has proved that Barrett Specification Roofs cost less per year of service than any other kind. It is because they give such long service at such low cost that this type of roofing now covers most of the permanent structures of the country.

It is because of these facts that leading architects, engineers, and roofing contractors everywhere are cooperating with us in the better-roofs movement and why large construction companies like the Turner Construction Company, the Fuller Construction Company, The Austin Company, and

many others, are so strong for Barrett Specification Roofs.

### **Guaranteed for 20 Years**

On all roofs of fifty squares or over, in cities of 25,000 or more, and in smaller places where our Inspection Service is available, we will give with every Barrett Specification Roof a 20-Year Surety Bond issued by the well-known U. S. Fidelity & Guaranty Company of Baltimore.

*This bond exempts building owners from all roof repair and maintenance expense for a period of twenty years.*

There is no charge for this bond. Our only requirements are that the roofing contractor be approved by us and that he strictly follow The Barrett Specification of May 1, 1916.

*Booklet explaining our 20-Year Guaranty and a copy of The Barrett Specification free on request.*

# THE PERMISSIONNAIRE

BY DOROTHY CANFIELD

ILLUSTRATED BY HERBERT PAUL

"What was in the ground, alive, they could not kill."

TWO weeks after the German retreat from the Aisne was rumored, five days after the newspapers were printing censored descriptions of the ravaged country they had left, and the very moment the official bulletin confirmed the news, Pierre Nidart presented himself to his lieutenant to ask for a "permission"—a furlough, the long-delayed furlough, due for more than two years now, which he had never been willing to take. His lieutenant frowned uneasily, and did not answer. After a moment's silence he said, gently: "You know, my old fellow, the boches have left very little up there." (Nidart was not an old fellow at all, being but thirty-four, and the father of two young children. His lieutenant used the phrase as a term of endearment, because he had a high opinion of his silent sergeant.)

Nidart made no answer to his officer's remark. The lieutenant took it that he persisted in wanting his furlough. As he had at least three furloughs due him, it was hard to refuse. There was a long silence. Finally, fingering the papers on the dry-goods box which served him as desk, the lieutenant said: "Your wife is young. They say the Germans carried back to work in Germany all women under forty-five, or those who hadn't children under three."

Nidart swallowed hard, looked sick, and said nothing obstinately. His lieutenant turned with a sigh and motioned the fourrier to start the red tape for the authorization for the furlough. "All right. I think I can manage a three weeks' permission for you. They're allowing that, I hear, to men from the invaded regions who haven't taken any furloughs since the beginning of the war."

"Yes, mon lieutenant. Thank you, mon lieutenant." Nidart saluted and went back to his squad.

His lieutenant shook his head, murmuring to the fourrier: "Those north-country men! There is no use saying a word to them. They won't believe that their homes and families aren't there till they see with their own eyes. And when they do see—I've heard that some of the men in these first regiments that followed up the boche retreat across the devastated regions went crazy when they found their own villages. Nidart has just one idea in his head, poor devil, to go straight before him, like a homing pigeon till—" He stopped, his face darkening.

"Oh, damn the boches!" the fourrier finished the sentence fervently.

"You see, Nidart is a master mason by trade, and he built their own little house. He carries around a snapshot of it with his wife and a baby out in front."

"Oh, damn the boches!" responded the fourrier on a higher note.

"And, like all those village workmen, they

got half their living out of their garden and a field or two. And you've read what the boches did to the gardens and fruit trees."

"Isn't there anything else we can talk about?" said the fourrier.

NIDART passed through Paris on his way (those being before the days of strictly one-destination furloughs) and, extracting some very old bills from the lining of his shoe, he spent the five hours between his trains in hasty purchasing. At the hardware shop, where he bought an ax, a hammer, some nails, and a saw, the saleswoman's vivacity of curiosity got the better of his taciturnity, and she screwed from him the information that he was going back to his home in the devastated regions.

At once the group of Parisian working people and bourgeois who happened to be in the shop closed in on him sympathetically, commenting, advising, dissuading, offering their opinions with that city-bred, glib-tongued clatter which Nidart's country soul scorned and detested.

"No, no, my friend, it's useless to try to go back. The Germans have made a desert of it. My cousin's wife has a relative who was in the regiment that first followed the Germans after their retreat from Noyon, and he said—"

"The Government is going to issue a statement, saying that land will be given in other parts of France to people from those regions, because it's of no use to try to rebuild from under the ruins."

"No, not the Government; it's a Society for the Protection of the People in the Invaded Regions; and they are Americans, millionaires, every one. And it's in America they are offering land, near New York."

"No, near Buenos Aires."

"The Americans want the regions left as a monument, as a place to see. You'll make much more money as a guide to tourists than trying to—"

"Your family won't be there, you know. The boches took all the able-bodied women back with them; and the children were sent to—"

"Give me my change, won't you!" said Nidart with sudden fierceness to the saleswoman. He turned his back roughly on the chattering group and went out.

They shrugged their shoulders. "These country people! Nothing on earth for them but their little hole of a village!"

Down the street Nidart, quickening to an angry stride his soldierly gait, hurried along to a seed store.

That evening when he got into the battered, dingy, third-class compartment of the train going north he could hardly be seen for the innumerable packages slung about his person. He pulled out from one bulging pocket a square piece of bread, from another a piece of cheese and proceeded to dine, bent forward with the weight of his burdens and his thoughts, gazing out through the dirty windows at the flat farming country jerking by him in the moonlight. It was so soon after the retreat that the train went no farther north than Noyon, and Nidart had lived far beyond Noyon. About midnight he rolled off the train, readjusted his packages and his knapsack, and, after showing his perfectly regular *sauf-conduit* to five or six sentries along the way, finally got out of town.

HE found himself on the long white road leading north. It was the road down which they had driven once a week on market days. Of all the double line of noble poplar trees not one was standing. The utterly changed aspect of the familiar road was startling. Ahead of Nidart as he tramped rapidly forward was what had been a crossroads, now a gaping hole. Nidart, used to gaping holes in roads, walked down into this, and out on the other side. He was panting a little, but he walked forward steadily and strongly.

The moon shone full on the place where the first village had stood, the one where his married sister had lived, where he and his wife and the children used to come for Sunday dinners once in a while. He stood suddenly before a low, confused huddle of broken bricks and splintered beams, and looked about him uncomprehending. The silence was intense. In the instant before he understood what he was seeing, he heard and felt a rapid vibration, his own heart knocking loudly. Then he understood.

A moment later, mechanically, he began to move about, clambering up and down, aimlessly, over the heaps of rubble. Although he did not know it, he was looking for the place where his sister's house had stood. Presently his knees gave way under him. He sat down suddenly on a tree stump he noticed. The lopped-off trunk beside it showed it to have been an old cherry tree. Yes, his sister's big cherry tree, the pride of her garden. A long strip of paper, one end buried in a heap of bits of plaster, fluttered in the night wind. It beat against his leg like some one calling feebly for help. The moon emerged from a cloud and showed

it to be a strip of wall paper; he recognized the pattern; he had helped his brother-in-law put it on the bedroom of the house. His sister's four children had been born within the walls of that bedroom. He tried to fix his mind on those children, not to think of any other children, not to remember his own, not to—"

The paper beat insistently and rhythmically against his leg like a recurrent thought of madness—he sprang up with the gesture of a man terrified and, stumbling wildly among the formless ruins, sought for the road again.

He walked heavily after this, lifting his feet with an effort. Several miles farther, at the heap of debris which had been Falquières, where his wife's family had lived, he made a wide detour through the fields to avoid passing closer to the ruins. At the next, Bondry, where he had been born and brought up, he tried to turn aside, but, against his will, his feet carried him straight to the center of the chaos. When the first livid light of dawn showed him the two stumps of the big apple trees before the door, which his grandfather had planted, he stopped short. Of the house, of the old walled garden, not a trace beyond the shapeless heap of stones and plaster. He stood there a long time, staring silently. The light gradually brightened, until across the level fields a ray of yellow sunshine struck ironically through the branches of the murdered trees upon the gray face of the man.

At this he turned and, walking slowly, dragging his feet, his head hanging, his shoulders bent, followed the road which led, like a white tape laid straight across the plain, toward—toward— The road had been mined at regular intervals, deep and broad craters stretching across it, enough to stop a convey of camions, not enough to stop a single soldier, even although he stumbled along so wearily, his cumbersome packages beating against his arms and legs; even although he walked so slowly, more and more slowly as he came in sight of the next heaped and tumbled mound of debris. The sun rose higher. . . .

Presently it shone, with April clarity, on the man lying, face downward, upon a heap of broken bricks.

For a long hour it showed nothing but that, the ruins, the prostrate trees, the man, like them stricken and laid low.

Then it showed, poor and miserable under that pale-gold light, a wretched antlike procession issuing from holes in the ground and defiling slowly along the scarred road toward the ruins; women, a few old men, a little band of pale and silent children. They approached the ruins and dispersed. One of the women, leading three children, picked her way wearily among the heaps of stone, the charred and twisted beams—stopped short, both hands at her heart.

And then the sun reeled in the sky to a sound which rang as strangely from that silent desolation as a burst of song out of hell, scream after scream of joy, ringing up to the very heavens, frantic, incredulous, magnificent joy.

THEY stood, the man and wife, clasped in each other's arms in the ruins of their home, with red, swollen eyes, smiling with quivering lips, silent. Now that the first wild cries had gone rocketlike to the sky and fallen back in a torrent of tears, they had no words, no words at all. They clasped each other and the children, and wept, constantly wiping the tears from their white cheeks, to see each other. The two older children, a little shy of this father whom they had almost forgotten, drew away constrained, hanging their heads, looking up bashfully under their bent brows. The man sat down on a heap of stones and drew the little girl to him, stroking her hair. He tried to speak, but no voice issued from his lips. His wife sat down beside him, laying her head on his shoulder, spent with the excess of her relief. They were all silent a long time, their hearts beginning to beat in the old rhythm, a sweet, pale peace dropping down upon them.

After a time the youngest child, cowering under the woman's skirts, surprised at the long silence, thrust out a little pale face from his shelter. The man looked down on him and smiled. "That's a Dupré," he said in his normal voice, with conviction, all his village lore coming back to him. "I know by the Dupré look of his nose. He looks the way my cousin Jacques Dupré used to, when he was little."

These were the first articulate words spoken. With them he turned his back on the unfriendly, unknowable immensity of the world in which he had lived, exiled, for three years, and returned into the close familiar community of neighbors and kin where he had lived for thirty-four years—where they had lived for hundreds of years. The pulverized wreck of this community lay all about him, but he opened its impalpable doors and stepped once more into its warm humanity. He looked at the little child whom he had never seen before and knew him for kin.

His wife nodded. "Yes, it's Louise and Jacques's baby. Louise was expecting him, you

know, when the mobilization . . . He was born just after Jacques went away, in August. We heard Jacques was killed—we have heard everything; that Paris was taken, that London was burned; I have heard twice that you were killed—Louise believed it and never got up out of bed at all after the baby came. She just turned over and let herself die. I took the baby. Somebody had to. That's the reason I'm here now. They carried off all the women my age unless they had children under three. They thought the baby was mine."

"But Jacques isn't killed," said Nidart. "He's wounded, with one wooden leg, frantic to see Louise and the baby." He made a gesture of blame. "Louise always was a fool! Anybody's a fool to give up!" He looked down at the boy and held out his hand. "Come here, little Jeannot."

THE child shrunk away silently, burrowing deeper into his foster mother's skirts.

"He's afraid," she explained. "We've had to make the children afraid so they would keep out of sight, and not break rules. There were so many rules, so many to salute and to bow to, the children couldn't remember; and when they forgot, they were so dreadfully cuffed, or their parents fined such big fines—"

"I never saluted!" said the boy of ten, wagging his head proudly. "You have to have something on your head to salute; they won't let you do it bareheaded. So I threw my cap in the fire."

"Yes, he's gone bareheaded since the first days, summer and winter, rain and shine," said his mother.

"Here, Jean-Pierre," said his father, wrestling with one of his packages. "I've got a hat for you. I've been saving it for you; I lugged it all over because I wanted my boy to have it." He extracted from its brown canvas bag a German helmet with the spike, which he held out. "And I've got something for my little Berthe too"; he fumbled in an inner pocket. "I made it myself, near Verdun. The fellows all thought I was crazy to work over it so, when I didn't know if I'd ever see my little girl again; but I was pretty sure maman would know how to take care of you, all right." He drew out from a nest of soft rags a roughly carved aluminum ring and slipped it on the child's forefinger.

As the children drew off a little, to compare and examine, their parents looked into each other's eyes, the deep, united, serious look of man and wife before a common problem.

"Eh bien, Paulette," said the man, "what shall we do? Give up? Move away?"

"Oh, Pierre!" cried his wife. "You wouldn't!"

For answer he shook himself free of his packages and began to undo them—the ax, the hammer, the big package of nails, the saw, the trowel, the paper bags of seeds, the pickax. He spread them out on the clutter of broken bricks, plaster,

splintered wood, and looked up at his wife. "That's what I bought on the way here."

His wife nodded. "But have you had your breakfast? You'd better eat something before you begin."

While he ate his bread (Continued on page 27)

At noon they went back to the fire burning under the open sky

# IN THE AMERICAN TRENCHES

BY JAMES HOPPER

COLLIER'S SPECIAL CORRESPONDENT

WE went along a bit farther in the limousine. Just as a cowboy will mount his pony to go from the saloon to the post office across the street, so does the war correspondent stick to his limousine to the last extremity. It was now an automobile without horn or lights, though, mute and blind, groping along a black road, furtive and muffled, all its insolence gone. The road was camouflaged; when our eyes had become accustomed to the darkness we could see, thanks to the vague milkiness which filtered from the moon through heavy banks of cloud, a sort of high screen to our left, made of long poles twined with twigs and leaves; and once, when we stopped to make sure of the way, my electric torch, winked for a moment, lit up a sign which said—or whispered—"Attention: l'ennemi vous voit" ("Beware: the enemy sees you"). This meant that from some observation post the German held this part of the road under his eye—my electric torch went out abruptly. We turned to the left, by the immobile shadow of a traffic policeman, looking exactly like the one at Forty-second Street and Fifth Avenue if you'll whelm that one in night and silence and helmet him mysteriously, and after a moment entered a village. The limousine stopped, and this time we left it.

## "How Fast Can You Get Your Mask On?"

IT was the most empty, the most silent village. We were on a wide main street; as far as we could see before us, and to the right and the left, there was not the smallest point of light, the slightest squeak of any sound—not the eyes of a cat nor the scurry of a rat. The stone houses had queer, distorted attitudes; they seemed to wring their hands and to scream voicelessly. Going up to them, we could look, through holes that had been windows, right up into the sky through holes that had been roofs; the houses were mere ghosts, the village a wraith. A chapel drew me by its apparent solidity. But it was the same. Standing in the Gothic arch of the entrance, at the head of the half-pulverized steps, and looking upward, I could see nothing but the sky—the heavy dome of cloud vaguely phosphorescent with moon—and where the altar had been there was a bush, almost as big as a tree, with one branch that looked like a witch astraddle.

We had left the machine up against a wall for shelter, and the chauffeur had vanished into the earth—into a dugout, I surmise, where he had friends (chauffeurs have friends everywhere). The limousine, now, in that tenuous village which seemed suspended in a state between life and death, looked fantastically solid and sacrilegiously out of place; but also it looked very lonesome, and it seemed wrong to leave it thus alone. We did, though; we had come to the utmost limit allowed to machines; it was as foot that we made for the other end of the village. And while in a little solid group, as incongruous as the limousine, we tramped through this unreal scenery, reality and the moment suddenly reasserted themselves. Deep somewhere in the night, something boomed heavily, followed by a clearer, nearer crash. The sound spread, was taken up and imitated; a half-lazy, half-interested artillery game began—big guns, startled for some reason or other, baying, but without much conviction. There would be dull booms, then clear, vicious cracking detonations nearer, and once in a while something traversed the sky above like an invisible rocket, with a long hiss which seemed to travel from horizon to horizon. It was as if Old Dame Slaughter, deep asleep in the middle of the night, had stirred vaguely with mutterings of a bad dream.

At the end of the street we dived into a dugout—a deep, solid little place, snug and warm, where we found the intelligence officer—a captain—who was to guide us on our onward journey. He said: "How fast can you get your gas mask on?"

I have said that you can tell if you are getting toward the front by the villages you go through and by the houses of the people you visit. You can also tell by the concern displayed toward your mask. When you leave on your trip, some one or other will say carelessly: "You'd better take a gas mask along." You take it along, and throw it at the bottom of the limousine, and forget it. At some stage of the journey some one says: "You had better string your gas mask on," and you sling it on, loosely, letting it hang upon your hip. Further on you are told to place it at the ready, and you hitch it up to its place beneath your chin. Then you get to a place where an officer says: "How fast can you get your mask on?"

I answered I had never had one on; that last time I was at the front they had not been invented.

Our intelligence officer put on an air of exaggerated horror, and said: "I'm going to give you a little lesson in putting it on." Upon which I was made to practice a while. I found the art more difficult than I thought. The mask is a rubber contrivance, with two goggles, and it covers your whole

face. Once you have it on, your only communication with the outside world is through a rubber tube connected with the little reservoir, filled with filtering material soaked in neutralizing chemicals, which hangs still on your chest tightly; you take the end of the tube between your teeth and breathe through that, your nose meanwhile being closed by two little pieces of wood, connected by a spring, which pinch your nostrils together. That is, they are supposed to. But they didn't hold mine. I didn't know till then what a stubborn nose breather I am. At my first attempt the little piece of wood flew off my nose violently; I took a deep breath through my indomitable nostrils and exhausted, of course, what little air was in the mask, which immediately sucked in flat against my face. For the next breath there remained no air—I began to drown, right there in that place without water, while everybody laughed. Even then I didn't breathe in by the tube held between my teeth: I had to snatch off the mask, purple-faced. Well, the captain held me practicing till I had got the hang of the odious instrument, then said consolingly: "That mask of yours doesn't fit, anyway; it's much too small; it would let the gas through."

## The Chatelain of the Castle

AFTER which the captain took us to see his maps. These were in an old château near by, one of the rooms of which he had made his office and workshop. We stood in the ruins of a garden a while, listening to the cannonade—dull boomings of heavy guns, resonant arrivals and, now and then, that long, ripping sound as though of a rocket hissing from horizon to horizon and tearing in two a sky made of paper—while in the distance, to the north, the east, and the west, flares of an incredibly violent whiteness of light rose in the darkness, hung long, then died slowly out with a few last luminous crumbs. We then entered the castle, groping blindly behind our guide across a large hall with stone flooring, our feet striking now and then resonances of huge vaults, then up a stone stairway with balustrades of marble, stepping carefully, to the words of warning of our leader, over strange voids, holes, and missing steps. Upstairs was a long corridor, along sashless windows. The captain opened a door, and

we entered his domain—a large room with a Gothic fireplace at one end. It was lighted by one guttering candle, and in its poor light a young French soldier, a boy with large brown eyes and curly hair, was working, bent over a long table. As a matter of fact, he was working on a map, but he seemed to have been here forever in this old castle, toiling upon an urgent, minute, and interminable task—the chate-lain of the castle, bewitched. The old place had been gutted of furnishings, but the many maps upon the wall rustled like tapestry to invisible currents of air, and small cavalcades of rats passed overhead. A battery of heavy guns near by let loose suddenly: the whole pile rocked and shook to its deep foundations.

### Following Mercury

WHEN the intelligence officer had shown us, on his maps, to what point of the front-trench system we were going, we started on the last lap of our journey. We passed through the village again, and by our limousine, which looked very lonely and vulnerable there against its wall, and then went out into open country. To the right and the left plains spread dimly, houseless, treeless, untenanted and dead, unstirred even by whir of wing or squeak of small rodent. The melted snows, the rains, had converted them into a sea of mud, and across this sea the road went straight, narrow, and hard as a causeway, and so empty that it seemed impossible anyone could ever have traveled it. Once in a while we plumped into a shell hole, icy water above the knees; the strange half light, passing through heavy clouds, transformed all shapes into deceitful semblances. The cannonade was gradually ceasing, and giving way to the intermittent stuttering of machine guns, and ceaselessly, now on one side, now on the other, now before us, the Very lights hung themselves above the horizon, violet-white, violent, and spectral.

We came at length to the headquarters of the colonel of the regiment. This was among the stumps and vestiges of a murdered hamlet. The lower part of the one chaumière, the outer skin of which still stood, had been heavily rebuilt into a low shelter of heavy beams and concrete. Just five minutes before our arrival, we found, a big shell had passed through a corner of the old roof and had fallen into what once had been the peasant's cabbage patch. We viewed the very respectable hole made in the much-fertilized soil (the shell seemed to have turned and turned in it like a dog preparing his bed), and then were invited inside.

The room, low and heavily beamed, was filled with tobacco smoke and fragrance of hot coffee; two small lamps, half smothered, threw gleams on strong faces above a rough table; the colonel and his staff were here (no one sleeps at night in the first-line positions), close to the telephones—their eyes caved in with long vigils, their clothes coated with the mud of frequent inspections. A runner was ordered for us, and when he had reported we went on again, following him.

A runner is a soldier who is used because of his instinct of direction and his knowledge of the trenches. In peaceful moments he guides staff officers on their visits through the intricacy of the narrow guts or reliefs coming in or out. But during an attack or a raid, when the telephone wires have all been cut and the rockets signal wildly, he is the last resort, the last means of communication between the front line and the commanding post, and it is he who, link in the running relay, bears urgent messages—calls for help or rigid orders—through barrage fires, through very hells of fire and destruction. The runner walking ahead of us with a long, elastic step was very young—a slim lad built on greyhound lines. The long rubber boots which he wore to the hips, the sleeveless, tight leather jerkin above, defined his athletic slenderness—and suddenly something I had sought in my mind for several hours came to me: I knew what he looked like, what so many young lads I had seen this day looked like under their small, straight-brimmed helmets. He—and they—looked like the god Mercury, Mercury of the winged feet—or,

rather, like pictures and statues I had seen of him (I've never seen the real Mercury).

For a little while longer we followed the road, at first with a few stumps of destroyed houses to right and left, then with only the immensity of the spongy plain. The batteries were going back to sleep one by one—a lone boom once in a while—but the Very rockets, now nearer, lighted up the whole earth at intervals with an unearthly light and our faces as well. Machine guns too were stuttering. Tat-a-tat one would say and then abruptly stop, then another Tat-a-tat-tat and another Tat-a-tat-tat-tat-tat, while a last one unrolled its whole belt in sudden, frenzied decision. Then insensibly we left the road and took to a path by its side, and insensibly the path sank itself into the earth, and before we knew it the path had become a trench, a communication trench. First we were within it up to our knees, then to our thighs, then to our necks—and to an observer outside (but, thank the Lord, there wasn't any) we would have looked like a line of heads solemnly sliding along the surface of the plain. Finally our eyes too sank beneath the level of the earth, and we proceeded narrowly imprisoned to the right and the left, with just one opening to take, a narrow slit of an opening, ever ahead. From the manner in which a leprous spot of sick light, which marked the moon behind the clouds, shifted now to the right, now to the left, we knew our way was a winding one, but most of the time our attention was entirely taken up with the problem of merely proceeding, of following that diabolical runner who led the way so lightly. The gut we followed had been dug through a land soaked and re-soaked. Whenever, losing our balance, we put out a hand against one of the walls, that hand sank in something cold and clammy; whenever a shoulder struck, great flakes of diluted earth fell to the bottom. That bottom was much worse than the sides. Three-quarters of its width was taken up by a narrow walk of slats. Sometimes this little walk was

and landed with a ploop into the drainage ditch at the side. At other times again it was visible, but that was because it floated across a little lake. You stepped with mistaken confidence upon the nearer end of a section of slats, and abruptly found yourself in water to the hip, while the whole section, uprearing, came up to the perpendicular and slapped you in the face. Soon we were bulls of mud, painfully waddling, and every once in a while, what with the necessity for silence, we would have to group close to control a mad fit of laughter and keep it down, through mutual severity and exchanges of warning, to smothered chucklings that hurt our poor ribs. And with some stupefaction we thought: "Here we are, come from the far States across the sea; here we are, in the midst of the greatest convulsion of all times; here we are, in one of the foremost bastions of the greatest war of all times—and we are laughing like fools!"

### The P. C.

AFTER a long time of this the communication trench became a fighting trench. We dived into a hole right in its side, crawled down a few rough steps, and found ourselves in the P. C.—the post of commandment: in other words, the captain's dugout. The captain was sitting on the upper of the two bunks, and two of his officers were sharing the bunk with him. The reason no one was using the lower bunk was that, from its earthen wall, a thin stream of chocolate-hued water was ceaselessly dripping. The fluid collected on the floor and floated its slatting. The huge-beamed ceiling was so low one had to be bent all of the time, and between the bunks and the small table against the other wall was just man width. The whole place, filled as it was with tobacco smoke, reeked nevertheless with another and more powerful smell—that penetrating odor of deep, wet earth which is so loathsome to man because so suggestive of his last habitat.

We had coffee there, in the dugout—coffee offered by a mysterious hand which emerged from a sort of low tunnel, the beginning of some abandoned sap, in which evidently were lodged the cook, the strikers, and the kitchen. Then the captain dressed to go out with us by the simple act of leaping down from his bunk into his big rubber boots, which stood at the ready on the floor below. A captain in a trench never sleeps nor undresses at night—nor in the day, with the possible exception of a little two hours' nap. I liked that captain. He seemed very young; he looked like the captain of a football team, and he had the same simple, calm, and alert efficiency which one finds in a good captain of a good football team. But he had been now seven days in the trench, and there were lines in his face which one doesn't find in the face of the captain of a football team.

### A Wedge

WE went out with the captain and, winding, reached the very first-line trench. We picked up on the way the lieutenant of the platoon. His home was a sort of little dog niche, just wide enough for a bunk, scooped out of the wall of a short gut between the first and second trench; he rose from it like a jack-in-the-box—a tall young fellow with head shaven under the helmet. As may be seen, our excursion had been in the form of a wedge, penetrating always farther toward the boche and narrowing ever from organization to organization—from army to corps, from corps to division, from division to brigade, from brigade to regiment, from regiment to company, from company to platoon. We were now with the platoon.

Well, we visited thoroughly the bit of France held by this platoon. It was all trench, of course. In spite of the darkness, through our sense of touch and the dim ghost of light that came through the clouds, we could see that the ground was bad. We were in the water all the time now, and the trenches were shallow, hardly higher than one's head. There

were places where cave-ins had occurred, and the fresh trace of shovels recently used could be seen; sometimes sacks of sand had restored a fallen wall; and there were places so

(Continued on page 22)

We kept meeting our soldiers, our boys, singly or in little groups

out of sight altogether beneath a two-foot layer of liquid mud. Sometimes it was vaguely visible, humped over a bit of firmer stuff, and then one slipped from it as from the back of a greased pig

## Stemming the German Tide

# THE CREDIT SIDE OF OUR WAR LEDGER

BY WILLIAM C. GORGAS

SURGEON GENERAL OF THE UNITED STATES ARMY

THE greatest credit item which the Army medical corps has placed upon the war ledger, in the six months that the men have been in camp, is the prevention of some 18,000 cases of venereal disease. This is the number of men who would have had sex maladies, gonorrhea or syphilis, had they stayed in civil life, and who have remained healthy and fit only because we went to war.

This figure is conservative: reckons only our advance, in the conquest of this disease, over the army conditions of peace times. If civilian figures were available, the credit would be greater. Among new men entering the army, we always find a much larger percentage of infection than among seasoned soldiers. In a recent report from twenty-nine representative camps, 83 per cent of the venereal cases were incoming men. In preventing these diseases, we are also preventing their horrible after effects.

Our measure of success in stamping out venereal disease has come from compulsory education in the army, from medical treatment, disciplinary measures, and from community co-operation. The army rate for peace times, although it was a gratifying reduction from civil rates, still was higher than our present figure because of the indifference of the public.

Community sources of infection were not within the control of our medical corps. Now that the army is growing to millions, and every family or so has a son in it, we find it easier to arouse interest. Sources of infection are being wiped out, prostitution suppressed, alcohol prohibited, education on the subject promoted, and wholesome recreational facilities provided in camp and community. Imperfect as are our results, they represent, as far as we can tell, the best ever yet obtained in any part of the world. They come from only six months for organizing the proper machinery and another six months for installing it in camp and community. The next six months should make a still better showing.

Eight hundred cases of alcoholism have been cured during our camp experience. This is another condition that comes to us from civil life when the men are drafted. These men may backslide at some future time, when they are released from military supervision, but for the time being, at least, 800 lives have been rendered normal and temperate.

## Unsuspected Defects Revealed

A GOOD many of our men have been taken into camp from areas which are known to have a large amount of malaria. It is a disease difficult for the individual to combat because of the costs of preventive measures, which involve the draining of streams, the straightening of their banks, the clearing of underbrush, the leveling of ditches and cutting of new ditches, the extensive use of oil on large bodies of water, the screening of dwellings, and continued medical treatment. Such costs are freely incurred for the protection of the soldiers.

Tuberculosis is another item to consider in the auditing of our health account. Frank tuberculous disease naturally excludes a man from entry, but all cases are not frank. Indeed, we have had men of strikingly splendid physique who turned out to have large active tubercular lesions. It is because of this fact that although the lungs of every registrant are examined for entry, and doubtful cases are referred to the medical advisory board and reexamined, and the men are all examined again upon arriving in camp, we are making still another examination of all the men in military service whom we can reach at this time, and still finding a small number of cases. Those which develop in the line of duty are cared for at special Government sanatoria. Mostly we are obliged to discharge them, in due course of time; but the treatment they receive, which in many instances they never could have afforded in civil life, and the educational benefits of their army and sanatorium experience, give them a protection against the disease which they did not previously have.

"Soldier's heart" is a term for classifying a variety of functional heart disturbances which are

Each base hospital has a full modern equipment

All mouths are put in a sanitary condition

months' work, but I believe I am justified in estimating as good results as they have had in England, here they have employed similar measures, and where 25 per cent of the cases of "soldier's heart" have been restored to full efficiency, and another 25 per cent to limited service.

Preparations are now under way for preventing the development, in many cases, of functional heart disturbance. Previously all men have fared alike as to training, whether they came from inactive occupations or from those involving heavy muscular activities. The sudden transition for men of inactive habits to strenuous physical exertion has been responsible for the uncovering of some of these heart weaknesses. Graded exercises will now be arranged for men of this type, to fit them by degrees for the heavy demands of full military duty.

In this group of men we shall include a number of types of slight physical defect, some of which, experience has shown us, break down under too sudden strain. A good many foot cases will thus be salvaged. There are no positive figures, but our orthopedic surgeons estimate that about 10 per cent of all the disabilities developing in camp have something to do with the feet.

The number of chronic cases of stomach disorder which our half year's medical work has uncovered is another indication of the amount of health saving which the war has brought about. A specialist from my office, who has recently made a survey of such cases in a number of camps, estimates that we are

uncovered in camp life. Even though we examine registrants for heart defects, and all doubtful cases are again examined by the Medical Advisory Board, we still find heart irregularities on our third examination in camp, or later during the course of training. I cannot give exact figures as to how many of them we have reclaimed in the six

restoring to health at the rate of 2,000 to 3,000 cases in a year. Many of these men have stomach or duodenal ulcers, or other digestive disorders with decidedly disastrous possibilities. In many instances they would have had no medical treatment, if they had remained at home, until they reached the incurable stage. The most highly scientific diagnostic measures are available to all these men regardless of expense. The cost of examination by laboratory and X-ray methods is generally \$50 to \$100, and this does not reckon the cost of subsequent medical treatment.

The teeth of young male Americans, as we view them on entry to the camp, appear in varying stages of highly dangerous neglect. Not only are all mouths put in a sanitary condition, but bridge, crown, and plate work are permitted, and the men are thoroughly instructed in oral hygiene. The relation of tooth decay and gum infection to heart trouble, appendicitis, and other organic illnesses is only beginning to be recognized by the public.

Approximately 15,000 cases of defective nervous and mental organization have been brought to light by the mobilization. Of these about 80 per cent have been sent back to civil life, as material unavailable for army purposes, but 20 per cent are being greatly improved in health and efficiency. The governor of Arkansas has sent to my office for a list of all soldiers from his State discharged for nervous and mental diseases, with a view to giving them special care. It is to be hoped that other States will follow this good example.

Our army death rate from typhoid is almost zero. In civil life this disease is still taking toll.

So widespread is disease that we are accustomed to think of good health as merely its negation. If it were, most of the men whom we accept would be ready at once, as far as their physical condition is concerned, for active fighting. But most men, in seemingly the best of

One reason why the army death rate from typhoid is almost zero

health, are far below their full physical capacity. War is a supreme test, and no man should enter it who has not been scientifically trained to the highest pitch of endurance. To bring him to this point is one of the principal objects of training-camp existence. His meals are carefully calculated as to quantity and proportion of food constituents (and, by the way, the American soldier is the best-fed in the world), he is obliged to eat at regular hours, to exercise a definite amount, to bathe at frequent intervals, to be in bed at a specified time, and to subject himself to a liberal quantity of fresh air. He is also instructed in the elements of hygiene and sanitation. Every man who receives military training will not only know more about the subject of health than he

(Continued on page 22)

## Not a Half-Portion War

THAT last Liberty Loan was finally set at the lower sum of three billions plus because, after compiling many estimates, Secretary McADOO's people finally discovered that our country was going to be able to spend only some twelve or fourteen billion dollars during this present fiscal year instead of twenty-one billions, which had been their second or third guess. The estimates for the coming fiscal year (July 1, 1918, to June 30, 1919) are now being put out on an even grander scale. The talk is of \$15,000,000,000 for the War Department and of a total for all departments running close to \$31,000,000,000. These figures, deservedly much criticized, are as loose as they are large, partly because our country has no real budget system and partly because we have not as yet under direct governmental control any bulk of industrial strength able to produce on such a scale. Time will show what we will be able to do. On this year's cut-down totals our country is raising a larger part of the cost by taxation than is any other nation. This looks well and is well, but should be no source of pride to us, because it means that we have not yet got anything like our full force into the war. When we talk of the difficulties in the way of spending the huge totals now estimated for next year (the same difficulties which cut down our war accomplishment by from 30 to 40 per cent this year) we are really talking of our inability to get into things as we should. The British budget for 1918-19 calls for \$14,500,000,000. It is a fair guess, based on population, natural resources, and development, that our national wealth is about two and a half times that of Great Britain. On that scale we ought to raise during this next year no less than \$36,250,000,000, and the results obtained by spending it ought to make a real dent in Germany. The present task for all of us is to give up the useless things of peace to which, even now, far too much of our energy is devoted, and to set ourselves for the stern work of freedom. The task of our leadership is to make us do that.

## Germany and Alsace

THE late CHARLES DILKE, a great British Radical, at first regarded France and not Germany as the attacking power in the Franco-Prussian War—which paved the way for the war of 1914. In one of his books DILKE wrote that "if the English race has a mission in the world, it is surely this: to prevent peace on earth from depending on the verdict of a single man"—and the sentence was written against LOUIS NAPOLEON, not against the Hohenzollern or BISMARCK. Later, DILKE saw the facts as they were. You may read of this conversion in the massive "Life" of DILKE which an Irish parliamentarian, STEPHEN GWYNN, contributes. On one occasion DILKE quoted the words of an Alsatian deputy in the German Reichstag, in 1874:

Had you spared us, you would have won the admiration of the world, and war had become impossible between us and you. As it is, you go on arming, and you force all Europe to arm also. Instead of opening an age of peace, you have inaugurated an era of war; and now you await fresh campaigns, fresh lists of killed and wounded, containing the names of your brothers and your sons.

It is not passion or prejudice that made CHARLES DILKE add: "The view of this Alsatian deputy is my view. I do not believe that might makes right." It is not prejudice or passion that interests such men of state as the French Socialist ALBERT THOMAS or the American peace lover WOODROW WILSON in the return of Alsace-Lorraine to France as one of the bases of the world's peace. In fighting for justice we are also fighting for the restoration of the lost provinces to the French—remote as that result may seem at this stage of the war, judged on the basis of actual operations.

## Americans!

"ELEVEN per cent of the Massachusetts population can't write or read English," says a news dispatch to the New York "Globe." In the next column of the "Globe" one reads of the brave stand made by certain New England troops against German attacks on their part of the line. "The men engaged were 60 per cent Italian and Polish by descent," one of their proud officers—in civil life a Connecticut school-teacher—tells the "Globe" correspondent. It would be an error to deduce from these two clippings from a New York newspaper that the best Americans of 1918 are the Americans who can't read and write English. Yet something may, all the same, be fairly inferred. Here at home the roll of

foreign-born or foreign-derived national administrators includes such alien-sounding names as Baruch, Rosenwald, Goethals (but we're told that Goethals is a Belgian name), Warburg, Schwab, and Frankfurter (the new "Assistant Labor Administrator"); abroad, our Polish American and Irish American and Italian American and German American soldiers have been making good alongside our Anglo-Americans and Other-American mixtures of blood and language and tradition. Little-minded men cannot much longer fail to realize that a man's name indicates as much about his patriotism and usefulness as the name of his favorite flower or the size collar he wears.

## To Make "Straight Americans"

SPEAKING of "German Americans," there is the poet HERMANN HAGEDORN. HAGEDORN, most of whose family is in Germany, and whose Tory kinsmen have been fighting for the Kaiser, naturally inclined toward the German side of the argument while America was drifting. Since America has ceased to drift, he has seen the issue like the American he is: so much so that the semiofficial Cologne "Gazette" refers to his "unholy activities" in organizing the society called "Friends of a German Republic" and delicately classifies the members of that organization as "dirty pigs" (*Schmutz-finken*). But it is not enough for us to recognize the loyalty and the democratic spirit of our Hagedorns and Schiffs and Franz Sigel juniors. Here is a passage from a letter written by HERMANN HAGEDORN:

The great body of Americans of German origin are absolutely loyal. They know that America is their home, their only possible home henceforth. A good many of them realize that somehow or other they have been running on the wrong track these last three years. They want to get back to the main line. They want to feel that they "belong."

In that mental attitude lies a great opportunity for other Americans. The German Americans can be won over absolutely by an expression on the part of other Americans of trust and desire for friendly cooperation. Do these other Americans want to root out German secret agents? No one wants to root them out more ardently than the German American, for he recognizes that every misdeed of a German agent makes his own position more difficult. Do these other Americans want men and women for work on Liberty Loan committees, Red Cross committees, and the like? The majority of German Americans are hungry for an opportunity to work shoulder to shoulder with their fellow citizens. They don't want to be made to feel that they are outside the pale.

There is one infallible means to make German Americans into straight Americans, and that is to treat them as such until they prove themselves otherwise.

Already they have earned the right to this treatment. They have earned it here at home—and over there, on the right side of the battle front in France.

## Are You a "Gentleman"?

PERTURBATION has been caused among certain residents of New York State by the new law which stipulates that all able-bodied males from eighteen years of age to fifty, inclusive, must be "habitually and regularly engaged in some lawful, useful, and recognized business, profession, trade, or employment until the termination of the war." Most male citizens can probably prove their callings legal and recognized. But this word "useful"—what dangerous possibilities it opens up! Magazine editors, fiction writers, toe dancers, and sword swallowers can, obviously, demonstrate their use in diverting more solid persons from too much war-time care. But other cases offer more difficulty. How about bartenders and beauty doctors and politicians? It is (we understand) the "recognized business, profession, trade, or employment" of stock gamblers to provide champagne and diamonds for chorus girls. Writers of stupid plays have an incalculable use in the lives of dramatic critics. CHARLIE MURPHY and HEARST and the "German spy" are similarly indispensable to hordes of editorial writers and cartoonists who, without such objects of righteous anger, might be at a real loss to earn a living. But can the usefulness of all these uses be shown before the law? We'd hate to be some lawyers hired to prove that theirs is a useful "profession, trade, or employment." Who is to interpret this most perilous verbiage?

## The Pessimist

THERE are any number of optimists who are confident that things will come out all right in the end. HOUSTON's is the much rarer case of the optimist who hopes for the worst, or something near it. "The news in the papers is very good this morning," says

# Editorials

HOUSTON. "I see where they are determined to put over conscription on the Irish, and the Irish are getting ready to fight. It's encouraging."

"Oh," one says.

"And there are the Clyde engineers threatening to go out on strike again if something isn't done about the beer ration. It's good news."

"Oh," one says.

"Here at home," says HOUSTON, "the spirit of partisanship is running amuck, as this headline puts it, and the aviation program has got mixed up with the Congressional elections. That isn't half bad."

"Are you going in for subdued satire?" one asks.

"Me, satire?" says HOUSTON. "I wouldn't know the fellow if I met him. I am giving you the facts. On the other hand, here's Kaiser Bill crowing over the spirit of perfect unity and cooperation which animates his beloved taxpayers. And it's true too. So much the worse for Bill."

"Houston," one says impatiently. "Don't trot out that moth-eaten stuff about being glad because we are in each other's hair since that is the way of democracy."

"It isn't that at all," says HOUSTON. "Only when I am down in the mouth about the situation out there on the front, it cheers me up to read about Ireland, and the engineers on the Clyde, and the fence builders at Washington. It shows we are not going to lose the war."

"Oh," one says.

"It's this way," HOUSTON elucidates. "I know that LANSDOWNE and CARSON are not animated by the purest of motives. I know their nasty little game. But, after all, if LANSDOWNE and CARSON were afraid of losing the war, do you think they'd take off time to satisfy their little grudge against Mr. DILLON or Mr. DE VALERA? No. And if those Clyde shipbuilders were really afraid of the Kaiser they wouldn't be thinking of their beer so hard. And in Washington, if they expected the German navy to sail up the Potomac, they wouldn't be laying wires for next November."

"Oh," one repeats.

"In this respect," says HOUSTON, "I rely on the instincts of the average man: and when I read a particularly depressing communiqué from France, I like to look out all over the Allied world and see things a good deal the way they used to be. If the German people stands like one man behind Kaiser Bill, it's because the German people is scared to death. If we go on scrapping among ourselves, it shows a gratifying state of confidence."

One cannot recommend HOUSTON's attitude without reserve, but in the interests of history and human nature his case deserves to go on record.

## Gorgas

GENERAL WILLIAM C. GORGAS, who contributes to this issue of COLLIER'S an article on the work of the United States army Medical Corps, is perhaps the most eminent sanitarian of our times. He it was who made possible the completion of the Panama Canal by changing the Isthmus from one of the plague spots of creation to one of the world's healthiest. When, in 1901, Major WALTER REED and his associates proved that yellow fever is transmitted by the mosquito, GORGAS, then Chief Sanitary Officer of Havana, set about applying this fact to the sanitation of the Cuban capital. In three months Havana was freed from yellow fever for the first time in 150 years. GORGAS became Chief Sanitary Officer at Panama in 1904, and his work in ridding the Canal Zone not only of yellow fever, but of all dangerous infectious diseases, is his outstanding achievement. Before becoming surgeon general, in 1915, GORGAS investigated the cause of the high mortality from pneumonia among the miners of the Rand, South Africa; and, more recently, he has made a survey of the breeding places of yellow fever in South America. GORGAS believes that, if yellow fever can be eradicated from these "endemic foci," the disease will entirely disappear. Lately, GORGAS has not only done his uttermost for the health and well-being of the enlisted men, but has transformed the army Medical Corps from a handful of efficient officers into a greatly expanded organization of equal efficiency, capable, we believe, of meeting the great demands which may be put upon it as the war goes on. Officers returning from the western front state that the American army medical establishment is there regarded as the best in the field.

## Clucking for Uncle Sam

THE country came up to scratch on the third Liberty Loan—no doubt about that!—and at a Liberty Loan meeting at Cheyenne Wells, Colo. (a town of 400 inhabitants), the people subscribed \$10,000. They held a Red Cross auction on the same occasion, and a calf was sold for \$1,190 and a hen brought \$113; and we city people miss the fun of auctions like that in spite of all our parades and band music. While the bidding was going on, that Cheyenne Wells hen laid an egg, and when the hen began to cackle, the auctioneer promptly knocked down the egg for \$1.25. This news from home ought to please the seventy-two men from Cheyenne Wells who are serving in the army or navy.

## Our Railways Are Good—Why?

THOSE who know often speak of our American railways as the best on earth. The underlying reason is fairly well shown in one recent issue of the "Railway Age." In glancing it over we noticed a summary of a 200-page report by a special committee organized over five years ago to investigate the stresses in railway tracks. They made over 250,000 observations on rail strains alone, and the work is continuing. In time we are going to know how a railway track ought to be built and why, instead of leaving the roadbed largely to the professional instinct of the section boss and his gang. Another group of practical men have been getting data as to the transverse fissures or splits in steel rails, and there will be fewer accidents in years to come because of their work. Another paper, bristling with tables and diagrams, tells how to reduce the "dynamic augment" for heavy locomotives. It seems that the big locomotive pounds on the rails because some of its parts are relatively too heavy and that various modern (and lighter) alloys of steel will help cure that bad habit. A fourth paper points out the deep interest in education that railroaders must take if their forces are to have the right human training and intelligence. It appears that our railways ought to cooperate with our public schools. All this from one number of one technical paper, and we have indicated only the high points! Busy brains make good railroading, and the U. S. A. has 'em.

## Reality

IN the worst days of Israel's desolation her prophets saw the hollowness of the tyranny by which she was oppressed. The conquest of Syria or Egypt or Babylonia was bound to fail in the final reckoning because the world's tide runs against the victory of unrighteousness. Across the gulf of three thousand years we can see that truth flaming from the hills of Judea as it flames to-day from the ridges of Picardy and the flats of Flanders. Not that the victory of the right comes of itself, for the arms of good men must advance it—but, through good and evil report, justice is strong and despotism is failing. An Irish poet, named DUNSANY, now a captain in the British army, has put this vision into words that will live:

They are mirage towns. The farms grow Dead Sea fruit. France recedes before the imperial clutch. France still smiles, but not for him. His new towns seem to be his because their names have not yet been removed from any map, but they crumble at his approach because France is not for him. His deadly ambition makes a waste before it as it goes clutching for cities. It comes to them and the cities are not there.

He sees victory near him now. That also will fade in the desert of old barbed wire and weeds. When will he see that a doom is over all his ambitions? For his dreams of victory are like those last dreams that come in deceptive deserts to dying men. There is nothing good for him in the desert of the Somme. Bapaume is not really there, though it be marked on his maps; it is only a wilderness of slates and brick. Peronne looks like a city a long way off, but when you come near it is only the shells of houses. Pozières, Le Sara, Sapignies, are gone altogether.

And all is Dead Sea fruit in a visible desert. The reports of German victories are mirage, like all the rest; they, too, will fade into weeds and old barbed wire.

And the advances that look like victories, and the ruins that look like cities, and the shell-beaten, broken fields that look like farms, they and the dreams of conquest and all the plots and ambitions, they are all the mirage of a dying dynasty in a desert it made for its burying place.

Bones lead up to the desert; bones are scattered about it; it is the most menacing and calamitous waste of all the deadly places that have been inclement to man. It flatters the Hohenzollerns with visions of victory now, because they are doomed by it and are about to die. When their race has died, the earth shall smile again, for their deadly mirage shall oppress us no more. The cities shall rise again and the farms come back; hedgerows and orchards shall be seen again; the woods shall slowly lift their heads from the dust; and gardens shall come again where the desert was, to bloom in happier ages that forget the Hohenzollerns.

June 8, 1918

# FLOTILLA SMILES

BY JAMES B. CONNOLLY

COLLIER'S STAFF CORRESPONDENT

*Suddenly he let drop his glasses, grabbed the wheel, and pulled it hard toward him*

WE were a group of American destroyers convoying twenty home-bound British steamers. There was one big ship, a whale of a P. & O. liner with eight guns, all ready for a raider.

She was a great specimen of camouflaging, like a boiler explosion amidships and her bows appearing to be bent in as we looked at her. She was the only ship in the convoy that was camouflaged; and she rode in stately style two lengths out in front of the others. All of which made her a prominent object. Our officers felt like telling her to dress back; but she had a British commodore aboard; and for an American two- or three-striper to try to advise a British commodore—No, no—it isn't done.

All day long she rode out in front of the column, and all day long our fellows kept saying things about her.

"Isn't she the cheery one?"

"Look at that big squash out there in front—how does she expect any U-boat to overlook her?"

"That big loafer, she'd better watch out or she'll be getting hers before the day's gone!"

U-boats were thick around there. One of them must have come up, looked the convoy over, and said: "Well, there's nothing to this but the big one!" and Bing! let her have it, for it was not yet quite dark when those who were looking at her saw a column like steam go into the air, a black column like coal follow it, and after that a column of water boiling white.

One of our destroyers hopped to twenty-five knots, dumped over a 300-pound "ash can" and got Mister U-boat; and two other destroyers—the 394 and the 384, say—went at once to the job of taking off passengers from the sinking *Oranna*.

That was at five minutes to six. It had interrupted dinner on our ship; but by and by we went back to the wardroom to finish eating. It is always good business to eat—no knowing when a man will be needing a good meal to be standing by him inside. And we were still eating when the messenger came in with a radio. He passed it to the skipper, who read it to himself, whistled, and then read aloud: "Torpedoed—*Clan Lindsay*."

The *Clan Lindsay* was another of our convoy, and she had been within 1,000 yards of our ship when we last came about to zig-zag back across the front of our column.

We looked at one another, and one said: "Well, you got to hand it to Fritz for being on the job every minute." And another: "Yes, but it looks like a big night to-night. Two in an hour! And eighteen more ships and eight destroyers to pick from yet. If he starts off like that, what d'y' s'pose he'll be battling by morning?"

The wardroom on our ship opens on to the ship's galley; and from the ship's galley another door opens on to the deck. Through the open galley door just then came a muffled explosion—a great Woof!

We all thought just one thing—they've got us too!—and we all sort of half curled up, and would not have been a bit surprised if the next instant we found ourselves sailing through the deck overhead. The feeling lasted for perhaps three seconds, and then our skip-

per, looking up at our colored mess boy George, suddenly came out with: "What the devil you laughing at?"

George had been staring through the galley door. Said George: "Cap'n, I see the flame. The galley stove done bust!"

The galley stove on our ship is an oil burner. It had back-fired, and so the loud Woof!

The big liner sank, but not until the two of our destroyers standing by had taken off every one of the 503 passengers, who were mostly soldiers home-bound on leave, the one taking people off the deck, the other picking up the people in the boats. One destroyer—the 396, say—took off 307 of these passengers. Her skipper passed the word by radio to the 384, which had gathered in 196 passengers, including the commodore. The 384 got the message, only she got it 7 instead of 307 rescued.

"Seven survivors!" said the 384's skipper. "I wonder why she radioed that?" And then he doped it: "Of course. She wants us to take off her seven and make one trip of it to port. Of course."

The 384 carried a little motor dory about twelve feet long. Said the skipper to the boson's mate in charge of her: "Go over to the 396 and get her seven P. & O. survivors."

The boson's mate shoved off, lit a cigarette, balanced himself on the gunwale of his twelve-foot dory, and motored out into the night.

Now, aboard the 396 they are busy trying to find space for their 307 passengers, when a lookout hears a Putt! putt! putt! coming over the waters. He listens. The officer of the deck listens. Everybody on the bridge listens: Putt! putt! putt! it comes. The officer of the deck reports to the skipper. The skipper wonders who it can be, when just then a radio message arrives: "Am sending a boat—384."

"Sending a boat? What for?" And then it flashes on him: "Sure! That British commodore she picked

is coming to see how the survivors aboard here are getting on. That's it, and"—he turns to his executive—"you know how these Britishers are for regulations. Even in the midst of a mess like this we'll have to kotow to his rank or he'll probably be writing the department about it. So rouse out six side boys, line 'em up, rig up the port ladder, have the bugler stand by for ta-ra-rums and all that stuff."

The Putt! putt! putt! is coming nearer and nearer. Then from out of the blackness of the ocean they make out a little motor dory; and then, balanced out on the gunwale of the little dory, an American bluejacket.

The captain of the 396 looks down at him, and then into the depths of the dory. Nobody else. "Who are you?"

The bluejacket removes the cigarette from his lips. "I'm from the 384, sir."

"Yes, yes, but what do you want?"

"I've come, sir"—he waved his cigarette stub—"to get the survivors."

## "It Was a Mine"

WHEN the big *Oranna* reported herself torpedoed that evening, a destroyer—not one of ours—picked up the message 100 miles or so away; and at once radioed: "Coming to your assistance—give position, course, and speed."

That was proper and well-intentioned, but as the 384 and the 396 were already standing by, a radio was sent back: "Everything all right—no help needed—thank you."

That did not seem to satisfy the inquirer. "Would like to help—give position, speed, and course."

Everybody being busy, nobody bothered to answer that. By and by came another radio: "This is the destroyer Blank—give position, speed, and course."

He was so evidently one of those Johnnies who are always volunteering to do things not needful to be done that nobody paid any further attention to him. But he kept right on sending radios. By and by, for perhaps the seventh time, came: "This is the destroyer Blank—please give position, speed, and course."

At which some one—nobody seems to know who, but possibly some undistinguished enlisted radio man whose ears were becoming wearied—sparked out into the night: "*Oranna's* position? Between two destroyers. Her speed? About four feet an hour. Her course? Toward the bottom of the Atlantic."

Which wound up the matter—no more urgent radios came to us that night. (Continued on page 32)

As he passed her young Captain Chisholm leaned out from his bridge and hailed: "Call yuh!"

*Twenty thousand owners call it a perfected mechanism—the Packard Twin Six power plant.*

**I**WIN SIX QUALITY is revealed when you lift the hood. Clean, symmetrical lines give a true picture of simple and sound design. That outward beauty of Packard workmanship is a symbol of intrinsic worth. Every detail a hall-mark of Packard performance ' ' smoothness of action, range of ability, economy of tires and low cost of upkeep.

Owners call the Twin Six the embodiment of eager power under perfect control. Its war-time utility is expressed in terms of transportation ' ' first-class travel over any road.

**PACKARD MOTOR CAR COMPANY, DETROIT, MICHIGAN**

"Dinah, clean all this furniture and woodwork with soap and water. It's varnished with Valspar and washing won't hurt it a bit."

## Valspar—the washable varnish!

Valspar is the ideal varnish for every household use *because it is water-proof, spot-proof, and durable.*

This means that if your furniture, woodwork, and floors are varnished with Valspar they can be washed freely with soap and water and thereby kept clean, sanitary, and beautiful.

You need never worry about little household accidents, because Valspar is immune from damage due to spilled liquids, leaky pipes, overflowing basins, etc.

Valspar will protect and preserve your woodwork and furniture for many years and will never turn white and never look "spotty."

*Use it wherever you need varnish indoors or out—but be sure to get Valspar.*

**Special Offer**—If you wish to test Valspar send 20c. in stamps and we will send you enough Valspar to finish a small table or chair.

*The boiling-water test that made Valspar famous*

# THE LEPRECHAUN OF TIN CAN ALLEY

BY RUTH SAWYER

ILLUSTRATED BY JOHN R. NEILL

IT happened in the borough of a great metropolis. I could name the borough and the city, only there is the danger of setting real-estate prices soaring—especially in connection with those front yards which boast of hawthorn bushes. So you must content yourselves with geographic generalities and a hazy description.

In the olden time, when the metropolis was a small, concentrated, civic unit, Tin Can Alley was the aristocratic suburb. Its families entertained presidents and visiting royalty and it was called something like Sidon-on-the-Heights. Then, after a century of social dominance, it went suddenly out of style, as suddenly as if it had been a lady's garment. The city spread itself like an incoming tide and Tin Can Alley became its damp heap; hence the name. For a score of years its property was quoted at a song; squatters' rights could be had for the asking, and some of the farthest out and most aristocratic of all the houses were torn down to give place to gas tanks and breweries.

And then another change took place. The city's universities commenced to jump like castles in a chess game from the crowded lower end to the extreme upper; professors and their families began poking into the alley in search of homes. Close on the border a line of modern apartment houses sprang up; and beyond them a circle of small brownstone houses with a park in the center; while dotted about the outskirts stood a few of the old mansions—tattered shreds of the neighborhood's past glory. Of course the name changed again. It was put down in telephone directories as Park Hill, and the professors' wives had it carefully engraved thus on their cards; but for all that it was remembered as Tin Can Alley, and the flippant-minded persisted in calling it so.

This brings us to the house of Van Decker and the beginning of the story; and I beg you to bear in mind that it all happened just as I am telling you.

**WILLUM VAN DECKER**—of course he spelled it William, but that makes no difference, for his mother gave it the good Dutch twist when he was christened and the world perpetuated it as he grew up—Willum Van Decker accepted the place of in-

structor in the English department of the City University at a salary of a thousand, with an empty bank account and a full heart. Ever since Willum could remember the Van Deckers had been woefully aristocratic and wishfully poor. It was natural, therefore, that a thousand a year seemed stupendous to Willum until Molly O'Gorman came sailing across his mental and spiritual horizon; and then it dwindled by the minute. She came sailing fresh from her green isle, as empty-pocketed as Willum, with cheeks like Killarney roses and eyes like Killarney lakes, with a mind bubbling full of Celtic fancies and a tongue dripping Celtic poems—many of them her own making. In fact, she had come to sell the poems and, having sold them, she stayed to write more.

From the moment that Willum first cast eyes on her over the edge of a teacup and a half-bitten wafer at an Authors' Club reception to the afternoon on the river bank when he confessed that he hadn't enough cash in hand to buy an engagement ring, he had loved and never stopped longing for Molly. And Molly herself betrayed something of the same state of mind when she answered him: "Wouldn't I have been angry at you then if you had been buying a ring? What good is a ring—tell me that! Sure, we'll be needing the money soon enough for a rug or a set of dishes." Which went to show that in spite of the poetry Molly was practical.

Those who knew them both best prophesied dire results, among themselves, when the engagement was first announced. The aristocratic kin of the Van Deckers felt an O'Gorman was no fit mate for Willum. They wagged their heads, repeating in a horrified tone: "Irish and Dutch! Who ever heard of such a combination? And, my dear, it is simply impossible to imagine what may hang hidden on the lower branches of an O'Gorman family tree."

The literary Bohemians, who knew Molly best, wagged their heads another way. "He'll simply smother her!" they gasped. "He's too literal, too repressed, too silent. He'll snuff out every bit of her genius; dissolve those precious Celtic dreams into thin air. There'll be no more fancies, no more poems; and without those what will happen to Molly?"

So the Bohemians and the Van Decker kin sat up and waited for what they expected to happen; and while they waited and expected, nothing happened. It was not until time had done considerable scudding, and their interested world had made its mind easy concerning them, that things began to go awry. But I am running ahead of my story.

They married and went to housekeeping in one

"I'll give ye a bit of advice if ye'll promise not to take it"

of the littlest of the harder-line apartments; and everything went as joyfully as a throbbing song. Having a free tongue and a mind eternally spilling over, Molly found peace and restfulness in Willum's repression, and with her ready fancy could read into his silence all the love and adoration that were there. And Willum found himself beginning to talk and dream. It was a veritable Jack Sprat combination. They attacked life with a wholesome, unstarved appetite, allowing of no waste to their daily platter. Molly wrote more poems, and better ones than ever before, and set her dream cap for a play—a poetical Irish drama. Willum brought a touch of imagination into his lectures, and on rare occasions even waxed eloquent. The head of his department spoke encouragingly of his work; and Willum's dream of an assistant professorship came true.

"It's all your doing, little girl," he burst forth after reading of his new appointment. "You've turned me from a pedagogue into a human being. Keep on and I'll be a poet myself, some day." And he laughed and swung her high into his arms.

"Maybe it's a bit of Irish yeast gone into a lump of Dutch dough," Molly laughed down at him. She loved his endearing outbursts all the more just because they did not come often or too glibly. "But be careful, lad, don't be letting it raise you too sudden. It spoils the flavor for afterward—and it bakes hard!"

**CLOSE** on the heels of the assistant professorship came Willum Junior. As Molly put it: "So much good luck couldn't be housed in a five-room apartment"; therefore, as soon as she was about again, she and Willum went searching for a home. First of all they looked at one of the stone houses facing the tiny park. The park offered a future playground when Willum Junior should come into possession of his legs and a faculty for adventure. But the rent was too high, the park too small and restricted; and, moreover, there was not enough inside space to meet Molly's dreams of what a home should be for a growing family. So they wandered on to the outer fringe of Tin Can Alley, and there they came upon what was still known as the Van Decker Mansion. It was decidedly seedy and overgrown. It looked as if it had not known good company for more than a decade. It had been swept ruthlessly of grounds and driveway; and the little house at the corner, that might have once been a caretaker's or gardener's lodge, looked far more up in the world than it. But there were two fine old elms shading it, a sunny spot behind large enough for a garden, and on the front lawn grew a hawthorn bush. It was white with blossoms when Molly first saw it.

"And is it related to (Continued on page 23)

Rolls it beyond where the throbbles sing

Overland cars now in service are the equivalent of several railroads combined in their ability to transport passengers.

One of the largest railroad systems carries about 74-million passengers a year, an average distance of 26 miles a passenger.

Overland cars can carry 2,500,000 passengers 100 miles or more a day, or 900 million passengers a year.

And Overland cars are not limited to tracks. They come and go in all directions, night and day, stop and start whenever and where necessary.

Your success, the amount of work you are able to do in a day, is largely a question of transportation.

Why is the cry for ships so frantic?

Why is railroad congestion so vitally serious?

The answer is **TRANSPORTATION.**

Motor cars are taking a stupendous burden off of railroads.

But are you helping by using a motor car? are you saving time, speeding up your efficiency? increasing your usefulness with a car?

What the railroads are to the nation—motor cars are to individuals!

Get your car now!

# PRISONERS

*Notice how many of the Germans shown above have their hands in their pockets. This is not because they are cold, but to keep their trousers on! The French make it impossible for their prisoners to run away by cutting all the buttons off their trousers and then taking away their suspenders.*

*German prisoners in France are easily identified by the "PG" stenciled on their clothing. The lettering stands for: Prisonnier de Guerre - prisoner of war.*

*A squad of British soldiers captured by the Germans. Notice that they are covering their faces with their caps to avoid being photographed for exhibition use.*

*"Sammy" Brings in His First Boches." A drawing by J. Simont in "L'Illustration" of Paris, commemorating the events of the morning of Feb. 23, 1918, when American troops, in the Chemin des Dames sector, captured their first prisoners.*

# Oil Tests

## Their relation to Correct Lubrication

*This important 8-minute talk is based on the 50 years' world-wide experience of the Vacuum Oil Company*

SEVERAL years ago a prominent engineer invented a machine to determine the comparative efficiency of lubricating oils. But one day it was found that crude kerosene oil, by this machine's test, was the best lubricant.

That ridiculous result will indicate the difficulties which science has always met in trying to judge an oil's efficiency by anything but the practical test of *service*.

Nevertheless, during manufacture, certain scientific tests are essential. For example: Each batch of Gargoyle Mobiloils is put through at least 35 separate and distinct tests. These tests are *not* aimed to get at the *lubricating efficiency* of the oil. That can only be determined by the test of *service*. The scientific laboratory tests simply make sure that the oil is running uniform. Below we outline briefly a few of the tests used for this purpose.

### VISCOSITY TEST

Viscosity is simply the technical name for what is popularly called "body."

But this fact must be borne in mind: Two oils which will show the same viscosity at one temperature will often decidedly differ in viscosity at higher or lower temperatures.

The viscosity of Gargoyle Lubricants is tested at three different temperatures - 104°-140° and 210° F.

In this test the oil is put into a tube surrounded by water or steam which is kept at the test temperature. When the oil reaches the predetermined temperature, a plug in the bottom of the tube is removed. This opens a small standardized tube. The oil is then allowed to flow out of this opening into a glass receptacle of known capacity.

The time in seconds required by the oil to fill the container beneath, up to the standard graduation mark, is the measure of the oil's viscosity.

Gargoyle Lubricants all go through the viscosity test, but the viscosity test alone cannot determine the efficiency of an oil. Gargoyle Lubricants possess individual characteristics as lubricants.

### GRAVITY TEST

In this test a weighted bulb with a graduated spindle (hydrometer) is dropped into a tube of oil. The hydrometer floats. But its bottom sinks to a certain depth depending on the oil's gravity. The gravity is determined by the depth to which the hydrometer sinks, as shown by the markings on the spindle with the oil at 60° F.

This test is simply used to determine whether or not uniform weight per gallon is being maintained. It is constantly used in manufacturing Gargoyle Lubricants.

### FLASH AND FIRE TESTS

The flash test is the lowest temperature at which the vapor from an oil will ignite but not continue to burn. If the flash test is too low, the oil will evaporate from the cylinder walls and bearings when the normal engine heat develops. This would leave the friction surfaces without lubrication.

Gargoyle Lubricants always undergo this flash test.

The fire test is made with the apparatus used in the flash test. The fire test is the temperature at which the ignited vapor from an oil will continue to burn.

This is another check used in manufacturing Gargoyle Lubricants to insure uniformity.

But it should be remembered that the flash and fire tests alone cannot determine an oil's lubricating efficiency.

# Mobiloils

*A grade for each type of motor*

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

### IMPURITY AND WATER TEST

Crude oil comes from the ground. It is liable to contain traces of salt, mud, sand, water and other foreign substances held in suspension.

The crude oil which is subjected to this test is mixed half and half with gasoline and poured into a graduated glass sedimentation jar. The jar is then put into a centrifuge and whirled.

During the whirling process the bottom of the jar is thrown outward. The water and foreign substances are forced into the small, graduated end of the jar. The organic foreign substances form a layer between the water and the oil, the sand sinking to the bottom.

The graduated scale indicates the percentage of water and of foreign substances in the sample under examination.

THE foregoing are, of course, but a few of the 35 separate and distinct tests which are used in the manufacture of Gargoyle Mobiloils. To describe *all* of these tests in this space would be impossible.

But we have tried to make plain the great difference in efficiency which may exist between oils which *look* alike, *feel* alike and *test* alike. To cope with this puzzling condition, the Vacuum Oil Company has for years maintained thoroughly equipped laboratories and engineering departments in many parts of the world.

In recommending a Gargoyle Lubricant for a given purpose, we first analyze the operating conditions to be met, then specify the lubricant which is known from practical experience to meet the conditions most efficiently.

With Gargoyle Mobiloils this situation is met by a Chart of Recommendations which is shown in part on this page. The oils specified for the various cars on this Chart are determined annually by a careful engineering analysis of each model and make of car.

The recommendations are based on 50 years of practical experience in lubrication. The formulas and methods used in manufacturing these oils are based on almost numberless practical tests.

You may safely feel that the oil specified for your car in this Chart will insure—Greater power. Less friction. Less carbon. Lower consumption of gasoline. Less consumption of lubricating oil. Longer life of your car.

### Correct Automobile Lubrication

**Explanation:**—The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A"  
Gargoyle Mobiloil "B"  
Gargoyle Mobiloil "E"  
Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc" means Gargoyle Mobiloil "Arctic," etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on Correct Automobile Lubrication.

# Sealpax

## A Better Athletic Underwear

### Sold in a Cleaner Way

**YOU** pay no more for Sealpax but you get more for your money. It sells at popular prices yet it possesses many exclusive features.

Sealpax comes fresh from the laundry to you in a crisp, sealed container, *clean as the driven snow*. You break the seal, put Sealpax on and wear it. That's convenience and economy.

You find the fabric caressingly soft and refreshingly cool and airy. You get a newer sense of freedom from the freer-cut of Sealpax.

You note with satisfaction that Sealpax Underwear is carefully sewed and neatly finished.

After months of service, you learn that there is unrivalled wear in Sealpax.

You'll conclude as have thousands of other particular men that *Sealpax is a better athletic underwear sold in a cleaner way.*

Sealpax is made in union suits and separate garments. If not at your dealer—write us.

THE SEALPAX COMPANY Dept. C., BALTIMORE, MD.  
Also Makers of Lady Sealpax Athletic Underwear

## In the American Trenches

Continued from page 9

narrow through slips that even as we scraped through we imagined the walls—like the walls of the torture chamber in one of Poe's fantastic tales—to be slyly approaching each other to catch us like worms. Every once in a while we stopped, and raised ourselves to a firing step, and peered over the parapet. We could see, on the level with our eyes, a few blades of frozen grass (at first we would think they were trees), then, perhaps, a little farther, the pickets of the barbed wire, then nothing—nothing at all except something we knew must be the No Man's Land, but which, soon merged in shadow, did not even seem solid, seemed vaguely to undulate like the sea.

### Our Boys

**AND** then we kept meeting our soldiers, our boys. We would come upon them singly or in little groups, motionless and wrapped in shadow. It was thrilling and strange. They came from our own land, maybe we knew some of them, maybe here was the gay grocer boy of my small town, he who before the war fitted about all day atop his delivery Ford like a swallow catching bugs—but we could not find out. They stood immobile in the dark, and silent, helmeted, booted, and jerked, changed as though by enchantment, mysterious and grim and impenetrable, and so, as we passed by them, we whispered merely: "Good night, boys," and they murmured back huskily: "Good night, sir." Some stood watch by little piles of grenades—small objects that looked like toys, like pretty toys; others stood by a sheaf of rockets—at the slightest menacing movement from the enemy one of those rockets would go high up in the sky, and to the signal the artillery behind would instantly transform the fluid and vague No Man's Land into a hell of steel and fire; each and every one had his duty apportioned, and waited, vigilant and attentive.

We stopped quite a while at a gabionade, a small half-lunar redoubt giving toward the German trenches. We rose on the firing step, and stood half emerged, our waists even with the plane of the earth, protected only by the night, and tried to take in and absorb a larger view than that given in the interminable narrow galleries. The German trenches were before us; we could not see them at all, but their unseen presence, thus, in some way, was all the more impressive. Ahead we could see only the dim barbed-wire pickets, with their strange shapes, sometimes of crouching men, but to the right and the left, as far as the eye could command, white flares were rising and bursting, illumining the horizon long with their savage white light before they died, leaving behind them drooping white tears. The night was wonderfully silent. That is, what noise pierced it was of that quality and intermittence which gives silence its utmost power. The artillery exchange of the first part of the evening had ceased, and only at very long intervals, very far away, there sounded a dull booming, more like the pulse itself of the night than a detonation. Then upon a large slice of silence would come the chatter of a machine or rapid-fire gun. Tat-tat-tat, one would go, then stop abruptly, as though it said: "No, no, I'm mistaken; there's nothing there." But another would say: "By Jove, I don't know, it seems to me there is something there—tat-tat-tat-tat-tat-tat-tat-tat-TAT-tat." And a third: "Oh, my—I'm getting so nervous! I can't hold on any longer! I'm going to let

go—oh-oh, here goes!" and would fire off its whole belt.

We resumed our walk along the first-line trench, and after a time I noticed that we were passing, at regular intervals, little curtains hung seemingly against the wall of the parapet. I raised one of these—and it was not the earthen wall which was behind, but a space hollowed within it. My eyes immediately were attracted in this darkness by the light of a loophole, and then almost at the same time I became aware of a head close by, between me and the loophole, but a little to the left. I dropped the curtain; with the curtain up, that head probably showed in silhouette from the German trenches. The captain was at my elbow by this time. "Go on in if you want to," he said: "but close the curtain quickly."

So I went in, snapping the curtain shut behind me. The place was small and dark; boards were beneath my feet, not mud. The loophole irresistibly drew the eye; from the profound darkness of the place, through the loophole the sky, the horizon, were extraordinarily light, and a sort of dim phosphorescence was on No Man's Land, making it luminous yet vague for perhaps a hundred yards—when it lost itself finally in a fantastic fluidity of black and opalescence. Within, to my right, I could just make out a recumbent figure upon a bench—a young soldier, asleep, and to my left was the man whose head I had first seen. He sat on something I could not discern—a high bench or high stool—and before him was a steel thing which in the obscurity seemed half great quadrant and half gun—a rapid-firer, no doubt. He was a slim lad; he sat very erect and watchful, motionless, his eyes peering fixedly through the loophole. We were very close; we almost touched. I said softly: "Hello," and he, without turning his head, said softly: "Hello." I whispered: "What are you doing?" and he, his eyes never leaving the loophole, whispered back: "From here I have a fine sight across there." Then, as some slight movement brought me nearer, I felt that he was trembling—trembling with eagerness and fine vigilance.

### "Go On Over There"

**I** KNEW now that I had come to the apex of my journey; through army corps, division, regiment, company, platoon, to this lone sentry, to this boy from the States, forefront sentinel on guard over humanity's spiritual treasures, over Beauty and Kindness menaced by Ugliness and Insane Cruelty. The great German offensive was just at its eve. This boy, although he did not know it, had said to some soldier of France: "Go on over there, feel free to go; go there where the threat is greatest. I am still young and untried; before you I am humble; but soon I will be able to be wherever you are, to feel your ribs against mine in the bells to which you are accustomed. Meanwhile go and feel free and easy; I will take your place. And be sure that over this place no one shall pass." That is what that boy had said. Only he did not know it, and so, when I asked: "What are you doing?" he answered simply: "From here I have a fine sight across there."

The captain clutched at me through the curtain. "Come on," he murmured; "you're being left behind."

This is the concluding part of Mr. Hopper's story of his visit to the American front. His next article will appear in an early issue.

## The Credit Side of Our War Ledger

Continued from page 11

knew before, and can benefit by that fact the whole of his life, but he will have ingrained into him the proper habits for applying his knowledge.

The new regulations permit men with such types of defect as enlarged tonsils, adenoids, nasal growths, chronic appendicitis, hernia, hemorrhoids, etc., to be called when circumstances warrant. These will be cared for in the army, when they are called, and corrective measures applied. Those whom we are unable to qualify for full service may be eligible for a limited service, provided we decide to adopt the English system of utilizing slightly defective physical material in this way.

From pneumonia and meningitis we have lost a number of men in excess of

those who would have died anyway in civil life. Reckoning from the census figures of 1916 for males of military age and upon a nominal-sized army, we have 3,014 cases of pneumonia and 729 cases of meningitis to place on the debit side of our war ledger. All communicable diseases of this sort are more difficult to control in the army than in civil life, because of the concentration of large numbers of individuals. A good many of the pneumonia cases developed from a weakened condition left by measles, which is highly contagious.

One of the very tangible gains which will accrue from the war is a raised standard of medical knowledge. Army medical schools furnish courses that may be likened to postgraduate work

The bringing together in camp of large numbers of men, and the variety of disabilities which are attendant upon war, offer an opportunity for medical experience which no other situation can give. The public will reap the benefit of higher standards of medical and surgical skill, and of the new facts which constant researches are uncovering. New vaccines are being developed for diseases not yet under control, new measures applicable to serious surgical cases are being discovered, and obscure pathological problems are being analyzed and solved.

Some 800,000 men have been examined and excluded from military service because of physical unfitness. Doubtless many of them will seek treatment for the defects uncovered.

The stupendousness of the task of properly safeguarding the health of our soldiers may be realized in some degree when I mention that a base hospital alone, which represents but a small fraction of the total camp construction, covers about seventy acres of ground, contains some thirty-odd wards, all so situated as to have direct access to sun and fresh air, each with a screened or glassed veranda, and all connected by corridors that cover about two and one-half miles of ground. The heating plant for a hospital of this sort is among the largest in the world. Before the war we had a hospital at every post, with from twelve to 100

beds in each, and in addition four general hospitals with from 120 to 500 beds each. We now have sixty-three hospitals in this country alone, thirty-two of which already have more than 1,000 beds, with preparations going on for doubling the capacity in nineteen of them.

Each of these hospitals has a full modern equipment, equal to the best in the world. We have one trained graduate nurse for every ten beds, at the present time, whether the beds are occupied or not, and whether the occupants are acutely ill or convalescing. This is full war strength, and makes it possible for each patient to have every luxury of attention. The chiefs of surgical, medical, and laboratory departments are men of the highest attainments. Assistants to the chiefs of service are not internes, but are also men of wide experience who had already passed through their preliminary hospital training before they entered the army. We have put in the special branches, such as eye, ear, nose, and throat, the same caliber of medical men. At one camp we have a famous specialist who is said to have left a practice netting him fifteen to twenty times his pay from the Government. We have a number of surgeons, both in this country and in France, now serving as majors at salaries of \$3,000 a year, who are said to have left practices of from \$100,000 to \$150,000 a year.

## The Leprechaun of Tin Can Alley

Continued from page 17

your family?" Molly asked with cheeks aflame while she balanced elbows on the rickety fence and sniffed the air for a whiff of the thorn.

"Hmmm—yes," agreed Willum. "The first William Van Decker built it, but it passed out of the family in my grandfather's time, along with all the mortgageable property. Since then it's been rented, sold, used as a road house, a temporary orphan asylum, and I don't know what else."

"Wouldn't it—oh, wouldn't it be grand to bring it back into the family for Willum Junior and—the others?" and Molly's hands closed over Willum Senior's like a vise. "Let's do it! Let's buy it now, right off, instead of renting a plain stone house that a body can't tell from its neighbors."

For a moment Willum stared at her aghast. Never before had Molly's flights of fancy achieved quite such proportions, and the unexpectedness of this almost staggered him. "Buy it?" he managed to stammer out at last. "We've got a balance of just eighty-two dollars in the bank. You can't buy even decrepit real estate as near the city as this for eighty-two dollars, you know."

"Faith, I know that much. But we'll buy with a loan. We can, lad; think of our prospects! We'll live on the old salary and save all the rest, and my poetry money. And there's the play! 'Twill be no time at all before Willum Junior will be grown enough so I can work again, and the first thing will be the play. I can do it, lad; I know I can."

Molly's face radiated insured dreams and happiness; and when she looked that way, her eyes flashing appeal into Willum's, he was as powerless to be conservative and practical and pessimistic as if he had never heard of the house of Van Decker. Moreover, he loved the memory of the old mansion—the traditions he had been reared on ever since he had stepped from his cradle. It would be a wonderful thing to bring up his son in the home of the first Willum. So it took but a slight pressure of Molly's hand to pull him round through the unhinged gate, up a weathered strip of turf that might once have been a driveway and to the house itself. The door was locked, but a little manipulation gave them free entrance through a window; and hand in hand they circumnavigated the house—once, twice, three times. Molly saw it all with the eyes of the dreamer; Willum saw it all with Molly's eyes. When they came down the tottering stairs for the last time it was settled. Willum, who was an artist with the hammer and saw, felt equipped on the spot to do miracles; to Molly's resources were to be left the gentler arts of coaxing mural decorations out of small paint cans, and curtains from bargain counters. Indoors should be their winter work—the garden for spring and fall; and with their dream full-fledged and ready to take wings, they sought out the real-estate agent.

They were right in their supposition that the place could be had relatively

cheap, and on a mortgage basis. It was plain that the owner, who figured only in the third person and nameless, was anxious to get rid of the property and the accruing taxes, and the agent agreed to the first terms Willum offered. The papers were drawn up by dusk of that very day; and Molly danced back through Tin Can Alley to Willum Junior, crying ecstatically: "It's ours, laddy, all for a bit of paper and a promise. But we're going to work for it—work and sing for it. You'll see."

WELL, they worked—oh, yes, they worked! And at first they sang—Molly in particular. But as the months went by and the work became more burdensome the songs became fewer. Willum was weighed down by the responsibility he felt toward his assistant professorship, and the memory of the annual taxes and the semiannual interest on their mortgage. Molly was literally swathed and bound with domestic intricacies. She cleaned and washed and baked and brewed; she painted and papered, stitched and made over. She held up her social end as Willum's wife simply, but as efficiently as if she had not had all the other things to do first; and she gave herself unstintingly to Willum and Willum Junior. Besides all this she found time for what she called "doing the decent human thing." This meant gathering in such of Willum's students as were working their way through the university, and giving them an evening of home life and good fellowship; or tending some young instructor's baby along with her own so that he might take his wife on a long-hungry-for-holiday; or helping to initiate some of the new brides into the mysteries of adapting a diminutive pedagogical income to the needs and desires of metropolitan life. And when their nearest neighbor, the little old Irishman who lived alone in the once-upon-a-time lodge, came down with typhoid, and she found he had an abnormal horror of being taken to a hospital, somehow she managed to nurse him along with all the other things—sending Willum down at night to sleep on a portable cot by the old man's bed.

Willum fought hard against this, not for his sake but for hers; he was beginning to see for himself that for some reason Molly's cheeks were no longer as pink as Killarney roses, nor did her eyes dance like Killarney lakes. "It's all nonsense, this wearing yourself out for a sour-dispositioned, hard old miser who hasn't a kind word for anyone and happens to be almost a stranger. He's probably got plenty of money to hire a nurse if he needs one."

But Molly shook an obstinate head. "I don't believe it. Half the world thinks the other half is hoarding. What's more, he's a neighbor, and that's no stranger; and his disposition is only tart tart like a gooseberry picked over green." Two coaxing arms found their way about Willum's shoulders. "Can't you see—the poor old soul is lonesome and fearsome; and maybe if

## JOHNS-MANVILLE FIRE EXTINGUISHER

**Speed in production  
increases fire hazard—  
and the need of this fire protection**

**T**HE very pressure of war on industry increases fire risk. The very speed with which factories are enlarged for urgent and increased output opens up many chances for the accidental-incidental blaze—the germ of fire tragedy. The temporary electric wiring, the speeded up machine, the unsparing use of lubricants, the recently recruited and green workman—all combine and conspire to increase industrial fire risk.

And back of all this is the big truth that a fire in an American plant today delays the big decision on which the world is deadlocked.

By all means install fire extinguisher protection and in the choosing by all means specify John's-Manville—the speediest, easiest and surest to use—the deadliest to fire because it can be discharged in two ways—a steady, fire-drenching stream, propelled by pressure stored up or pumped by hand, if there is time or elbow room.

Approved by the Underwriters' Laboratories. Entitles motorists to 15% reduction in automobile fire insurance cost.

To the Trade: Ask for our liberal jobber-dealer sales plan.

somebody shows him a bit of kindness he'll find the way to it himself."

In spite of the arms Willum still grumbled. "If we nurse every sick person in the neighborhood and you tend all the babies when their parents want a good time, we'll never get on. We've stuck fast where we started—neither of us has made a foot of headway any direction."

"Sure and we have. We've gone miles along the way of being happy and making a few other folks happy. Just be patient, lad; the rest will come with working and—doing our best."

So they worked harder than ever. By getting up very early and going to bed very late Molly had managed the first year to lessen their debt by a clear two hundred. The next year there was only half as much; and the third year—which brought Mary the Second to the Van Decker Mansion—netted only a Christmas poem and a cradle song. The fourth and fifth years brought nothing at all.

As winter melted into spring mud and tired nerves, Molly began to realize the truth of Willum's assertion; he was right—they were not getting on. The worst of it was their wind was breaking. The work they had dispatched in the old days with zest and pleasure they drudged at now with the nagging consciousness of the probable years they would have to continue at it; the obstacles they had faced squarely with a laughing challenge to failure they were beginning to meet with a wavering courage.

**S**o it came about on a fine spring day when the thorn bush in the front lawn was heavy with bloom that Molly, after tucking in Mary the Second for her morning nap and incensing Willum Junior in overalls for a wrangle in his garden patch, deliberately turned her back on the unfinished housework and came forth into the morning, hatless, almost heartless, to take tally of those five years.

For the first time in her life she felt old and indescribably tired. It is a customary toll of sleep-broken nights and overcrowded days. The inward joy of being alive—at being just Molly, the wife of Willum and the mother of Willum's children—was curiously missing. When it had gone, and where, she could not have told. With the joy had gone much of the belief in the mystical infallibility of youth and courage, in the unquestioned conquering powers of Willum and herself. And with all these gone she knew time might as well ring the passing bell for her poetry and her fancies.

Would the day ever come—had it already come—when she could believe in nothing but the grim realities of a pinched, humdrum, unleavened existence? Would her tongue forget its trick of coloring everyday happenings and discouragements with the make-believe of old Celtic lore, thereby reading into their efforts, that had practically gone for naught, the magical ending of fairy gifts to the two adventurers? Not that Molly expected something for nothing—she knew the world too well for that—but she had been born with the soul of her race that needs must turn the light of fancy upon the hardships of life and so keep it glowing and translucent instead of impassably leaden. It had seemed to her a hundred times in the past as if she could have looked through and seen the wonderful thing that was going to happen to them some grand day. How did they know but that one of the poems Molly had written might turn into a prize winner and open the road for the much-dreamed-of play? What more likely than that Willum's last course of lectures might earn for him his coveted full professorship? It had been a rare game, this picturing of opportunity sitting at their very elbows like the Irish leprechaun, invisible but for that one fleeting moment when he must be caught and firmly held if he is to give up the hidden crock of gold.

"When we're after catching the leprechaun," had been a chimney-corner phrase among them for that time when they should be able to do some of the things they had never had time or money to bring to pass. Even Willum Junior had fared forth on certain climactic occasions to see if he could not speed ahead the appointed moment by discovering the fairy man for himself.

**A**S Molly crossed the lawn to the thorn bush—the leprechaun's own bush—she realized how that particular bit of Celtic fancy had dwindled away and in its place was only a dull

ache of the hopelessness of it all. Their debt was hardly diminished—a bare five hundred less. They were growing old, stupid, uninspired before their children had come into their power of perception and understanding. At the gracious, beautiful, bountiful side of life was being crowded to the wall to make room for the necessities. Willum longed for books, for travel, for ways of improving mind and ability; she longed for time to do more with her children than feed, clothe, and keep them clean, and for a little over and above leisure to write and invite her soul. She thought she knew what the matter was—and the knowing did not supply a remedy. They had contracted to do more than two human beings could do: to bear and raise children, minister to them, fill a responsible position, shoulder a considerable debt, reclaim a crumbling old house and get on in the world. If only she had not dreamed beyond all human power; if only she had not pulled Willum and the children into the dream with her and made them suffer!

"If I could only be twins now!" She dropped on the ground under the thorn bush and addressed the lawn at large. "If there was one of me to mend and bake and clean, 'twould leave the other time to make songs and keep fancy alive for the wee ones and Willum. Sure if I could be twins, just, everything would come right."

"Twins!" sputtered a voice behind her. With a tear balanced neatly on the end of her nose, Molly looked over her shoulder and saw the little old Irishman of the lodge leaning on his blackthorn stick and eying her with amazement. He was withered and bent and looked every whit as sour and miserly as Willum had claimed him to be. "Twins!" he repeated acridly. "How in the name of the seven saints could ye be twins?"

"I couldn't," agreed Molly somewhat chokingly, "but I'm wishing I could."

"God forbid! Sure, what would your husband be after doin'?" Hasn't a man the full of his patience with one woman hanging to his neck; would ye kill him entirely with two o' ye?" The little man's voice rasped shrilly as he shook his stick at her.

**B**UT Molly only smiled. She liked the little man for all his tartness, and ever since she had saved him from the hospital he had shown a marked liking for Molly. His manner of showing it was as characteristic of him as his blackthorn stick and his piercing tongue. It was on her he perpetually showered all the wealth of his caustic humor; he gloated over every chance she gave him to tease or hector her. When she paid him back in kind he would cackle forth his dry little laugh and beat the ground with his stick; when no retort followed he would snarl out the remark that she wasn't fit to be Irish, turn on his heel, and quit her company. But he could not stay long away. Unconsciously she had touched some hidden spring of feeling in his shrunken, loveless nature; and he reached out as involuntarily toward her as a plant toward the sunlight. And his eyes showed this. His tongue might keep its sharpness, but his eyes had grown softer and more kindly ever since that day when she had first crossed his threshold with a thermometer in one hand and a bowl of broth in the other.

"If there were two of me," continued Molly, "we'd have each other to hang to and let him go free. Don't you see the sense of it yourself, Mr. Hegarty? Now half his spare time he's doing a woman's work to help me out and give me more time to rest or write; but the time never comes. Sure, the both of us are beginning to feel like a parcel of mules with hay tied to our forelocks—we see it within reach of our noses, but we never get it into our mouths."

The amazement on John Hegarty's face turned to suspicion. "What ails ye? There, ye needn't be tellin'—'tis easy guessed. Ye've pestered the good man near to death an' it's on your conscience or ye've taken to sulkin' for the why he wouldn't be buyin' ye one o' them newfangled hats. The more a woman has the more she wants."

"And the more a man wants her," laughed Molly.

"Ye might laugh again," suggested the Irishman. "Sure, sulks on the face of an Irish lass is worse nor blight on a rosebush." He looked down at her closely, the mouth drawn into a sardonic grin, but the eyes filled with trouble. He had never seen Molly like this before, and he couldn't make head or tail of it. Suddenly he tilted his old

silk hat back on his head and dug viciously at the thorn roots with his stick. "I'll give ye a bit of advice—if ye'll promise not to take it. Don't let worry bark at your heels; 'twill keep ye fretted and fetch ye nowhere."

With that he was gone, as unexpectedly as he had appeared.

But worry did bark at her heels. It barked so hard and so continuously through the rest of the day that at day's end she could summon only the ghost of a smile as a greeting for Willum. And she might have spared herself the effort, for Willum never noticed. He brushed by her, entirely forgetful of the kiss that Molly had tiptoed for regularly every day in the five years. Straight past her he went, as if she had been nothing more than the umbrella stand in the hall; and throwing his books on the living-room table he sank down in the nearest chair. A hot flush mounted to Molly's cheeks. She stood angry, ready to fling him a bitter word and then leave him. Was this to be the end of it all—was their love going to fail them along with all the other things?

ANGER was swept away by a grim resolve. Molly clenched her fists, and the flush died out of her cheeks. "We can go hungry, we can go near naked, we can do without shelter or warmth, but we'll keep our love whatever happens!" And slipping into the room after him she crouched down beside his chair and laid her cheek against his hand. "What is it, lad?"

"Harvey's been put at the head of the department."

"Put in the chief's place?" There was awe in Molly's voice.

"Yes. It's decided, the chief's retiring, and Harvey's got the appointment."

"Never mind, lad."

"Never mind? Never mind! Can't you see what it means? Good heavens! don't you see it makes me out a plain failure? They might as well publish it in the 'University Chronicle' or post it officially. It's as plain as the date on the calendar. Harvey at the head of the department—Harvey, who got his instructorship when I got my advance! Oh, I'm not blaming them—Harvey deserves it. He's clever and a worker. He spends his summers studying and traveling—I spend mine trying to raise enough in our garden to bring down the cost of living!"

All the pent-up bitterness and discouragement of months was poured forth in this one outburst. It was the first complaint Molly had ever heard from his lips. Her cheek was very white now. Under all the agony of the morning she had held to one abiding hope; that Willum might not see and feel their lives as she had. And now in one brief illuminating moment Willum had shown depths of despair that she had never fathomed. She gripped fast to what little courage she had left and she spoke the love that was spear and shield to her.

"And I still say, never mind, lad. Bliss Harvey is a single man. He's been able to spend all his time, all his money on himself and getting on; while you've had yours to divide among four of us. It's small wonder that the trustees might be choosing him for the better head of the department, but that doesn't be making him the better man or you a failure."

But Willum was deaf to her meaning. "I am a failure—you're a failure. When we married we had every chance two young people would wish for, and we've wasted them—or been blind to them. Why, the chief told me years ago that he hoped to see me in the chair after him some day; and editor after editor spoke of you as the coming poet. And see where we are. Harvey's got the appointment, and you've written one cradle song in three years!"

THERE was unmeant mockery and stinging in Willum's words. Molly had to wait an interminable space before she could trust herself to answer. And then, as she had called forth her flagging courage before, she groped now for what faith and fancy she had left. "I know, lad. I know. But I warrant you the chief still thinks the most of you; and when all's said and done you've put more into your life than Harvey. He's just built for himself a grand intelligence and crammed it with knowledge; you've made yourself into a man your students adore, your wife can worship, and your children put next to God Himself. As for me, I'd rather be having the children and one song than

the years full of songs and empty of children. That's the plain truth for us both; and who knows?" Molly's lips curved bravely to a smile—"who can be telling but the leprechaun has something better hidden for us than a peering English chair!"

That night, with the children in bed and Willum fitfully dozing away a nervous headache, Molly rolled up the sleeves of her old dimity dress and attacked the supper dishes in the big old-fashioned kitchen. If her heart had been heavy in the morning, it was twice as heavy now. Then there had only been her discouragement and burden of work and failure; now there was Willum's coupled to it, and Molly knew how his bitterness would grow.

"If we could only get a bit ahead—enough to catch our wind again. Then Willum might go traveling, studying at Oxford and getting his hands on those books he's hungering after; and I could be getting time to earn something instead of trying to save what never gets saved. Just a fair push from behind and I'll wager we'd go puffing straight up the hill and land Willum in the president's chair. If I was only twins—" Molly drew dripping hands out of the rinsing water and buried her face in the glass towel.

SO it happened that she never saw the knob of the kitchen door turn, nor heard the tap of the blackthorn stick on the floor. She never guessed she was not alone in her kitchen until the rasping voice of the little Irishman broke out at her elbow. "Is it still weeping that ye're not twins that ye are?"

"It is," confessed Molly.

"An' ye've let worry bark at your heels—aye, an' nip them into the bargain?"

Molly nodded.

"Faith I'm ashamed to own ye for Irish." The little man looked as sour as a bushel of green gooseberries as he boasted himself to the top of the table with the aid of his stick. He sat there, swinging his legs and wagging his head. "Who ever heard tell of a glower-faced Irish lass writin' poetry! Aren't ye ashamed o' yourself?"

"But I can't be writing poetry—that's half the trouble. Don't you see, if I could get the time to write and the money to start with I could pay some one to come into the kitchen. Then there'd be more time and more money. It's the old bag of tricks: time makes time and money makes money; but it's hell, just, for those who have to start without either!"

The Irishman eyed her narrowly. "Well, what's the matter with your takin' time? Why don't ye pen up the childer, put the kettle on wi' enough corn beef an' cabbage to do ye for a week, and get down to work?"

Molly laughed outright. "That's a grand idea. Thank you, Mr. Hegarty." Then she sobered again. "But it isn't the time, just; there's the ideas and the fancies. Housework does something to your mind just as it's bound to redder your hands and tire your feet. All the storage space up there"—and she tapped her forehead—"goes to ideas of how I can make over Willum's worn-out shirts into rompers for Willum Junior and such like, and I'm comin' round to believe in nothing much but the butcher's bills and the mortgage. The fancies won't come."

"Coax 'em."

"But suppose they won't coax. Oh, I get them so far and then—" Molly shook her head hopelessly. "Months ago I sat up one night and wrote the bare beginning of something; but I've never had the wits to finish it. It went—" She folded her hands tightly and almost as if she had been alone she repeated softly:

*Out on the moors where the throbbles*

*ring,*  
*My feet brushed the green of a fairy*

*ring;*  
*My ears caught the tilt of a fairy pipe*

*And the fruit of the blackthorn hung*  
*full and ripe.*  
*And because of the ring and the fairy*

*time,*  
*And the wishing time at the full o'*

*the moon—*

"That's all," said Molly. The little old man glowered at her. "What kind of an ending is that? There's a grand chance to put a fancy in—a pretty Irish fancy that will make them that has known Ireland wishful to be tramping her moorland again, an' them that has not to be keenin' for what they'll never be knowin'."

## Just the jacket you will want for vacation time

NO garment was ever fashioned for men that fitted into vacation days as well as the Tom Wye. When motoring or camping, on the river, or at a week-end at the sea shore, or in the mountains, wherever you encounter changeable weather or cool evenings, take your Tom Wye along to keep you snug and comfortable.

With a Tom Wye you are not only warm, but well dressed wherever you go.

The special Tom Wye stitch gives the fabric its close firm texture.

### Tailored for those who dress well

Each Tom Wye is carefully hand tailored. It is cut to fit the form; not knitted loosely, making it bulky and cumbersome. The shoulder seam stays in its proper place; the buttonholes will not stretch and there is no bulging under the arms. Four smart military pockets add to the tailored appearance.

The Tom Wye is made from pure double-combed Australian worsted wool; the only wool that will stand hard wear and hold its elasticity. It keeps you warm, sheds fog and dampness.

The Tom Wye is made in 10 colors. Sizes 34 to 46. Price \$12.50 with sleeves, \$11.00 without sleeves.

### The service jacket for Army and Navy men

The service jacket is made particularly for Army and Navy men. This has a collar neck that ends at the collar button and so will not interfere with the fit of the blouse.

Stop in today at your haberdashers or department store and look at a Tom Wye. You will get more year-round service from it than from any other garment you wear.

### The "Why" of the Hood Extra "Ply"

When you purchase a tire, why not use your business judgment and get under appearances to tire facts?

Go to a Hood Dealer. Ask him to show you the 5" section construction of a Hood Arrow Tread Tire. Count the plies of fabric. Compare with any "standard" 5½" tire. Get proofs why the Hood delivers more miles for least cost. We leave the answer to you.

The much talked of Hood outdoor signs upon the roads lead to the sign of a Hood Dealer near you. If you cannot find him look on the page of the 1918 Blue Book opposite the contents index and you will learn where to be told of the "why" of that extra "ply."

Hood Tire Co., Inc. - Watertown, Mass.

"I know," said Molly, "but I can't, just. Ochone, if I could have kept them just—the fancies and the poetry. That was about all the good there was to me—all that made me fit to be loved by Willum and blessed with the children. And they need the fancies—Willum to keep heart in him and temper his great seriousness, and the children to thrive on. Sure, what way is it to bring up children—to believe in nothing but what ye can see on the surface of the earth and the outside of people's hearts and minds!"

"What way at all!" echoed the little Irishman. He slid down from the table as abruptly as he had mounted it and came close to Molly. His face was strangely twisted with some painful emotion while his eyes blinked appealingly at her. "Faith, maybe the fancies aren't gone. Think hard, lass; maybe ye could be thinkin' one back an' writin' it straight into the poetry. 'Twould be there, safe then, for the childer to keep. Don't ye see, lass?" He pulled her sleeve insistently. "What is an Irish heart without a fancy but a flower without perfume? Think hard!"

Molly never witnessed such earnestness on his part before; she had never dreamed it was in him. The little man was actually shaking with his feelings while his lips quivered piteously. For the life of her she could not see what it mattered to him whether she kept her fancies or not; but plainly it did matter, and for this reason she found herself thinking hard.

"Could ye put in the leprechaun now?" he questioned timorously.

"Sure and I could try," agreed Molly. "The O'Gormans were always looking for the leprechaun; and my great-uncle Timothy had his hands on him once. He caught him one night on his way home from a fair, and held him fast while he made the wee man tell him where was the crock o' gold. The wee man pointed out the thorn bush where he had it hidden, but that wasn't enough for Great-uncle Timothy. 'I must be going home to fetch a pick for diggin'; how will I know the bush when I come back?' says he. 'Fasten your green neckerchief to it,' says the wee man. So Timothy did, going home with a brave heart, but when he returned to dig for his gold every thorn bush on the countryside was fastened with a green neckerchief. But that's not the ending I'd be fancying for us. If I write in the leprechaun I must write him in with the crock found."

"And why not?" The little man peered anxiously into Molly's face.

"It takes more than wishing to catch the leprechaun," sighed Molly.

THE little man cackled dryly. "I've heard tell o' fools that hadn't sense enough to know when they had him caught. Ye wouldn't be that kind of a fool, would ye?"

"Would I?" asked Molly.

"There's no tellin' women." He glowered at her again in his odd fashion. All the feeling of the moment before had vanished. "There'd be no harm, though, in diggin' under a thorn bush to see—especially if there was only the one thorn bush."

"That's true," agreed Molly. "But to make sure, he might take the advice he gave Great-uncle Timothy and fasten a green neckerchief to it."

"He might, if he had one," conceded the Irishman. With a swiftness unusual in him he made for the door; but he turned again to Molly on the threshold. "I'll be givin' ye another bit of advice—'twon't harm ye any if ye leave it alone. If ye do catch the leprechaun, keep it to yourselves. Sure, the news of a leprechaun in Tin Can Alley might make it too popular and crowd the likes of us out."

"All right," agreed Molly. "I'll just tell you. And we'll celebrate with a baking of Irish griddle bread and jam."

THE next morning Willum woke with a dull head and dressed in silence; Molly woke with a dull heart and dressed herself and Willum Junior with equal silence. She might play at fancies to humor the whim of a lonely old Irishman; but she had not clung to enough for the making of even a dream, nor had they sent forth a single shaft of color into the morning for her.

Willum Junior, being finished first, turned his attention to the open window. So it fell to his lot to announce the news.

"Mother, there's a long green string hanging to the thorn bush, and it wasn't there yesterday."

Molly flew to the window, looked,

rubbed her eyes and looked again. There it was—a long green streamer the kind they use abundantly in St. Patrick's Day parades. With a little hysterical laugh she buttoned her morning dress, picked up Willum Junior, and swung him pickaback; then she called to Willum to hurry and almost tumbled down the stairs.

The earth looked fresh packed in one place about the roots, and here Molly made Willum Junior dig with his little spade. First came loose dirt, then the shiny cover of a brown crock, then the crock itself. With suspended breath Molly drew it forth and lifted the cover.

Let me say right here that the climax was distinctly disappointing. No shining gold met the eager eyes that looked expectant; in fact the crock was conspicuous for its emptiness. Only at the bottom lay a small folded paper. Molly drew it out with trembling fingers and unfolded it.

"Why," said Willum, "that's our mortgage. There's your signature and my signature—and—and—it's canceled!"

"Why," said Willum Junior, "it couldn't have been the leprechaun after all. That's nothing but the brown crock that sits on Mr. Hegarty's kitchen shelf. He keeps buttons in it."

"Can you make anything out of it?" asked Willum, frowning and smiling by turns. He was frowning at the mystery that baffled his practical mind; he was smiling at Molly's eyes—they were dancing themselves straight into Killarney lakes again.

"The meanin's as simple as the sky over your head, and spring under your feet—things nobody quite understands for all they may say. It means, lad dear, that we caught the leprechaun years ago when we hadn't an inkling he was within miles of us; and it means more than that. Some day you'll be having something better than the chair of English in the university. I was always thinking you had the makings of a fine college president."

THE withered and tart little Irishman came to supper that night and Molly baked the promised griddle bread. This time she took his advice and made no mention of the leprechaun all through the evening. But as he was reaching for his blackthorn stick, preparatory to departure, she put forth an impulsive hand and drew him back from the door.

"Wait a bit, Mr. Hegarty. Maybe you would like to be hearing the end of the poetry—the poetry that has hung on my tongue for months like a half-made cloak in a closet?"

"Thank ye, lass. If the ending is no worse than the beginning, faith, I might be standin' it."

Again Molly folded her hands tight and repeated the lines:

*Out on the moors where the throistles sing,  
My feet brushed the green of a fairy ring;  
My ears caught the lilt of a fairy pipe  
Where the fruit of the rowan hung full and ripe.*

*And because of the ring and the fairy tune,  
And the wishing time at the full o' the moon,  
Out of the bog mist's choking gray  
A wee man-fairy found his way.*

*He was there—he was gone—in the space of a laugh;  
But he cleared the dank bog mist in half,  
Rolled it beyond—where the throistles sing  
And hid his gold in my wishing ring.*

*Sure, gold may be precious and gold may be grand;  
But a far richer gift filled the small gnarled hand:  
The wish of a brave heart to put heart in me—  
And I found that too, by the Leprechaun's tree.*

The little old Irishman cackled dryly as he thumped the floor triumphantly with his stick. "What was I tellin' ye? Didn't I know ye could coax them back! Troth, fancies be harder to lose nor a bad shillin'. Give them a chance an' they're bound to come thrailin' ye."

Molly smiled and slipped a hand into Willum's. And Willum looked down at her as a man who was realizing for the first time in his life what the conquering power of a woman's courage meant. Then he swung her high in his arms, in the old, old way. And it all happened in the borough of a great metropolis—just as I am telling you.

## You Can Carry this Camera with You Always

as you do your watch and you will find it just as useful. It is so light and compact that its presence will hardly be noticed, yet it is always ready to snap the unexpected picture.

The Ansco V-P No. 0 is a real camera, making pictures 1½ x 2½ inches in size. Its operation is simple and easy to understand. The front springs out ready for action when you press the buttons—it is the only self-opening camera made.

Focusing, to insure clear, sharp pictures, is made so easy for you that you never need sacrifice any advantages which the high grade lenses afford—and an anastigmat lens that cannot be focused is no better than a cheap lens.

**ANSCO**  
CAMERAS & SPEEDEX FILM

To get sharp, clear pictures, always use Ansco Cameras, Ansco Speedex Film and Gyko Paper.

In finish and workmanship the Ansco V-P No. 0 is a beauty. Its made in three models priced from \$8 to \$25.00 according to equipment. Other Ansco cameras, \$2.25 up. Send for catalog.

ANSCO COMPANY

## America Needs This Boy

What are you doing to help the men and women of tomorrow? There are thousands like this boy. Their energy must be rightly directed and nothing takes the place of healthy exercises in play. We are authorities on apparatus for city playgrounds, for the home, school, kindergarten, etc. Our Free Book illustrates and describes our wide line. All apparatus is scientifically built, simple, strong and sturdy. Address: **HILL-STANDARD CO.** 42 Van Ness Avenue, Anderson, Indiana.

Note the interesting Harvard Classics advertisement on another page of this issue of Collier's. The booklet is worth sending for.

of the nearest trench-abri; how he could use the trunks of the felled trees to strengthen his hastily constructed brick walls, and for roof beams; what they could plant in the garden and the field—things which she and the children could cultivate after he had gone back.

At the reminder of the inevitable farewell again before them, the wife broke out in loud wailings, shivering, clutching at him wildly. He drew her down on a pile of rubbish, put his arms around her, and said in a peremptory tone: "Paulette! Listen! You are letting the boches beat you!" He used to her the tone he used for his squad, his new soldier's voice which the war had taught him, the tone which carried the laggards over the top. At the steel-like ring of it his wife was silent.

He went on: "There's nothing any of us can do but to go on. The only thing to do is to go on without making a fuss. That's the motto in the army, you know. Don't make a fuss." He lifted his head and looked around at his home dismantled, annihilated. "Not to give up—that and the flatirons are about all the boches have left us, don't you see?"

He was silent a moment and went on with his constructive planning. "Perhaps I can get enough lime sent on from Noyon to really rebuild the chimney. With that and a roof and the garden and the allocation from the Government—"

"Yes, Pierre," said his wife in a trembling voice. She did not weep again.

He himself, however, was not always at this pitch of stoicism. There were times when he looked up suddenly, and felt, as though for the first time, the downfall and destruction of all that had been his life. At such moments the wind of madness blew near him. The night after they had moved from the cellar into the half-roofed, half-walled hut, to sleep there on the makeshift beds, he lay all night awake, crushed with the immensity of the effort they would need to put forth and with the insignificance of any progress made. There came before him the long catalogue of what they had lost, the little decencies and comforts they had earned and paid for and owned. He sickened at the squalid expedients of their present life. They were living like savages; never again would they attain the self-respecting order which had been ravished from them, which the ravishers still enjoyed. With all his conscious self he longed to give up the struggle, but something more than his conscious self was at work. The tree had been cut down, but something was in the ground, alive.

At dawn he found himself getting out of bed, purposefully. To his wife's question he answered: "I'm going to Noyon to buy the seed for the field. We haven't half enough corn. And I can get young cabbage plants there too, they say. I can make it in six hours if I hurry."

He was back by ten o'clock, exhausted, but aroused from his waking nightmare—for that time! But it came again and again.

ON the day he began to spade up the field he noticed that two of his murdered fruit trees, attached by a rag of bark to the stumps, were breaking out into leaf. The sight turned him sick with sorrow, as though one of his children had smiled at him from her death-bed. He bent over the tree, his eyes burning, and saw that all the buds were opening trustfully. His heart was suffocating. He said to himself: "They have been killed! They are dead! But they do not know they are dead, and they try to go on living. Are we like that?"

In an instant all his efforts to reanimate his assassinated life seemed pitiful, childish, doomed to failure. He looked across the field at the shapeless, roughly laid brick wall he had begun, and felt a shamed rage. He was half-minded to rush and kick it down.

"Papa, come! The peonies have begun to come up in the night. The whole row of them, where we were raking yesterday."

The man found his wife already there, bending over the sturdy, reddish, rounded sprouts pushing strongly through the loosened earth. She looked up at him with shining eyes. When they were betrothed lovers they had together planted those peonies, pieces of old roots from her mother's garden. "You see," she said again, "I told you what was in the ground, alive, they could not kill!"

The man went back to his spading.

THE author, Nathaniel Hawthorne, believed that there was a "darkness" in the human soul, a "darkness" that was "the very heart of the matter." The story of the "Pierres" and "Berthe" is a story of the "darkness" in the human soul, and the "darkness" in the human soul is a "darkness" that is "the very heart of the matter." The story of the "Pierres" and "Berthe" is a story of the "darkness" in the human soul, and the "darkness" in the human soul is a "darkness" that is "the very heart of the matter."

## THE HARVARD CLASSICS DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

"It is," says Dr. Eliot of Harvard, "precisely this encounter with the mental states of other generations which enlarges the outlook and sympathies of the cultivated man and persuades him of the upward tendency of the human race."

But, of more definite significance to us individually, is the fact that an acquaintance with the great writings of the past means a broader outlook on life and a more com-

plete command of the natural abilities with which we must make our way. The outcome of a lifelong belief that the few great books essential to a liberal education could be gathered within a five-foot shelf, The Harvard Classics have come to be regarded as a national literary institution, and as the crowning achievement of Dr. Eliot's career. We invite you to read the booklet that contains Dr. Eliot's own statement.

A copy of this book—free to every reader of Collier's

A really delightful little book. Not a mere catalogue of titles and authors, but a literary guide no book lover can afford to neglect. Thirty-two pages—some of the headings:—  
—What Are The Harvard Classics?  
—Fifteen Minutes a Day with Dr. Eliot  
—How to Read  
—Dr. Eliot's Aim  
—The World's Civilization on a Bookshelf  
—The Pleasure of Good Reading

silently, and, as he labored there, a breath of sovereign healing came up to him from that soil which was his. The burning in his eyes, the taste of gall in his mouth, he had forgotten them when, two hours later, he called across to his wife that the ground for the beans was all spaded and that she and Jean-Pierre could come now with their rakes, while he went back to building the house wall.

But that quick scorching passage through fire was nothing compared with the hour which waited for him in his garden beside the wall on which the branches of his pleached trees and vines still spread out their carefully symmetrical patterns. He had put off caring for them till some odd moment. He and his wife, glancing at them from time to time, had made estimates of the amount of fruit they would yield. "And for us, this time—we haven't had a single peach or apple from them. The boche officers sent their soldiers to get them always."

"Queer they should have left those unharmed," said his wife once, and he had answered: "Perhaps the man they sent to kill them was a gardener like us. I know I couldn't cut down a fruit tree in full bearing, not if it were in hell and belonged to the Kaiser. Anybody who's ever grown things knows what it is!"

ONE gray day of spring rains and pearly mists the fire would not burn in the only half-constructed chimney. Paulette crouched beside it, blowing with all her might, and thinking of the big leathern bellows which had been carried away to Germany with all the rest. Jean-Pierre shaved off bits from a dry stick and Berthe fed them under the pot, but the flame would not brighten. Pierre, coming down, cold and hungry, from the top of the wall where he had been struggling with a section of roof, felt physically incapable of going on with that work until he had eaten, and decided to use the spare half hour for pruning the pleached trees and vines. Almost at the end of his strength after the long-continued straining effort to accomplish the utmost in every moment and every hour, he shivered from the cold of his wet garments as he stood for a moment, fumbling to reach the pruning shears. But he did not give himself the time to warm his hands at the fire, setting out directly again into the rain. He had been working at top speed ever since the breakfast, six hours before, of black coffee and dry bread.

Sudden with fatigue and a little light-headed from lack of food, he walked along the wall and picked out the grapevine as the least tiring to begin on. He knew it so well he could have pruned it in the dark. He had planted it the year before his marriage, when he had been building the house and beginning the garden. It had not been an especially fine specimen, but something about the situation and the soil had exactly suited it, and it had thriven miraculously. Every spring, with the first approach of warm weather, he had walked out in the evening after his day's work, along the wall to catch the first red bud springing amazingly to life out of the brown, woody stems which looked so dead. During the summers as he had sprayed the leaves, and manured the soil and watered the roots and lifted with an appraising hand the great purple clusters, heavier day by day, he had come to know every turn of every branch. In the trenches, during the long periods of silent inaction, when the men stared before them at sights from their past lives, sometimes Nidart had looked back at his wife and children, sometimes at his garden on an early morning in June, sometimes at his family about the dinner table in the evening, and sometimes at his great grapevine, breaking into bud in the spring, or, all luxuriant curving lines, rich with leafage, green and purple in the splendor of its September maturity.

It was another home-coming to approach it now, and his sunken, blood-shot eyes found rest and comfort in dwelling on its well-remembered articulations. He noticed that the days of sunshine, and now the soft spring rain, had started it into budding. He laid his hand on the rough, knotted, fibrous brown stem.

It stirred oddly, with a disquieting lightness in his hand. The sensation was almost as though one of his own bones turned gratingly on nothing. The sweat broke out on his forehead. He knelt down and took hold of the stem lower down. The weight of his

hand displaced it. It swung free. It had been severed from the root by a fine saw. The sap was oozing from the stump.

THE man knelt there in the rain, staring at this, as though he were paralyzed. He did not know what he was looking at, for a moment conscious of nothing but a cold sick nausea.

He got up heavily on his feet then and made his way to the next vine. Its stem gave way also, swinging loose with the horrible limpness of a broken limb. He went to the next, a peach tree, and to the next, a fine pleached pear. Everything, everything, peach trees, apple trees, grapevines, everything had been neatly and dexterously murdered, and their corpses left hanging on the wall as a practical joke.

The man who had been sent to do that had been a gardener indeed, and had known where to strike to reach the very heart of this other gardener who now, his hands over his face, staggered forward and leaned his body against the wall, against the dead vine which had been so harmless, so alive. He felt something like an inward bleeding, as though that neat, fine saw had severed an artery in his own body.

His wife stepped out in the rain and called him. He heard nothing but the fine, thin voice of a small saw, cutting its way to the heart of the living wood.

His wife, seeing him stand so still, his face against the wall, came out toward him with an anxious face. "Pierre, Pierre!" she said. She looked down, saw the severed vine stem and gave a cry of dismay. "Pierre, they haven't—they haven't!"

She ran along the wall, touching them one by one, all the well-known, carefully tended stems. Her anger, her sorrow, her disgust burst from her in a flood of outcries, of storming, furious words.

Her husband did not move. A death-like cold crept over him. He heard nothing but the venomous, fine voice of the saw, cutting one by one the tissues which had taken so long to grow, which had needed so much sun and rain and heat and cold, and twelve years out of a man's life. He was sick, sick of it all, mourning not for the lost trees, but for his lost idea of life. That was what people were like, could be like, what one man could do in cold blood to another—no heat of battle here, no delirium of excitement—cold, calculated intention! He would give up the effort to resist, to go on. The killing had been too thoroughly done.

His wife fell silent, frightened by his stillness. She forgot her own anger, her grief; she forgot the dead trees. They were as nothing. A strong, valiant tenderness came into her haggard face. She went up to him, close, stepping into his silent misery with the secure confidence only a wife can have for a husband.

"Come, Pierre," she said gently, putting her red, work-scarred hand in his. She drew him away from the wall, his arms hanging beside him. She drew him into the sheltered corner of the room he had half finished. She set hot food before him, and made him eat and drink.

THE rain poured down in a gray wall close before them. The heaped-up ruins were all around them. Inside the shelter the children ate greedily, heartily, talking, laughing, quarreling, playing. The fire, now thoroughly ablaze, flamed brightly beside them. The kettle steamed.

After a time the man's body began slowly to warm. He began to hear the children's voices, to see his wife dimly. The horror was an hour behind him. The blessed, blurring passage of the moments clouded thick between him and the sound of that neat small saw, the sight of that deft-handed man, coolly and smilingly murdering.

He looked at his wife attentively as she tried to set in order their little corner saved from chaos. She was putting back on the two shelves he had made her the wooden forks and spoons which she had cleaned to a scrupulous whiteness; she was arranging neatly the wretched outfit of tin cans, receptacles, and formless paper packages which replaced the shining completeness of her lost kitchen; she was smoothing out the blankets on their rough camp beds; she was washing the faces and hands of the children, of their own children and the little foster son, the child of the woman who had given up, who had let herself be beaten,

## How to Save From \$10 to \$25 When Your Radiator Leaks!

Do you know why the experienced car owner no longer sends a leaky radiator to the repair shop?

Because he has found that "X" Liquid repairs leaks more scientifically than by soldering—does a better job in about ten minutes and saves anywhere up to \$25 in repair bills.

Often other parts of the cooling system leak—the pump, gaskets, hose connections, etc. "X" Liquid makes every part watertight. "X" has even repaired a cracked cylinder wall so that it stands 2000 pounds explosive pressure!

It is poured into the radiator, combines with the water and circulates throughout the cooling system. "X" finds every leak, flows through and turns to a metallic-like solid right in the hole. This makes a life-time repair. Vibration can't loosen it.

In using "X" Liquid there is no need to drain the radiator. Simply pour it in—leave it there—and you'll never again be bothered with leaks.

### No More Rust or Scale—a Cooler, Smoother Engine

The same "X" Liquid which is used to repair leaks will prevent rust and scale from clogging up the narrow water passages. This improves cooling and saves oil.

Don't confuse "X" with chemicals, powders, or kerosene waste in liquid form. "X" cannot clog or harm the cooling system. It is guaranteed to make good or your money back.

"X" Liquid is the only scientific process for making cooling systems Leakproof—Rustproof—Scaleproof.

Large Size \$1.50

will do a \$25 repair job!

Ford Size 75c

will do a \$15 repair job!

If your dealer hasn't got it, send for "X" Liquid and as his name and price and we will ship direct.

"X" Laboratories  
642 Washington Street  
Boston, Mass.

who had let herself be killed, who had abandoned her baby to be cared for by another, braver woman.

A shamed courage began slowly to filter back into his drained and emptied heart. With an immense effort he got up from the tree stump which served for chair, and went toward his wife, who was kneeling before the little child she had saved. He would begin again.

"Paulette," he said heavily, "I believe that if we could get some grafting wax at once we might save those. Why couldn't we cover the stumps with wax to keep the roots from bleeding to death till the tops make real buds, and then graft them on to the stumps? It's too late to do it properly with dormant regions, but perhaps we might succeed. It would be quicker than starting all over again. The roots are there still."

He raged as he thought of this poor substitute for his splendid trees, but he set his teeth. "I could go to Noyon. They must have wax and resin there in the shops by this time, enough for those few stumps."

The little boy presented himself imploringly.

"Oh, let me go! I could do it, all right. And you could get on faster with the roof. There are only ten days left now."

He set off in the rain, a small, brave spot of energy in the midst of death. His father went back to his house-building.

The roads were mended now, the convoys of camions rumbled along day after day, raising clouds of dust; staff cars flashed by; once in a while a non-militarized automobile came through, sometimes with officials of the Government on inspection tours, who distributed miscellaneous lots of seeds, and once brought Paulette some lengths of cotton stuff for sheets; sometimes with reporters from the Paris newspapers; once with some American reporters who took photographs and gave some bars of chocolate to the children. Several times people stopped, foreigners, Americans, English, sometimes women in uniforms, who asked a great many questions and noted down the answers. Pierre wondered why those able-bodied young men were not in some army. He had thought all the able-bodied men in the world were in some army.

For the most part he found all these people rather futile and uninteresting, as he had always found city people, and paid little attention to them, never interrupting his work to talk to them—his work, his sacred work, for which there remained, only too well known, a small number of hours. He took to laboring at night whenever possible.

THE roof was all on the one tiny room before the date for his return. The chimney was rebuilt, the garden spaded, raked, and planted. But the field was not finished. It takes a long time to spade up a whole field. Pierre worked on it late at night, the moonlight permitting. When his wife came out to protest, he told her that it was no harder than to march all night, with knapsack and blanket roll and gun. She took up the rake and began to work beside him. Under their tan they were both very white and drawn, during these last days.

The day before the last came, and they worked all day in the field, never lifting their eyes from the soil. But their task was not finished when night came. Pierre had never been so exacting about the condition of the ground. It must be fine, fine, without a single clod left to impede the growth of a single precious seed. This was not work which, like spading, could be done at night in an uncertain light. When their eyes, straining through the thickening twilight, could no longer distinguish the earth, he gave it up, with a long breath, and, his rake on his shoulder, little Berthe's hand in his, he crossed the mended road to the uncanny little shelter which was home.

Paulette was kneeling over the fire. She looked up, and he saw that she had been crying. But she said nothing. Nor did he, going to lean his rake against the reconstructed wall. He relinquished the implement reluctantly, and all through the meal kept the feel of it in his hand.

THEY were awake when the first glimmer of gray dawn shone through the empty square which was their window. Pierre dressed hurriedly, and taking his rake went across the road to the field. Paulette blew alive the coals of last night's fire, and made coffee and carried it across to her husband.

## Through the Gateway to the West

ST. LOUIS, historic "Gateway to the West," as seen from the new "Frog" Bridge, East St. Louis on the right, and Eads bridge in the distance.

"As through the neck of a bottle millions on millions of tons of freight flow from the east across

the great bridges into the city where the radiating railroads distribute them to our mighty West.

"From West to East comes still another stream of traffic—stock, grain, ore—over the bridges, through the 'bottle-neck' the stream must go on its journey eastward."

## How Federals Help Solve the Terminal Problem

Even before the war, St. Louis was quick to adopt the motor truck as vital aid to her wonderfully developed terminal system. The towering bodies of powerful Federals soon found their place amid the roaring babel of the mammoth terminal freight sheds.

But with the war, however, motor trucks showed their full possibilities. Traffic congestion became greater than ever before.

Necessary regulation abolished the convenient "trap" car that collected and distributed freight locally on both sides of the Mississippi.

The terminal problem was therefore tangled anew, but Federals proved themselves equal to the emergency.

Unfettered by rails they are more than supplanting the banned trap car. Wherever business requires and a road leads, they are going.

In the great commission districts, over the bridges, at the packing houses—for wholesaler, manufacturer, shipper, they are doing their part toward keeping the flow of traffic unimpeded through the bottle-neck.

Every city has its terminal problem. In every city, Federals are helping to meet the situation.

Unfailing dependability, so essential in work of this sort, makes the Federal name familiar at all the great terminals of the country.

Young Captain Chisholm of the *J23*  
was one.

One morning, having convoyed a fleet  
of merchant ships safely to their port,  
the *J23* was one of a group of destroy-  
ers making the best of their way to  
their base port. Officers and men who  
have been hunting U-boats for a week  
or so do not like to linger along the  
road home. So it was every young cap-  
tain giving his ship all the steam she  
could stand and let her belt. It was  
moderately rough when they started.  
It grew a bit rougher. Chisholm in  
the *J23* was going along at twenty  
knots when a fellow he very well knew  
came along in his big 1,000-ton de-  
stroyer. Her nose hauled up on the  
quarter of the *J23*; up to her beam;  
up to her bridge. As she passed the  
*J23* her commander megaphoned across:  
"What you making, Chiz?"

"Twenty knots!" hailed back Chis-  
holm.

"I'm seeing your twenty knots and  
raising you five!" returned the other,  
and passed into the lead.

"All right," said Chiz, "but wait!"

The sea grew yet rougher. The *J23*  
was bouncing pretty lively, but hang-  
ing on to her twenty knots. "And at  
twenty you let her hang if she rolls  
her darned crow's nest under!" said  
Chisholm to his watch officer—"and we  
won't be acting rudder to this bunch  
going into port!"

They were still going along at twenty  
knots when from out of the drizzle  
ahead they saw the stern and funnels  
of a destroyer. It was the big destroyer  
that had just passed them; and the  
tough little *J23* breasted her stern, her  
waist, her bridge, and as he passed her  
(and he came quite close to let all hands  
view the passing), young Captain Chis-  
holm leaned out from his bridge and  
halled: "Call yuh!"

### Keep Straight On!

THIS same young fiver captain was  
headed for port in the usual hurry  
and was already well into the west  
channel just outside the port when a  
signal was whipped out from the sig-  
nal tower. It was for his ship: "West  
channel mined last night by U-boats.  
Proceed to sea and come in by east  
channel."

Chiz did not proceed to sea, and he  
did not come in by the east channel.  
The harbor saw him come straight on  
to his mooring.

Said Chiz: "I was well into that  
channel when I got the signal. And,  
of course, the first instinct was to obey  
orders. But I stop and think: 'This  
ship of mine, she's 300 feet long and  
under her stern there's two big prop-  
ellers. If ever I turn this 300-foot  
ship in this channel with those two  
propellers churning, and there's any  
loose German mines around, there won't  
be a blamed one of 'em she'll miss. But  
if I keep her straight on, there's a  
chance.' So 'Hell's afire!' I says to  
myself, 'the only thing to do is to keep  
straight on!' And I kept straight on,  
and we made our mooring."

After that they waited to hear what  
the Admiralty had to say. But they  
heard nothing; whereupon some said  
that was due to the Admiralty con-  
cluding that it is poor business to scold  
an officer who carries through a nervy

## Ashamed of Corns

As People Should Be—They Are So Unnecessary

The instinct is to hide a corn. And to  
cover the pain with a smile. For people  
nowadays know that a corn is passed. And  
that naught but neglect can account for it.

It is like a torn gown which you fail to repair.  
Or a spot which you fail to remove. The fault  
lies in neglecting a few minute duty—just as  
with a corn.

Any corn pain can be stopped in a moment,  
and stopped for good. Any corn can be ended  
quickly and completely.

All that is necessary is to  
apply a little Blue-jay plas-  
ter. It is done in a jiffy. It  
means no inconvenience.

Then a bit of scientific  
work begins its gentle ac-  
tion. In two days usually,  
the whole corn disappears.  
Some old, tough corns re-  
quire a second application,  
but not often.

Can you think of a reason for paring corns  
and letting them continue? Or for using harsh  
or messy applications? Or of clinging to any  
old-time method which is now taboo?

Or for suffering corns for spoiling hours—  
when millions of others escape?

Can you think of a reason for not trying Blue-  
jay? It is a modern scientific treatment, in-  
vented by a famous chemist. It is made by  
a house of world-wide fame in the making of  
surgical dressings.

It has ended corns by the  
tens of millions—corns  
which are just like yours. It  
is easy and gentle and sure,  
so you can prove for your-  
self tonight.

Try Blue-jay on one corn.  
If it does so easy, keep it by  
you. On future corns apply  
it the moment they appear.  
That will mean perpetual  
freedom. A corn aches, after  
that, will be unknown to you.

## "THE STORY OF THE GREAT WAR"

—A History—

PUBLISHED ONLY BY P. F. COLLIER & SON

IT SHOWS what led up to the war—how it  
began—through it all. It gives you historic  
perspective, digging out the roots of the war  
for the past fifty years, vivid description, cov-  
ering in detail the thrilling events of the war;  
expert analysis, a resume of the war results.  
A whole army of noted authors and corre-

spondents assisted in its compilation, taking  
advantage to the full of the world-wide news-  
gathering facilities of the Collier Organiza-  
tion. The result is a real history written to  
keep pace with the conflict—a work that every  
man should read now for his own sake and  
that of his country.

piece of work. The rest were sure it came of a previous experience with this same Captain Chisholm.

This Admiralty to whom our destroyer skippers had to report was presided over by an old fellow who believed that the Lord made the earth for admirals, more especially for British admirals.

Following his first cruise after U-boats, our young Captain Chisholm went up the Hill to report. He knew little of the procedure at this naval base, and nothing of the quality of the man he was to report to. So up he goes whistling to the castle on the hill, and by and by he is admitted to the presence of the admiral, who is seated at a flat desk in the middle of the room gazing straight ahead of him.

Chiz waited a moment, then ventured a "Good morning, sir."

The face at the desk did not even turn, but a voice barked out: "Got anything to say to me?"

Chiz was one of the sociable souls, and he would have liked to sit down and talk in an informal way of several little happenings that he thought were fairly interesting. But he had not been asked to sit down, and the voice froze him. So: "Why, no, sir, nothing special," was all he did say.

"If you have nothing to say, you might as well get out, hadn't you?"

Chiz got out.

"An American lieutenant commander in this place must rate about seven numbers below a yellow dog," said Chiz when he was talking of the matter to some of his chums in the King's Hotel smoke room.

"You Wish to See Me?"

THAT same week there was a cricket match between a team from our flotilla and a team from theirs. The idea was for all hands to forget rank for a while, get into the game, and so cement the entente cordiale between the two nations.

It is a friend and great admirer of Chiz's who told the sequel—in that same smoke room. Said Chiz's friend:

"You know what a husky Chiz is, and what he used to do with a baseball bat. There weren't many who ever hit 'em any farther or oftener than Chiz on the old Annapolis ball field. He was one of the first of our fellows to go to bat for our side. He's standing there waiting for one to his liking, when he spots the admiral friend playing what we'd call it in baseball left field. 'Oh, boy!' murmurs Chiz, and sets himself. Those cricket bats, you know, are about three times as wide as a baseball bat, and they're pretty heavy; and along comes one about knee-high, with an in-curve to it, and when it does Chiz swings and, whale-o, over the admiral's head it goes and down the slope of a hill the other side of him.

"Chiz makes all the runs the law allows—six, I think it is—and he's sitting resting on the wide part of his cricket bat before the admiral even shows the top of his head over the hill with the ball. When he does and heaves it about halfway to the pitcher, or bowler, whatever they call him, he's out of breath.

"Chiz sets for another one knee-high with an inshoot, and when he gets one he whales it again, and away trots the admiral on another hunt down the hill. And Chiz makes six more runs before they even see the top of the admiral's head over the brow of the hill.

"The third time, and the fourth time, Chiz sets for a knee-high one with an inshoot to it, and the third time and the fourth time he belta it over the old fellow's head and down the long slope. And the fourth time the old fellow walks clear across the field and up to the stand and says to the chief judge that perhaps they had better call the game off for that day.

"That was all right," Chiz puts out to sea, and when he's into port again he calls up on the Hill as per instructions. And by and by he is passed again into the presence, who is sitting just as before at the flat desk in the middle of the room and gazing straight before him.

"This time Chiz doesn't speak, not even to say: 'Good morning, sir.' And the graven image at the desk doesn't speak either, and there's a silence for maybe a minute; and then the old fellow barks out: 'What are you standing there for? You wish to see me?' And Chiz barks out in his turn: 'No, sir, I don't wish to see you.'

"You do not wish to see me? What are you doing here then?"

"And Chiz cracks out: 'I'm here because your orders compel me to be.'

"Zowie! That straightened the old boy up. He took a look at Chiz, says Ah! won't Chiz have a chair? And after that Chiz and a lot more of us didn't find it so hard to get along with him. Trace it down and you'll find that was why Chiz was not jacked up for not coming in that other channel."

Results, Not Percentages

THIS admiral that our fellows told these stories about wasn't the worst in the world. He lacked imagination, and he had the manner of a rat terrier toward people not of his own kind; but he was one good executive. Before he came to take command of this coast district the U-boats had been raising Cain there.

There was a fleet of steam trawlers skippered by their old fishing captains and crews, whose special duty it was to sweep up the waters just outside the harbor. It was at that time a dangerous business, but it was also monotonous. It was a duty most easy to evade.

As a trawler went over an area of water, she was supposed to drop buoys to indicate that these waters were safe. Suppose they dropped the buoys anyway? Who was to say they had not swept up? No cove at a naval base five hundred miles away, that was sure! Even if mines were found there after buoys were put out, what would that prove? The boches were laying mines all the time, weren't they? So—war days are hard enough anyway—why not ease up now and again?

The British public will probably stand more from their lawfully ordained rulers than any public on earth. They stood for a good many of these ships being mined on that coast before they began to ask the why of it.

The powers returned with facts and figures, percentage tables and so on, of ships departing and ships arriving, seeking to prove that the number of ships lost was no more than was to be expected. Whereupon the B. P. took to writing letters to the press. British politicians take letters to the press seriously—a new man was sent, this time the admiral we have been talking of.

He got down to business. He fitted out a 30-knot dispatch boat and away he went. All along that coast he pounced in on little harbors where mine sweepers should be working outside—but where he found them working mostly inside at little sociable gatherings where was a dance or the like of that going on in the front and a little something nourishing to drink in the back room. Our stern and efficient admiral lit into them like a gull into a school of herring. Out by their gills he hauled them, and pretty soon the B. P. began to read less of percentages and more of results.

For £5

SOME trawler skippers lost their jobs under the new regime and new skippers took their places. This was at the time that rewards of £5 or so was offered the skipper bringing a mine into port.

That £5 looks pretty good to one of the new skippers; and when one night at a pub a discharged skipper confides where there is a nest of German mines, out he goes into the gray dawn to be there first. He's there first, and sure enough it's a grand little spot for mines. He hooks into one, lashes it under his quarter, and goes scooting back to his harbor, which happens to be the naval base.

Proudly and noisily he steams along, telling everybody he meets of his good luck and asking the course to the admiral's ship. Everybody he meets gives him the course, and also the full width of the channel as he passes. He runs alongside the flagship, hailing lustily for the admiral as he steams up.

The admiral is not aboard, but his aid is; and the aid, coming on deck, takes a look over the side. He sees the mine bouncing up and down between the mine sweeper's quarter and his own ship's side. "Get away from us! Suppose you pressed one of those little 'feelers' and blew us all to pieces—get away, I tell you!"

The mine sweeper looks up—would they cheat him of his £5 reward? "Feelers, sir?"—and then looked down. "Feelers, oh? You mean them little 'orns stickin' out on 'er? Blyme, sir, I thought I'd knocked 'em all huff when I lashed 'er alongside. But 'ave no fear, sir, there's only two of 'em left, sir, and I'll bloomin' well soon"—he reaches for an oar—"I'll bloomin' well soon knock 'em all huff, sir!"

## *Photography Rediscovered the Unicorn*

THE difference between Pliny's mythological unicorn and the photograph of the rhinoceros is the difference between fiction and fact.

The strange tales brought home by the travelers of other days were distorted in repetition, exaggerated in detail, because there was no truthful and unimaginative lens to record the facts.

Today we sit in comfort by the library lamp and all the world is brought to us. Our magazine gives not merely a word picture, but the indisputable photographic record. It shows, not a unicorn rampant, but the rhinoceros and how he lives; it may acquaint us with the fauna of Africa, the

texture of silk, the face of a famous man—or a ruined Zeppelin—all interesting and compelling because we know them to be pictorial facts—given to us by photography.

The present-day efficiency of photography has been reached by no easy road, but by untiring effort, by costly and exhaustive research in which the Eastman Kodak Company has played a big part. To foster, sustain and advance photography through sustained scientific effort has been among its ideals—and often at a total sacrifice of gain—except such gain as comes from the satisfaction of a well-earned leadership.

# A Tire for Every Road

There are five different United States Tires.

Each is scientifically designed and built to fit a particular requirement of motoring.

Among these five you will find exactly the tires you need.

Whether your car is large and heavy, or small and light,

—whether the roads you travel are rough or smooth, hilly or level, hard or soft.

No other tire manufac-

turer provides so complete a line from which to choose.

No other has gone to such extremes to assure you tires that will give you utmost economy, greatest service, and keenest all 'round satisfaction.

It is both a personal and a national duty to put your tire buying on a thrift basis.

Our nearest Sales and Service Depot dealer will show you how. Ask his advice.

THE NATIONAL WEEKLY

Our  
Dauntless  
Destroyer  
Boys

More than a Million Every Week

In 1917 Johns-Manville say:

"During the current twelve months our requirements have been approximately 65,000 tons of asbestos fibre."

About 1250 A. D.  
Marco Polo said:

"A Turk, named Karcilar, a man endowed with singular industry, who had charge of the minerals in that District told me that a certain mineral of Earth was found in a nearby Montagne. But amounts were so scarce that though it yielded wool and was unhurt by flames, none but Kings could find the fortune it cost when spun into cloth."

*A Few Pounds then for just  
one King—now a Hundred Million  
Pounds yearly for All Peoples*

MARCO POLO found the Ancients of Tartary bruising small pieces of silky rock-fibre in a brazen mortar. He had stumbled on the crude efforts of ignorance to turn asbestos—the gift of Nature—to the use of rulers of men.

For it was known that such rock, so treated, gave a substance unharmed by fire—which flames served only to bleach and cleanse. So they washed and spun and wove it into cloth. But the labor was so great and the substance so rare that the product was only for kings. As Man's development progressed, new needs for comfort and safety arose. But within asbestos were the properties that met those needs—and many more.

So man delved and found a way to make these uses available and the mines increased in number and production.

Around asbestos a great industry has been built and its wheels kept whirring to meet the public need. Asbestos is unique for it is unaffected by the action of acids and fire, electricity, decay or moisture. So many are its uses that Johns-Manville alone, mine, crush, mould and weave over one hundred million pounds a year into Shingles, Roofings, Brake Linings, Insulations, Packings, Cements, Electrical Devices, Tapes, Clothes, Yarns—hundreds of products that enter every avenue of science and the useful arts.

# This Year's Great Buy

## Here Your Money Goes Furthest

A big, impressive, roomy car, with a 40 horsepower motor. A beautiful body—built, finished and upholstered in the Mitchell's own body plant. A car built for lifetime service. Fitted with shock-absorbing springs—the most comfortable springs ever used. Extra complete equipment. Every appointment, every touch is exquisite.

### It Is Built to Today's Requirements

This new Mitchell Light Six is a vast improvement on last year's like-size model. Yet the price is only \$1350.

This car was brought out under new conditions. Good service men are becoming scarce. So, to minimize service, we have for one thing doubled our tests and inspections.

Then Mitchell has won a large export demand, in countries with difficult roads. The requirements there are extreme. Last year we decided to build every Mitchell car to meet them. So these new Mitchells are built to those new standards.

### Experts in Endurance

A considerable number of the ablest men in Motordom have been added to the Mitchell staff. Most of them

are experts in endurance. They have specialized on over-strength requirements under every road condition.

These men have studied every Mitchell part. They have fixed new tests, new standards. Never in one year has a Mitchell model been so improved as this one.

Yet last year's Mitchells were a 14-year development. Again and again they have proved themselves able to render 200,000 miles of service. So this year's Mitchells are extraordinary cars.

### A Master Designer

A famous expert has been placed in charge of our body-building plant. This new Mitchell is by far the handsomest car in its class. It is long, low and impressive—a distinguished car.

It is finished in a new way which gives enduring luster. Its equipment

is unusually complete. It stands supreme in easy-riding comfort, because of shock-absorbing rear springs.

### Scientific Savings

What we save is in factory efficiency. We have spent years to equip this plant to produce the Six type economically. Our savings are simply what old-time methods waste.

We build the complete car—chassis and body—under ideal conditions. And these extra values are all due to that.

They are just as conspicuous in our \$1625 Mitchell. And that also is built to new standards.

These two models in their 16 new-style bodies form a line of wondrous interest. Every man who considers a fine car should see what Mitchell prices buy. Write for our new catalog, then see the cars themselves.

# WHY ARE WE AT PEACE WITH BULGARIA?

BY DEMETRA VAKA

AUTHOR OF "IN THE HEART OF GERMAN ENIGMAS"

IN April, 1917, we entered the world war, not as enemies of the German people, but in order to defend our rights and the lives of our citizens under international law. No one except a German or a peace-at-any-price man could accuse us of having taken to arms in the heat of passion or before having exhausted every peace-preserving word and argument that might have prevented hostilities. President Wilson is—in the best acceptance of the word—the greatest pacifist of our times. He endured from the German Government all that good will, patience, forbearance, and even humility could be expected to before drawing the sword. He turned the other cheek not once, but so often as to brave the accusation of cowardice, in his sincere endeavor to avoid bloodshed.

When finally the President did resort to arms, he did not do so as the ally of this or that group of people, but against German militarism and its lawlessness. Over and over again he had maintained that international law and the rights of the nations under it must be preserved. Those among us who were aware of the extent of European political entanglements, even among the nations which are fighting against Germany, have often wondered if President Wilson would be able to stand by the high principles and the high political standards he set for America in this war. Would he be able to uphold the rights of the nations, especially of the little nations, when those rights already, through force of circumstances, had been jeopardized by our own friends?

A year passed, and as April, 1917, was memorable for the entrance of America into the war, so April, 1918, is memorable for a pronouncement of far greater importance than appears on the surface. On the 26th of that month our Government assured Greece, through Minister Droppers, that her integrity would be preserved, and that her rights should be assured, in the final peace settlement.

The significance of the message to Greece is this: It was fair warning to all the diplomats of the old school that the strongest of the world's democracies was going to uphold the rights of the little nations, openly and aboveboard, no matter what bargains the old-line, subterranean diplomats might already have made among themselves.

Never before has a European war ended in any other way than by a rearrangement of the boundaries of the small nations to suit the schemes of the "great" powers. And now there appears the latest accession to the concert of Europe and announces openly that the time-honored methods are to be done away with.

That is the first significance of President Wilson's action. The second is this: it indicates that he may be beginning to realize the potentialities at the Saloniki front and its possibilities for victoriously shortening the war, even at this late hour. And the Saloniki front can only be made the most of by us if we obtain the full cooperation of the Greek nation and of the Greek army. Thus what Mr. Wilson has done for Greece he has done no less for the Entente cause.

Of the two great fronts in Europe, the western front (including Italy) must be held if we are not to go down to defeat. But the Saloniki front has been, and still remains, the one on which we can most easily strike a vital blow at the enemy. Had

*Ferdinand brings out and emphasizes the worst traits of the nation he was chosen to rule*

the Allies taken care of this front in the first year of the war, they would have spared Serbia her martyrdom and Rumania her humiliation.

Why did the Allies not do it?

The answer lies in the sinister name—Bulgaria! As soon as war was declared, and Austria attacked Serbia, there was one thing that ought to have been attempted at once, and that was to re-form the Balkan Alliance. (To effect this both Serbia and Greece were willing to make substantial concessions to Bulgaria.) Could it have been formed, it would have blocked Germany from Turkey; it would have localized the war; England would have been spared the necessity of maintaining large armies and commissariat in so many distant places; and there would have been saved the thousands of Christians murdered in the Turkish Empire during the last three years.

whose persistent misunderstanding of the Bulgarian character would be incredible were it not a matter of history. And Bulgaria, laughing in her sleeve at the gullibility of the Anglo-Saxon—and how many times must she not have laughed at another branch of the race since!—utilized the time during which she dickered with the Entente to provide herself with arms, ammunition, and money from Germany.

The men on the spot—Venizelos, Prime Minister of Greece, and Pachitch, Prime Minister of Serbia—knew that Bulgaria was simply hoodwinking the Entente. They warned Downing Street of it, and implored for permission to strike Bulgaria while the latter was still unequipped and unfinanced by Germany. This permission was absolutely refused.

Sir Edward Grey was so completely deceived as to the real state of affairs that, even one week before Bulgaria fell upon Serbia, he still hoped that she would go with the Entente.

Had the English been acquainted with the history of the Bulgars in the Balkans, they could hardly have helped knowing that Bulgaria stood for autocracy against democracy, for the aggrandizement of the state against the welfare of the individual, and for might against right—in a word, for exactly the things that modern Germany stands for. Bulgaria's principles, her sympathies, and her deepest beliefs inevitably ranged her on the side of the foes of the Entente.

The Bulgarians in reality have no more right in the Balkans than the Turks. Of Tatar origin, they descended on the unfortunate peninsula in the seventh century, and wrested lands from the Greeks and Serbs by force. For two hundred years they were the dominant power, and the historian records that "even for those cruel times they were noted for their cruelty." As they grew in strength they began to harass the Hellenic Empire in Constantinople, until Emperor Basil, gathering his forces together, fought and defeated them, and earned for himself the title of "The Bulgar Killer." The Serbs seized this opportunity to strike for their rights; they too rose against the Bulgars, and won back a large part of their lands—and that ended the Bulgar supremacy in the Balkans, which had lasted only two hundred years. In the eleventh century, when the Greek Empire was suffering from internal dissensions, the Bulgars united with the Wallachs of Rumania, reconquered a portion of their former conquests, and for fifty years once more assumed a dominant position. So impossibly cruel were they, however, that they goaded the Serbs into fighting, and the Bulgars were again defeated. Later the Turks arrived and conquered the whole peninsula.

During the supremacy of the Turks we hear nothing more from the Bulgarians until the latter part of the nineteenth century. This is due to the fact that as soon as Turkey consumed her conquest, most of the Bulgarian leaders turned Mohammedan, in order to retain their lands.

From the sixteenth century on, the Greeks were gathering force to break free from the Turks, as were the Serbs and the Albanians. The Bulgars made no attempt to gain their freedom. Each at-

*Roberts College, whose professors are targets for Bulgarian propaganda*

On the other hand, had it been found impossible to re-form the Balkan Alliance, the Entente Powers would at once have known where Bulgaria stood. Instead, futile, long-range attempts were made to win Bulgaria to the Entente cause by a man who did not understand the Balkan situation at all, and

© International Film Service

tempt of the others at freedom was a failure, and was followed by tremendous slaughter. It was only in 1830, after nine years of bloody revolution by the Greeks, that a small part of the land which had fought against the Turks was permitted by the powers to become free. Later Serbia and Rumania also became independent.

Autocratic Russia looked with strong disfavor upon all these awakenings of national patriotism in the Balkan Peninsula. For centuries she had been scheming to become mistress of the peninsula, and through it to reach Constantinople. Every new country in the Balkans able to satisfy its national aspirations was a new stumblingblock to the growth of great, all-embracing Russia.

As time passed, however, Russia began to fear that Greece and Serbia would become too strong to be absorbed by her. She even feared that they might unite, drive the Turks out of the Balkans, and (perhaps with Rumania) themselves become heirs to the dying Ottoman Empire. The idea was intolerable to Russia because in that case Constantinople would naturally revert to the Greeks—to the Greeks who had founded it, whose capital it had been for eleven centuries, and to whom morally and ethnographically it belonged, since even to this day the Greek language and the Greek population predominate.

So about this time Russia first began to talk of her little "Slav" brother, the Bulgarian, groaning under the Turkish yoke, and pining for the protection of big, Christian Slav Russia. Agents provocateurs were sent among the Bulgarian peasants to distribute arms among them, and inflame them with promises of the lands of the Turks. The Bulgarian peasant's one passion is the acquisition of land, and the Russian agents succeeded so well that soon—in certain parts—they rose and slaughtered the Turks.

At the same time the Russian Embassy in Constantinople was sedulously playing upon the fanaticism of the Turks by telling them that still another Christian nation was about to rise and assist at the dismemberment of the Ottoman Empire.

The outcome of it all was just what autocratic Russia had schemed for. The Sultan ordered his troops to put an end to the uprising, and a cruel slaughter of the Bulgarian population ensued.

This was the opportunity Russia had been awaiting. She called upon civilized England to witness the martyrdom of her "Slav" brothers, and dear Mr. Gladstone—who epitomized all that is most sentimentally high-minded, and least farseeing, in England—was completely fooled by Russia, and

backing Tatar Bulgaria to punish Slav Serbia—and Serbia was duly punished by a first dose of modern Bulgarian atrocities.

From that time on the Balkan Peninsula was the regular intriguing ground for Russia and the Triple Alliance, and neither side thought anything of the welfare of the people there, but only of how it might checkmate the moves of its rival.

If Bulgaria had not fought for her independence, she soon developed remarkable skill in fencing diplomatically for her further advantage, and played Austria and Russia against each other with remarkable success. Having had but one minor uprising against the Turks, her manhood was not depleted, like that of

churches had been paid for by rich Greeks from all over Europe; but Russia backed Bulgaria in her stand, and Greece was too little to obtain justice at that time.

It was most unfortunate also that the second prince of Bulgaria should have happened to be a man like Ferdinand. If the palm for unscrupulousness can fairly be awarded to any one man, then surely Ferdinand has the greatest claim to it. Had Bulgaria been blessed by an honest ruler, she might be progressing along better lines; for that the Bulgarians—like the Germans—are one of the most hardworking and industrious of peoples no one will deny.

But Ferdinand brought out and emphasized the

openly espoused her side against Turkey. In Russia, meanwhile by those methods which autocratic governments know so well how to employ, the people were whipped into a frenzy of indignation, and called upon to go and save their "Slav" brethren.

In 1877 Russia made war on Turkey, and it was only when the Muscovites were actually at San Stefano, and within sight of Constantinople, that England woke up to the way in which she had been duped. With the utmost haste, then, she dispatched her warships to the Dardanelles, and ordered Russia to go no farther.

It was a tight squeeze in the old diplomatic game, and was followed by the Treaty of Berlin, in 1878, in which modern Bulgaria was created a state; and if it was Russian soldiers who had done the fighting for Bulgarian independence, it was now Russian rubles and Russian officers that began to groom Bulgaria to be used against Serbia and Greece if Serbia and Greece did not do as Russia wished. And so, in the war of 1885, we had the spectacle of Holy Russia

the other Balkan States; and the lands allotted to her were not only more extensive than those of Greece and Serbia but they were richer. They contained flourishing Greek cities, such as Philippopolis and Varna. Later—backed by Russia again—she seized all the Greek schools and churches throughout Bulgaria and proclaimed them Bulgarian property, giving as excuse that they had been built by the taxes that Turkey had raised from all the inhabitants. Considering that Turkey spends only an infinitesimal part of the taxes she collects on even her own schools and mosques, it is laughable to claim that she had spent large sums on schools and churches for the Christians. These schools and

worst traits of the nation he was chosen to rule, and under his tutelage Bulgaria more and more assumed the position of the Prussia of the Balkans. Not only did she prepare the sword, but she developed a propaganda which compares favorably in efficiency with that of her model, Germany. To win England, the Government printed pictures of Gladstone wholesale, and distributed them to every town in the land, so that all English travelers could see how the people loved the English. To propitiate Austria, Ferdinand's son and heir, Boris, had been baptized a Catholic;

but the time came when Ferdinand felt the need of bolstering up his reputation with the Russians; so Boris was rebaptized into the Russian Church, and the Czar was asked to become his godfather. During the present war, I understand, he has again become a Catholic. While manifesting this devoutly religious spirit, Ferdinand was secretly promising the Austrians that the whole nation would change from the Russian to the Roman Catholic Church—and a

# OUR DAUNTLESS DESTROYER BOYS

BY JAMES B. CONNOLLY

COLLIER'S SPECIAL CORRESPONDENT

*When her stern rises he lifts his feet and shoots and fetches up—Bam!—*

that and other possibilities in the reception room outside, so when the senior of the group looked from one to the other of his colleagues they had only to nod for him to turn to the admiral and say: "We are ready now, sir."

At this time—at the gates to the North Sea, the English Channel, the Irish coast—the U-boats were collecting frightful toll. In the Mediterranean they were running wild. Five ships from one convoy in one day, three of them big P. and O. liners, was one of their records in the eastern Mediterranean.

To the natural question: "Why haven't you checked them?" almost any young British naval officer felt like saying: "Check 'em? Try it yourself and check 'em! You go out there and keep your zigzagging full speed night and day for three years and see how you like it! Go out there in rough weather and fog with not a minute's let-up, and see if you get to where the fall of a bucket of a dark night will make you jump three feet in the air or not! Our ships were not built, and our chaps were not trained, to beat their rotten game."

## "What Were They Doing?"

SO things were when our fellows took hold; and hearing no word from them for a long time and then but a meager one, it may be that many a citizen on this side was saying to himself: "Well, they're gone, that little flotilla, swallowed up in the mists of the Atlantic, and that is all we know about them. And now I wonder what they're doing over there—or are they tied up to a dock at the naval base and their officers and crews roistering ashore?"

I can say from several weeks' observation later that they were not doing too much roistering ashore. Before leaving this side I found no evidence that anybody in Washington wished to suppress the record of what that little fleet was doing. Secretary Daniels and Chairman Creel of the Committee on Public Information believed with me that our little fellows over there were doing things worth recording. This fact is set down here because many people last summer believed there was too much suppression of the news of our fighting forces; and suspicion of suppression breeds distrust. Our fellows perhaps were not doing well. If they were doing well, wouldn't we be told more?

But they have ideas of their own on these matters over on the other side, and it is the other side which has most to say of what shall or shall not be given out for publication. When I first asked the British Admiralty to be allowed to cruise on an American destroyer from a British port, the reply was a flat and immediate no. The Admiralty did not allow British writers on British ships; why should it allow an American writer on an American ship?

It had to be explained that, despite what the Admiralty allowed or did not allow, English papers did publish praiseful items about the deeds of the British navy; and even if they did not publish such items, conditions governing publicity in the United States and the British Isles were not equal. The British navy was a tremendous one; it was operating just off its own shores; officers and men were regularly going ashore by the thousands, and to their friends and families, if to nobody else, they talked of what was going on; and it didn't take long for thousands of bluejackets to spread the gossip

in a country where no spot in it was much more than fifty miles from tidewater, whereas our nearest Atlantic ports were three thousand miles from our base of operations in Europe; and it was another three thousand miles to our west coast.

It also had to be pumped into the Admiralty over there that possibly the American and British publics did not hold to quite the same ideas about their respective navies. It was possible that the 110,000,000 people of the United States looked on our navy as not altogether the property of the officers and men in it; possibly our people looked on the navy as their navy; and believed that they had a right to know something of what it was doing; and so (this item had to be pointed out to one of our own top-side admirals), as that same public were paying the bills of the navy, no harm perhaps to let them in on a few things or—this being the twentieth century—they might take it into their heads some day to have no navy at all.

## An Ash Can of TNT

IT took the foregoing talk and something more before I could get the permission of the British Admiralty to cruise on one of our own destroyers. This isn't a criticism of the British Admiralty—merely to show that its point of view differs from ours, and to show that it was not Washington which was holding up news of our navy.

And our navy has been doing great work. The destroyer on which I cruised was five years old, yet one day, during an 85-mile run to answer an S. O. S. call, she exceeded her builders' trial record. Incidentally, she saved a merchantman, which had been shelled for four hours by a U-boat, and her \$3,000,000 cargo; also she ran the U-boat under, one of the new big U-boats with two 5.9 deck guns. On the same day two other destroyers of our group took from a sinking liner 503 passengers without the loss of a life. One of these destroyers lashed herself to the sinking ship the more quickly to get them off; and as the liner went down our little ship had to use her emergency steam to get away in time. A fourth destroyer of ours got the U-boat which sank the liner. That was the record of one little group of destroyers in one day; and it is detailed here because the writer happened to be present when it happened.

When our fellows first went over they had to learn a few things from the British. We had first to get rid of some childish ideas about depth charges. We brought over a toy size of 50 to 60 pounds. They showed us a man's-size one—300 pounds of TNT—a contraption looking so much like a galvanized iron ash can with flattened sides that they call them ash cans.

These ash cans need not actually hit the U-boat; to explode one anywhere near is enough. When our fellows let go one of them, the ship has to be going 25 knots to be safe. One of our destroyers was making 11 knots one night the best she could do under the weather conditions—and an ash can was washed overboard by a heavy sea. The destroyer's stern came so near to being blown off that she had to feel the rest of the way carefully to port.

## Saving Our Men

THIS U-boat hunting has been found so wearing on men's nerves that the British Admiralty has a law that our destroyers must remain in port after every cruise for periods that average about two-thirds of their time at sea. Once our destroyers are back to port and tied up to moorings, a U-boat might come up and sink a ship at the harbor entrance and our fellows not be allowed to up steam and at 'em. It was only after a hard experience against U-boats that the Admiralty evolved this law to save men from breaking down.

It is a dangerous, hard service on one of the

ONE day last summer a group of our destroyers was sent across the Atlantic. It was a night and day strain for all hands; watching out for raiders, watching out for U-boats—watching out for everything—and grabbing snatches of sleep when they could.

Arriving at their naval base, every skipper of the little fleet felt pretty well used up. But every worth-while skipper thinks first of his men. One we have in mind passed the word to his crew that whoever cared to take a run ashore to stretch his legs and forget sea things for a while—why, to go to it. And stay till morning quarters if he wished.

As fast as they could clean up and shift into shore clothes they were going over the side. Our young captain felt then that perhaps there was a little something coming to himself, so he turned in, and he was logging great things in the sleeping line when the anchor watch, who was also a signal quartermaster, woke him up with:

"Signal from the Admiralty, sir."

"Read it."

The S. Q. M. read it: An order to proceed at once to an oil dock and take oil.

It was nine o'clock at night when our skipper had come to moorings. It was now one in the morning, and he knew he could have slept for another week; however, orders were to oil up.

He turned out and mustered what remained aboard of his crew. There were about a dozen. He sent three to the fire room, three to the engine room, one here, another there, he took the wheel himself, and, with his signal quartermaster acting as a sort of officer of the deck, set out to find the oil dock.

He had never seen that harbor before that night, but he sheered close in to every ship's anchor light he saw and hailed for the course to the oil dock. Most of them did not know, but one now and then passed him a word or two, and so he bumped along and by and by made the oil dock.

Officers who have business with it will tell you that the naval organization of the British is pretty complete. Our young skipper found everything ready for him now. Men ashore made fast his lines, connected up his pipes, filled his tanks, all in good order. Sister destroyers were oiling up with him; and with tanks filled they all bumped their way back to moorings, again without sinking anything along the way.

It was then daylight, and right after breakfast they all had to report to the Admiralty, so there was no use trying to sleep any more. Arrived at the Admiralty, the officer in command complimented them on their safe run across, and then went on to say that of course they had had a trying passage, and naturally their ships, especially engines and boilers, would have to be overhauled—all very natural and proper—and of course the needful time for overhauling, and for officers and crew—two, three, four days, whatever it was—would be granted; but (they knew the need) the question was: How long before they would be ready to go to sea?

The young destroyer commanders had discussed

roughest coasts in the world—a coast where for seven months or so in the year wind and sea and strong cross tides seem to be the daily diet; a service where for days on a stretch it is nothing at all not to be able to take a meal sitting down, not even in chairs lashed to stanchions and one arm free hooked around a stanchion; a service where officers live jammed up in the eyes of the ship and never think at sea of taking off their clothes, and where they sleep (when they do sleep), mostly by snatches, on chart-house or ward-room transoms.

And for watches: eight hours in every twenty-four, night and day watching of their convoy, of their colleagues, of periscopes. (The prospect of collision with their close-packed convoy is a bad chance in itself.) On a destroyer conveying ships the officer of the deck has to stand with one eye to the compass ordering, say, 200 changes of course in every hour. One watch officer of every destroyer has the extra job of acting as chief engineer of the ship; and when a watch officer has to go aboard a torpedoed ship, or to go in the crow's nest in a critical time—to spend hours, it may be—the time so spent is in addition to his regular eight hours.

If he is the executive officer, he must also act as navigator; and as it is important to know just where the ship is any moment of the day or night, the navigator does not figure on sleep in any long stretches. About twenty waking hours out of twenty-four is his portion. As for the skipper: Every single waking hour is a heavy strain. I went to sea with a commander of the alert, intense type. Most of them are of that type, but this one was particularly so—with eyes, ears, nerves, and brain working always at full power. Three hours in twenty-four was a pretty good lay-off for him.

### Whoop-o, They Can Roll!

**L**IVELY? Our destroyers are about eleven and a half times as long as they are wide, which does not mean that they cannot keep the sea. They can. Put one of them stern on to a 90-mile breeze and all the sea to go with it, give her five or six knots an hour head of steam, and she will stay there till the ocean is blown dry. But they are engined out of all proportion to their tonnage, with their great weight of machinery deep down; which means that they roll. Oh, but they can roll! Whoop-o—down and back like that! Most any of them will make a complete roll inside of six seconds. Ours was a five-and-a-quarter-second one. When she got to rolling right she would snap a careless sailor overboard as quickly as you could snap a bug off the end of a whalebone cane. There is one over there which rolled 73 degrees—and came back.

Take one of them when she is hiking along at 20 knots, rolling from 45 to 50 degrees, and just about

to go forward, say. He hooks onto a rope loop, hanging from a fore-and-aft taut steel line about seven feet above deck, and when her stern rises he lifts his feet and shoots and fetches up—Ham!—against the foc'sle break. He is forward and wants to go aft; he hooks onto the loop, waits for her bow to rise, lets himself go, and there he is, back to her skid deck.

That sounds like rough work. Sometimes it gets rougher than that; you hear of the wireless operator who was held in his radio shack for forty hours. He got pretty hungry, but he preferred that to being washed overboard.

But let a machinist's mate tell you in his own way of the night he was standing a fire-room watch (this with all due respect to the chart-house bulkhead, the trolley line, the buckling decks, and the radio operator who was confined). And was it rough? Rough! When he looked down at his feet, there were the fire-room deck plates folding in and out like a concertina!

Destroyer crews do not loaf overmuch around deck. They can't. They live below decks, mostly, strapped in when it is rough to a stretch of canvas laced to four pieces of iron pipe, set on an angle down against the ship's sides, and called a bunk. Even strapped in so, they are sometimes, when she has a good streak on, hove out into the passageway. It was a young doctor of the flotilla who said that, except for their broken arms and legs, his ship's crew were disgustingly healthy.

Our officers over there volunteered for this service, and for every one who went there were a dozen who wanted to go. And there is a lot of difference between men who go to a duty because they are ordered to go and men who go because they want to go. These officers and men—there is no beating them, except by blowing them off the face of the waters. And even then they are not always beaten. One of our destroyers was cut down one night by collision (with so many ships being crowded into a small steaming area, collisions are sure to happen). All

hands had to take to the rafts in a hurry. It was about two in the morning, one of those summer nights in the north when the light comes early. They watched her going under. Her deck settled level with the sea, and as it did so a young irrepressible one sang out: "What do you say, fellows, to having

"Where do we go from here?"

in European ports; singing it from behind the drawn shades of coaches rolling across France. There were even those who sang it while waiting to step into the lifeboats on a torpedoed troopship; but for light-hearted courage has anyone beaten that destroyer lad who was torpedoed one night last winter?

When the torpedo struck his ship the two depth charges astern were exploded also. Two 300-pound charges of TNT they were. The little ship seemed to be lifted out of water. There was just time to throw over a few life rafts and take a high dive after the rafts. There was no time to get an S. O. S. message away before the ship went down; so there they were—a November night in northern waters, more than half their crew known to be dead, their ship sunk, no other ship near, and no hope of one coming near. It was about as tough a case as men could be expected to face and hope to live. But there was a boy there—he was jouncing up and down in the water to keep warm, and jouncing up and down he was singing (from out of the dark they heard him)—singing cheerfully:

"Oh, boy; oh, boy, where do we go from here?"

Only half a dozen destroyers in that first group; but other groups followed and are still following. They have not driven the U-boats from under the seas, but they have made it possible for British merchant ships to live in that part of the ocean they are sent to guard.

### Five a Day

**S**OMEBODY has broken into print somewhere to say that Germany has trouble getting U-boat crews; that men have to be driven into U-boats to man them. What a queer idea of human courage people have who say such things! There are always volunteers, probably always will be—plenty of volunteers for any dangerous service. If the U-boat crews were the kind that have to be driven to sea, there would be no great harm in them. But they are not that kind. They have courage, and they have skill, and they are dangerous.

After a year of the U-boat drive England saw the danger of being some day starved out; and with England starved out our army might as well have stayed on this side last summer; but though the drive is still on, England is not yet starved out, for much of which comfort she can thank the unquenchable spirit of the officers and men of our destroyer flotilla.

At a time when England was worn and weary with the U-boat game our fellows went over to hearten them up; they are still heartening them up, and besides heartening them up, getting the U-boats regularly. How many they are getting I could not say, even if I knew; but one of our vice admirals has publicly stated that once they got five in one day. And, with malice toward none, let us hope for more days like it.

Away they started, four or five gangs, paddling their life rafts with their hands

filling the whaleboat swinging to the skid-deck davits as she rolls? See one dive and take a sea over her foc'sle head and smash in her chart-house bulkhead maybe!

At the thinnest parts the outer skin is only three-sixteenths of an inch thick; see that thin skin give to the sea like a hot-water bottle! And watch the deck crawl till sometimes the deck plates buckle up into V-shaped ridges! See her with the seas sloshing up her low free board and over her narrow decks so that men have to make use of a sort of trolley line to get about. A man is fat and has

# THE RIGHT SORT OF MAN

BY LUCIAN CARY

ILLUSTRATED BY ARTHUR G. DOVE

ANN WINKLER was a distinctly modern young person. Ann knew what she wanted and quite intended to get it. Ann, being twenty-four, confided as much to her friend Dorothy.

"Well," said Dorothy, and paused. "Just—just what is it you want?"

"I want," Ann continued firmly, "to lead an interesting life."

"Oh," said Dorothy.

Ann reflected afterward that it was vain to confide in Dorothy. Dorothy couldn't possibly understand. Dorothy was planning to marry Ed King and live the rest of her life in Bingham. Could Ann say to Dorothy: "I will die before I will marry a small-town man and bury myself in this hole?" She could not. Dorothy would never know how dull life in Bingham was—unless somebody told her. There was, after all, something of the vegetable about Dorothy. Ann felt herself to be more alive. Dorothy was positively mid-Victorian.

Ann was one of those girls who are all long legs and flying pigtails at sixteen; who are suddenly pretty at eighteen; and who flower some time after twenty into that harmonious beauty which does not so much hit you in the eye as steal upon you unawares until you are permanently bewitched.

Besides, Ann had an altogether exceptional speaking voice; a voice a note deeper than you expected; a voice for laughter, a voice for moonlight on the water.

Ann had other qualifications for getting what she wanted.

For one thing, Ann had got a liberal education at the University of Wisconsin. Ann had been one of the leaders of the Gamma Kappa sorority, a heroine of the war for supremacy with the Gamma Delta sorority. Ann was reputed, during her sophomore year, to have had "dates" forty-nine evenings in succession. During her junior year she was variously believed to be engaged to Bill Williams, the all-Western full back; to Red Tarleton, who left college the day the town went dry; and to a young professor of philosophy from Harvard. It was during the fourth year of Ann's unabated popularity that a Gamma Delta girl inquired with malice of one of Ann's Gamma Kappa sisters if she thought Ann Winkler was the "sort of girl men marry."

"No," said the Gamma Kappa—"no, she isn't; she's too particular."

Ann's four years in Madison developed in her a positive technique for the painless repulse of college boys.

For another thing, Ann had an indulgent father Mr. Winkler was the sole proprietor of the Bingham

wire-box factory, founder of the Bingham Country Club, and the only man in town who habitually maintained two machines.

Mr. Winkler did not understand Ann's impatience with life in Bingham even after Ann had informed him of it. Mr. Winkler had established the wire-box business on a shoe string in the face of the most complete skepticism on the part of both the local banks. Mr. Winkler had never suspected that life in Bingham was dull.

When Ann mentioned it at breakfast Mr. Winkler said something about nonsense.

The subject was renewed at luncheon. Ann observed that there were no interesting people in Bingham.

"What do you mean—interesting people?" asked her father.

Ann found it extremely difficult to state just what she did mean; she knew well enough, but she had never put it into words.

"People who do things," she flashed.

"H-m-m-m-m," said Mr. Winkler.

At dinner Ann remarked that Bingham was a narrow-minded community. People had nothing to talk about but each other.

HE inquired belligerently what Ann proposed to do about it. Ann proposed to spend the winter in New York. Mr. Winkler would be pleased to know what on earth for. Ann said she wanted to know what was going on in the world. Mr. Winkler said he wanted to know what was coming in the world when young ladies calmly proposed to abandon perfectly good homes in order to gad about New York. Alone, too. At this point Ann's mother remarked that Ann's aunt Josephine lived in Brooklyn. Mr. Winkler looked from his daughter to his wife and from his wife to his daughter. Then he ostentatiously retired.

So it was not long after Ann's original confidence to Dorothy that Ann offered another.

"I'm going to New York," Ann said.

"On the stage?" Dorothy cried.

"I rather think not," said Ann judicially. "I don't know just what I shall do. I'm going to spend the winter finding out."

"I think that's awfully nice," said Dorothy. "If I weren't going to be married, I'd like to spend a winter in New York myself. But of course—"

Dorothy did not finish the sentence, but her tone implied that she who had the sun naturally took only a slight interest in the moon.

Ann, driving home down the wide brick-paved street that was the pride of Bingham, felt sorry for Dorothy, and impatient of her.

"Ed King is a nice enough fellow," she observed to herself. "But, good Lord! Think of marrying him and living with him all your life! Of limiting yourself to Bingham—forever!"

Later, when everybody had gone to bed and she could not sleep for thinking of New York, Ann reflected that there was something vitiating about the atmosphere of small towns. Somehow at twenty people who lived in small towns were alert and eager and daring; and at thirty they were comfortably settled in humdrum. Worse, they were satisfied with humdrum; content just to go on living. It had affected her already. It would be easier just to slump back into easy-going Bingham

than to dare New York.

Ann got up, found a steamer rug, and climbed out of her bedroom window to the roof of the dining-room extension. There

she sat, her hands clasped about her knees, in her pajamas. The pajamas were not important in themselves. They were important in what they meant. They said, those pajamas, that Ann Winkler had emancipated herself from small-town prejudices; they said that Ann Winkler was a person of sophisticated taste; they said that Ann Winkler was a woman of the world. They were the only feminine pajamas in Bingham, Wis.

Bingham, Ann thought, would be pretty much the same fifty years hence—just as dead to first nights at the theater and spring academies and the kind of dinner parties that matter.

Ann observed the intermittent glow to the south—the reflection of the plow works at Bardwell, Ill. Bardwell and Bingham, though less than ten miles apart, were in different States. Citizens of either regarded the other with condescension. Ann could see no important difference between the two. If you lived in Bardwell, you went to the University of Illinois; if you lived in Bingham, you went to the University of Wisconsin. What had either community to boast of? Both were crude and neither was vivid. Ann was going to New York—where life is interesting.

Imagine meeting an interesting man in either Bingham or Bardwell! There were men who danced nicely in Bingham; there were men who played excellent golf; there were amiable, honest, sober men. But imagine a man of any sophistication of speech or manner or point of view. Imagine a man whom you couldn't—well, whom you couldn't solve in the first five minutes! You just couldn't. The Middle West produced the obvious. New York—the New York of painters and poets and studio teas—produced something more complex. . . .

ANN got her first good look at New York from the top of a Fifth Avenue bus.

It was one of those bright afternoons that come sometimes in November. One of those afternoons when the avenue is its pagan best. One of those afternoons when you can count more imported cars between Forty-sixth Street and Forty-second than anywhere else in the world.

Ann leaned forward, her arm resting on the back of the empty seat in front of her, and gazed as one entranced at the stream of motors, at the people on the sidewalks, at the shop windows. She observed the blue-coated czar of traffic at each cross street, the mixture of residence and business buildings, the magnificent assurance of those shops that are so certain of their clientele that they carry no sign—not so much as a brass plate. She was alert to all those details which delight the newcomer for no reason at all except that they are different. Had she not come to find differences?

At Thirty-fourth Street a young man took the empty seat in front of her. Ann identified him in a swift glance as a typical product of the metropolis—the young man whose shoes are always polished, whose chin is always freshly shaved, whose Malacca stick hangs with the ease

BY H. C. WITWER—SEVENTH INNING

ILLUSTRATED BY F. E. GRUGER AND ARTHUR WILLIAM BROWN

VIVELA, FRANCE.

DEAR JOE: Well, Joe, don't be surprised if you read in the papers any day now that the Germans has fled outa France, because I am back at the front again. No doubt you remember in my last letter I was on leave of absence when them squareheads pulled off that spring drive, and I'll betcha Pershing, Haig, and Foch won't let me get six inches away from the trenches again till the war's over. Sec. Baker was over here too, and I seen him talkin' to Gen. Pershing the day I come back. They both gimme a odd look as I passed, and a infant could figure out what they was thinkin'. You never won no lovin' cups with your brains, Joe, so I'll tell you what was goin' on in their minds. They was thinkin' which one of them the American public would blame for lettin' me be away when the boches pulled off that drive. Joe, I would of run them guys ragged and will do the same the minute they turn me loose on 'em again!

But all jokes to one side, Joe, it was certainly tough that I had to be elsewhere when this thing come off, hey? However, they is a good chance that I will soon be 'mid shot and shell again, because they is a rumor runnin' around wild here that we are goin' right up to where this latest free-for-all is bein' had, at any minute. Joe, when we do go up, believe me, we will knock them squareheads kickin' and make 'em like it!

Don't pay no attention, Joe, to that there slight gain which them Germans tore off the other day. Every one of them guys must of been carryin' a pocketful of horseshoes and were nothin' around their necks but four-leaf clovers. My dope is that they was all fed rabbit's left-hind legs for breakfast and Hindenburg must of touched all the humpbacks in the world on the back. If this big stiff in Berlin with the trick whisker thinks any of us Alleys is bothered about this drive, he's kiddin' himself to death. We let them squareheads come outa their holes where we could get at 'em and staked 'em to a couple useless burgas over here simply to make it look good. No doubt you remember, Joe, how I used to let Cobb and the like get a long lead off first and just when they got the idea I was dreamin' of the sweet old farm or somethin', I'd wheel around like lightnin' and nail 'em a mile off the bag. Well, that's what us Alleys is gonna pull over here. Just when them squareheads figure they have got us in a hole, which is what we want 'em to think, we'll turn on them babies and—oh, boy! They won't none of them ever see France again, except maybe on a picture post card or somethin'.

Well, Joe, no doubt you remember in my last letter I was in dear old Paris, with a chance to see is it true they is more life there than they is in the South Bend of Poughkeepsie. Joe, I must say I had an elegant time and would prob'ly be satisfied to live there all my life—if I was French. The town is a knockout and the people is great! Jeanne, my newly made bride and a guy from the South

named Calhoun, was with me, and we seen all the sights just like the hicks does when they hit New York from the sticks. Joe, I had the time of my life without gettin' stewed or doin' a thing that is against the traffic laws of any religion on earth; can you beat that? Just imagine, I didn't even see the makin's of a headache, whilst at the same time they was never a dull moment all the time we was in Paris!

No doubt you will laugh yourself sick at this and say I have gone to work and become the champion long-distance liar of the world, but such is not the case, Joe. I wanna tell you somethin' about this army life which no doubt you ain't never seen on no draft questionnaire. Joe, it is the greatest thing on earth, I'll tell the world fair, and if they was a son of mine in it around the age of twenty where a kid begins to hit nothin' but the high places, I'd sleep comfortable durin' the night and know they was makin' a man outa him! I wouldn't be sayin': "Where is my wanderin' boy to-night?"—I'd know he was bein' taken care of better than if he was out shootin' Kelly pool or tryin' to startle Rockefeller with his winnin's at poker. He'd be doin' his bit like a he-man to make the world a regular place for his own kids to live in, and if he wasn't behavin' himself he'd be in a nice clean guardhouse, and why not?

They is also some more things, Joe, which a guy don't appreciate till he gets in the army. You get good food, a nice clean place to sleep, doctors and medicine as free as fresh air, exercises every day that keep you where you'd be willin' to get gay with Jess Willard, and the best-lookin' suit of clothes any man ever put on his back! On top of all that they give you money—can you imagine it? Joe, I have knowed guys which before the war kept the booze factories workin' day and night so's to keep up with their thirst—and looked it—turned into big strong huskies, healthy as life in the mountains, in no time at all. They're seein' what the sun looks like for the first time in their lives and livin' on meat and potatoes instead of Rock and Rye. They come down to the camps lookin' like a good, strong sneeze would blow 'em to bits, and in a couple months their own family don't know 'em, but is darn glad to make their acquaintance. Then take these here Winsome Willies which before they went into the army was so yeillah that if they was throwed into a barrel of lemons you wouldn't know which was the fruit. The captain, which eleven times outa ten is a regular guy, takes 'em in charge, and by the time they get to France you oughta see them babies go over the top with a haynet—Oh, lady! Say! I'd rather battle with three of them so-called hard guys than one warmed-up Willy boy any day of the week—believe me—I know!

Well, Joe, fare-thee-well for the time bein', as the guy said which fell off Pikes Peak.

Yours truly,

Serg't ED HARMON. (HOW ARE YOU FIXED FOR LIBERTY BONDS?)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I must tell you about our last day in Paris, because they was a few things happened I ain't likely to forget for some time. Me and Jeanne started out with this big buck private Calhoun to have a regular field day before goin' back to toy with the German army again. Jeanne claimed she had a sister livin' in Paris by the name of Marie, which was so good-lookin' she balled up traffic every time she crossed the street. She thought she could introduce her to Calhoun so's we could fix up a little party. Calhoun had enough francs on him to pay off the French army and even allow 'em overtime, so it looked like we was all set for a large day.

The first thing we did was hire a guide on account of Calhoun havin' a friend which told him before he come over that was the proper stunt to do in order to really see Paris. This here friend of his lived in Bird's Nest, Va., and had once been all the way to Richmond, so naturally he knowed what he was talkin' about. The guide we dug up was a knockout, Joe. He claimed he was a Algerian, but, notwithstanding that, he could speak every language known to the world, not to mention a couple he had made up all by himself. I come to find out later he spoke them last two better than any of the others, Joe. He was so little I bet he went up curbstones hand over hand, but he sure was hefty. Out on the farm, Joe, we'd say this guy was just about fat enough to kill. His complexion and coffee with no milk was the same. Calhoun takes one flash at him and gets a bad case of the hystericals, but Jeanne gets sore.

"This small little cockon," she says, "why is he?" "Sssh!" I says. "He's liable to get sore and leave us flat. This bird's a guide—he's gonna show us Paris."

"He is of a certain not having the good looks," she says.

"Maybe he ain't tryin'," I tells her. "Never mind whether he's a good looker or not; we didn't hire him for a chorus girl, did we?"

All the time this here little guy stands there grin-nin' from one to the other and not sayin' a word.

"Where is the best place to go for somethin' to eat?" I asks him.

"Gazink oofus la gump et pluto!" he says, still grin-nin'.

Calhoun busts out laughin'.

"Ah knowed this little grampus come from the zoo!" he hollers. "Gazink oofus, hey? Oh, boy!"

Even Jeanne begins to giggle.

"Hey, stupid!" I says to our charmin' guide, grabbin' him by the shoulder, "what are you tryin' to do—kid somebody? I thought you claimed you could speak the English?"

"Alla paza goop gump oofus catawbas!" he says, puttin' all he had on the grin.

"Aw, shut up!" I says. "I oughta bust you in the nose!" I turns to the rest of them, and they is on the verge of death.

## The Fallen Mighty

IT is not so long since a railway president was a "bigger man than old GRANT." In those not-distant days the tour of a president of the United States would hardly excite more emotion in the breasts of the people of remote parts of the country than a visit from one of these mighty men, who came in a private car, delicately furnished with walnut and green plush, and could be seen at the window smoking his great cigar and gazing benevolently upon the gaping citizenry. They were a strong race, these men who built or bought their roads, and controlled the policy of the companies as well as operating the lines. Also, they managed the politics of the sections through which their roads ran, and the governor of a State might be a less considered employee of the "Three G's and H" than a general passenger agent. When the days of new railway construction and enterprise passed, the presidencies went into the hands of salaried employees, who operated the roads and had little or nothing to do with financial or other policies. As a rule, they are men who have risen from the ranks. It is surprising to find in the lives of those who have fallen or are likely to fall how many of them have "come up" from brakemen or telegraph operators. Generally speaking, they were not overpaid, according to the scale of salaries common, except at Washington, among the directors of great enterprises. No doubt the survivors will accept the new schedule and serve the Government as eagerly as they have served the corporation.

But how the old race of "railway kings" would have roared over this order! Imagine JAMES J. HILL suffering eviction from control of his road—his road, which he took over when it was the St. Paul-Pacific, with a length of a few hundred miles, and built up till it spanned from St. Paul to the Pacific; his road, over which he used to walk with the surveying parties, and which seemed to him as much his individual property as his hat or his Corots. When President ROOSEVELT dissolved the merger, his protestations almost shook the firmament. If he had lived to see this fatal day, we can imagine him tossing his great head and charging full tilt against the Director General. But we doubt if even he could disturb the equanimity of the boldest man who has appeared in American public life in many years. And we question whether, if the roads are well managed and the returns are large, either the public or the stockholders will long lament the able individuals who have been so summarily disposed of by the unsparing hand of Mr. McADOO.

As to the future of the roads, whether they will be returned to the stockholders or kept by the Government, and if returned what their condition is likely to be, that is a matter upon which the public can only conjecture while watching the inception of an economic adventure audacious even in these days of bewildering changes.

## After Twelve Years

BACK in 1906 that same JAMES J. HILL, who knew, said that one thousand million dollars a year for five years would hardly be enough to keep the railways up to their job. Nothing like that has been so spent since, and the experience of last winter proved the need. So now Mr. McADOO's Railroad Administration has approved plans for putting \$937,961,318 into this year's "additions, extensions, improvements, and equipment." That does not mean new tracks, but it does mean better vehicles and harness for the steam horse. Financially, it means Government aid, and, whether or not as a consequence, up go freight and passenger rates. Politically it means a storm of protest sooner or later from the narrow-gauge, single-track State commissions. The average citizen should approve, because supplies will flow faster to our allies and our armies, and the American home will have a better chance of getting some coal in the bin for next winter. The practical problem is this: How will the railways get the fuel, the iron, and the men for this betterment work? That will have to be sweated out this summer, and in doing it we shall learn the toil of trying to catch up with JIM HILL after twelve years' delay. In passing, it seems odd that Mr. McADOO did not take this occasion to give the railways the use of the four thousand trained engineers and of the millions of money now being wasted in that red-tape "valuation" of railway property. Conditions are changing so fast that the valuation will be perfectly useless in comparison with its cost. But the National Government is learning the railway business, and that knowledge is everlastingly worth while.

## Picks and Shovels and Gondolas

NOW that we are beginning to get our stride in turning out ships and airplanes and guns, it is time to remember that the very pulse of all this war work is coal. Every riveted seam, every humming motor, every dully gleaming gun barrel is the working ghost of so much coal. We ran short last winter even though our war manufactures were not in full swing. There is no comfort for the wise nowadays in comparing present coal output with that of last year or the year before. Almost every dollar that Congress appropriates for the army and navy means burning more coal. These gigantic war programs for which we cheerfully pay taxes and buy bonds are really plans for gouging deeper into the coal seams. Behind the man behind the gun is the quota of anthracite and bituminous that keeps him going. This is a war of mechanical power as well as of brains, and practically all our modern mechanical power gets its vim from the bottled sunlight that sparkles in the black diamonds. The gulch mines of Pennsylvania, the prairie diggings of Illinois, the hill pockets of West Virginia—every place we have that can put out coal—is on the firing line to-day. The swarthy lads with the picks and the funny little lamps on their hats—they're in the trenches too. If you want to know what our national strength will be next winter, watch the figures as to coal output. If you can raise it, that's your clear duty.

## Why Not?

WE note in the local paper that a War Savings Metal Market is now open in our town and that all sorts of jewelry, etc., can be turned into fighting stamps. Gold and silver are on the firing line these days, getting supplies over to our soldiers. The same paper shows a column of lost articles, mostly having some precious metal in them. These are no times to be flourishing mesh bags and other vanities—why not enlist such items in UNCLE SAM's war finances? Your jewelry will be safer then; so will you and so will your country.

## Committees, etc.

WE find it hard to get excited over these proposals that Congress set up some sort of a joint committee on the conduct of the war. Such a body, composed of three senators and two representatives, was constituted in December, 1861, and maintained through the Civil War. It is very difficult to find anything more than passing reference to it in the standard histories, or in the biographies of the rough, aggressive, patriotic, and rather crude committee members. ANDREW JOHNSON went from it to become LINCOLN's second vice president. Military writers think that discipline was rather the worse for its investigations. The civilian historians who notice it at all, grateful perhaps for eight massive volumes of "proceedings," argue that the committee did stamp on graft and inefficiency and did get the public needed information. Neither side attributes to the committee any real contribution toward winning the war. The newspapers of our country to-day are vastly better qualified for such publicity campaigns, including the fight on graft and muddling, than any formal investigating body that can be set up at Washington. We doubt very much if the French Chamber of Deputies or the British House of Commons has effectively influenced the actual conduct of the war in the field; much less the main committee of the German Reichstag or the Austrian legislators. The fact is that war is a responsible executive matter, an "operating job," as railroaders say, and that the legislative branch can serve best by bringing popular support to the tested leaders of the nation's fight. From this angle one can see the importance of the Overman Act, which gives the President power to line up the governmental departments as he thinks the need is. It is the greatest trust ever committed to an American executive and also the heaviest responsibility ever imposed on one. The underlying idea is, to our notion, sound. The President can now cut red tape and shift men almost as he sees fit, but he must get results. If Congress wishes, it can go farther along this line: can give the country a real budget system for planning war expenditures, a sound revenue system to replace the present hodgepodge, and clear the way for having our war work done with all possible scientific skill. Nobody cares much nowadays for investigations, post-mortems, and like luxuries. What we are after is victory.

## And the Merchant Seamen

"WHEN Germany first threatened Britain with the submarine blockade," writes an Englishman, "she supposed that a few months would serve to bring the latter country to her knees—but she forgot the British seaman." Britain is still unconquered; her ships move in and out; if a ship goes down, the brothers of the men in sail or steam who sink with her still carry on the business of the seven seas. A hundred merchant ships a day pass Dover's narrow gateway. Over 8,000 British seamen have gone down since the beginning of this war; half as many are prisoners—but Britain is still HENLEY's "Mother of Ships." CURZON of Kedleston declares that 13,000,000 human beings have been moved in British ships since August, 1914, out of whom only 3,500 have been lost; 2,000,000 horses and mules and 500,000 vehicles; 25,000,000 tons of explosives and supplies; 51,000,000 tons of oil and fuel for the fleets and armies. The daily cargo of supplies conveyed to France amounts to 30,000 tons, and the daily passenger list is 7,000 persons, and 570 steamers are kept busy with the moving of these passengers and their freight. It is good to know that Britain not only has such loyal sons as the sailors who make these things possible, but is giving them a recognition more complete than they have formerly had. In future, officers and men of the merchant service will cast their votes by proxy—and this political recognition is accompanied by such other advantages as the institution of a standard service uniform, and of better and safer quarters for crews of standard ships. The story of Britain's mercantile marine, 1914-18, is, as the New York "Evening Post" puts it, "an epic of human accomplishment." Not only their fellow countrymen, but all their allies, are proud of the Britons who have insured the provisioning of Great Britain and Ireland during the war, and also the immunity of the French coast and the French colonies from attack, and, indeed, the carrying on of the war. It is an epic that is not yet concluded. What one can write to-day is that the spirit of the British seaman remains as indomitable as ever it was; and he is worthy of the reenforcement he is receiving, thanks to the American navy that we are always proud of, and the American merchant fleet that we are now seeing increasingly and worthily recruited. Who shall say which has most of poetry—heroism on land, or at sea, or in the air? The merchant seaman has never pondered this weighty question: but he carries on!

## Lapsing Into the Truth

"NOT by the gain or loss of ground will the war be decided. It will end with the annihilation of the enemy's armed might." Why should we bother to reprint a statement so widely understood? Well, this time it appears in the Berlin "Lokal Anzeiger." And it is heartening to read one German statement which precisely expresses the basis upon which we Allies will fight out the war.

## Officers

IT is pleasant to read how the men in our new army believe in and stand up for their officers, whether of militia, West Point, or reserve training camp origin. Very pleasant indeed—and then one sees some of these upper-class uniformed photographs now so plentiful in all good photographers' windows and rather wonders! An observant friend remarks that many of them seem as if they were afraid some fellow was not going to salute as he should. No doubt some of these youngsters were prominent recently in their college fraternity circles, and have not quite gotten over it as yet. Time and the job are a great cure for all such human frailty. No young fellow ever kept much of a foolish streak after having the lives of other men on his hands in time of peril—men with whom he shares mud and toil, danger and utter weariness. Unless an army is based on masses of dense ignorance, as in Russia, or built on a savage superstition of caste such as the Kaiser cherishes, it inevitably tends to become democratic. In the front lines the tailored grace of a uniform is no longer fundamental, and those who hold authority have to meet its ancient challenge: that of ability to surpass in doing the things that everyone does. Our officers will meet that test. Glance at their photographs of a few months hence and you will see. KIPLING got it all into two lines of verse: "The look of men that ha' brothered men by more than the easy breath, The eyes of men that ha' read wi' men in the open books of death."

## Anastasia

THE American censorship, operative on both sides of the Atlantic, has been criticized more or less. In view of our native tradition, it would be strange if it hadn't been. What surprises one is not the fact that the Public Informers at Washington and the gentlemen who study news cables and the officers of the Intelligence Section in Paris and at American Headquarters "over there" are more or less unpopular with newspaper correspondents, but the ease and the seriousness with which our newly anointed ministers of public opinion slip into their swivel chairs and their new habits of mind. No one would realize that, until less than a year ago, Americans thought of "censors" (and especially censorship of "tendencies" and opinions) as peculiar to melodramas about Russia, and to muckraking articles about Germany and her "Reptile Press." How fluid we are, after all! We take the censorship idea for granted now; we find it reasonable enough that large sums should be at the disposal of a Committee on Public Information for purposes of "propaganda" in America and abroad, in countries enemy and Allied and neutral. France, in accepting the censorship, has been far less reconciled to it than we seem to be. The French censorship which, under CLEMENCEAU, purports to be nonpolitical, is constantly the subject of gibes from the unregenerate. The French personify the censorship as a virulent old maid armed with large scissors; they have found a fitting name for the old maid: ANASTASIE. The wittiest of French newspapers, the Paris "Œuvre," has even formed the habit of reprinting, whenever a considerable number of lines are deleted from one of its articles, a black-bordered extract from the works of ANATOLE FRANCE:

*Silence and ignorance are from now on the people's only rights! Surely our masters are wonderfully confident of their genius to deprive us thus of light and of counsel.—ANATOLE FRANCE.*

But ANATOLE FRANCE always was a sarcastic old intellectual, and something of a liberal too; probably he isn't duly awed by that female, ANASTASIE—even when she wears uniform, and talks big bow-wow talk about saving civilization by blowing out the gas.

## Unofficial Honors

LIBERTY LOAN, Red Cross, Y. M. C. A. campaigns, one big war drive after another, each with its heroic speechmakers and full-dress parades, have made the Croix de Guerre as familiar as a Ford car! The small boy next door looks down on anyone who fails to differentiate between our own Medal of Honor and the Victoria Cross; he knows all about the D. S. C. and the D. S. M. But there are other decorations than these: unofficial, democratic decorations to which we are not yet accustomed; decorations which do not figure in press dispatches, pictures of which never appear in the Sunday papers or draw cheers at the movies; decorations of which the heroes themselves as yet know nothing. Not gold, or silver, or bronze, these decorations, but words written on the backs of letters, envelopes, on scraps of white or brown paper picked up in a trench or dugout, written with pen or pencil; decorations which cannot be worn on parade, yet will be passed from generation to generation as jealously as any badge of honor.

There is no lining up of battalions to witness their award, no kiss or formal handclasp for the winner—but these decorations are coming to the mothers of our boys; coming quietly, modestly—just a bit of unfamiliar handwriting tucked in somewhere in that letter from France.

"Dear Madam," so one reads, "it might please you to know that your son is one of my best and most dependable men," and signed "His Platoon Commander."

Another—and this is an actual copy: "May I tell you that your son is indispensable to me, that without him our work could not go on so well; he is always cheery and ready. Madam, I love your boy."

They come from where, from whom, these unofficial honors? Straight from the front lines, slipped in by some busy officer of your boy's command, an officer who, in spite of a thousand other duties, finds time to act as censor, but is something more than any censor in the ordinary meaning of the word; an officer who has watched your boy day after day, and worked with him through danger and—worse than danger!—drudgery.

# LET 'ER BUCK!

BY WILLIAM SLAVENS McNUTT

A CHARGING column of frightened horses broke down a section of fence and came plunging across the road toward the ranch house. With the foreman of the ranch, I stepped up on to the porch for safety and watched the runaway band go thundering by. Snorting and neighing, they scrambled up the steep hill back of the house and disappeared in the dense woods. Two cowboys, wearing sombreros, chaps, high-heeled boots, and with brilliant-colored handkerchiefs knotted about their necks, hurried from behind the stable across the way and made for their horses.

"Watch these fellows ride," the ranch foreman said to me. "They're a couple of our top hands."

Watching those two cowboys ride was easy on the eyes. They swung into their saddles with the ease of ordinary men sitting down to breakfast in an accustomed chair, and went rocketing away after the runaway animals. One of them took a narrow winding trail up the hillside through the brush. I found my admiration about evenly divided between rider and horse. The horse scrambled and twisted up that narrow, rough trail as sure-footed as a cat; and the cowboy stayed with him as secure in his seat as a hungry flea at bedrock on a woolly dog's back.

"Top hands," the ranch foreman said proudly. "And mighty fine fellows. You won't find a cleaner pair of gentlemen anywhere!"

What the ranch foreman said was quite true, but he was not a ranch foreman, and the cowboys were not cowboys, and the ranch was not a ranch. The ranch was a part of the great remount depot of Camp Lewis, the National Army cantonment at American Lake, Wash.; the foreman was the officer commanding the remount, and the cowboys were soldiers in the service of the United States.

## Regular Rookies

THE remount depot at a cantonment is simply the horse camp where the animals called for service are received and trained for their military duties.

At the remount the incoming horses are greeted with the equine equivalent of the "shot in the arm" that welcomes the rookie into camp; only, instead of getting the needle for protection against small-pox et al., Dobbin gets his little squirt of goozelum to insure him against glanders. When our friend, the horse, arrives in camp, he is immediately examined and assigned to one of a number of detention corrals, according to the state of his health. If he has a particularly bad case of the blues, or a sniffly nose, or any of the forms of pazooski that afflict a horse, he gets a trip to the hospital. It's a real hospital with smells and operating tables and doctors all dressed up in white clothes, with knives and serious expressions. I watched one poor gee-gee get cut apart and sewed together again for appendicitis, or grand larceny, or whatever it was that ailed him. The doctors kidded him on to the operating table. The table, operated by machinery, was stood up

Photographs from Union Pacific Railway Press Bureau

on edge to make the horse believe it was a nice, ordinary barn wall and good to lean on. When the poor nag leaned on it, they locked him to the camouflage wall with straps around his legs and neck, and then turned the table top back to a horizontal position again. Of course the nag went with the table, and there he was, all laid out on his side for burial or convalescence, whichever he might be fit for when the vets got through trying out their knives on him. A horse can't talk like a human being, but he can groan and whine like one. I stood at that poor nag's head while they worked on him, and all I had to do was to shut my eyes to believe that a man in pain

One man was keeping two loops going at once, and the fence top was lined with a cheering, jeering crowd

was lying at my side. And the great shuddering sigh of relief when they had finished with him and let him up! He was a little shy on articulation, that horse, but he was a regular four-legged Warfield when it came to expression. He couldn't say anything, but you knew what he meant all right!

## The First Battle

BUT the brones and all the rest of the gee-gees are in the hands of their friends at Camp Lewis. The camp draws from all the range country of the West, with the exception of Arizona, New Mexico, and Colorado, whose men report at Camp Funston, Kansas, or Camp Travis, Texas. There are accommodations for fifteen thousand horses and mules at Camp Lewis. The muster rolls of some of the companies sound like a list of the champion riders and ropers of the West. A mean brone that's never been ridden and doesn't ever intend to be is out of luck at Camp Lewis. He goes into one of the six bull pens stepping high and haughty, snorting information to the wide world that no bow-legged, cow-punching imitation of an animated pretzel in boots and spurs is going to fork him and live to die in bed! A solemn-looking cowboy goes into the pen with him. The bull pen is like a paper drinking cup in shape. It is thirty feet in diameter; it has board walls set at such an outward angle that there is little danger of the rider's legs being crushed during the battle, for a battle it is. Those circular board walls are about eighteen or twenty feet high, and there are hoof marks mighty close to the top of some of them. The cowboy and the brone stay in the pen alone for the length of time determined by the orneriness of the brone; but when they come out Mr. Horse is stepping meek and low and gingerly, like a deacon in a foreign chicken yard, and if a man had advertised him for sale as being fit for women and children to play with, he could not be sued for making a false statement!

It is a vital work these men of the rope and saddle are doing, the work of taming and training thousands of horses for the officers and the artillery, and mules for transport. Captain Jackson, commanding at the remount, explained to me how important the work is. He is a ranch owner from Williston, N. Dak., who volunteered for service the day after war was declared.

"It takes a long time and a lot of money to make a good officer—a colonel, we'll say—but one twist of an ornery brone's back may put him out of business. We can't afford to have any officers put out of business just now; we need 'em too bad. It's our business out here to see to it that the officers' mounts are trained so's they don't tend to any of Berlin's business. We always advise an officer to let us pick his mount for him, and if he does, we guarantee to give him a horse that'll behave. So far as I know, there hasn't been an officer thrown in this camp yet. That's a record to be proud of, isn't it?"

A few days later I met Captain Jackson, sitting on his horse in a downpour of rain, watching a division review. He was accompanied by Sergeant Richardson, who sold

# How Soon Will Premiums Be Paid for Hudson Super-Sixes?

Soon, it Seems, People Will Pay Extra Prices to  
Get the Car of their Choice

It is not a new condition for people to pay premiums for prompt deliveries of Hudsons.

There have been many times when that situation has obtained.

It bids fair to be repeated again—soon.

This time the reason lies in the growing demand for cars of proved quality.

That demand grows.

More and more people can buy cars than ever before could afford them. But the supply grows less. Realizing the situation, still other thousands desire to get rid of the cars they now own that they may get new proved reliable cars that may be relied upon to serve them through the uncertain times ahead.

They know the growing difficulty of getting efficient automobile repair service. Consequently, they will not hazard their motor car needs by retaining a car that is dependent upon constant mechanical supervision.

So they, too, turn to the Super-Six.

They, having owned and used motor cars for several years, know what the Super-Six may be relied upon to do.

They watched the way it made its reputation on the speedway, in road races, in a double transcontinental race against time and in the most famous hill climb to the highest altitude to which a motor car was ever driven against time. They know the Super-Six defeated all contenders. And they further know how it has served others who have put it to the most severe tests.

That is why they have chosen the Super-Six.

It is the reason, also, why you too can rely upon it.

Strange and wonderful as is the performance record of the Super-Six, still all that has been said for it never seems able to match the final performance of the car. Ask anyone of 50,000 owners.

Production cannot be increased, but demand shows how much motorists desire the Super-Six.

It is a case of the early bird if you will want a Super-Six this year.

**Hudson Motor Car Co., Detroit, Michigan**

(Continued from page 13) from laughin', Joe. "Stop that stuff!" I hollers, "and gimme a hand here. Jeanne, try this bird out in French."

Well, the wife goes to work on him, and they begin a shoulder-waggin' and hand-wavin' tourney. At the end of ten minutes I had enough.

"Come on!" I says. "I didn't ask you to rehearse an act with him. Can he talk or not?"

"Gazink oofus—" begins this here freak, but I grabbed him.

"If you butt in again, I'll strangle you!" I says. "That stuff may get you laughs in that Algeria place you come from, but it's small-time comedy with me! Where is the best restaurant in Paris, for all you know?"

"Ah!" he says, hittin' himself on the head. "It is sooch long times since I have spik the Engleese, I forget him. Excuse, please. I will now talk of you with the most fluent. Madam and monsieur would of the dine, then? Let us then be off!"

"I'm already off of you for life!" I says. "Where's the nearest highest-priced beunery in this burg?"

"I would offer the Café de la Paix," he says. "It is not too far; come!"

With that he runs out to the middle of the street and begins warin' his arms around and yellin' like he's gone nutty. Nobody pays no attention to him except us, until finally he stops one of them there *fiacres*, which is French for a kind of trick carriage they have over here, Joe. It's all open in the back, and you simply loll back in it and look at the world with a "Pretty soft for me, hey?" expression on your face. What had prob'ly at one time been a horse was hitched to the front of this thing and, Joe, you should of seen this here brute! I'll betcha if you had took him to a boneyard and tried to park him there for the night, they would of waved you away with sarcastical sneers. At no time was his head over a inch from the ground, and he remind me of a bloodhound sniffin' for the trail of the desperate escaped murderers, or somethin'. His neck was a long lane without no turnin', and he's featurin' a pair of hips which acted like a windshield by stickin' away up on the sides. I wouldn't think he was a day older than Noah's old man, and when engaged in walkin' he had a trick shuffle that would make Charlie Chaplin take carbolic outa pure envy.

The steersman of this layout is all dressed up in a white high hat and a apron he borrowed from some garage mechanic which never did nothin' but grease cars all day long.

"Pig!" says our guide to the driver. "Prepare now to drive us to that Café de la Paix with the utmost speed and precision. We will enrich you with two francs. Call me but the one improper name and I will have those gendarmes at your heels!"

The driver give a moan and begins waggin' his head from side to side.

"Playmate of dogs!" he says, "I ask ten francs. I—"

"Enough!" butts in the guide. "That, then, is agreed. Two francs shall be the fee, little pig, with perhaps a centime as a bonus—who can tell?"

Well, Joe, we all climbed into this thing, and the driver and our guide keeps bawlin' each other out in French all durin' the trip. Them guys never let go for a minute, and if they only had dumb-bells in their hands, the way they kept wavin' them around, the exercise would of done them a world of good. The guide stands up in the carriage and keeps pourin' it into the driver, which never once durin' the entire ride looked ahead to see where he was goin'. Instead, he sits facin' us and give the guide back as good as he got. What they was sayin', Joe, ain't neither here or there, but it's a cinch they wasn't doin' no love makin'.

We got along that way through all the main boulevards and, Joe, the Paris streets is great sights these days, believe me! Even Coney Island would have to hump itself some to make a showin' alongside of 'em, if you can imagine anything like that. They is officers and privates in the uneyforms of every army in the world, Joe, except the Germans and them boobies which is fightin' on their side. These big Scotch babies walk along with them little trick skirts blowin' around, and the first time I seen 'em I thought

Ziegfeld's chorus had been drafted, on the level! But, Joe, you ought to see them birds scrap! Believe me, they know more about fightin' than the guy that wrote it. They is plenty of U. S. uneyforms in the mobs here, Joe, and all in all I think our uneyform is the trimmest and most business-like-lookin' one of the lot. As far as I am concerned, I know positively that I look better than any of these other mixed soldiers, but then I always kinda stood out, Joe, if you know what I mean.

The main thing, of course, is the dames. They is certainly lots of 'em over here, Joe, and most of 'em could make the front row in the Winter Garden without half tryin'. They walk along, laughin' and smilin', and, Joe, they ain't none of 'em deliberately unfriendly, and that's a cinch! This Calhoun guy kept stretchin' his neck around like it was on ball bearin's all durin' the ride, and all he said was one thing: "Some burg!" Joe, he must of said that eight million times!

By some miracle this here horse lasted out the journey, and finally our delightful trip come to an end. This didn't get me sore, because, Joe, we didn't attract no more attention with that layout than a German flag would of on top of this Ethel Tower. Jeanne went to telephone for her sister, and me and Calhoun went over to get a table outside the Café de la Paix.

Right here, Joe, they was a thing happened which I'm warnin' you now to be careful of when you get over here. Paris right now is full of con men and dips from the U. S. which is preyin' on the soldier boy, far from home and crazy to pal around with anybody that speaks United States. They'll take you out and show you around Paris and touch you for everything but your political belief before they get through with you!

A guy in citizen's clothes rushes up to us whilst we are sittin' at the table and slaps me on the back.

"Well, well, well!" he says, holdin' out his hand. "Of all the guys in the world! Don't you remember me, Jack?"

"No!" I says.

"Why, you come from Peoria, didn't you?" he asks me. "Ain't you Jack Layton?"

"No!" I says.

He shakes his head.

"Well, well, well!" he says. "You and Jack Layton ought to certainly meet! I never seen two guys so much alike. I could of sworn you was him!" He bends over the table. "Seein' Paris, eh?" he says and winks. "Wanna go where you can have a

and J. P. Morgan's right-hand man. He'll prob'ly send me fifty thousand or so the minute he gets around to it. I ain't got a nickel right now. Could you loan me fifty bucks till I get it?"

"No!" I says.

"What?" he hollers. "You'd leave a guy from your own country flat in a strange land?"

"Yes!" I says. "Listen! You ain't broke—they's too many suckers here for that. You never seen Iowa; you're a New York con man. The only cable you expect is one from the New York police askin' the Paris cops to start you back to dear old Sing Sing again. If I see you botherin' any more of the boys here, I'll beat you up first and then have you pinched! Now, on your way—get me?"

"All right, pal," he says. "My mistake!"

He starts away, and a waiter nails him with a check. Joe, you ought to of seen the roll this guy pulled out to pay it with. It must of took weeks for him to print it!

"How did you-all know that scorpion was a New York crook?" says Calhoun. "I thought he was sure enough broke, and would have give him ten anyways."

"I didn't!" I says. "But they's many a worse guesser than me! If all them guys whose fathers is J. P. Morgan's right-hand men was tellin' the truth, Morgan wouldn't be able to get into his office in the mornin's—they wouldn't be no room!"

So you wanna be careful when you get over here, Joe, and hang onto your dough. That's if you got any. You'll no doubt lose yours on the way over, bettin' how many waves they is in the ocean or somethin'—not meanin' no reflections on you as a boob or nothin', Joe.

Yours truly,

Serg't Ed HARMON. (How is the Giants makin' out, Joe?)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I have a lot of things to tell you, includin' bein' up in an areyoplane and gettin' recommended for a commission on account of it. I guess, however, I'll start in where I left off in my last, because I know you have been prob'ly no doubt stayin' up all night to get a letter tellin' of the finish of that trip to Paris—hey, Joe? Where did I leave off? Oh, yes—we was at the Café de la Paix gettin' ready for the eats. Well, Joe, Jeanne come back with her sister Marie, and, Joe, I'm sorry I could not of saved this one for you! Believe me, she is some doll, and the minute she sit at our table they was a epidemic of twisted necks took place. You know, Joe, these here French dames

knows more about dressin' than Columbus did about real estate, and you can imagine what a commotion two knockouts like Marie and Jeanne caused, by bein' at the same table with me and Calhoun. Joe, they must of been a hundred doughboys tried to get acquainted with me in the next five minutes. I leave it to you whether they did or not. Don't get the idea, Joe, that this here Marie has got anything on Jeanne when it comes to bein' a good-looker. Why, Joe, Jeanne would make Venus look like a washwoman after a tough day at the tubs!

Well, Calhoun is anxious to show off in front of Marie, which he had fell for so hard he like to broke his neck, so he claims he'll order the dinner. The menu is all in French, and Calhoun studies it long enough to have recited it blindfolded, if only he had an idea of what he was readin'. Finally he says: "Well, let's start off with a bottle of nice, cold eau, anyways."

"A bottle of O what?" I says.

"Eau is water, you bone-head!" says Calhoun. He turns to the waiter, "C'mon now!" he says, waggin' his shoulders and wavin' his hands like he seen the French guys do. "Look—

see—Aha!—one bottle of eau!"

The waiter looks stupider than usual, and turns to the girls, shakin' his shoulders. This here seems to get Calhoun's goat.

"Eau, eau!" he hollers. "Eau, eau, eau, eau, eau, eau, eau!" till he gets red in the face.

Everybody sittin' around is lookin' at us, and I thought the girls and me would die of the hystericals. Up comes the manager. (Continued on page 20)

"I will try to die as bravely as I know you would"

real time?" Joe, he laughs, but his eyes didn't. Did you ever meet up with a guy that you wanted to bust in the nose right away for luck? This bird was that!

"No!" I says.

He tried his luck again.

"Listen!" he says. "I come from Iowa, and I'm busted here for the time bein'. I expect a cable from my wealthy father which is a rich millionaire

UMC**

## Official Government Honors Now Offered .22-Rifle Shooters

**THE** National Rifle Association has just officially announced the new *Small-Bore Course for outdoor shooting with the .22 caliber rifle.*

The new Small-Bore Course is open to every civilian American of 16 years of age or older, and those who qualify as marksmen, Sharpshooters or Experts will be awarded the same high official decorations as the crack shots of the United States Military Rifle.

**WHEN** you first got your .22 rifle, you probably found a good bit of fun in just shooting at any chance you get—a bit of paper stuck up on a tree, an old bottle, or a tin can on the roadside. But that kind of shooting soon loses interest.

Yet every man who shoots a rifle will tell you that rifle shooting under *right conditions* has all the outdoor "sports" attached for interest as well as practical value.

**RIGHT CONDITIONS!** There is nothing that trained riflemen abominate more than careless or trivial popping around at any old mark—nothing that is done more to give people the feeling that rifle shooting is dangerous.

Under right conditions, rifle shooting is safer than baseball, football, swim-

ming or doing stunts in the barn. It is more to the point—a more valuable training of eye, nerve and hand.

And now this official offer of the highest honors for rifle shooting has made .22 rifle shooting more worth while than ever!

**Remington  
UMC  
for Shooting Right**

**NOW** for the practical questions—*How to do it?* and, *What will it cost?*

First, a group of ten or more should get together and appoint one of their number to write to the *National Rifle Association, Woodward Building, Washington, D. C.*, for directions how to form a rifle club that can affiliate with the N. R. A.

Or, let him write to us, and we will send him a copy of our book, "How to Start Your Rifle Club" (new edition, revised and enlarged, including full instructions on the new Small-Bore Course). Then organize your Club, lay out your range and start shooting.

The range is a very simple matter—

merely a strip of idle land somewhere that gives the maximum range of 150 yards, with an earthy hill or bank at the target end to stop the bullets.

**THE** all-important thing is that your shooting shall be *right*.

As to your Rifle and Ammunition—you can shoot the Small-Bore Course with *any* .22 rifle, *any* make of cartridges.

Your own matured judgment will unmistakably lead you to Remington UMC—the *modern arms and ammunition*, approved and adopted by the greatest body of seasoned shooters in the world today—

**The .22 Caliber Slide Acting Repeaters**—The most popular series of repeating rifles in this caliber ever produced.

The No. 12 N. R. A.—Fitted with sling and special sights; produced expressly for the most exacting target shooting.

The Autoloading .22—The finest practical application of the autoloading principle to the .22 caliber.

The No. 4 Single Shot .22—Light in weight, beautifully balanced, made and finished in every way up to the requirements of shooting the Small-Bore Course.

The No. 6 Single Shot .22—Even smaller and lighter than the No. 4 Rifle.

**.22 Caliber Cartridges**—Remington UMC—Used by the millions for target and small-game shooting; made in Short, Long and Long Rifle sizes; and the .22 Remington Autoloading Cartridges, for the .22 Autoloading Rifle.

Any one of Eighty Thousand dealers will show you the Remington UMC Arms and Ammunition. You will know him by the **Red Ball Mark of Remington UMC** in his store—the Sign of Sportsmen's Headquarters in every town.

**The Remington Arms Union Metallic Cartridge Co., Inc.**

*Largest Manufacturers of Firearms and Ammunition in the World*

**Woolworth Building, New York**

**REMINGTON UMC, LTD., OF CANADA, WINDSOR, ONTARIO**

"Monsieur has then the pain?" he says. "Otherwise why should he make the shouting of Oh, oh, oh?"

Calhoun is game. "Look yere!" he whispers to Jeanne. "How do you-all ordah soup, chops, and salad in French? Ah don't like for your sistah to think I'm a boob!"

Jeanne turns that million-dollar smile on him. "Oni, oni!" she says, noddin' her head. "You must then say: *Potage, une côtelette avec de la salade.*"

"What's that again?" says Calhoun, pushin' back his chair.

Jeanne repeats the thing. "Oh, boy!" says Calhoun. "Ah nevah could say that in a million years—let's let it go at ham and eggs!"

"One minute!" I says. "The way I understand it, we come here to eat. Let Jeanne order the meal, and I'll pay for it. Anything she orders is good enough for me!"

Joe, you oughta see the smile she gimme. I didn't care whether I ever eat or not!

Well, we had some feed, Joe. Everything from soup to finger bowls and anything that made a hit we played twice. I wanna tell you right now that the food over here is the finest in the world, except the bread. Joe, that don't go! It's all made by bakers which learned their trade in a blacksmith shop, and it's the same as eatin' pieces of brown sponges, except maybe the sponges is tastier. However, they got a war on here, and you gotta expect some hardships—hey, Joe? Wait till we been in this scuffle a little while longer, Joe, and, believe me, we'll have to give up a lot of things to help win it the same as everybody else! These birds over in the U. S. which is kickin' about payin' an extry income tax, buyin' Liberty Bonds, helpin' the Red Cross, and so forth, don't know what's comin'! Joe, believe me, the dear old *Etat Unis* don't really know it's in the war yet. Compared to everybody else, we're gettin' outa this soft—we ain't had to do nothin'! And, Joe, where does them guys which is watchin' the thing from the wrong side of the ocean get off to kick about coughin' up? Look what us doughboys is proud and willin' to give, eh?

WELL, we had some feed, Joe. Everything from soup to finger bowls and the Rue de la Paix when they is a terrible explosion. People stops dead and looks at each other, but they is no excitement. Then a lot of whistles begin to blow, and it remind me of New Year's Eve on Broadway. A lot of French cops comes ridin' around on bicycles, tellin' everybody to duck inside the doors. Jeanne and Marie gets a little pale, and I thought this here trick guide of ours was gonna pass right away then and there. He was the only one in all that mob of people that looked really scared—and he wasn't French! "What's the idea?" I hollers, shakin' him. "What's comin' off?"

"Ah, monsieur!" he chatters. "Flee, I of the beseech you! It is the air raid—the *boches*—we will of the certainty be kill'! We—"

"Shut up, you little tramp!" I yella. "D'ye want them Germans to get the idea they're scarin' somebody? They ain't no boches livin' can kill me—they's a lot of them tried it! They—"

Joe, just then they is another explosion, a little louder than the first, if that's possible. I heard that noise before a lot of times out at the front, and I knowed what it was. It was a shell, Joe, and from the sound it must of been a lulu!

Well, I can't figure the thing out, Joe. I know they ain't no Germans close enough to Paris to bombard it, and at the same time we don't see no areyoplanes, but whilst I'm tryin' to dope it—Zamm! off goes another one! With that the guide beats it, and from the way he was travelin' he must of made that Algeria place the first hour!

Well, Joe, the shellin' kept up for quite a while, and about every fifteen minutes one of them babies bust, in or around Paris. We heard afterward it was a sure enough German cannon that was doin' the shootin', although they is plenty of guys, includin' myself, that would like to see that gun first before bettin' on it! Them big yella stiffs killed some women and kids again, which is their specialty, but they didn't scare nobody in Paris as far as I could see except that there guide. Anyhow, Joe, you can see the Kaiser never expects to reach Paris with no army, or he wouldn't have rigged up a gun which could throw a shell as far as that—hey, Joe? Them guys better get

to work on a cannon that'll shoot about three million miles, because when we get through with them they'll be that far away from France!

Joe, we took Jeanne and Marie home and seen they was fixed up so's they'd be fairly safe from them rotten hounds who's motto is "Women and children first!" only meanin' it the wrong way! I couldn't get Jeanne to come back with me, because she wouldn't leave her sister alone whilst this here bombardment was goin' on. I raved and hollered murder, but they was nothin' stirrin'.

"Be not of the afraid," she tells me when I'm leavin' her. "You will be in more of the peril than Jeanne, *mon chéri*. I am French, and I can be verree brave too! If something should happen to me, well—I will try to die as bravely as I know you would out in the trench, of the certainty—but, poof! This *boche*, he cannot frighten Jeanne!"

Joe, them's the kinda people these Germans is tryin' to beat! A fat chance—hey, Joe?

Yours truly,  
Serg't ED HARMON.

(Joe, if them guys hurts Jeanne, just killin' 'em will never satisfy me!)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I forgot to tell you about me bein' up in the areyoplane in my last letter and will do the same in this. It was one of the most excitin' experiences I have had so far and come near bein' the last. I suppose no doubt you have read about it in the papers by this time, but I will now hand you the real inside dope on it, provided the censors is willin'. Them censor guys gets my goat, Joe, because a guy can write a letter home and for all he knows they won't be nothin' but his signature on it by the time it reaches the other side, if it ever does. You can't mention no towns, dates, outfits or the like; in fact, you can't hardly say anything. Joe, them censors would of been tough in the olden days, hey? Take the operas, for instance—why, them guys wouldn't of let William Tell. That there's a joke, Joe, I have just found out after I wrote it. I discovered it all by myself. You prob'ly won't get it, not that you're no thicker than the average, Joe, but you better repeat it aloud to somebody and have them show you where the laugh is. Then you let me know and I'll tell you if you got it right.

Well, after I have said good-by to Jeanne that day and also Calhoun, whose leave was up before mine and has got to get right back, who do I meet on the Boulevard de la Madeleine but no less than Slim White! You no doubt remember Slim; he used to be with the Cubs and claimed he was a ball player. Well, Joe, if he was a ball player, then I used to formly be King of Africa, but that's neither here or there. Slim enlisted and got in the aviation with them guys of the Lafayette Escalator, and I think I told you some time ago I had met up with him over here. He got to be quite a aviator and brung down two German flyers or two hundred, whichever you wanna believe, me or Slim. Well, Joe, I bump into him, and he asks me where I'm goin'. I says eventually Berlin, but right now back to this here French burg where we are holdin' the line.

"C'mon back with me," says Slim. "I gotta get away from here in a hour, and I'll take you back in my plane."

"Ha, ha!" I says. "Don't make me laugh! I wouldn't get in one of them areyoplanes for a cut of the Liberty Loan!"

"You big boob!" he says. "I'm offerin' you the chance of a lifetime. They is guys would give millions for the experience!"

"All right!" I says. "Go get 'em! I don't want you to lose no money on my account!"

"Well, you big stiff," he says, "here I am offerin' you a chance to do somethin' you never done yet, and you throw me down!"

"I ain't never crossed the Rocky Mountains on roller skates yet either," I says, "but that don't say I wanna do it!"

"I see you're still yella!" he says. "So long."

"If I was yella, I wouldn't be here!" I hollers, losin' all control. "Bring on your areyoplane; I'll go anywhere you will!"

Well, Joe, them words come near bein' my downfall, and a thing like that in an areyoplane ain't no joke! We go out to the field where Slim's got the machine stored, and they was a lot of guys flyin' around in the air,

doin' fancy stunts and the like. Joe, they was sailin' along so nice and easy it looked like anybody could do it and why not, but looks in this case is certainly deceivin'. I'll tell the world fair! A lot of mechanics brung out Slim's machine, which contains two seats among other things, and they is a machine gun mounted on one of 'em. They started up the motor and—oh, lady! Joe, I been in ample battles over here, but I, you, or nobody else ain't ever heard no noise like this baby made. I once had a second-hand auto, and when you started it in first speed it used to send everybody runnin' to cover from the noise, thinkin', well, here's another earthquake; but this areyoplane motor would of made that quit like a dog, Joe!

"Get in the seat where the gun is!" yells Slim after I have been give four coats, a football headpiece, and goggles to put on.

Joe, I give a look up at the sky and listened to that there motor for a minute. "I'll tell you, Slim," I says, "I think I better go up next Friday, hey?"

"Get in, yella!" he bawls.

I got in, Joe.

WELL, we start to roll along over the ground with a lot of guys holdin' on the back, and pretty soon they let go and we started up in the air. We kept on doin' that, and, Joe, I felt I was closer to heaven than I ever had been before in my life, in more ways than one. I took a look down over the side and—oh, boy! Joe, people looked like gnats and buildin's was cubes of sugar! They was a gauge on this thing which claimed we was goin' ninety miles an hour, and, believe me, Joe, I was wishin' we wouldn't do no skiddin' or have no blow-outs! Pretty soon the needle on the gauge moves up to 100, and I begin to look around for motorcycle cops, till I remembered that's one cures areyoplanin' is free from.

We shoot along like that until we finally get right over our lines, and I happened to look up and see another areyoplane comin' toward us.

"Look, Slim!" I hollers in his ear. "We got company!"

He twists around and looks, Joe, and then he gets as pale as a ghost. We swung around in a circle and started to climb up until I figured Slim was gonna drop in on St. Peter for a friendly call. This other areyoplane starts up after us, and believe me it's travelin' some! It got closer and closer every minute. "Can you handle that machine gun?" hollers Slim.

"Yeh!" I hollers back. "But I thought this was a pleasure trip and—"

"Shut up!" bawls Slim. "Provided you wanna live out the day! I'm gonna climb up over this guy and when I tell you to shoot, you start workin' that gun! It's the only chance we got. That bird is a German, and he brung down two of our machines only yesterday. If we get this guy, it may mean a commission; if we don't—well, you and me is all through with livin'!"

Oh, boy! Joe, can you imagine my feelin's? A mile up in the air and in a tight hole like this! I must of eat somethin' for breakfast that didn't set right, Joe, because I sure got sick to my stomach, now believe me! I ain't no hero, Joe. I'm human! I give this machine gun a quick once over and she was workin' great, and then I looked down over the side through the glass and I seen that

everybody on both sides of the lines was watchin' the thing.

Joe, this German guy was some flyer! He twirled and twisted around like a nutty bat or somethin', and once I thought he was gonna drive his machine right into us. If he had, we would of got the worst of it, because his areyoplane was twice as big as ours and had three guys in it. In about one second more they open up with their gun and, Joe, it begins to hail bullets! One of them chipped a slice off our propeller and another cut a stay outa one of the wings. Them things kept singin' all around us and I had a fearful time with myself to keep from turnin' loose with my gun, but I waited for Slim's orders, bein' a soldier.

"Go to it, Slim!" I hollers. "They ain't hit neither of us yet!"

"I don't care if they hit either of us or not!" he hollers back. "I'm hopin' they don't hit the gas tank or the motor—that's all!"

Well, Joe, that's just what happened the next minute! They cut loose again and one of them bullets put a hole in the gas tank, and the motor begin to miss. "Good night!" I says to myself, and then Slim turns around and yells:

"Go on, Ed, turn that baby loose and give them squareheads Hell!"

Joe, I did that thing! They was one guy shootin' at us with a automatic and I got that bird first. Then I devoted all the rest of my time to their motor. Joe, we was in bad shape ourselves, but you ought to of seen Slim drive that areyoplane. I think he must of been holdin' us up with will power instead of horsepower! Them stiffs got Slim in the arm with a lucky shot, and in another second I stopped one with my bum shoulder, but I keep that gun clickin' like a busy typewriter. Both of us is droppin' lower all the time, and it's only a question of who will quit first. Well, Joe, the Germans got enough and decided to call it a day. They start back to their own lines, cuttin' all kinds of crazy circles in the air. I must of got them in the motor, because they started to coast down with us right on their tail. Then, Joe, they swung around all of a sudden and tried to climb up. I had a thing as big as the side of a barn to shoot at for a second, and I give them all I had in stock. Joe, that German areyoplane crumbled up like paper and dropped to the ground, with flames shootin' out of it like a skyrocket!

I don't know how we ever made a landin', but we got down all right behind our lines, and about a million guys come runnin' over to us, cheerin' and throwin' up their hats. Even the officers was excited, which is unusual. Slim had to be lifted out, because he had gone to work and fainted, but I was all O. K. except for a trifle skin scraped off my shoulder. Our captain comes runnin' up and shakes my hand.

"Harmon," he says, "you are positively a wonder! I never know what you'll do next. I'm going to recommend you for a commission this very day!"

"Thanks!" I says. "Say, captain, I think New York has got it on Paris eighty ways. I met a guy there that never heard tell of the Polo Grounds—ain't that rich?"

Yours truly, ED HARMON.

(They ain't no use for me to sign "Sergeant," Joe, because for all I know I'm a admiral by now, hey?)

(To be continued in an early issue)

## Why Are We at Peace with Bulgaria?

Continued from page 1

covert threat to this effect was constantly held over Russia.

It sounds very crude and ineffacious when thus epitomized; but as practiced by Ferdinand it proved anything but futile, and earned for him a deservedly high place in the annals of the old diplomacy.

When the Balkan nations actually united against the Turks, in 1911, it was a great blow both to Russia and to the Central Powers. Their faith in the venality of human nature, upon which they staked their all, received a rude shock. Yet they adhered to their old methods, and when the Turks were beaten, the Triple Alliance invented the kingdom of Albania to checkmate Serbia and to block her from the sea. Then, by backing Ferdinand and promising him military support, they induced him to attack Serbia and Greece.

Both Austria and Bulgaria expected that the Bulgarian armies would go through those of Serbia and Greece "like a knife through cheese," and it

came as a bitter surprise to both when the cheese proved tougher than the knife. By playing the traitor to her allies, Bulgaria not only broke up the Balkan confederation—which is and must be the safeguard of the peninsula—but lost territory both to her ex-allies and to the Turks.

It is an open secret that, after the Second Balkan War, Bulgaria, in her intense desire to be revenged on Serbia and Greece, made a treaty of alliance with Turkey, Germany's vassal.

This brief historical sketch is given to show the position Bulgaria occupies in the Balkans, and why it was inevitable that she should side with the Central Powers at the outset of the war. Serbia, whose lands she coveted, was with the Entente. And Greece whose lands she also coveted, was at that time completely in accord with her prime minister, Mr. Venizelos, who at ways was the most ardent of Ententists.

France at once reasoned that this must be the case. Unfortunately in

THE flower boxes in the windows of many of our buildings are only outward and visible symbols of the freshness and cleanliness that prevail within the kitchens and throughout all the Heinz establishments.

# HEINZ Vinegars

In bottles filled and sealed in the Heinz establishment

IT is difficult to describe a flavor. That is why we cannot express in words the appetizing taste that Heinz Vinegars give to foods. And that is the purpose of vinegar—to impart a flavor—not simply a sourness. All of the care taken in selecting materials, the skill in preparation, the aging and the bottling of Heinz Vinegars are for the purpose of creating and retaining that rich, mellow tang which has made Heinz Vinegars worthy of a place among the 57. These vinegars, which have made so many of our own foods so desirable, are offered you, so that you can put something of the Heinz flavor into the food you prepare.

Three kinds: Malt, White, Cider, in pints, quarts and half-gallons

Name .....

Address .....

England, as in America, there exists a curious state of mind in regard to Bulgaria, owing to the assiduous propaganda which she has carried on for so many years. Because of this state of mind England temporized with Bulgaria, and at the outset of the war we lost the one great chance of striking a vital blow at Germany in the Balkans, and shortening the war by many months. To-day we are again—this time in America—the victims of Bulgarian cunning.

Kaiser Wilhelm told King Constantine that the reason he had arranged to send exchange professors to America was because he wished to give his best psychologists a chance to study the American people. And the conclusions they reported to him were that we were "dominated by limitless sentimentality and boundless vanity."

We have other traits which perhaps they did not notice. Of the two they did discover let us modestly admit a fair proportion; and it is on these two that the Bulgarians have consistently played for the last thirty years, both in England and in America. The result is that we have an idea of the Bulgarian as a sort of woolly lamb, unfortunately garbed as a wolf, who only needs proper guidance—our guidance—to make him shed his wolf's clothing and appear in all his fleecy whiteness.

There are those in America to-day who believe that, if we only refrain from declaring war on Bulgaria, she will be induced to make a separate peace, and even to come out on our side.

What possible reason is there for such a hope? There is not a small ally of the Entente within the fighting zone which is not suffering grievously. Why should Bulgaria elect to become another victim?

As the ally of Germany she is successful. She has accomplished all her immediate territorial desires. She is mistress of Serbia, of three of the richest provinces of Greece, and of part of Rumania. And she believes that she can keep on playing America, as she so successfully played England, so long as America is useful to her.

Even to-day there is an earnest Bulgaphile party in England, headed by the pacifist Noel Buxton, who furnishes us with the ludicrous spectacle of an Englishman rising in the House of Commons and pleading that Bulgaria "must not come out of this war with a grievance." That is to say, Serbia, England's ally, who has given her life's blood and all in this war, is to cede vast tracts of her territory to the nation that is killing Englishmen (and American Red Cross men) in Macedonia, lest the latter should have a "grievance" against England! Why not as well maintain that Germany must come out of the war with all her desires satisfied, lest she should feel unkindly toward the nations that are fighting her?

#### Roberts College

WE Americans have an American college in Constantinople of which we are immensely proud. Roberts College is patronized by Greeks, Bulgarians, and Armenians, with a scattering of other nationalities.

The Greeks look upon it as an institution of learning where they can obtain a knowledge of English at a less cost than by going to England.

The Bulgarians regard it in quite another light. To them it is their chief and cheapest means of propaganda in the United States. They not only encourage well-to-do parents to send their sons there, but they pay the expenses of a number of poor young Bulgarians of ability. When these are graduated they are put into government positions all over Bulgaria, and one of their functions is to watch out for American and English travelers, entertain them, and impress them with Bulgaria's unity of spirit with the Anglo-Saxons, and with her rights in the Balkans.

Anyone who has traveled in far-distant lands knows how gratifying it is to be addressed in one's own language where least one expects it, and Bulgaria's Roberts College graduates have been successful in impressing English-speaking travelers.

The professors of Roberts College are the next targets of Bulgarian propaganda. At different times they are practically all invited to Bulgaria, where they are flattered, feasted, and treated as the spiritual guides of Bulgaria. The climax comes when Czar Ferdinand invites them to the palace

and has an informal talk of an hour or two with them, in which he dilates on the aspirations of Bulgaria, and of how she looks to America for guidance and help.

Unfortunately we democratic people seem to be particularly vulnerable to royal favors. Before the United States entered the war it was said that there was hardly an American who had ever dined with the Kaiser who did not become pro-German in his sympathies. And if any Roberts College professor is not won over to Bulgaria's side after feeling the warm handclasp of Ferdinand, it is because he is entirely lacking in the two characteristics which the Kaiser's psychologists pronounced our dominant traits.

#### Let Us Not Be Fooled

THE crowning play was to have been the visit of the Queen of Bulgaria herself to this country to "study our institutions"—and incidentally to raise enormous sums of money to establish in Bulgaria the same institutions that she would have admired in America. So far as I know, America has never yet been flattered by the visit of a real queen. Unfortunately for the Bulgarian propaganda, the war put a stop to the visit of the royal drummer.

Perhaps the most artful of all Bulgaria's scheming has been done through our missionaries. We maintain a large body of missionaries in the Near East. These missionaries have made no converts among the Serbs and the Greeks because with those two their religion is a part of their nationality. To exchange it for another form seems to them to be betraying the best there is in them, which is the love for their country. Such scruples have less weight with the Bulgarians. They have played the religious game between Austria and Russia for years, and are quite prepared to go the limit with America. In fact, they are intimating that if America will "stand by them"—i. e., if she will let them keep the Serbian and Greek territory they hold—they are prepared as a nation to turn Protestant. And in furtherance of this pretty game, Minister Panaretoff may be seen every Sunday morning in the front pew of a Protestant church in Washington.

Let us hope Bulgaria will not be able to play on an enlightened and disinterested western democracy the tricks she played on autocratic and self-interested Russia and Austria. The case has only to be stated to the American public to defeat itself. Sentimental we may be, and rather childishly vain—as the Kaiser has said; also ignorant of the intricacies of European politics. But we are no fools, and above all else we are not in this war for any scheme of self-aggrandizement.

This vital fact Bulgaria cannot be expected to understand. Steeped in the methods of the old diplomacy, Bulgaria, like Germany, is incapable of believing that we are fighting in any disinterested spirit. If it is not land we want, then it must be business advantage—or spiritual domination.

Even the casual newspaper reader can satisfy himself of the truth concerning the Bulgarian propaganda, by noticing who in this country flies to the defense of Minister Panaretoff and of Bulgaria. So ardent, indeed, are these defenders that they cannot perceive that if Panaretoff is the honorable and loyal man they proclaim him to be, he must of necessity serve the interests of his country—the ally of Germany—and not the interests of the United States, which is at war with the allies of his country.

#### War Gains

I SAID that the case against Bulgaria I had only to be stated to convince the people of America that we should no longer lend ourselves to the machinations of Bulgaria and Germany. But we have been a year in the world war, and still the pro-Bulgarians are strong enough to prevent our declaring war against her.

We are told that if we do so we may lose the missionary property in Bulgaria, years of work, and possibly the lives of many missionaries. This is a terrible price, but sometimes a man or a nation must make a terrible sacrifice for a greater good.

On the other hand, what should we gain by declaring war on Bulgaria?

To begin with, we should hearten Serbia, which sees us, her ally, on friendly terms with the ravishers of her women, the murderers of her children, and the despoilers of her land. Is it a

TRADE **YALE** MARK

## You need "Yale" protection today!—

Your locks and hardware can *prove* their security only when put to the test.

That test may come any minute, day or night, when you are away—the one time when your family *needs* protection.

That is reason enough why you should insist upon "Yale". You know that trade-mark "Yale"; know that the locks and builders' hardware bearing it are chosen first when it is a question of a certain sure safeguard that can be depended upon in season and out of season.

You need "Yale" protection today—to insure protection for the future. And when you go to your hardware dealer, and you should go today, he will show you the Yale lock you need. And he will show you the trade-mark "Yale" on it—it is the guarantee of service and security.

*Yale products include Yale Locks—Night Latches, Padlocks, Door Closes, Builders' Hardware, Cabinet Locks, Grand Locks, Brass Locks and Chime Rings.*

wonder the Serbs stand amazed and disheartened at the sight?

Secondly, we should gain the whole-hearted cooperation of the Greek people, who cannot understand how we can honestly call ourselves their friend and ally, and at the same time the friend of the foe we expect them to fight.

Thirdly, by enlisting the whole-hearted cooperation of the Greek army of half a million men, the Allied army at Saloniki could reconquer Serbia, cut off Bulgaria and Turkey from Germany, and encourage the Jugoslavs of Bosnia, Herzegovina, Dalmatia, and Croatia to rise in rebellion and bring about the disintegration of Austria.

We could thus shorten the war by months, or even years, and thereby save the lives of hundreds of thousands of Americans and their allies.

### Delaying the Blow

GERMANY, through Bulgaria, is desperately playing for time; and every minute we delay our declaration of war against Bulgaria is a valuable minute gained for Germany.

So long as we remain friendly with Bulgaria so long do we abet and foster the German propaganda in Greece—so long do we sap the vitality of the only front which can deal a vital blow at Mitteleuropa's invulnerability.

Germany is afraid of the Macedonian front as she is of none other. On the west both sides can hold out till utter exhaustion sets in—and who can say how long that may be? To carry men and supplies to her Balkan army, however, Germany has only two long single-track railways, and the country is so wild and rough that there is no chance of increasing these means of transportation. The Allies, on the other hand, have the whole sea, and numerous short railways.

Time is the great necessity for the plans of Germany; and Bulgaria meanwhile, in the captured Greek and Serbian provinces, depots and kills Greeks and Serbians—importing Bulgarians in their place—with the expectation that at the final peace conference she can complacently invite America to leave the nationality of the disputed lands to the will of the inhabitants. If this is carried out with Teuton thoroughness, there will no longer be any vexing question of "national aspirations"; for there will only remain Bulgarians to aspire. This must be carried out before the Allies pull themselves together for a decisive blow at Saloniki, and America's friendship for Bulgaria is the most valuable means of delaying the blow.

A few days ago I received a letter from Mr. Politis, the Minister of Foreign Affairs in Greece. He writes:

"The Bulgarians are deceiving those kind Anglo-Saxons by telling them that all they ask is to establish their claims where the Bulgarian population predominates. For this reason they have deported from eastern Macedonia all the Greek population, of which half has already ceased to live, and replaced it by Bulgarians; and, considering now that they can prove their claims, they will ask the President of the United States to send a commission to inquire into the will of the people."

"In Kavala, in 1916, the Greek population was between 45,000 and 50,000 inhabitants. To-day there are only 17,000 Greeks. What has become of them? Perhaps the Bulgars, like Cain, will answer: 'And are we the keepers of the Greeks?'"

### Shorten the War

GERMANY has won her successes by defeating our allies separately, one by one. We can follow these same tactics in the Balkans. We can defeat Bulgaria. Force Turkey to a separate peace. Cut off Germany from the rich wheat fields and oil wells of Rumania. Encourage the Jugoslavs of Austria to revolt.

This is no impossible dream. These things can all be done with one-tenth of the effort it would cost us to drive the Germans back to the Rhine, on the western front.

President Wilson has done one great thing by coming out for the integrity of Greece. Can he not do the second great thing, which will give added weight to his Grecian declaration?

By declaring war against Bulgaria, America will become the cement of the Great Alliance. Without sending a cannon or a soldier to Macedonia herself, she can shorten the war—shorten the lines of graves of our youths—simply by proving our good faith to our Balkan Allies.

# Ever-Ready ARMY RAZOR

This dollar khaki kit is an achievement. It's Uncle Sam's favorite razor and yours, too. Give it the "once over." Compact, waterproofed case—10-year guaranteed frame and those marvelous Radio Blades. Gives the joy shave to millions.

# TOMATO CATCHUP 5 CENTS EXTRA

BY OCTAVUS ROY COHEN

CHICKEN SOUP, a juicy sirloin steak, asparagus, lettuce-and-tomato salad, a glass of sweet milk, and a dessert of lemon pie calculated to bring with it memories of mother's culinary ability—there you have a fair example of the meal which a normal young soldier would order in a city restaurant while on leave.

That meal, in a cantonment city of the South, will cost \$1.68. In a Southern city where there is no cantonment the same meal, served in the same way and in the same type of restaurant, will cost \$1.15. In other words, the proprietors of the popular-priced restaurants in military cities demand—and, what is more, receive—an excess profit of 53 cents on this meal; an increase of 46 per cent on the normal price charged by a restaurant owner in a nonmilitary city.

## The Soldier Pays

THE restaurant business of the South has grown like Jack's beanstalk since the building of cantonments through the cotton belt. Where, previous to April 6, 1917, one restaurant eked out a fair measure of profit there are now four or five doing a land-office business. For facts are facts—and the facts in the restaurant case happen to be that when your average soldier is given leave from camp he travels as fast as electric car or jitney can carry him to a restaurant. On nights when general leave is granted—Saturday night, for instance—it is a well-nigh hopeless task to worm one's way into a popular type of restaurant in a military city of the South. And it isn't that the food at the cantonment is not ample or of the best quality; it is more a craving on the part of the men to get away from the incessant camp mess, to sit before a table on which there is supposedly clean napery and to order what they will from a more or less comprehensive menu.

As a matter of fact, restaurant food is different. As a man of the Ohio Division, in camp at Montgomery, Ala., told me: "We have fine food—but, Lord, how it is maltreated by the kitchen police! When it gets to us it's food—and nothing else; cooked any old way."

But whatever the reason for this soldierly passion for a restaurant meal when leave is granted, the fact remains that the passion does exist. General leave nights find the restaurants in cantonment towns preparing for a great drive: extra waiters are marshaled, cooks are on their toes—the trolleys and jitneys begin to arrive, and there is a rush for the marble-topped counters and the rows of slim tables.

I am writing now of the enlisted men. The officers, as a rule, seek the hotels and the higher types of restaurants where the prices are theoretically within reach of their pocketbooks. But the enlisted men—the privates, corporals, sergeants—they eddy into the cheaper lunchrooms—restaurants of the Child's type—and pack them, jam them.

It is no uncommon sight on Saturday nights in military cities through the South to see lines formed outside the little restaurants, the soldiers patiently awaiting their turn and passively submitting to treatment such as one usually sees among a gang of laborers before the pay car. I have seen this in Montgomery, in Spartanburg, in Greenville, in Anniston, in Columbia, in Macon, in Little Rock, in Atlanta—all cities on the outskirts of which the Government has constructed cantonments.

The restaurant men in these cities do not face the legitimate gamble of business. There is a sure patronage limited only by their capacity; the volume of business does not fluctuate save in the rare instances where, because of an epidemic, a cantonment quarantines the city; or the city the cantonment.

Therefore, by all the laws of business, prices in these cantonment-city restaurants should be materially lower than the prices existing in restaurants of the same class in cities where there are no cantonments. In the latter class of cities the proprietors face an uncertainty of patronage and a certainty that

there will be a greater percentage of food wastage.

But something is patently wrong. On averages struck from actual menu cards secured from almost every city of any size in the South, the prices charged in the restaurants of the military cities run about 40 per cent higher than the prices in the nonmilitary cities.

I do not make this statement on hearsay or even on the memory of personal observation. I have in my possession actual menu cards, two to four from each city and always from representative restaurants of the popular type, gathered from the following military cities of the South: Montgomery, Ala. (Camp Sheridan); Anniston, Ala. (Camp McClellan); Atlanta, Ga. (Camp Gordon); Macon, Ga. (Camp Wheeler); Spartanburg, S. C. (Camp Wadsworth); Greenville, S. C. (Camp Sevier); Columbia, S. C. (Camp Jackson); Charleston, S. C. (Navy Yard and Naval Training Station); Little Rock, Ark. (Camp Pike), and Jacksonville, Fla. (Camp Joseph E. Johnston). I have actual menu cards from the following nonmilitary cities: Birmingham, Bessemer, and Mobile, Ala.; and Savannah, Ga. (there are few cities in the South where there are no cantonments).

A comparison in prices charged is rather startling when one pauses to consider that the restaurant men in the nonmilitary cities assure me that their profits are exceedingly good and their business flourishing. Figure, then, that the restaurant owner in the military cities makes not only the profit of normal times, but in addition to that the excess profit in an increase of something more than 38 per cent.

The thing sums up into a form of extortion directed against the very men for whom we are asked to make sacrifices of every sort: it is a tax on the soldier himself. For if we accept as a premise the incontrovertible fact that your soldier does go to a restaurant when he is on leave, then there is but one conclusion—and that is that the restaurant owners have cannily taken advantage of this fact to boost their prices to a point where their profits are beyond all reason.

## Striking an Average

LET us take for comparison the dishes which a hungry soldier would naturally call for, remembering that the prices in the following table are culled from all the menus in my possession from the cities mentioned above. Average price:

	Noncantonment City	Cantonment City
Lamb chops.....	.35	.50
Two poached eggs....	.21	.27
One dozen fried oysters	.38	.49
Wheat cakes and sirup	.14	.19
Sirloin steak.....	.40	.62
Ham and eggs.....	.28	.40
Tomatoes and lettuce.	.22	.31
Asparagus.....	.25	.36
Lemon pie.....	.07	.11
Spanish mackerel.....	.38	.47
Glass sweet milk.....	.05	.07
Spanish omelet.....	.35	.50
Strawberry shortcake.	.14	.21
Chicken soup.....	.16	.21
Double loin steak.....	.90	1.35
Cold sliced chicken...	.45	.64

The list might be carried on indefinitely, but I have endeavored to be just in selecting only those dishes which I happen to know are the most popular with soldiers in town for the day or evening. To strike an absolutely fair basis of comparison, let us consider the average prices charged for certain things in two small Alabama cities: Anniston, where Camp McClellan is located, and Bessemer, where there is no cantonment. The two cities are almost exactly the same size, and both are in the industrial belt of northern Alabama, less than a hundred miles from each other.

Lamb chops, which cost 35 cents in Bessemer, cost 45 in Anniston; plain, ordinary, everyday wheat cakes and sirup which are 15 cents in Bessemer are 20 in Anniston; a small sirloin steak which may be had for 35 cents in Bessemer will cost 65 in Anniston; a slice of lemon pie costs 5 cents in Bessemer and 100 per cent more in Anniston.

# MURAD The TURKISH CIGARETTE

Compare  
them with  
any 25 Cent  
cigarette

18  
Cents

Or perhaps a comparison between the prices prevailing in noncantonment Birmingham, Ala., and military Atlanta, Ga. The cities are about the same size—each a bit more than 200,000 in population; they are 156 miles apart. Birmingham, however, is not in an agricultural region, and Atlanta is. Furthermore, Atlanta has greater railroad facilities. But a bit of sliced chicken in a Birmingham restaurant will cost 40 cents as against 55 cents for the same thing in Atlanta; lamb chops, which are 35 cents in Birmingham, average 45 cents in Atlanta; one dozen fried oysters are menued at 40 cents in Birmingham and at an average price of 67 cents in Atlanta; lettuce and tomato salad, which will cost 23 cents in a Birmingham restaurant, will appear on your Atlanta check at 31 cents; and a glass of sweet milk, which you may buy at any cheap restaurant in Birmingham for a single jitney, will cost twice that amount in any one of the five representative Atlanta restaurants the menus of which I have in my possession.

And the irony of it: in Charleston, S. C., where the Navy Yard is located—a city from the streets of which one may gaze at the Atlantic Ocean—one is taxed an average price of 50 cents for so common a fish as Spanish mackerel, whereas in Birmingham, 200 miles from the sea, the restaurant price is 40 cents, and even in Atlanta is only 45.

I do not pretend that these prices are averaged from menu cards of every little restaurant in every one of the cities mentioned. But the averaging has been done fairly. I venture to say that the menu cards from Birmingham which I have represent a higher type of restaurant than those of any other city in the list. There can be no question as to, at least, an equality. I have not selected unusual dishes which happen to be higher in the military towns. The list which I have given could not be more commonplace or fair: all are dishes which a hungry soldier would naturally call for.

#### Nickel-Snatchers

I HAVE talked with the restaurant men in cantonment cities. They are wild-eyed with enthusiasm. Those who will talk at all have hit upon a common phrase: "I'm making so much money I don't know what to do with it!" And about 40 per cent of that money does not legitimately belong to them: it represents an excess profit over and above a good, legitimate, normal profit. It is money collected from soldiers made hungry by hours and hours, days and days of strenuous drilling that they might make themselves fit to fight the battles of these men who own the restaurants—these men and their opulent families. It is a preying upon the natural human appetite for food. It is a frenzied tumbling over one another to snatch the extra nickel from the \$30 per month of the private soldier. To my mind there is no excuse for it, and I have seen personally and have personally writhed because there is apparently no way of putting an end to it—no way, unless public sentiment can be so crystallized that it will become forceful and effective.

This frantic moneygrubbing has become petty in many of the cantonment cities. In the others it is becoming so. There are undoubtedly many proprietors of cheap restaurants in the cantonment towns who are not parties to this penny grubbing—but I have not found them in my wanderings about the training camps of the South.

Let us consider this from an Atlanta restaurant which is perhaps the most popular one for soldiers in that city. On the menu card appears: "Extra charge of five cents for bread and butter on all à la carte orders." All, mind you, whether it be an omelet or a double porterhouse served with mushrooms. On the same menu appears this: "Owing to the extreme high prices of china, glassware, linen, laundry, food-stuffs, and in fact everything, we are compelled to raise our regular 35 and 50 cent meals 10 cents each." And farther down on the menu: "Five cents for a second order of butter or sirup," and "Ten cents service charged for each child not getting regular order."

Why? Why? Has the price of "china, glassware, linen, laundry, food-stuffs, and in fact everything" gone up in Atlanta more than it has in Birmingham or Savannah or Nashville? Why the apologies for an increase over a rate already too high? Can it be possible that the restaurateur has a conscience?

Another Atlanta hashery, extremely

popular with the Camp Gordon soldiers, charges "Fifteen cents for each child not getting regular order." Another Atlanta restaurant, which caters almost exclusively to soldiers, has marked out most of its old prices with a pen and inserted new, and higher, prices next to them. Worse: on one menu I find veal cutlets with the printed price of 40 cents crossed out in pencil and 45 cents replacing it, and attached to the same menu a typewritten sheet announcing, among other things, that veal cutlets are 50 cents! And atop the menu an exhortation "Buy Liberty Bonds!" The proprietor should be able to buy Liberty Bonds: soldiers of the United States are paying for them!

Argument after argument can be advanced to refute the point I make—which is that this food extortion is directed against the soldiers and is unjustifiable—but I have talked with restaurant men all over the South, and in the end they admit that no argument holds water. The consensus of opinion is that as the cantonment city restaurants do a greater volume of business and have a steadier flow of business, they should reduce wastage and prices. But the prices are going up steadily. A comparison of the prices charged in these restaurants now and six months ago is appalling—those commodities which have gone up in price have leaped skyward on the menus: those which have gone down—eggs, for example—have remained for the most part where they were during the height of the egg shortage.

#### The Solution

THE evil is indefinite, but it is tangible. The solution for it? Certainly the soldiers themselves cannot right the wrong: it is a soldier's nature to seek a restaurant when he reaches the city. Is it not a question for civic associations of the cities affected? For their chambers of commerce? Is it not possible for those cities which are being benefited inestimably in a commercial way by the nearness of the cantonments to finance, and operate at cost, restaurants for the enlisted men?

Only a harmony of public opinion can right this injustice. Only concerted action of influential civic bodies can put a stop to this extortion. But once get a municipal restaurant under way at cost prices and it will have the double effect of giving the soldiers the food they crave at reasonable rates, and of forcing the restaurant keepers to lower prices to meet competition.

And the first city to adopt the suggestion should be Spartanburg, S. C., which, from the figures at hand, now has the largest cantonment of any city in the United States.

Spartanburg, before the war, was a typical, sleepy little South Carolina mill city. Then Camp Wadsworth was built and the New York troops quartered there. There is a second division of troops there now—I believe they are called the Pioneers. I understand from first-hand information that a few weeks ago there were nearly 70,000 men in camp near Spartanburg: Spartanburg, a city which a year ago boasted a population of certainly not more than 22,000.

Spartanburg has become bloated with the money spent within its limits by the soldiers stationed at Camp Wadsworth. Restaurants, large and small, some pretentious and others mere holes in the wall, have sprung up overnight. And perhaps nowhere in the South is the restaurant extortion worse than in Spartanburg.

It is a marvel that the men put up with the treatment they are accorded on a rush night: "Stand in line there!" "Room for two in here—no, no! I didn't say three, did I? Here you, fellows, don't push." Finally the lucky pair is seated at the greasy counter: the men inspect the thumbled menu card; a waiter approaches—"Well, whatcha want? I ain't got all night here. If y'r gonna order, order!"

But the citizens of Spartanburg should make it their business to see that conditions are changed for the better. They have benefited incalculably by the presence of the troops, and the debt they owe the soldiers is tangible and should be collectible.

Yes—of all the cantonment cities I have seen, Spartanburg is the most aggressive in its restaurant penny grubbing. I recall one filthy little hole-in-the-wall lunchroom on the menu card of which appears the warning:

"Tomato catchup 5 cents extra."

And, at that, they serve a limited portion!

# SAVING DAYS AGAINST THE U-BOATS

BY WILLIAM HEYLIGER

THE submarine war has developed into a race. It is American and British shipyard labor against the havoc of the U-boats. New ships must be built, and unseaworthy vessels must be made seaworthy, in such proportion that U-boat destruction will be unable to wreck the shipping plans of the Allies. In such a race every hour of labor counts.

Six small hospitals, established in shipyards and dry docks in New York Harbor, have so shortened time lost through injuries that 30,000 individual working days per year have been added to the shipyard calendar. In other words, there has been created, from what was formerly waste time, a force equal to the skilled labor of 1,000 men for one month.

These hospitals were established by an insurance company underwriting the liability of employers. Early in the war it was demonstrated that the sooner a wounded man received medical care the better his chances of recovery. The insurance company was not thinking of that; it was proceeding principally on the theory that it would be cheaper to operate its own hospitals than to send injured workmen to outside physicians. Yet the experiences of the nurses in these shipyard hospitals have matched exactly the experiences of the army doctors. Dry-dock workers come into intimate contact with rust and corrosion. Blood poisoning was rather common, and each case meant a skilled man's labor lost for a week or two, if not forever. The hospitals, by compelling injured workmen to report at once for treatment, have wiped blood poisoning from the books.

### Saving 30,000 Days

ACCIDENTS in shipyards and dry docks are far more numerous than the average man supposes. Hammers will slip, planks will fall, sharp-edged tools will go awry, and acetylene torches will play the mischief momentarily. The result is a constant succession of mashed fingers and knuckles, banged-up toes, more or less ragged cuts, and painful burns. In one dry dock, not the largest on New York Harbor by any means, from 80 to 120 wounds are dressed each day. About 95 per cent of these injuries are what a doctor would term "minor."

Under the old system at this particular plant the man who received an injury left the yard to visit a doctor. He might find the doctor out, or he might find the reception room full of patients and have to take his turn. Very often the injured man stopped either coming or going for a drink and a chat. The dock records show that it took an average of two hours for a man to return to work. He might go to the doctor's office again or he might not.

Some men did not bother to go to the doctor at all. If they deemed the wound of small moment, they would treat it with mucilage, or wrap it with a dirty rag, or poultice it with a chew of tobacco. It was these cases that developed the blood poisoning—these, and a sprinkling of cases among the men who failed to obey the doctor and

go back for a second dressing. Through injuries this company reasoned that it lost the equivalent of 1,400 individual working hours each week.

A hospital was established at this yard by the insurance company, and three nurses were put in charge. The hospital boasted an X-ray machine, an apparatus for baking the kinks out of stiffened joints and muscles, pulmotors, and a room all ready for a major operation in an emergency. At once blood poisoning became a thing of the past. No longer was a man away from his work two hours if he mashed his thumb or had to have a wound redressed. The hospital cut the time lost to fifteen minutes for each accident or redressing.

This dry dock, under war pressure, is working a ten-hour day seven days a week. With an average of a hundred hurts dressed each day, the dock officials figure that the little hospital at the yard gate is saving one hour and forty-five minutes on each dressing, or 102 individual working days each week. Fifteen minutes after a man has received a minor hurt his wound has received expert medical care—and he is back on the job.

The work of the nurses does not stop with that initial dressing. They are there to guard against the after effects, and against a one- or a two-week lay off. They have that man's name, and just where he can be found. Next morning, if he does not report for a second dressing, a messenger is sent out to bring him in. One result of all this care, the dock officials say, is strikingly apparent. Men on risky work perform their labors with far more confidence.

What has happened at this dock has happened, in proportion to their size, at every one of the docks and shipyards where similar hospitals have been established. The combined efficiency of these hospitals has created this tremendous asset of 30,000 individual working days saved.

### "A Mighty Good Job"

THESE hospitals do more than save time—they save lives. At a Brooklyn shipyard a motor ambulance had been added to the hospital equipment. At this yard five men were under a ship driving red-hot rivets into her hold. They were working in what was practically a confined space with acetylene torches, and other men outside were heating rivets and passing them in.

Suddenly the riveting stopped. A hurry call was sent to the hospital, and nurses and pulmotors were rushed down in the ambulance.

The five men were found unconscious from the effects of acetylene fumes. They were hauled out from under the ship, and the nurses applied the pulmotors. One by one, the men were brought back to consciousness.

"That's what I call a mighty good job," said the foreman of the riveters. "We can't spare any acetylene workers these days—not with the U-boats raising Cain."

The accident happened Thursday afternoon. On Monday morning the five men were back at work.

## Let 'er Buck!

Continued from page 16

his ranch to be free to enlist, and who handled over sixty thousand horses for the Allies before we even thought enough about the possibility of getting in to inquire the temperature of the water.

They were watching the riders in the review and their mounts, recognizing and commenting on this and that individual, and recalling incidents in the training of many of the horses that passed. They were jubilant over the fact that no animal misbehaved. The captain called my attention to an extra-fine rope hanging from the sergeant's saddle.

"Be worth something if I had the Kaiser at the end of it," the sergeant growled. "If I had him there, I'd show him the length of this parade ground."

At the remount there is a school for horseshoers and also a school for packers. The head professor and all-round high-micky-doodle of the pack-

er's school is Jim Keneely. Jim is neither an enlisted man nor an officer. He has no rank. All he has is more practical knowledge of packs and packing than any other man living. He taught packing to the army in Cuba, in the Philippines, and in China. In China his packing was a revelation to the officers of the other armies, and he was much sought after as a teacher in foreign parts; but Jim stuck with his own, and it's no mean advantage to us that he's with us now.

The cowboys' social hall at the remount boasts an original by Charlie Russell, the cowboy artist of Montana. It is Russell's gift to his pals of the range in khaki. The walls are covered with color-print reproductions of other paintings by Russell, stirring scenes of camp and trail. According to the men of the range, Edwin Abbey was an architect's draftsman in comparison with Russell, and, measured by the same standard, John Sargent is seen

# Tobacco and the Long Hunt

The telephone and the automobile have so speeded up the pace that people are more nervous than in previous generations.

But probably you have observed how much less inclined to be impatient and irritable a pipe-smoker is than most other men.

Smoking, when not indulged in to excess, soothes the nerves.

That was discovered way back in Queen Elizabeth's time, when tobacco was first brought to England.

Tobacco was originally smoked in pipes and to this day—in spite of the persuasions of Fashion to other forms—pipe-smoking has persisted.

Pipe-smokers of the past were pictured as the best-natured of people. You remember the squire in the old prints, and his long-stemmed pipe, and that happy, amiable look upon his round face?

Well, as a class, pipe-smokers of today continue to be the kindest and most even-tempered of human beings.

That is, they are when they finally succeed in connecting with the brand of tobacco best suited to their particular tastes.

It is a long hunt but—

Other tobaccos are as if they were not when a man at last lights up a pipeful of the tobacco he has so long sought.

His face beams. He sinks back, taking his supremest ease. He lets that prized smoke escape from his delighted lips lazily, almost grudgingly.

Edgeworth has added zest to the smoking of so many that its makers would greatly enjoy learning what you think of it.

Send them a postcard containing your name and address, also that of the retail dealer supplying you, and they will willingly send you generous samples of Edgeworth in both forms—Plug Slice as well as Ready-Rubbed.

They don't ask you to state in which of these two forms you are buying your tobacco now. They will send both.

Edgeworth Plug Slice is pressed into cakes, then sliced into thin, moist wafers. One slice, made ready between the hands, makes an average pipeload.

Edgeworth Ready-Rubbed is what its title indicates. Straight from can to pipe it can be poured. Or it can be rolled into a cigarette with a most inviting flavor.

Edgeworth is sold in convenient sizes for all purchasers. Edgeworth Ready-Rubbed in pocket-size package is 15c. Other sizes, 30c and 65c. The 16-oz. tin humidor is \$1.25; 16-oz. glass jar \$1.30. Edgeworth Plug Slice is 15c, 30c, 65c and \$1.20.

When the samples reach you, fill your pipe with a good, generous load, light up, and settle back in your chair to decide a matter of some importance. Edgeworth is a tobacco that many smokers fix upon after having tried all other brands. If it is your brand, you will be saved a long hunt.

The boys in khaki, both here and over there, certainly bless those thoughtful enough to send them tobacco good both for pipe smoking and cigarettes. The man in the company who has a little tobacco to spare now and then ranks high among his fellows.

Send an unbreakable pound package of Edgeworth to the boy you're so proud of. It will arrive whole, whether he is at one of our cantonments or over there, and he never has too much tobacco. You may be sure of that. He'll go back to quarters carrying it as high above his head as the first helmet he captures.

For the free samples for you to light up and savor, address Larus & Brother Company, 3 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of the Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

**EDGEWORTH**  
EXTRA HIGH GRADE  
SMOKING TOBACCO

to be a fair man for drawing cloak and suit ads.

Most of the cowboys came into Camp Lewis in the draft and were transferred to the remount depot after having done some training service in the infantry. They couldn't all be transferred immediately, of course, and those who were obliged to drill about for a time were in a hard way. Saturday afternoons, instead of going to town, they'd come up to the remount, perch on the tops of the corral fences, and watch the horses with the expression of a mad tenor making love. You see, a cowboy is not built for purposes of pedestrianism. Years of riding get his legs properly squeezed to fit the curves of a horse's back; but the slant is wrong for walking. During the unfortunate moments of his life when it is necessary for him to walk, he teeters precariously around in boots with heels high enough to satisfy a Broadway flapper on parade. The result is that in his maturity, while he has more legs and feet than a whale, they're not of much more use to him if you peel him away from a horse and call upon him to circulate around on his own.

So a cowboy in the infantry has this in common with a fish in the Sahara Desert: he's manifestly out of place.

They drilled around in flat-heeled shoes for a few days, and the first free hour they got they stampeded for the remount and begged Captain Jackson for transfer to the remount depot.

"Cap'n, I'd rather be shot at sunrise than walk on these feet o' mine another day," one temporarily dismounted unfortunate declared tearfully. "If I knowed they'd shoot me sittin', I'd do something to deserve it; but I'm afraid they'd make me stand up; an' it's too

much for my brain to think of, standin' on my feet an' gettin' shot at the same time. They gimme shoes 'bout no heels to 'em, that set a man back on his spine so's that every time you step your backbone rattles like a boxful o' loose dice, an' then they make me walk. That's all. Just walk. Not goin' no place; just walkin'! Cap'n, there ain't any place as fur away as I've walked in the last week. No, sir. I walked my legs off clean down to the knees, an' I'm workin' on the thigh bones now. I'm willin' to die for my country, captain, but I just naturally can't walk for it. Please you get me transferred up here where I can pour myself into a saddle an' live human again!"

### Fit and Happy

HOWEVER, most of the blown-in-the-glass cowboys are soon assigned to the special service for which they are fit, and for which they are very urgently needed. And when they get where they belong they're a happy lot. They are with their own, and to a large extent on their own. I visited the remount at Camp Funston in search of pictures. Within a few minutes there was a little private Wild West show in progress. Bands of horsemen were dashing here and there, performing all manner of tricks, a dozen ropes were circling in the air, one man was keeping two loops going at once, and the fence top was lined with a cheering, jeering crowd.

The cowboy is working hard for the army, but he's busy at the work he understands and happy in it. And when a fieldpiece goes bumbling by in the clattering wake of a sturdy, well-trained line of obedient horses, you know that the work of the American cowboy has counted.

## The Right Sort of Man

Continued from page 11

of habit from his left forearm. She could see only the back of his neck and half his face, but he drew her attention from the fascinations of the avenue. At Thirty-third Street she wondered what it was that distinguished him from all the other young men she had known. At Thirty-first Street he was joined by a friend, an enormous man with an enormous voice, who boomed:

"Holloa, Rodney!"

Rodney cordially invited the newcomer to sit down.

"Still with McCord, Read & Bright?"

"Surely," said Rodney.

Ann could hear every word they said, and though the name McCord, Read & Bright meant nothing to her it remained in her mind like a refrain; it sounded like the name of a famous old firm. A moment later Ann was listening eagerly to what the young man was saying.

"Joe has done the most amusing portrait of Jane. All in blacks—a symphony in blacks."

"Sounds somber," the big man muttered; "there's nothing somber about Jane."

"But that's just it," Rodney interposed. "He has used the black gown and the midnight background to render that wonderful blond verve of hers. Why, that picture has got almost as much—the clangor of a Bellevue ambulance drowned the next word—"as Jane herself."

"Isn't Jane a corker?" said the big man.

"Jane," said Rodney earnestly, "is the only really worth-while woman in New York."

ANN was all ears now. But the big man had risen.

"I've got to get down here," he said. "See you at Jane's Sunday?"

"I'm getting off here too," said Rodney.

Ann watched them crossing the street as the bus moved on. Ann felt as Cortez (or whoever it was) felt when he stood on a peak in Darien and verified the existence of the Pacific Ocean. She had not been in New York two hours, and already she had sat on the edge of that magic circle of people who do things. Two hours and already she had heard a young man talking about a portrait, a portrait by a man he knew intimately, a portrait of a woman named Jane who was the "only worth-while woman in New York." Ann felt almost as if she had met them. Oh, there were people worth knowing in New York!

Ann's pleasure of anticipation lasted

all the way to Brooklyn, to the very door of her aunt Josephine's house. There, while she waited an answer to her ring, she had a momentary reaction. She had spoken at home, in Bingham, almost as if she expected to spend the winter with her aunt Josephine. And now she was oppressed with the fear that she might have to spend the winter with her aunt Josephine, in Brooklyn. . . .

HAPPILY, Aunt Josephine proved herself the perfect relative—the relative who in always easily reached and never around. Aunt Josephine assured Ann that she was delighted to see her, that she would always be delighted to see her; but of course she appreciated that Ann would want to live in New York, to be near the school of art or music or whatever it was Ann had come to study.

"What is it exactly?" Aunt Josephine inquired.

"Piano," said Ann bravely.

"Of course," said Aunt Josephine. "Your mother told me you began when you were seven."

Ann left feeling happily free to establish herself as near the center of Manhattan as she liked.

She found two rooms and a bath in the Crosset Arms, which is one of those great buildings in middle Broadway that promise all the privacies of a home and all the conveniences of a hotel at something less than the cost of both. Then she was ready for a survey of the specialty shops and an intensive study of those sections of the Sunday papers that are devoted to theatre, art, and music.

Ann intended to bring her wardrobe and her mind to the metropolitan standard simultaneously.

After a forenoon in the specialty shops off the avenue, Ann had a vision of herself dressed as she had always wanted to be dressed—with that simplicity which takes so much thought and so much money. But after reading a great many columns of the Sunday paper she feared the condition of her mind would not be so easily remedied. There were so many plays and it was so hard to tell from what the critics said which ones she ought to see. And the men who wrote about art were almost unintelligible.

Where did one go to acquire the language of art? To books, of course; but to what books? Her memory shot back to the nice young man on the bus. What had he meant by an amusing portrait? Obviously amusing didn't mean funny when applied to a portrait that was also a symphony in blacks. Evidently

## Could You Ask For A Stronger Guarantee?

ENAMEL LINKS

PLATE GOLD LINKS

Wear out the gold if you can! Should you step on these loose links and crush them or break them in any way—it doesn't matter how—here's a sentence that covers this, and every possible contingency:

"..... If unsatisfactory from any cause at any time, any dealer anywhere, or we, will replace them free."

All Krementz 14 kt. Rolled Gold Plate is sold under this air-tight, perpetual guarantee. It isn't an experiment. For more than 50 years Krementz & Co. have been manufacturing fine jewelry.

Professional men and business men of high standing continually write unsolicited letters telling of Krementz collar buttons which have been worn every day for as long as 28 years—and the guarantee still holds good.

Jewelers say, "Omit the words 'Krementz Plate' stamped on the back of each article, and you can not tell it from solid 14 kt. gold."

Your dealer can show you these and many other equally attractive designs in enamel or all gold plate. For graduation or birthday gifts you will find nothing quite so satisfactory as a pair of Krementz loose links.

Write for illustrated catalog C.

Krementz & Co., Newark, New Jersey

## Prevent Magneto Trouble

Manufacturers and repair men say, "90% of magneto trouble is due to improper lubrication." Your neglected instruction book says something like this: "Oil the magneto every 300 to 500 miles with a highly refined light oil." In spite of all this, many motorists persist in using cylinder oil or light mineral oil, which gums and clogs the delicate mechanism. Don't court trouble. Oil your magneto regularly with

## 3-in-One The High Quality Oil

It's a highly refined light oil—exactly the kind recommended by magneto manufacturers, repair men and your instruction book. 3-in-One is light enough to lubricate just right. Viscous enough to stay in the bearings. Never gums or dries out. Never heats up, smokes or burns at highest speed. Won't freeze.

**Ford Commutators** are lubricated with 3-in-One. Makes the motor run smoother and cooler.

**Stop Spring Squeaks** by lubricating with 3-in-One. For every car and truck. 3-in-One is the only oil that will stop the squeaks and creaks of springs, shocks, and other parts. It is the only oil that will stop the squeaks and creaks of springs, shocks, and other parts. It is the only oil that will stop the squeaks and creaks of springs, shocks, and other parts.

**FREE** literature on magneto trouble, also on 3-in-One oil. Write for it today. A postcard will do.

**THREE-IN-ONE OIL CO.**  
165 ANN. Broadway, New York

charmed so many college boys out of their wits. "Won't you sit down?"

"I'd like to," Rodney said. "May I bring my coffee?"

Ann took a long breath as he turned his back. It was now or never. When he returned with his coffee she was again calm, composed.

"Your name is Rodney," she said, smiling, "isn't it?"

"Yes, Rodney Sands. But how do you—"

"How do I know?"

"How do you know?"

"I listened," said Ann.

The waiter brought her mazagran. Ann sipped it reflectively. He was really a very nice man.

"I listened one day on the bus," she continued.

"I had no chance to listen," he interposed.

"No," said Ann, "you had no chance to listen. My name is Ann—Ann Winkler."

"Well, Ann Winkler, what else did you hear when you listened?"

Ann sipped her coffee. She tingled to her finger tips. For once in her life she was going to say exactly what was in her head. She felt this man would understand. And, besides, he was not wholly insusceptible. Her beauty was her weapon; her frankness her defense. Who can resist beauty when it is frank, when it pays one the supreme compliment?

"I heard something about a portrait, a portrait of a wonderful blond person named Jane."

RODNEY knitted his brows. "I know a portrait of a person named Jane well enough. But I don't remember discussing it on a bus."

"You wouldn't. It was of no consequence to you. But it was of immense consequence to me. You see, I never had heard anyone mention a portrait or a painter or people who have their portraits painted—well, as if they knew about—" Ann finished the sentence with a wave of her hand.

"You make me wish I were a portrait painter."

"Why?" said Ann. "Aren't you an architect?"

Rodney shot her a startled look.

"I looked it up in the telephone book—McCord, Read & Bright," said Ann with a slight pensive lift of an eyebrow.

Rodney laughed. "What else did you hear on the bus?" he asked.

"Nothing," said Ann. "You and your large companion—a tremendous man he was—got off at Twenty-ninth Street."

"Ah!" said Rodney. "I remember—that was Wakefield Green."

"The dramatic critic?" Ann cried.

"Yes," said Rodney.

"Tell me, do you know a great many of that sort—of people who do things?"

"Not a great many—a few."

"What do they talk about?"

"Themselves mostly."

Ann smiled. "What else?"

"Each other."

"I know," said Ann. "Everybody does that—"

"They make a specialty of it. But they do talk about other things sometimes—how to make America respect art, for instance."

"I thought so," said Ann. "I—"

"But I don't get you quite," said Rodney. "I don't understand what you're driving at. Won't you tell me?"

"I wonder if I could make you understand?" Ann surveyed him appraisingly.

## Where Better Production Starts

*Proven ability* is the basis upon which discerning power users select their operating equipment, just as it is the basis in the selection of men.

With these concerns, better production begins with the selection of motor equipment which will set the pace for machine and man efficiency, equipment that will insure a full day's output and a full day's wage—every working day.

Twenty-one years of dependable service in a wide field of manufacturing endeavor bespeaks the proven ability of Robbins & Myers Motors to keep production at peak-efficiency.

The Robbins & Myers line includes motors for every purpose, from 1-40 to 30 horsepower—a motor for the one-man shop, or a

complete motor equipment for the great manufacturing plant.

\* \* \*

Also, manufacturers of the better electrically-driven devices equip their product with R & M Motors to match their own high-quality standards.

An R & M Motor on a vacuum cleaner or washing machine for the home, coffee grinder or food chopper for the store, addressing or mailing machine for the office, is a sure sign of value throughout, and a safe guide in buying.

Robbins & Myers Motors insure better production to power users, dependable operation to electrical-device manufacturers, and increased sales to motor dealers.

ly. He had been extraordinarily patient, uncommonly nice. He had been as nice as she had hoped he would be. He was the nicest man she had ever met.

"It depends on whether you are willing to tell me the truth or not," said Rodney quietly. "But perhaps I'll understand even if you don't."

"I think maybe you would understand even if I didn't," said Ann. "But I'm going to tell you the truth—if you don't mind."

"You know I don't mind."

"Well," said Ann, "I'm from the Middle West—from a town so small you never heard of it."

"Yes," said Rodney.

"I want that to sink in—it's a thing no New Yorker can really understand without an effort of the imagination."

"New Yorkers—" he began.

"I have no talent," Ann interrupted.

"I didn't come down here because I thought I had a grand-opera voice or anything of that sort. I came because I was curious. I came because I wanted just once to meet some people who—" Ann paused, looking down at her glass. This wasn't the truth—the real truth. How could she tell him that? She looked up at him again. He had a nice face, an intelligent face. And just now it wore the expression of profound interest. He was as interested in what she was going to say next as any college boy.

"The truth," said Ann, "is that I couldn't see myself marrying a small-town man out in the Middle West."

"I understand," said Rodney. "I—"

"You understand in a way," said Ann. "But no New Yorker can really understand the sort of thing I ran away from. You have to experience it. And all the time I'm talking I'm acutely conscious that I've no right to demand anything—well, anything better. I'm small-town myself. I don't know anything about art. I play ragtime and like it. But just once, before I go back West, I'd like to meet—the sort of people you know."

"Look here," said Rodney Sands. For just a moment it seemed to Ann that his eyes had that look of eagerness that she had so often surprised in college youths. "To-morrow night is Jane Ordway's annual party. The party when she asks everybody she knows. Will you go with me?"

"Would it be all right—really all right?"

"Yes," said Rodney Sands. There was a grin, an ironic grin—though at whose expense Ann was not sure—trembling in the corners of his mouth. "It would be more than all right. It would be highly desirable."

"What—what about Jane?"

"Jane Ordway has only one object in life, and that's to bring people together. She'll send you an invitation to-night. Will you go?"

"Yes," said Ann. "I will."

ANN entered the tall brownstone house in Gramercy Park, driven, like a soldier, by the fear of running away.

Jane Ordway was as simple and as friendly as could be. But it was not Jane that Ann feared.

The girl to whom Jane introduced her was friendly also.

"You'll like Jane's party, I know," this young person assured Ann. "There's dancing on the first floor and conversation on the second, and tete-a-tetes on the third. And at twelve there will be supper on the fourth. And nobody expects anybody else to be introduced."

But it was not Jane's party that Ann feared. It was Rodney Sands that she feared. For the first time she didn't know what a man thought of her. And it was the first time it had really mattered.

No one could have been more thoughtful. The invitation from Jane Ordway had come in the first mail. At eleven

he had called up to make sure that she had it. At seven there were flowers. And now, as she stood before the dressing-room mirror, she knew he was waiting for her to come down and dance. But didn't he regard her as a millionaire might regard a shopgirl? She had read a story once about a man who for his own amusement had offered a girl at the notion counter in a department store the chance to live for twelve hours as a princess, to do anything she could think of that cost money. Was that something like what Rodney Sands was doing? Introducing her to this salon of sophistication to which anybody who was anybody was likely to come, in order to savor every gesture of her simplicity and ignorance? Oh, why had she been so recklessly frank? Why had she told this man everything, retain-

ing no shred of mystery, just because he seemed to understand?

That was just the trouble that he understood. He was the kind of man who understood everything, anyway. For a moment she wanted to run away, to escape forever the eyes that would see through her every pretense. But as she considered the possibility she heard the first bars of "Poor Butterfly." She had not danced for months. She would dance now if she never danced again. With a firm step she walked out of the dressing room and down the stairs.

HER determination kept her up for the next ten minutes, and gradually the excitement of meeting people took hold of her. It was very like her first junior prom, except that she was more sure of herself. Within an hour half the men present had discovered that she danced and the other half that she laughed. Ann had never been

more popular in her life. It was only when she stepped into the taxicab to go back to the Gramercy Arms that her panic returned.

"You aren't sorry you brought me?" she said to Rodney Sands, and knew as she said it that it was a childish remark.

"It was the error of a lifetime," said Rodney Sands solemnly. "I never knew anyone to make such a hit. To-morrow at eleven o'clock your telephone will begin to ring. And before lunch you will have accepted invitations to tea, to dinner, to the theatre, to breakfast, to luncheon, to the opera, to dances, to week-ends in the country. And I shall be lucky to see you more than once in the next month."

"Are you making fun of me?"

"My dear lady," said Rodney Sands. "You are young; you are beautiful; and—you listen. It is an irresistible combination."

"Seriously," said Ann, "you will never know how grateful I am to you for introducing me to Bohemia."

"Bohemia!" Rodney exclaimed. "Listen to the child of the Middle West. Bohemia with a butler and seven servants!"

"But aren't they all people who do things?"

"Perhaps one in ten. People who do things don't occupy houses in Gramercy Park—it is only people who have done things who can do that."

"I don't believe I understand New York a bit," said Ann.

"Jane Ordway's isn't New York. Jane Ordway is an institution—a unique institution. I really believe you may see more varieties of people in her house than in any other house in the world. But, after all, nine-tenths of them are people with money, who go there because they are bored with themselves."

Rodney chuckled.

"What are you laughing at now?"

"It amuses me," he said, "to think of my having introduced you to all these people, of being the means of making you a social butterfly."

The remark seemed cruel to Ann. She did not speak again until they

Ann wished she had picked him up that day on the bus

## Make Flour

Do Your Bit. Help the Government By Saving the Freight on Wheat and Flour

RELIEVE the (shoulder) of the unnecessary burden of establishing in your community one of these wonderful American Midway Mill Flour Mills.

**\$150 to \$1,000 Per Month**  
Can Be Made With This Permanent, Substantial and Dignified Business.

This wonderful de-licensed mill is revolutionizing milling. Makes splendid flour at a lower cost than even the Government mills. The fine test is that previous milling experience can be successfully taught even small power easy operation enables you to make a "Better Butter" of Flour Cheaper. You can save your flour under our nationally advertised brand "Midway."

Our Service Department reports your products each month free and keeps you up-to-date. Flour of mill from 25 to 100 barrels per day. You can start with the small size if you have \$1,000 in capital. Sold on 30 days free trial.

Write for our catalog and experience of successful users all over the United States.

During the period of the War, we will not sell on American Midway Mill flour unless we are sure it is the best flour of the country, in our Government, with flour and feed.

**Anglo-American Mill Company**  
736-742 Trust Bldg., Owensboro, Ky.

"Why Every American Should Know" is the title of an intensely interesting booklet of 32 pages describing our Great War history. It contains many valuable battle maps and photographs. Do you want a copy FREE, without obligation? If so, drop a line to E. F. Collier & Son, 216 W. 14th St., New York City.

reached the Crockett Arms. "Thank you," she said. "And I will see you again, won't I?"

"You will if I have anything to do with it," said Rodney Sands, "but I work for a living, you know, and just now I'm working nights redrafting the plans of Jane Ordway's country house—McCord, Read & Bright are doing it."

ANN went to sleep thinking what a thoroughly nice man he was—except for his ironical turn of speech and smile. Why had he chortled openly over having introduced her to his friends? Did it amuse him so much to think that he had manipulated them for the benefit of a strange girl who had introduced herself to him in the basement of the Brevoort the night before? Perhaps he was satiated with these people. Perhaps she had done him a favor in giving a new turn to a stale pleasure.

He was the only man who had ever really intrigued her. And she could not make the slightest impression on him. He was intelligently appreciative—and that was all. He understood everything and felt nothing. Probably he was in love with somebody else. At the thought Ann was suddenly wide-awake. That explained it. He was the only man she had ever wanted, and he was already taken. Ann wished she had never seen him.

His prophecy as to the invitations proved hardly exaggerated. Engagements occupied her increasingly, until nearly every day was full. But she waited in vain for a message from Rodney Sands. And it was two weeks before she saw him again, at a dinner at Jane Ordway's. They exchanged only a sentence privately. She wondered why he avoided her. He had seemed pleased to see her. And once or twice during dinner she had caught him watching her. Was she nothing but a phenomenon to him?

She knew she couldn't be in love with a man who had only a sociological interest in her. But it hurt just the same.

Gradually the social round began to repeat itself. She was definitely in a circle now, so that she rarely met people she had not met before. And then her interest evaporated. She lay awake thinking it out. Going to dinners and the opera in New York was really no more interesting than going to Sunday-night suppers at the Bingham Country Club and dancing to the pianola afterward. There was no essential difference. These people were older, more mannered than the people at home. They spent more money and spent it in more sophisticated ways. But the differences were superficial. Already New York was almost as stale as Bingham had been a year before.

She knew what had spoiled everything—it was he who had made everything. She had fallen in love with Rodney Sands. She wasn't thinking about anything but Rodney Sands. And it was no use. She might better go home—where she wouldn't be driven by the hope of meeting him.

He was the only man to whom she had ever wanted to talk. That was why she had talked so frankly that day in the Brevoort. She had regretted it afterward, but she did not regret it now. He had understood her. She knew now that was why she had run away from Bingham and the Middle West. It was to find the right sort of man. Well, she had found him and he didn't want her. . . .

ANN went over and over it and always she came out at the same place. It was only when she made her final decision that she was able to go to sleep at all. She decided to go back to Bingham.

ham. The next day was Saturday. She would go on Monday. In the meantime she would have one last talk with Rodney. She called him on the telephone.

"Look here," she said, "I want to talk to you. Will you come to tea?"

"Can't," said Rodney. "I'd like to awfully, but I've got to work."

"Work on Saturday afternoon!"

"That's me."

"But I'm going home on Monday, and I did want to see you before I leave."

"Going home?"

"Yes," said Ann, "back to Bingham, Wis."

"Bingham, Wis.?"

"That's where I came from," said Ann.

"I'll meet you in fifteen minutes."

They lunched at Henri's. She thought Rodney had something on his mind. But he refused to be serious. He laughed incredulously when she said she was going back to Bingham for good.

"It's only the failures who do that," he said soberly, when he saw that she was hurt. "You're a success."

"But what good is it?"

"I thought you didn't want to marry a Middle-Western small-town man."

"I did say that," said Ann.

Rodney Sands had never seemed so completely desirable. Or so completely aloof. "You know what I'd like to do?" he said suddenly.

"No," said Ann. How could she possibly guess what was in his head?

"Don't you know it's spring—the first real spring day we've had?"

Ann hadn't realized it; she had been unconscious of the weather; but now he mentioned it she knew it was warm and sunny.

"Let's get a hansom and ride up the avenue and through the park."

"Let's!" cried Ann. It was the first deep touch of sentiment she had found in Rodney Sands. It suited her mood precisely.

THE horse ambled steadily up the avenue. The big wheels rolled softly over the pavement. The quaint vehicle swayed gently, like a hammock. Through a world of iron and stone and asphalt stole the breath of spring.

They said never a word until they reached the park. Then Rodney Sands leaned back in his corner and looked at Ann. "I'm going to tell you something—two things."

He paused a full minute.

"I've thrown up my job at McCord, Read & Bright's. Next week is my last."

"What are you going to do?"

"I've won a competition—a public library. And I'm going to build it. But that isn't what I was going to tell you."

He grinned at her amiably.

"You know," he continued, "I can't keep my eyes off you."

Ann could have slapped him. Didn't this man realize that she cared for him? Or was that why he grinned?

"You are the most beautiful thing that ever was made. And you're honest too. It was the most delightful thing that ever happened to me—that

## "Good Things

come in threes." And so with Rockinchair Underwear.

- 1 Intelligent method of sizing, the work of a leading men's clothing designer. For every size there are three shapes—regular, tall slim, short stout. A model for every figure. And proportioned to body lines, like a tailored suit of clothes.
- 2 Three more comfort features: The fullness above the snug-fitting waistband that allows perfect freedom in all bodily movements. The closed seat that is comfortable and sanitary—no back split to bunch up and annoy. The side leg opening, with buttons in plain sight, that opens with a broad sweep clearly across the back and allows quick, easy adjustment. With no strain on the buttons!
- 3 A variety of materials to suit every purse. Slightly underwear as well as the most comfortable. Like its namesake, the rocking-chair, it is typical of comfort.

## All that we have is staked in this war—

Our men, our money, our boundless resources. If we were to lose, we'd lose everything—so it is up to us to win, and one of the first steps necessary is to learn all about the War, what led up to it, how it began, through it all. The fragmentary accounts in the Newspapers are fine as far as they go, but it is only in a real History that you can see things in their proper perspective.

## "THE STORY OF THE GREAT WAR"

Published only by P. F. Collier & Son

Is just such a history. A whole army of noted authors and correspondents assisted in its compilation, taking advantage to the full of the world-wide news-gathering facilities of the Collier organization.

It gives you historic perspective, digging out the roots of the war for the past fifty years; vivid description, covering in detail the thrilling events of the war; expert analysis, a resume of the net results. In short, it is a real history written to keep pace with the conflict. A work that every man should read now for his own sake and that of his country.

Send for free booklet describing this wonderful War history.

P. F. COLLIER & SON, 415 WEST 134th STREET, NEW YORK CITY, N. Y.

Please send me free booklet describing the Story of the Great War, showing samples of paper, etc., and give me full information about the plan of subscription.

her production to her consumption, but she has the added positive advantages in the other two factors. In broad prewar figures, while England produced one-fourth of her consumption, and France produced one-half of her consumption, Germany produced three-fourths of her consumption.

### Machinery for Marketing

WHEN the war came it shut Germany in upon herself. It contracted all her marketing machinery and simplified her methods of procedure. The fact of war itself enabled Germany to make her last pound of meat, her last gram of cereals, effective. For the Allies the sudden breaking out of the war brought a sudden expansion in markets. Provisions for which presumably secure channels had been provided now suddenly had to be secured from the other side of the world. Uncertainty was introduced into the whole business of food. And all the extant quantities of food in the world's markets were of little account compared with the fact that transportation was becoming daily more difficult and time was becoming daily more precious.

Germany is the youngest of the great powers. She is the only nation in western Europe which is young enough to look back to a recent agricultural history. With her the food problem has always been an adjunct to war preparations. It would be hard to say which idea came first, whether war was the chicken which laid the food egg, or whether the demand for food hatched the call for war.

We are told that in building the German Empire Bismarck was faced with two courses. He could encourage agriculture and develop an agrarian empire, or he could take the dangerous step of throwing Germany into competition with the rest of Europe as an industrial empire. He took the middle of the road. He decided that Germany should be both an agricultural and an industrial empire. Only an industrial empire could send its nerve strands across the world. Only an industrial state could supply the men who would be needed for the wars of the future. But only an agricultural people could feed these armies in case of a war with its neighbors.

Agriculture was stimulated by every possible means. A tariff wall was built to encourage the growth of grain and meats. The population of Germany rose from less than 45,000,000 in 1880 to about 70,000,000 in 1914. The growth of industry was unparalleled. In thirty years the production of crops on approximately the same acreage increased 60 per cent.

Her staple crop was transferred from wheat to potatoes, in which in late years her total yield per acre has been far beyond the yields of any other nation. Germany was preparing for war in every direction. She was creating the munitions, the man power, the food within her own borders.

When the war began grain embargoes were clamped down simultaneously by both neutrals and combatants. Germany was still in better stead than the Allies. She had her potato crop of 2,000,000,000 bushels as compared with a French crop of a little more than 300,000,000 bushels; she still had an excess of one-third sugar beets over consumption. And her consumption of grains for some years before the war had been 32,000,000 tons as against a production of 26,000,000 tons. A part of the shortage she could make up by enforced economy and a part by substitution. At any rate, she could go on until the next harvest.

In this last consideration we find a strong feature of Germany's situation, a feature she has been wise enough to use to its full value. It has to do with that "social psychology of combat" that is the greatest hope and the greatest anxiety of war makers. Morale is a capricious thing. Like the war machine itself, it is dependent upon other factors than material resources. Too much material resources is sometimes bad for morale. Morale is keyed to hope, but it is tempered by necessity.

### The Tightened Belt

I DO not know that Germany has been a good psychologist in dealing with other peoples. But she has been a good psychologist in dealing with her own peoples. Of course she has had her troubles. Germany has had her food controllers, her food cards, her shortages, her requisitions, her bread lines, her bread riots. Her efforts at regional administration of food problems failed; the wheat crops of 1915 and 1916 failed.

She had difficulties in securing returns from farmers; there were strained relations between Prussia and Bavaria, between Germany and the Dual Empire, and between Austria and Hungary. We read of efforts to secure conservation by mechanical means, stories of sawdust foods, of synthetic substitutes, of the fining of merchants for joking about sandwiches, of the drilling of school children in mastication, of campaigns for the saving of cherry stones. These are diverting bits of gossip and no more. All her failures she used to her advantage; the greater the pressure the more she drew upon her people's resistance.

We have made too much of the promised break of the German morale through hunger. It has been the fear of hunger that has screwed the German's courage to the sticking point. Every German citizen has been reared to the idea that his subsistence is in danger. He has been taught that the half acre that he calls his fatherland is not large enough to support its population. He knows that in case the iron ring is drawn about him he can live only by the utmost economy.

At the outbreak of the war a committee of German scientists frankly stated that Germany faced a deficit of one-third of her normal calorie consumption and one-fourth of her consumption of albumen. Every German citizen was taught the logic of the tightened belt.

### Where Germany Stands

GERMANY has always been able to make the psychological appeal, to promise for the future at the same time that she is showing that present conditions are the result of the iniquities of her enemies, to impress upon her people the plea that however ill they may fare they are better off than they would be in case of surrender. The call to hold out until the next harvest is very useful in handling the German food problem.

Americans who tell themselves that Germany will collapse for want of food are letting their hopes speak for their reason. It is much to be feared that their hopes will delude them. If Germany ever comes to a change of heart—and no one doubts that she eventually will—it will not come through an appeal to her stomach.

Germany has committed great crimes. But if any of us thinks of her as a slinking conscience-haunted villain of the Bulwer-Lytton school of crime, we fail to understand her spirit. Whatever she has done she has created a philosophy to explain and justify. She is standing by her guns to-day with a vigor and a courage which are no less because they are utterly misguided and vicious.

We find it necessary continually to check up our thinking on this war. We keep on thinking of the war in terms of the older and primitive combat. And we keep on finding that these old foot rules, these old measures, these old philosophies of hate and morale, do not work at all.

We will understand this war only when we accept it as a different kind of war, a twentieth-century war, in which men are bringing to bear in new combats everything they have learned, and all the new subtleties they have ingrained into their flesh.

In all human probability Germany's food prospects for holding out through a long war are better now than they have been since 1914. In four years she has added thousands of square miles of valuable territory from Belgium, France, the Balkan States, and Russia.

Even if the German supply of food is inadequate, it is a far cry from a food shortage which the people believe has been brought about through their enemy, to a surrender to that enemy with the threatened danger of reduced resources after the war.

America has a war to fight which will tax all her energies. In this war we shall need all the force, all the determination, all the single-mindedness behind our blows that come from very simple and very powerful intentions. It is no kindness to America to weaken our decision to-day by speculations, academic or sentimental, as to the fighting stamina of our enemy. It is enough that we consider that to date no pain in the pit of the German stomach or momentary flutter of human kindness in the German heart has mitigated the force of the German explosive or purified the poison of German gas.

Germany will not collapse until after she is beaten.

One of the many beautiful illustrations in *The Harvard Classics*, Dr. Eliot's Five-Foot Shelf of Books.

## This Is Marie Antoinette Riding to Her Death

Have you ever read her tragic story? Have you ever lived through the stirring days of the French Revolution in the pages of Burke's great book—one of the wonderfully fascinating books that have made history?

In all the world there are only a few of these books, speeches, letters, poems, essays, biographies, that have really made history. To read these few great works systematically and intelligently is to be really well read.

What are these few great works? How can a busy man discover them among the millions of worthless books in the world?

The free booklet offered below answers that question. It tells how Dr. Charles W. Eliot, from his sixty years of reading, study and teaching, has selected the books that "picture the progress of civilization" and arranged them as

## Dr. Eliot's Five-Foot Shelf of Books

If you ever expect to add another book to your library, you should have this free booklet, this "guide book to books" to-day.

You should know why 150,000 busy successful men are finding in *The Harvard Classics* just the daily mental stimulus they need.

You will understand then why it is that some men—who may never have been to college—nevertheless think clearly, talk more convincingly, earn more and enjoy life more than many college men.

## Your copy of this FREE Booklet

is wrapped up, awaiting your request. It was printed especially for you—one for each Collier reader—and it was printed to give away.

"It has saved me hours of time and many, many dollars in my choice of books" writes one man.

Merely clip the coupon: it will bring your copy by mail to you.

## Why America has the best roast beef in the world

**T**HAT cut of prime roast beef on your table—do you realize that it is of a quality such as our fathers seldom knew?

In their day meat dressing was purely a local business—wasteful, unscientific, frequently unwholesome.

It depended solely upon such cattle as could be raised in the immediate vicinity—cattle adapted mostly for dairying purposes and usually sold for meat only when unfit for anything else.

Today, thanks to the enterprise of the American cattle-raiser, herds of broad-backed cattle, scientifically bred for meat-producing purposes in the fertile pasture lands of the West, supply a quality of beef that is the standard of the world.

This scientific breeding on a large scale became practicable only when the facilities developed by the modern packer made meat dressing and distributing a national instead of a local business.

Through the establishment of large packing plants with adequate stockyards facilities near the finest cattle lands, and through the development of country-wide distributing machinery that assured a ready market at all times and all seasons, the breeding of fine, meat-producing animals was made possible.

And because those parts of the animal that once were wasted are now converted into valuable by-products, the large packer is enabled to sell this better beef, dressed, for less than is paid for the animal on the hoof.

## ***Harrison Radiators Increase Motor Flexibility***

Rolling quietly, easily along the boulevard—racing with eagle speed over the wide country side—darting thru the traffic openings on the crowded city streets.

The wider range of speeds a car is capable of, the more perfect the cooling system must be.

This is why you find Harrison Radiators on cars whose motors respond so easily, quietly, to each gentle pressure of the accelerator.

Harrison construction embodies all the requirements of a cooling system—big free air passages, cool easy flowing water circulation, lightness of weight, durability.

You will always observe motor flexibility in cars equipped with a

# America First!

in good roads

## America Leads Because Its Finest Roads Are Tarvia Roads—

Twenty-five years ago, the roads of Europe were the best in the world.

Two centuries of incessant care had made them so smooth and firm that people thought they would never wear out. But along came the automobile, destructive alike to the roads and all road-building traditions.

The highways had not been constructed to bear this kind of traffic, and unless protected by modern methods they promptly went to pieces.

So Europe had to start even with America in developing roads that could withstand the gruelling test of the new conditions.

*Now America leads.*

The finest roads the world has ever seen are now constructed in this country and a *very large part of these roads are built and preserved with Tarvia.*

*Constructing a dustless, mudless, automobile-proof Tarvia Road.*

Tarvia roads are dustless and mudless, durable and automobile-proof. They give the maximum of wear at the minimum of maintenance expense.

Tarvia roads are an asset to any community because they make intercourse easier and increase property values.

They are an asset to the nation because they shorten the market haul and release labor for more productive work.

Now when we are at war and the railroads are clogged with traffic, *good roads are more necessary than ever.*

With plenty of good roads, motor-truck traffic can take care of thousands of tons of food, fuel, and munitions, and relieve the railroads to a very great extent.

Every highway authority, every government official, should be interested in this problem *because good roads will help us win the war.*

*Preserves Roads-Prevents Dust*

### Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department which keeps up to the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity, the matter will have the prompt attention of experienced engineers. This service is free for the asking.

If you want *better roads and lower taxes*, this Department can greatly assist you. Booklet free on request.

## BEHIND THE BARRICADE

*Here is a sight that has not been seen since the earliest days of the war—soldiers fighting in a barricaded street. The photograph was taken in Bailleul a few hours before the British, fighting desperately against overwhelming odds, were compelled to evacuate the town.*

# MAN-POWER

BY MARK SULLIVAN

THE purpose of this article is to attempt to bring simplicity and understanding to the industrial situation in the United States at the present time, especially that phase of it which is widely discussed under the phrases "essentials and nonessentials" and "business as usual." It is an attempt to set down what has happened, is happening, and is going to happen to the fundamentals of the business and industrial structure of the country. Let us begin with man power. Indeed, we must begin and end with man power, for that is what it all comes back to. If the discussion be kept in terms of man power, it will be within the comprehension of any understanding, for the whole problem becomes merely one of addition and subtraction—under our present conditions, chiefly subtraction.

"Man power" is frequently used in military discussion as meaning the total number of soldiers a nation can bring together. More broadly, and more properly, it is the entire strength of a nation, military and industrial. In this more correct sense the man power of the United States is 35,000,000—the 35,000,000 men, women, and children who do the country's work, who serve it in the army, who dig its coal, who raise its crops, who run its trains, who build its roads, who make its powder, who turn out its munitions.

(The latest census gave the total number of persons "engaged in gainful occupations" as 38,167,336. But the census includes everybody "ten years of age and upward." Since the census was taken we have quite generally ceased to regard children under fifteen as a factor in industry. For this and other reasons the figure generally used by economists, 35,000,000, may be taken as a sufficiently correct estimate of American man power as it exists to-day. It is confessedly merely a rough approximation, but it has been adopted by the Department of Labor, and generally by statesmen and economists who deal with this subject.)

This 35,000,000 man power is our all. It is the whole measure, and the true measure, of our wealth. In public discussions our national wealth is frequently given, in terms of dollars, as about \$200,000,000,000. But if the whole \$200,000,000,000 were wiped out to-morrow, our man power could reproduce it. The wiping out of our man power, on the other hand, would be the end of everything. Our man power is our all. It is the measure of our effectiveness in war and peace. It is the total—to put it in terms of our national card game—of our pile of chips in the fight with Germany. We cannot increase it. To a certain extent we can mobilize it more effectively and manage it more economically. But we shall always come back to this 35,000,000, and no more, as the measure of this nation's capacity to work, to fight, to accomplish, to do.

## Immigration Has Ceased

NOW, let us see just what has happened to this 35,000,000 since the war began. The first thing to bear in mind is that with the beginning of the European War the greatest source of increase for our man power was cut off. We used to get an increase of a million man power a year through immigration. We now get substantially nothing. Few people recognize the significance, in a business and economic sense, of this cutting off of immigration. The immigrant was almost the only source of what we call "day labor," the men who do the building and repairing of railroads, the mending of streets and roads, mining, and the rough work of steel mills and other factories. We have gone on as if this source of our labor were a perpetual fountain. We have not stopped to consider the business and economic and social changes which must come about when the fountain runs dry, and we are compelled to adapt ourselves to a condition very strange to us. Moreover, an immigrant raised to maturity, with all the expense of his nurture and training paid by his own country, delivered at our gates free of charge as a working unit of man power, was a valuable asset. Valued even in the way that slaves were valued before the Civil War, and taking into account

the change of standards, he was worth at least \$2,000. A million immigrants a year were worth \$2,000,000,000. That is, roughly, equal to the value of our wheat crop and our corn crop added together. If our entire wheat crop and our entire corn crop were complete failures in any one year, we should hear a great deal about it. As a matter of fact, the cutting off of our immigration of a million man power a year was a more serious matter than the loss of our wheat and corn crops. For the cessation of immigration was not for one year merely, but for as long as the war lasts—and it may very well be for always.

## Dislocations and Diversions

WHETHER this immigration, this rich fountain of man power, will ever again flow into the United States is one of the mysteries of whatever future shall be organized out of the political and social debris when peace is signed and reconstruction begins. One cannot give the answer; one can only set the problem up in the shape of questions. Will the German, the Italian, the Austrian, the Hungarian, and the other Europeans be emigrants after the war? One would expect them to want to emigrate. If the debts now being piled up by European countries are not repudiated, or by any device scaled down, then the citizens of those countries will most assuredly be tempted to run away from the intolerable burden of taxation.

Taxes in most of those countries will be in excess of anything known in history. If they have wanted to emigrate in the past because of burdensome taxation and other hampering economic conditions, they will assuredly have all the more reason after the war. A laborer in Germany, or in Austria, or even in some of the countries of our allies, will find himself in a position something like this: he will go to work at seven o'clock in the morning and he will work until noon; by that time he will have paid his taxes; whatever he earns during the rest of the day he may be able to keep for himself. Under such circumstances one would expect this laborer to do some very hard thinking during the noon hour. One would expect him to conclude that he would take his hat and his tools and set out for some country where he would be permitted to keep more of the product of his work for himself. But Germany and Austria and the other European countries may forbid emigration.

Germany understands the importance of man power as the true source of a nation's wealth and power—none better. She has conserved it and stimulated it in the past more generally and more intelligently than any other nation. She will have all the more reason to conserve it after this war is over. Most assuredly she will try to find means of keeping her man power at home, even to the point of forbidding it to go away. It is all in the future, and one man's guess is as good as another's.

Of all the guesses I have heard, the one that seems to me most probable is that if there is any emigrating among European people after the war they will be most likely to gravitate toward Russia. Russia, assuming that it achieves a reasonable government, will be to the rest of the world what America and our Great West long were to us, the field of opportunity for the adventurous emigrant, the goal of the pioneer. Russia is an undeveloped country, and it is near at hand. All in all, whether America will ever again receive a million immigrants a year, or any considerable number of immigrants, is a question. However, that is all a matter of future surmise. We are dealing with the present, with what has actually happened, or is happening, to the man power of the United States, to the 35,000,000 who now compose our all. And in that area of consideration the

net fact is this: that adult immigration has practically ceased, that this great source of an increase of a million man power a year must be wiped off our books.

After the cessation of the accustomed increase, the most obvious thing that has happened to our man power is that 2,000,000 of it, between the ages of twenty-one and thirty-one, have gone into the army, and are no longer at their accustomed posts in factories, mines, offices, and farms. This 2,000,000 is the best of our man power. It was at the age of greatest vitality. The loss of it to our industries is greater than the mere figures indicate. Two million man power (a year from now it will be 3,000,000, two years from now it will be 5,000,000) out of our total 35,000,000 have ceased completely to be normal producers of goods. (Incidentally, these millions have not only ceased to be normal producers; in addition, as soldiers, they have become larger consumers than they were before of food, clothes, and other materials.)

Here, then, is the first subtraction: 2,000,000 from 35,000,000 leaves 33,000,000. But this is only the first, and not the largest, of many subtractions.

Subtract another half million for the navy.

Subtract another half million for shipbuilding.

At this point it might be appropriate to ask some of the "business as usual" advocates just how business can be as usual, just how 32,000,000 man power can do the amount of work and business usually done by 35,000,000. As a matter of fact, we do not have even 32,000,000 man power left available for business as usual. For the deductions just pointed out are not by any means all the deductions that have occurred. They are not even the largest deductions. I have set them down first merely because they are the most obvious. They are the best ones for illustrating the thing that is happening. They involve actual dislocations of man power, men who go away, not only from their accustomed pursuits, but also from their accustomed homes. But it must be remembered that man power can be diverted without being dislocated. A man may continue to live in the same house, and use the same pick, and work in the same mine, and get his wages from the same boss; but if the ton of ore he digs finds its ultimate destination in rifles instead of piano wires, he is a unit of man power subtracted from its normal uses. And these diversions are enormous.

## Fifty Per Cent for War Industries

AS to the precise number who have gone and are now going from their normal pursuits into powder making and bullet making and rifle making, and gun-making and the like, it is not possible to give figures as exact as in the case of the army and navy. But it is possible to arrive at some convincing estimates. Consider, for example, one of the minor war industries, airplane making: Ultimately, if we do what we ought to do, we shall have at least 50,000 aviators in France. Mr. Howard Coffin and others estimate that one aviator on the fighting front will require forty men back of the line for repairs and in the factories as mechanics and gathering spruce and in other ways producing the materials. Based on that estimate, we shall, during the present and coming year, take another 2,000,000 out of our man power for building our air fleet, and keeping an adequate supply of these unusually in-

tricate and unusually breakable machines flowing toward the front in France. (This estimate of the quantity of man power required for building and maintaining our air fleet seems to me large, but I accept Mr. Coffin's figures.)

But airplane making is merely one of the minor of the several war industries which are taking millions away from the usual pursuits of our normal 35,000,000 of man power. Mr. Charles M. Schwab says of his one concern, Bethlehem, that out of nearly 100,000 employees about 90 per cent are engaged on Government orders. This is fairly typical of the steel business as a whole. Mr. Leonard Replogle, who is in charge of steel for the War Industries Board, says that during May and for three months preceding, 85 per cent of the entire steel trade of the United States was engaged in war work. And until the war ends this proportion is sure to increase rather than diminish. But it is not necessary to go through all the tedious computations of the number of our man power which has been taken for powder making, for shell making, for rifle making, and the like. The figures change from day to day, and the change is always in the direction of increase. The sum of it is pretty accurately known to those whose business it is to form expert judgments on such subjects. For example, Mr. Frank Vanderlip, president of the National City Bank of New York, has found an ingenious and convincing way of arriving at the number of our man power which has been diverted from normal pursuits into war work. He first points out that the total amount of production that all our man power can do in a year is about \$30,000,000,000. Then he sets down alongside this fact the other fact that the appropriations made by the United States Government for the present year are \$19,000,000,000. That is to say, the Government is going to buy, for war purposes (allowing for some millions for duplications) about one-half of the entire productive capacity of the country. In other words, the Government is going to hire for war work, and take away from normal pursuits, about one-half the entire man power of the country. That would be between 17,000,000 and 18,000,000 of our man power. Others estimate the number, for the present, as somewhat lower. They say that although it is true that the country, in an industrial way, is now more than 50 per cent at war, various considerations reduce the total of man power diverted. A little later on, they say, the diversion will amount to 50 per cent.

### The Famine

OUT of all the mass of figures, exact and estimated, the one *not* fact, the "red-ink" fact, as the accountants express it, is this: *as compared with normal peace-time production, there is a labor shortage in the United States of at least 15,000,000 man power.* What this means is that if we attempt to carry on the war, and at the same time continue "business as usual," we shall lack 15,000,000 man power. We cannot do both. With such an alternative, there is but one answer. Business, of course, will not and cannot be "as usual." In fact, already business is not as usual. To take one conspicuous example, the building trades of the country, which normally engage about a million man power, have practically ceased, except in so far as they have gone into building warehouses for war uses. And the automobile trade, by agreement with the Government, has voluntarily reduced its 1918 output 30 per cent below its 1917 output. Such a shortage from normal as 15,000,000 is not a shortage at all, but a famine, and it is this famine in man

railroads are crying for labor. The manufactories are crying for labor. There is shortage of labor everywhere."

With a shortage of 15,000,000 man power, or nearly one-half of our whole, it is so obvious that we cannot have "business as usual" that even the most hopeful of the boosters must admit it. But these learned economists of the retail millinery and bric-a-brac trades are invincible optimists. At this point doubtless they will say: "Well, with a 50 per cent shortage in our man power we can at least have business 50 per cent as usual." But they can't. Right here comes the distinction between "essentials and nonessentials." (The authorities at Washington, wishing to soften the blow, have taken to speaking of "essentials and less essentials.") We aren't going to be able to get this one-half of our man power to fight the war as soldiers and workmen by taking an even half from the production of each of our normal peace-time lines of goods. For there are some things we can't get along without. There are some of our normal peace-time products which we must have. Indeed, in war they are more necessary to have than in peace. These particular businesses must go on as usual, or above usual. These are the essential industries. Of these the biggest and most obvious is farming.

### Farming the First Essential

THE farms of the United States, this year and so long as the war lasts, must supply food not only for the population which normally depends on our farm products, but, in addition, for large portions of the population of France, England, Italy, Belgium, and some neutral countries. They must do this or some of our allies must starve. Now, farming is at all times our biggest consumer of man power. In peace times the number of man power engaged in it is about 12,000,000—about 6,000,000 farm owners and 6,000,000 farm laborers. Whether this number of man power engaged in farming has been increased during the war, I do not know. It is a fact that the quantity of farm products has been enlarged. The farmers of the United States planted and harvested last year the largest acreage on record. Secretary Houston believes that in the present year even that record will be increased. It is worth while to pause for a moment and consider what the American farmer accomplished last year; he increased the number of horses in the country (in spite of the shipments abroad for war purposes); he raised more cows; he raised more beef cattle; he raised more pigs.

From this it may fairly be argued that the portion of our man power engaged in farming must have increased. But assume that it remains at the normal 12,000,000. Then we have this condition: About 18,000,000 of our man power either has been or soon will be diverted for war; out of the remaining 18,000,000, 12,000,000 are engaged in farming. Seen in this cold statistical light, the prospects of "business as usual" do not look very up-and-coming.

Of the 18,000,000 man

itself would be easy to tell if there were room. But we are only concerned with its relation to man power. The man power normally engaged in railroad work is about 2,500,000. The late James J. Hill, before he died, and before the war began, said the railroads ought to have a billion dollars a year spent on them for five years to bring them up to good condition. That is the same as saying that even in peace times the railroads needed a million more man power. And it is not only the railroads. It is the same in every branch of the transportation industry.

### Over 15,000,000 Short

FEW people have observed a most striking evolution that is just beginning in America. The Philadelphia "Public Ledger" carries two columns of advertisements of daily motor-truck express service between Philadelphia and New York, with tri-weekly services to smaller cities. Regularly, every day, 640 motor trucks carry freight on schedule on the public roads between New York and Philadelphia. The Post Office Department has just inaugurated daily motor-truck package services in the country districts for thirty to fifty miles outside Philadelphia, Baltimore, and Washington. All this is merely a hint of what is coming. And not only will more man power be needed to build these trucks and drive them and load them. That is only a fraction of the need. The entire public-road system of the United States must be rebuilt. I asked the Government official who has charge of the matter how many miles there are of good public roads in the United States. His literal answer was "not one single mile."

That answer, of course, was meant to convey a certain emphasis of exaggeration. But it is a fact that even what we have been accustomed to call good roads are not equal to the new need. Even our concrete roads break down under the conditions of heavy motor-truck service. They have been built too narrow. The heavy trucks, when they pass each other, go out on the dirt shoulder and press it down. The dirt slides out from beneath the concrete, and the concrete cracks. Moreover, it is absurd, that heavy express trucks, on their trips between New York and Washington, should have to pass through the narrow, crowded main streets of Philadelphia and Baltimore. There should be cut-offs around these cities. All the public

power required for war, none can be taken from farming. They must come from somewhere else.

Now, there is one other of our great occupations which must be kept up to the normal man power. It must be kept up to normal; it ought to be increased. The railroads are a most essential war industry. And they are in a bad way. We had a transportation failure last winter which caused us much inconvenience and held back our war work. (The coal famine was really a transportation failure. Those who are competent to know say it was almost wholly a lack of cars. They say there was never a day when a car remained empty at the mine mouth. The coal was always there; the lack was cars to carry it away.) And the transportation failure is really just as serious to-day as it was last winter. If you doubt this, try to get a carload of coal, or a carload of bricks. This transportation failure is going to continue to grow worse for a long time to come. Just how and why it will express

power which underlies all other famines. As Congressman Borah put it: "The farms are crying for labor. The mines are crying for labor. The shops are crying for labor. The

### Five Ways Out

ALL the proposals for alleviating the famine in man power came down to these five:

1. Conscript labor. Draft all males from eighteen up to fifty or sixty and put each of them at work in industries designated by the Government. (Some of the proposed bills put the limits at twenty to forty-five; others at sixteen to sixty-five.)

2. Take up the slack in the man power we have. By supervision, avoid the wastage of time and man power. Make more economical use of the man power we have. (The Government has already

# THE ADVERSARY

BY JOHN RUSSELL

ILLUSTRATED BY J. C. COLL

IN the good old days of Thursday Island there passed as waif currency a certain local jest. When some pride of the pearling fleet was moved to approve himself, his company, and the pervading wickedness in general he was wont to state—more or less titubant on his pins the while—that the only honest men in that merry little hell had come by land. It was a useful and a harmless jest, salted with the essential fact whereby legends are preserved and made historic. But from a date it lost its savor.

At the Portuguese's one night—Saturday, to be sure, for it was always Saturday on Thursday with the pearlmen—a gentleman from Woolloomooloo who had just adorned the traditional witticism with profane fancy found himself confronted by a quiet stranger who laid down his coat and a new law.

"I don't mind so much what you call yourselves to yourselves," he observed, while the circle shouted and spread about. "Nor your nice new magistrate, nor your missionaries, nor your artillery guard on the hill. Maybe you've overlooked the modern spread of respectability and corrugated roofings. Or maybe you know 'em better than I do. But I've come to tarry with you for a time, my friends. And, as long as I'm in your midst, any chap that says I'm not honest—and can't prove it—I'll knock seven bells out of him."

Which he did, *seriatim*.

NOW, there never was another place habitually so incurious as Thursday Island in its social dealings. It is the last raw outpost toward the last unknown continent of Papua, and those who resort to its blistering grid among the reefs are folks that have largely reduced their human complex to the simple thirst. Where every prospect displeases and man is only an exile the merest regard for etiquette will warn against prying very far into your neighbor's little eccentricities unless you are prepared to push the inquiry with a knife.

Also, there never was another place like Thursday for variations on a color theme. That season the islanders counted twenty-two races among the two thousand of them, including half-castes; and most of their common gossip was carried on in a lingo of rather less than two hundred words. You cannot do much abstract speculating in *bêche de mer*.

Perhaps these points would somewhat explain the stranger's success. Nobody questioned his account of hailing from the Low Archipelago, or the curiously yachtlike snap to his craft, or his own odd employment on a pearling license. Nobody wondered when he paid off and scattered his Kanaka crew—possible links with his past—and shipped a new lot from the motley mob on the jetty.

And a motley lot he picked! His cook was Chinese; his head diver a Manila man; the delicate lemon of Macao mingled with the saddle tints of the Coromandel Coast about his decks, and for mate he found a stranded West African negro who bore, in pathetic loyalty to some ironic crimp, the name of Buttermilk. Still, such a mixture was ordinary enough at Thursday. Ordinary too was the fact—which again nobody noticed—that they were all opium users, who do not talk, rather than drunkards, who do.

This honest man had brought his honesty to the proper shop for face value. His story began with

that startling gesture at the Portuguese's. It continued in the epic strain of a halfpenny serial. The hero himself might have filled a whole illustration; thewed like a colossus, crop black hair in a point over the brow of a student, a smooth, long jaw always strangely pallid, and gray eyes, inscrutable and ageless as pebbles. With his jungle step, with his thin ducks molded to the colling muscles underneath by the press of the southerly buster, when he came swinging along the front the crowd parted left and right before him. Most crowds must have done so; probably many had. But at Thursday he was almost an institution.

"'Im? Cap'n of the Fancy Free, that flash little lugger out beyond. 'Ardest driver and str'itest Johnny in the fleet." Thus the inevitable informing larrikin, eager to cudge a drink from the tourist on shore leave. "'E'd chyse you acrost the Pacific to p'y you tuppence 'e might ha' owed you—that's 'is sort. And—my word!—'e's got a jab to the boko you don't want to get p'id at no price! Wetherbee, they call 'im. 'Honest Wetherbee'—that's 'im."

For he lived to the title. If it is honest to abide by every hampering regulation that makes you solid with the authorities; to split prices over a bit of inferior shell; to lose two weeks with your outfit in quarantine, voluntarily—that happened when the *Opalton* brought a hot cholera scare and her passenger list camped on Friday Island—to share your stores with starving lighthouse keepers; to drink a set of hard cases blind and stiff and then, departing clear-headed, settle the whole damage yourself; to pay all bills square; in short, if it be the part of honesty to give the cash and take the credit every time, Cap'n Wetherbee played it. Amazingly—as a man might play an arduous game!

Within six months Port Kennedy and all thereabout would have sworn by him; he had dined with the subcollector and the harbor master and was calling various pilots, navigators, and odd fish of Torres Strait by their handier names—especially the pilots. These were the rewards of reputation, and they defined Thursday's acceptance of him up to that night in the wet season when his visit ended.

A SATURDAY again. The northwest monsoon had broken with torrential downpour, and now the island reeked in a steam bath, as if the young moon had focused a sleek, intolerable ray upon it. A high wind stormed the sands and brought no relief. The

quiver of the surf beat on the senses like heat waves. A few thrashing papaws and palm tufts threw shadows like tormented sleepers along the beach. But up in the town Thursday took its usual "tangle," shouted and sang and drowned its fever without assuagement in the periodic crisis of the fortune hunt. A Brisbane steamer lay ready to depart with the morning tide. Meanwhile her shore goers, "seeing a bit o' life," did their possible to keep up the prevailing temperature. Only the long jetty was quiet. Here a man might stand back and away from it all and hear the single note of its turmoil and peer into the mist of its lights like a contemplative Lucifer at the verge of some lesser inferno.

AND in truth there stood such a man in much that manner. He had come down soft-footed from the streets and, lingering to assure himself he had not been followed, stepped out upon the jetty where he stayed motionless and attentive. His glance roved from point to point, noting, verifying. First the outward spread twinkle of the deserted lugger fleet at anchor; then the bulk of the Brisbane steamer at the T head, with her yellow cargo flares that showed loading still in progress; and the town, all unconscious of him. Something sinister seemed to detach this big, dim figure from the restlessness of the night; brooding apart there so coolly alert and contained. He regarded Thursday for a while, and at last, alone and with himself for confidant, he made a gesture as if to seal its folly and its whole destiny with final contempt and triumph.

He was turning away with a swing of broad shoulders when another figure slipped from the shadow and moved suddenly to confront him.

"Ah—Captain Wetherbee?"

Everywhere and always up and down the earth, and more particularly in rather unhealthy corners of it, are men who have to go braced for that questioning slur, that significant little drag before the name. It is a challenge out of time and space, and at sound of it the big fellow drew up tense like a battler in a ring.

"Halvers," stated the newcomer without preamble or apology. "I'll take halvers, if you please, Captain Wetherbee."

He revealed himself as a long, weedy frame in limp linen. Both hands were jammed into his side pockets with a singular effect—against a hypothetical chill, one would have thought. Without his stoop he might have been as tall as Wetherbee, but he had shrunk like the sleeves tucked above his bony wrists. He had an air at once fearful and implacable—the doubly dangerous menace of a timid man ready to strike.

Wetherbee was aware of it, though incredulous.

"You spoke?" he inquired, from a lengthened jaw.

"I said—halvers," affirmed this extraordinary apparition. There was no mistaking the peculiar flavor in his husky voice—no mistaking, either, that at present its owner was deadly cold sober. "Don't move, captain. I've got you covered from here. And this time I'm not afraid to shoot!"

Wetherbee continued aware of it.

"Just my little device for holding your attention," explained the newcomer, between a cough and a snuffle, the remnant of polite affectation. "I thought it out very carefully."

"Ho! You did?" queried Wetherbee.

"You used to be such a damnably abrupt sort of person yourself."

"Ho! Did I?"

"Even then. Even then, when we sat under the same pulpit—such time as you found it socially expedient to attend—it was matter of grave doubt to me whether you took any real benefit. You were always a poor listener, Mr.—ah—Wetherbee. Whereas I—I was chosen deacon that winter, you may remember."

Wetherbee stared into the shaven, haunted face thus preposterously thrust at him across the years. Aside from the unimaginable oddity of the attack, there was cunning and unsettling purpose in it, but he yielded no nerve reaction, no start or outcry; not even a denial. And by this—had he been so wise—the other might have taken warning.

"By Jove!" was all his comment.

"We've come a considerable distance," suggested the new arrival.

They looked in curious silence, each measuring that span from the edge of things. Thursday howled on one side of them and on the other wind and the sea, until the humor of it won Wetherbee to a grim chuckle.

"Well, what do they call you nowadays—deacon?"

"I'm usually known as Selden, thanks."

"Seldom?"

"I shouldn't insist: any more than you yourself, captain."

"And what are you doing here?"

"I dropped in from Samarai, meaning to catch the Brisbane steamer yonder. I've been diving up there all season. I'm a very fair diver, really; only my luck is generally so poor."

TO any passer-by he must have seemed the usual loafer, with a string of woes on tap. But Wetherbee, one eye to the bulging pockets, appeared in no way bored.

"Strolling along the front, I chanced to recognize you. That was luck, if you like. I've thought so. Especially since making inquiries. I've made rather exhaustive inquiries. In fact, I believe I have your rating fairly up to date." He coughed again. "Captain Wetherbee, do you remember when we last met?"

"No," said Wetherbee shortly.

Thereupon Mr. Selden recalled that meeting, and others; and his voice trailed like a snake in the dust, looping cryptic patterns. It was one of those counts of grievance and disaster such as almost any broken fugitive among far places has to tell. Thursday can offer them by the yard, and dear at the price of a drink. He spoke of shares and deals and swindling betrayal, of hope and fortune lost and the false lead that puts a man on the chute and sets him off for a blackleg and a wanderer. All in the clipped jargon of the markets, a common tale, but with this difference in the telling—it came away briefly, with the slow-biting venom that such a fugitive would be apt to reserve for only one out of all possible living listeners in the world. From over the hidden weapon he drove home his point; while Wetherbee stood there rooted on the jetty, like the wedding guest.

"... So you knifed the lot of us in the dark—everyone that trusted you—and bolted. That was your way. You sent me ashore from that last yachting party all primed to go my last penny on a dead bird. I was flattered. I used to credit your honesty more or less myself—then."

"And now?" suggested Wetherbee.

Mr. Selden, late deacon, drew a husky breath.

"Why, now—I've caught up with you. I'm the flaw in the title, at 50 per cent. I'm the judgment out of the past! Verily, no man shall escape it: do you mark? No man comes so far or hides his track so cleverly, even at Thursday Island. I've got your record—as you've got mine, of course; but yours is rather worse, with a warrant pending—of which, by the way, I know the very date. And, besides, I've nothing at all to lose. I'm only a broken diver. No-

body ever called me 'Honest' Selden or 'Honest' anything else!"

His wrists stiffened as Wetherbee took a step.

"You mean to blow, you wasp?"

"You won't make me. Blow! That's no good to me: I mean to get level. Halvers, I said—captain. I'm in!"

"On what?"

"On your new speculation, of course." He came very close to capering. "Your latest devilry. Don't I know your little methods? D'you think I couldn't smell it out? Public character, no suspicion, traces all removed—alibi all complete—and a clear road to the back door."

"You sneaked your crew out of town to-night. Your lugger's ready to slip cable. You've been hobnobbing all evening with the pilot you camped along with on Friday Island for two weeks—that had the *Opallon*—by George, I believe it was you made him a sot on the sly! I wouldn't put it past you. You used to gammon us the same way on your cursed week-end sprints. Don't I know? Haven't I reason-

He stole a step nearer. "Those pearls have been locked in the strong room of the Brisbane steamer since early afternoon. Now then. How the devil am I—are we—to nab 'em? Come! You're the little personal Providence in this affair, at 50 per cent. Don't tell me with all your knowing you didn't know that!"

"It's your deliver," said Selden, "anyhow."

"Well, let's take counsel together—I'm agreeable to have an adversary. Goodness knows I haven't had much amusement so far—the thing's been so rotten easy. By way of a text—Brother Seldom—and a point of departure: did you ever hear of the *Volga*? Ever hear of the *Quetta* or the *Mecou*; dozens of other ships lost one time or another between here and Cape Flattery?"

"Pity about them too—they fell a trifle off the track. Just a few fathom off the track among these millions of reefs that will rip the heart out of anything afloat. Suppose for the sake of argument our Brisbane steamer which we're both so interested in—out there at the dock head—suppose she should hap-

pen to go wandering this trip—say, somewhere around Tribulation Passage, two hours out. Suppose she should—as a slant of luck." His voice lowered with obscurely evil suggestion. "Would it occur to you we might have any chance of salvage on those pearls?"

"I—I don't understand," stammered Selden. "The passage is lighted. There's a light on Tribulation Shoal."

"So there is. What a helpful chap you are to work with! You keep it to port as you turn the Blackbird Reef. It's a fourth order fixed dioptric—unattended. The keeper lives on Horn Island. But suppose, now—suppose that light were moved, either way?"

"Move the light!"

"In effect, merely; in effect. A man might very readily land there from the lee and blanket that light to the westward. And if that same man, with something like a discarded lightship lantern aboard his lugger, should then anchor half a mile away, and show his light at the masthead—hey? A fifty-foot elevation is visible at nearly fourteen miles twenty-five feet up. But a twenty-five-foot elevation gives a total of only eleven point four. You begin to see the possibilities for error—particularly if the pilot of the oncoming steamer should happen to be, as you wisely suggest, a bit of a sot with a hazy eye—"

"My God! You're going to wreck her!"

"Hush!" said Wetherbee very loudly.

Selden whirled around to find a black-skinned native standing impassive behind him. At the same instant a steel grip locked his wrists. "Not that!" he gasped, struggling. "My God, man, you wouldn't! You daren't!"

"No! And yet you said you knew my little methods." "Honest" Wetherbee shifted a thumb to his throat and smiled into his face. "I've a mind to show you, deacon—shall I—how far I have come and how cleverly I have covered my tracks? Hya, you fella boy—that fella boat all ready? Then bear a hand here one time. We've got a passenger."

He stole a step nearer. "Those pearls have been locked in the strong room of the Brisbane steamer since early afternoon. Now then. How the devil am I—are we—to nab 'em? Come! You're the little personal Providence in this affair, at 50 per cent. Don't tell me with all your knowing you didn't know that!"

NOW, it is a fact that no one knows or is ever likely to know the actual explanation for the wreck of the Brisbane steamer, which left Thursday Island that night and came to grief some two hours later on Tribulation Shoals. Other craft have gone the same way from natural causes, and Thursday has kept no suspect tradition of them. The only man who might have denied the yarn as afterward colored in local legend—and incidentally a libel on his own memory—was the pilot who had her in charge. And he never came back, drunk or sober. But the records declare that about four o'clock of a fair enough morning, wind and sea then running high, the 2,000-ton *Fernshawe* went clear off her course among the graveyards where a coral ledge stripped her plates as neatly as a butcher's knife lays open a carcass. She sank inside of five minutes, and her survivors were hurried.

Neither has anyone ever told the true adventures of the *Fancy Free*, the flash little lugger that happened somehow to be missing from week-end rendezvous at the same hour. Her

(Continued on page 28)

Selden was going to fight.... He swung up his armed fist

to know? But you needn't have pumped him so close. I could have told you days ago what she takes aboard of her this trip."

"The hell you could!"

"Pearls: the season's sweep. Twenty thousand pounds' worth of pearls!" recited Selden. "Eh? Twenty thousand—and I've got you by the short hairs!" His eyes shone in the moonlight with a fanatic gleam. "Thus saith the Lord God; An adversary there shall be, and he shall bring down thy strength from thee!"

THEN Captain Wetherbee relaxed and laughed in his chest to match the note of the reef. "Black-mail and piracy! My colonial oath, deacon, I never saw your beat. So you've dropped to me! I go bail you asked a blessing on the enterprise!"

Selden did not deny it.

"Let's hear the rest," urged Wetherbee, while his chuckle echoed the lap of waves among dark pilings. "What's your notion? Did you picture me sticking up the consignors as they walk aboard the plank and passing you your share in a little hand bag?"

The deacon shuffled nervously.

"It can't matter how you do it."

"Can't it? Now, don't you go disappointing me."

### NO WONDER CUBISM STARTED IN FRANCE!

No one need wonder any longer where the cubists got their inspiration. They must have gone up in an airplane and had a good look at France! This airplane view of an observation balloon floating over a French village is as good a bit of cubist art as anything that Marcel Duchamp ever turned out.

# SERBIA ON THE RACK

BY E. M. CHADWICK

Confirming the statements in this article, the Serbian Minister to the United States, Mr. L. M. Mihalovich, wrote the author on May 22, 1918:

"Nearly all that we actually know of what is taking place in Serbia is from the involuntary and accidental admissions of our enemies themselves made in their press and in their parliaments and by the evidence of the few neutral travelers who have succeeded, in spite of all the precautions taken by Austrians and Hungarians, in making their way into the occupied regions. It is especially on each document, the authenticity of which is above question, that you have based your article. The conclusions which you have drawn from them are not only not exaggerated, but they even fall short of the truth."

Additional verification comes from Professor M. E. Pupin of Columbia University, the eminent Yugoslav scientist, who writes to the editor of Collier's:

"I beg to inform you that the article entitled 'Serbia on the Rack,' by E. M. Chadwick, contains data which, so far as my knowledge goes, are perfectly correct."

This article furnishes valuable confirmation and expansion of two other articles recently published in Collier's—'Yugoslavia: A New Nation,' in the May 25 issue, and 'Why Are We at Peace with Bulgaria?' in the issue of last week.

villages have been simply wiped out. Here at my hand is an endless list of names:

"In Doglovatz were massacred: Trajko Mircovic, priest, and six members of his family; Mirosl Ristic and four members of his family; Milenko Jankovic and six members of his family. . . ."

And so on for twenty-eight more. These are cases of entire families destroyed. My list goes on:

"The Bulgars have massacred the following individuals: Four children of Stoyko Mircotic, the wife of Kuzman Stovanovic, seven members of the family of Ivan Ristic, fifteen members of the family of Stevan Kostic. . . ."

And so on with sickening monotony for another eighty-three. This is a record of one village only. The massacre of little children has been as extensive as the killing of adults, and as hideous, a fact which alone is sufficient to dispose of any possible excuse of military necessity. There seems to be no manifestation of insane frenzy of which these soldiers of a "civilized" nation have not been capable. In the course of an inquiry instituted by the Serbian Government into the atrocities committed by the Austro-Hungarian troops in the two earlier invasions of Serbia (1914 and early 1915), Professor Sima Lusanitch (Minister of Education and former Serbian minister to Great Britain),

public press, but there is abundant evidence in his report that the Austro-Hungarian troops were ordered to destroy "every living thing" in Serbia, and it is for this reason that I refer here to these earlier events. The worst massacres seem to have occurred before the enemy acquired the complete control of the country that they now possess, when there was a strong and active Serbian army fighting them and liable at any time to kick them out again, as eventually, to its everlasting glory, it did. Now that, since the joint invasion by Austria, Germany, and Bulgaria at the end of 1915, they are in more or less undisturbed possession, other methods of extermination have largely superseded the cruder one of massacre, though Bulgaria still reverts to it very readily.

## "Hanged by the Tongue"

AS effective as the massacres, from which they differ chiefly in name and (under Austrian jurisdiction) to the extent of some slight form of judicial procedure, are the wholesale executions by means of which many thousands of Serbs have been removed. The country is overrun by spies and secret agents, recruited from the dregs of the Austro-Hungarian and Bulgarian populations; and the most trivial denunciation by these men may be followed by death for the victim. In the village of Ramatya (district of Gruzna) 35 peasants were shot or hanged last year and 250 men and women were imprisoned, simply because some old and disused fowling pieces had been found in the village. In many towns the men are hanged with ceremony in the open market place (it has even been

Effect of the systematic starvation of Serbian prisoners of war

Serbia's land lies idle while Bulgaria steals her plow. These are assembled for shipment to Bulgaria

IT is officially estimated that out of the population of 4,500,000 with which Serbia entered the war, over 1,000,000 (i. e., over 22 1/4 per cent) have died already—a higher proportion than in any other country engaged. If present conditions continue very much longer, the remainder of the Serb population will be dead too, or otherwise lost to the country, by the time the war is over.

I say if present conditions continue. I mean by that if nothing is done to check the reign of terror by which Austria and Bulgaria, working hand in hand, are rooting out from the Balkan Peninsula all trace of Serbian life. The Austro-Bulgarian campaign in the Balkans is nothing less than an organized attempt to destroy the whole Serbian nation. This is no hysterical exaggeration, but a considered statement which can be proved up to the hilt a hundred times over.

That which is being done to Serbia is not at all the kind of infamy that Germany has practiced in the places on which she has laid her defiling hand. Even in their wildest dreams the German war lords do not seem to have contemplated the actual elimination of the Belgian or the French people. But Bulgaria does literally look forward to a time when that portion of the Serbian nation which she now controls will have disappeared into the limbo that holds the Hittites, the Hivites, and their kin. If Austria does not go so far as that, it is chiefly because she realizes better than Bulgaria that the Serbian people cannot be destroyed while their seven million kindred in the Dual Monarchy are alive and clamoring for freedom; but the evidence of Austria's intention to bind to her chariot wheel as much of Serbia as she can get, and to destroy so far as possible all trace of national feeling in its inhabitants, is too extensive and too well authenticated to be disputed.

Civilized people, until they begin to investigate, hardly realize how many ways there are by which a people may be removed from the ranks of national entities. The evidence which lies piled up before me points to seven leading methods, all of which—for the sake of speed, presumably—the occupying powers are employing in Serbia.

The most obvious method is murder. Multiply by itself all you know of Germany's iniquities in Belgium and you may form some idea of the massacres in Serbia. In one district after another whole

who was a member of the Serbian War Mission which recently visited this country, came upon a woman who told him that her little child had been snatched from her arms by a soldier, slashed in halves, and thrown to the pigs before her eyes. This incident is confirmed by the neutral testimony of Professor R. A. Reiss of Switzerland, who undertook an independent investigation of these atrocities. The details he gives are in most cases too horrible to be written about at all in the

country to a friend in Switzerland. In the course of that heartbreaking epistle he says:

"The Bulgarians have set up gibbets on the bridge at Leacovatz, at Belotintze, at Vlasotintze, Lebane, Nish, Kniajevat, and in other places, and have begun to hang men, women, and children, forcing the others to look on at their terrible tortures. A certain Jordan, clerk of a municipality, was hanged by the tongue and endured thus an atrocious death."

# THE WAR AND THE "Y"

BY HARRIS DICKSON

FOR bellowing days and nights the guns had clamored and thundered and roared at their unwearying cannonading. Deep in muddy trenches a mass of soldiers huddled, not daring to lift their heads and peer across No Man's Land. Dazed and deafened, they waited for the command to go over the top, to advance with the bayonet, to cast off this deadly tension.

"It'll be to-morrow morning, eh?"

Tommy's comrade could not hear, could only see Tommy's lips move; but he nodded assent to what was in all their minds. "To-morrow morning. To-morrow morning."

Twice that night officers of the infantry and of the artillery synchronized their watches until they ticked together accurately to the second. The Big Push must be mathematically shoved forward, with no allowance for variation in timepieces. There's no whoop and hurrah about an advance which moves with methodical exactitude. The artillery officer must know precisely where the infantry will be at any given moment. The infantry officer must know that on the dot at 7.17 a. m. their curtain of fire will be thrown along that first ridge in his front. And on the dot at 7.42 it will lift to the second ridge. That's why they synchronize their watches. To prevent miscarriage it is essential for the men to be under perfect control. Should enthusiasm sweep them beyond the line prescribed, they may rush into their own barrage and be slaughtered.

## He's No Hero

AT dawn everything is prepared, every trigger set, and somewhere, far behind the front, the master hand touches a button which lets loose the inferno. Along the line guns flame up—singly; in salvos. The sky blazes and shrieks and whistles with hurtling steel. A forest melts into stumps; wire entanglements are mowed down. With gleaming steel the men crouch in their trenches and listen for the words: "Come on, boys, and give 'em hell!"

The first wave billows over the crest, dropping its dead as it goes. The second wave meets an answering storm from the boche, a pelting of shells

When the smoke of the Big Push had cleared away, two secretaries were found among the slain, and ten among the wounded. And chaplains too were lying dead upon the field.

As Tommy puts it: "If you like that sort of sport, it's fine to go over the top with a bayonet; but it takes some nerve to go over with a pot of coffee, or a hymn book in your hand."

Through the chances of havoc these secretaries, like stolid Tommy, have become fatalists: "Wot's the use," says Tommy, "of dodgin' shells wot ain't meant for you? And w're's the sense o' tryin' to dodge the one wot's got yer name on it?"

## Like Their British Brothers

NEAR an advanced position the Y. M. C. A. canteen is a mere dugout, protected by sacks of dirt or trunks of trees. Shells destroy them and kill the secretary. But another secretary steps into his shoes, just as another soldier comes to fill a gap in the ranks. Sometimes, during a lull at the front, a weary lad may be sitting in his dugout, with nothing to do but gaze through a square opening at the shell-lit sky. The Y. man darkens his doorway, lights a candle, and places it on a box. "Here's a pencil and paper," he says; "write to your mother. I'll come back presently and get the letter."

American secretaries are not yet going over the top. When that time comes they will measure up to the standard of their British brothers. But it is marvelous to see the success with which they help a lad from the awkward

tenderfoot and sissies. When the Y. besieged the border, Bill side-stepped their pious proposition for fear he might be corralled and get preached to by the hour. Yet he saw other fellows going in, heard them laughing and singing songs; so Bill reconnoitered at the door before sneaking in and taking a back seat. Then he caught the habit.

With all of his swagger, when Bill marched off the transport and went ashore in France, he would have given a dollar and six bits to be roping steers in Texas. Bill felt mighty lonesome until he glimpsed the Red Triangle on a Y. tent. Then he marched in as if the whole outfit were branded with his mark. He stopped and grinned at a board running across one end of the oblong tent, like a lemonade counter stacked with chewing gum, peanut brittle, cigarettes, chocolate, and a nickel-plated gooseneck poking up through the oilcloth. This was no marble-villa frivolity of a soda fountain. But it produced the fizz, and Bill tackled it.

"Hey, fellows, nominate yer pizen."

The thirsty rodeo took sassypariller in their'n.

Toward the middle of the tent stood a piano on a rough stage, and Bill knew a corporal who could claw the ivories to the queen's taste. In a far corner he saw a dozen men scribbling away on small

A little Mecca of the East, a Y. M. C. A. shelter which served the British Egyptian Expeditionary Force

Army rations are abundantly sufficient, but the men crave knickknacks, and the principal sales are of coffee, tea, chocolate, or bouillon. Next come tobacco, eating chocolate, cakes, crackers

which converts the slope into a field of death, plowed by gigantic maniacs. Officers order their men to lie down in the captured trenches, in the shell craters, to lie down anywhere, everywhere, until the opposing batteries can be smothered.

One man disobeys; one solitary figure keeps his feet. He carries no bayonet, flashes no sword, flourishes no banner. From crater to crater he moves calmly about his work.

"Who is that hero? Is he some great general encouraging his soldiers by such splendid gallantry?"

Not a bit. He's no hero; that's nothing but a Y. secretary serving hot coffee to the men.

moment of his debut in an O. D. uniform. Beginning at cantonments in the States, they follow—more often go ahead—to the French port of debarkation. Thence, all along the route, they plant their huts of rest and cheer to the cratered edge of No Man's Land.

## "Nominate Yer Pizen"

AT first Bill Maddox, like every other seasoned and cynical regular, had jeered at the Y., for Bill was a leather-faced cowpuncher, with no sanctimonious proclivities concealed about his person. During all previous experience in riding herd he had never infected the Y. premises. Such dissapations were for

tables; so Bill secured free writing paper and huddled down to literary toil.

On their long, long hike from El Paso at every station Bill had swanked about the platform accumulating girls' addresses. Which gave Bill a versatile correspondence and gave Bill's captain a cussin' job to censor it. Ten thousand men, dispatching fond remembrances to petticoats from Maine to Mexico, left their officers little time for military affairs. So the authorities muzzled the billets-doux, restricting privates to one letter and three postal cards a week.

Thousands of mothers in the States will tell you that practically all messages from their sons come on Y. paper. And millions of soldiers' letters would never be written except for these or kindred facilities.

## "Is This Genuine Money?"

BILL always patronizes the Y. canteen, because he can demand what he wants and get it. At a French shop he asks for what he thinks he wants, and the woman dispenses what she considers good for Bill. Which reminds Bill of going to a doctor.

The function of the Y. canteen is to provide for the men, without profit, certain extras not mentioned on the regulation menu or sold by the quartermaster. The principal sales are of hot drinks: coffee, tea, chocolate, or bouillon. Running a close second, come tobacco, eating chocolate, cakes, and crackers. Army rations are abundantly sufficient, but the men crave knickknacks, just as a child itches to scamper downtown and spend its nickel. And hereafter the Y. will sell canned goods, toilet articles, and other trifles at cost. Complaints have been made that higher prices were charged. For instance, in one case the Y. was selling a certain brand of cigarettes at 15 cents, the retail price in this country, which the United States Quartermaster's Department sold for 8 cents. But this was an error, corrected by General

## The Liberty Motor

**I**N this month of June, when one day's news from France seems as bad as it can be, till the next day's news comes, there is some small consolation in having a favorable report on the Liberty motor, a contrivance that threatened to be one of the saddest of our failures as an ingenious war-making people. A representative of *COLLIER'S* has visited one of the principal aviation camps where he has had the advantage of daily association with the man who is perhaps best qualified to give an expert opinion. It is the sincere opinion of this authority that the Liberty motor is a **SUCCESS**.

Before this article is published the plant mentioned will deliver twenty fighting planes a day. These planes will have a speed of 120 to 135 miles an hour. They will be equipped with two machine guns, a camera, a wireless sending and receiving outfit, and a bomb-dropping outfit. They are capable of flight to a height of 15,000 feet at least.

*COLLIER'S* investigator had an opportunity of sitting in the observer's seat while one of these machines did all the "stunts" of the advanced flyer's repertory—the Immelmann turn, the loop, the tail spin, the nose dive, and the side slip. He is an aviator of considerable experience, and he tells us that the sensation throughout was one of stanchness, stability, and power.

As we understand it, the Liberty is not now intended as a "pursuit plane." The pursuit plane is lighter and smaller, carries only one passenger, and is capable of somewhat higher flights than the Liberty. The latter is classed as a "combat plane," and as such it promises to fulfill the expectations of the Aircraft Board. The efficiency of the engines depends to some extent on the skill of individual manufacturers. Some of the motors are better than others, but the average is high.

*COLLIER'S* is glad to repeat this information for the encouragement of the general public as well as for the solace of those whose adventurous sons have entered this perilous but essential service.

It may well be that before the year is over *HOWARD COFFIN'S* prediction will be fulfilled and clouds of Liberty motors will darken even the place in the sun that Germany now occupies.

## Teaching the Germans—and Learning

**T**HE German offensive from the Aisne confirmed what the German offensive in Picardy revealed—the discovery of a new tactical method that sent to the scrap heap the accepted notions of three years of trench warfare. For the three days' preliminary bombardment followed by an infantry attack against utterly demolished enemy lines, there has been substituted the three hours' preliminary bombardment followed by infantry attack against a surprised enemy. In what the military writers describe as "the Von Hutier method"—the secret mobilization of shock divisions far behind the battle line for elaborate rehearsal, their secret transport by night to the points of impact, the sudden rush of overwhelming masses in utter disregard of the butcher's bill—one seemingly detects the characteristic German traits, the combination of enormous preparation and tremendous force, of the infinitely detailed and the "kolossal."

But who was it discovered the Von Hutier method, so characteristically German? A Frenchman named *NIVELLE*. As commander in chief of the armies of France in April, 1917, *NIVELLE* ventured to break with the tradition of two years of trench warfare, refused to believe that an elaborate artillery preparation must precede—and give warning of—an infantry assault, and on the Aisne sent his troops forward to the assault after a brief bombardment. The *Nivelle* method was the method of surprise. Six months later *VON HUTIER* applied the method with marked success at Riga. He has applied it with still greater effect in Picardy and on the Aisne.

Before April, 1917, for two years back to March, 1915, the older method of break through by the impact of cannon held sway. Who discovered this method? An Englishman named *JOHN FRENCH* at Neuve Chapelle. But Neuve Chapelle was a failure, whereas, in less than two months, *MACKENSEN* applied the Neuve Chapelle method in Galicia with tremendous results, as later *FALKENHAYN* applied it in Rumania. Thus the two great tactical discoveries of the war have been made by Englishmen and Frenchmen and applied successfully by the Germans.

And the reason? Precisely the same reason that accounted for German success before the war in scientific and industrial

achievement. Others discovered, but the Germans elaborated. Others had the vision; the Germans supplied the army of patient, minutely trained, minutely organized gleaners and elaborators: in numbers "kolossal," in preparation tireless. *FRENCH* hit upon the idea of blasting a hole through the barbed wire and trenches with artillery, but he didn't use artillery enough and on a sufficiently wide front. The Germans in Galicia did things on the colossal scale. *NIVELLE* in April, 1917, hit upon the valuable idea of surprise, but he trusted too much to the idea. The Germans supplemented the idea with men and guns on a colossal scale.

The enemy has borrowed from the Allies their ideas. Without overreaching themselves, our allies must learn from the enemy something of the method of "kolossal," of doing things big. Our efforts must be big in conception, big in the price we make up our minds to pay, and big in forethought and preparation. The Allies have the leadership; with America's aid they will have the price to pay.

## The Letters You Write

**W**HEN you write to Some One in France, write him the kind of letter you think he'd like to get; the kind you'd like to get if you were in a trench or dugout or hospital or village billet, out there.

If you were in France, there are several kinds of letters you wouldn't want to get. You wouldn't want to learn how hard a time your people are having—or think they are having: either because they are so unhappy at your absence or because the grocer's bills are so big. And you wouldn't be particularly edified at learning that some people are so patriotic that they lynched an unarmed, apparently harmless "enemy alien" out Illinois way, and the law couldn't punish the murderers, even when their ringleader confessed. The army is the place for men who want to kill enemy aliens, and the army has no need of this cowardly kind of home competition.

We fancy the kind of letters our young men in France like to get includes a lot of home news, the family and round-the-corner news. That's a whole lot better than news about the flag wavings and parades of people who aren't soldiers. Above all, don't write that the submarine has been beaten or that you expect the war is going to be over this summer. They know better than that, over there.

Sitting down to think about what our men would like to have from home is one good way of looking ourselves over and making our minds up as to whether or not we stay-at-homes are making good in our part of the war. We fancy our men would be glad to hear about progress in shipbuilding, and how the Liberty motor business is going better than it was; but we don't believe there's anything very inspiring about this affair of our not sending General *LEONARD WOOD* to France: our soldiers might imagine it meant that the Administration is a Democratic and not a national administration: a war administration. And that would be a demoralizing idea.

Write him a letter that comes as near to being the kind of letter he'd like to get as you can write.

## The Tax on Dead Soldiers

**N**OW that Congress is going to sweat out a new tax law, we would like to call the Hon. *CLAUDE KITCHIN'S* special attention to Section 201 of Title II of the Revenue Act of September 8, 1916, as amended by Section 300 of Title III of the Special Preparedness Revenue Act of March 3, 1917—providing for a national estate or inheritance tax on property. If a man goes to his death under orders while serving in the army or navy of the United States, his grateful (and thrifty) country collects that tax just the same. No doubt this is chiefly due to careless work in drawing up these revenue laws, for "any decedent dying while serving in the military or naval forces of the United States" is specifically exempt from the additional estate taxes provided for in Section 900 of Title IX of the War Revenue Act of October 3, 1917. As it stands now, if a soldier or sailor of whatever rank or class, having property worth, for example, \$120,000, is killed fighting our battles, the Treasury will at once collect about \$1,350 from his widow or other heirs. To draft a man for service, order him to risk his life for his country, and then tax his folks if that risk goes against him, is rather too mean a course for our United States to take. It can be made right merely by enacting that Section 901 of the last revenue act apply also to the two other acts mentioned. Surely the Hon. *CLAUDE KITCHIN* need not hold any hearings as to that!

## Our First Captured Village

"WEST of Montdidier," ran the German communiqué, "the enemy, during a local attack, penetrated into Cantigny."

"West of Montdidier," ran the French communiqué of the same day, "the Americans, supported by our tanks, brilliantly occupied a salient along a front of a mile and a half and the strongly fortified village of Cantigny, capturing 170 prisoners and war material. They repulsed counterattacks."

But official historians don't tell all. It is the New York "Tribune's" correspondent who cables that COLLIER's representative at the front, JAMES HOPPER, "was able to act as stretcher bearer for a mile from the field dressing station." The "Tribune" man interviewed JIMMY at some length on what he saw at Cantigny:

The American barrage was beautiful [said Hopper]. Our American shock troops were magnificent. Those that I followed deployed from behind the wood, following the lumbering tanks. Three waves preceded me. I followed a batch of fellows who had machine guns on their shoulders.

The barrage seemed literally to plow up the ground. Those whom I followed swept to the left of the village. I found myself looking at a tank which was firing at the corner of a street. I was absolutely alone. Suddenly I wasn't alone. Trotting toward me came twenty poor, wizened Germans, unarmed, frightened beyond the power of speech, and holding dirty hands limply above their heads. They wanted some one to herd them in.

I was excited, I guess. I threw up my own hands as a sign to them to hoist theirs higher. They did.

By this time we had a wounded man on our stretcher and started back. He was heavy. The Red Crosser and myself during that mile had to stop many times to rest, though the German machine guns were sending bullets altogether too close to be healthy. There wasn't much artillery fire.

Cantigny was still burning as we lugged that stretcher back to our first lines.

The New York "Evening Sun" correspondent tells us only this much about Mr. HOPPER at Cantigny:

"Jimmy" Hopper, magazine writer, went over the top with the Americans. As he was entering Cantigny a crowd of Germans rushed at him, begging earnestly to be taken prisoners. Hopper was nonplused, but called to an officer: "Come and get 'em!"

We hope that JAMES HOPPER has been taking good care of himself since he and his friends took Cantigny. (We give some of the credit to the troops, for, after all, JIMMY went over the top unarmed but for his trench hat and his colossal nerve.) Our correspondent must not risk his life again unnecessarily till he has got down on paper the true account of the capture of Cantigny and the war material and the 170 prisoners. Also, there is one glaring inaccuracy in the "Evening Sun's" account of COLLIER's man in Picardy. It is the statement that JIMMY was "nonplused" when twenty Teutons offered themselves as his prisoners. JIMMY nonplused by the capture of a mere handful of the enemy? No one who knows him can believe that. Of course, if the Crown Prince or HINDENBURG was one of them—but that's only a matter of conjecture. To get all the facts we shall have to wait for JIMMY HOPPER's manuscript to pass the censor.

## News of Our Own

LONG, long ago, while Great Britain was busy training men, but the land fighting was still pretty much entirely France's job, some of the writers for English newspapers gave the impression that it was Marshal FRENCH who won the Battle of the Marne (with a little help, no doubt, from JOFFRE and FOCH), and that the troops in France, after the Marne, were chiefly British and Colonial. It seemed important to British journalists that Great Britain should be proud of her men in France—and, of course, the British or Canadian reader was more interested in news of his own people than in news of the French troops who were bearing the real brunt of things. To-day the situation is repeated—only we Americans are in the position of the British in 1914, and the British and French together stand in the place which was France's in those early war years. A new army like Britain's then, or our own now, is, during its early experiences, being tested out: has it courage and endurance and organization? It is finding the answer to these questions, not for history alone, but for its own satisfaction. When it passes through some operation of relatively slight importance, that operation looms large to the field historians, for it helps to determine the value of the new man machine. That is why the correspondents do well to tell us in detail of the American capture of Cantigny—even though that local happening coincided with the great German drive which in a few days brought the enemy back to the Marne.

## Note on Current History

VARIOUS newspaper letter writers are urging that the United States send "an American Lafayette" to Russia and thus save the Russian nation. Those familiar with the story of our own country will unqualifiedly approve the suggestion. All that needs to be done first is for Russia to find her own Washington. Do LENINE and TROTZKY meet that need?

## War Pigeons

IN New York our windows looked out upon a street where every human was caught into the crowd between dark buildings and under the elevated road. That was when we looked down. When we looked up we saw a roof opposite, whereon a young man came and opened the little door of a wire cage and released pigeons. They would sail straight up, circling into the clean sky, and then fly off toward the harbor or one of the rivers, returning after many minutes, never missing that one roof out of the million roofs. They alone seemed free in a cityful.

After that we spent many days with the pigeon fanciers, learning the speed of these swiftest of all creatures, their strange instinct that calls them back from another country (five hundred miles, even a thousand miles), their endurance to death. We read the beautiful chapter on pigeons in DARWIN's "Origin of Species." And then we forgot it all for fifteen years, till war brought back the story. When the war came, the pigeons of Britain were conscripted by His Majesty's Naval and Military Pigeon Services. They were sent out to the front, where they live in motor buses between flights. They have comfortable quarters. Indeed, their life is much like that of human aviators, who return from long, cold sky trips to cozy, permanent quarters. Anyone shooting a carrier pigeon is sentenced to fine or imprisonment. Its life belongs to the state. It is the King's messenger. A chaplain at the front tells of sixty pigeons in a Piccadilly bus. A board is poised at the cage opening. When a bird steps on it an electric bell rings. A man comes and takes the message from an aluminum tube on the leg of the bird, which has come from the trenches, sailing, through fog and poison gas and battle smoke. The chaplain says:

The men get devoted to them, and make them love their clean and comfortable homes, where they are well fed and cared for in every way. Ah! how many of us would love to fly back to our warm, comfortable homes and be at rest with those who care for us.

The crew of the loft include a chauffeur to drive the motor omnibus, a pigeon trainer who is cook, and an orderly to carry the messages of the birds to brigade and divisional headquarters. One of the tributes to the work of these messengers states:

There is a wardroom where the memory of a gallant little bird will always be held in love and admiration. Liberated in a fierce wind and in stormy weather, and bearing an urgent message—S. O. S.—from a seaplane which had got into difficulties on the high seas, the little pigeon flew for all it was worth—to the last feather—and fell exhausted as it reached its native shores. It died almost at once, but the signal so faithfully carried was the means of saving many valuable lives.

## What It Is All About

PERHAPS the reasoned explanations of this war are too high for many of us. These great generalizations as to freedom, liberty, and democracy are true; they hark back to Magna Charta and have the ring of WASHINGTON and LINCOLN in every syllable, but sometimes they are a bit over our head. There is a directer appeal than that. A British poet—we don't even know his name—tells about a crippled cockney soldier who was creeping out of Fleet Street on his crutches one day when over on the Law Courts side three laughing Frenchmen passed in uniform:

For the houses all grew misty with a faint horizon blue,  
While I thought o' cornflowers peepin' from a blackened harvest land.  
With many a weary Frenchy fightin' where those cornflowers grew;  
An' I've got a kind o' homesickness I cannot understand  
Since I saw those little Blueys goin' laughin' down the Strand.

Oh, cottages with gapin' roofs astarin' at the sky,  
Oh, ruined gardens on the Somme an' trampled banks of Aisne,  
There's little left the Frenchies but to beat the boche or die.  
I'd go back to all we hated so, the noise an' filth an' pain.  
Jest to help those cheery Blueys win their little homes again!

For many of those who have been there that is exactly what this war is about. That is one reason why we will fight it and win it.

# YOU CAN'T JUST WAIT

BY OSCAR GRAEVE

ILLUSTRATED BY ARTHUR WILLIAM BROWN

IT'S happened, of course, in every village and town in the United States. Whenever a young man has voyaged forth to make his fortune in the big city there's always been a girl, some particular girl, he's left behind him. And there are only three things that can happen to the girl who's left behind. Sometimes the young man does find his Golden Fleece and comes back for her. But much more often he forgets to come back, and either the girl doesn't care and marries the cashier in the village bank or she does care and waits—and waits—while youth vanishes and love wears and reluctantly she loses her faith in men and men's promises. Invariably these are the three strings on the instrument to which the tale is sung—and yet this is a story of something quite different.

NEEL FANSHAW was the girl John Stanley left behind him in Old Lennon. It was called Old Lennon to distinguish it from that young upstart, Lennon Junction, to which the railroad came. And it was at Lennon Junction one pink-and-gold June evening that Johnnie from the rear platform of the New York express waved good-by to Nell. Against her parents' wishes she had driven over from Old Lennon with him in Bill Heman's stage in order to postpone the parting to the last possible minute.

"I'll write you often, Nell, and I'll come back for you as soon as I'm making enough for two to live on," he called from the platform, with as much fervor as if those same words had never been said before. Indeed, Johnnie himself had said them before; in the last few weeks he had said them a hundred times. But even as the train pulled out he kept repeating them. Long after the thunder of the wheels had drowned his words Nell could see his lips moving, and she knew what he was saying.

The memory of those words, however, comforted her as she drove home. She had approved of Johnnie's going, she knew there was no chance for him in Old Lennon (there was no chance for anyone in Old Lennon), and yet when he went it left her with a singularly forlorn feeling. Besides, now that he was actually gone, there was no need to keep up the pretense of looking cheerful and happy and eager any longer. She sat crouched up in a corner of the deserted stage where Bill Heman could not see her and with her red lips drooping, with her clear green eyes misted a little with tears, thought of Johnnie all the way back to Old Lennon. After all, she knew that she could have kept Johnnie beside her if she wished. And she was proud that she had not so wished or, rather, she was proud that she wanted him to succeed more than she wanted to keep him captive to her desires.

She could not remember the time that she had not known Johnnie. They had been sweethearts ever

since as children they had played together in the Fanshawe orchard. Johnnie had been funny that way. He was the best pitcher the junior Old Lennon team had ever boasted; he could dive straighter and swim faster than any of the other boys who went down to the swimming hole in Elm Creek, but better than anything else Johnnie liked to sneak away from the boys and play with Nell Fanshawe. Nell remembered it with particular gratitude because she had been a scrubby little thing then; it was not until years later that her carrot red hair had become a wondrous thing of soft and lovely tones, and her pinched and freckled face had bloomed into pink and rounded radiance. One is grateful, you know, for favors when no possible reason can be discovered as to why they should be offered.

Old Lennon seemed older and more deserted than ever after Johnnie had gone. When Nell in her white dress walked down Maple Street on summer afternoons she could hardly realize that she wouldn't see Johnnie in Ryder's drug store, where since his graduation from high school he had clerked. Every afternoon in the sleepy lull that fell upon the village between two and four she had gone down there and chatted with him. Every afternoon they had had a little party of their own beside the soda fountain. Nell would have some ice cream or a glass of vichy—she could not tolerate very sweet things—but Johnnie, while she lovingly derided him, would concoct for himself a sticky mess known locally as a walnut chocolate sundae.

So the summer afternoons now without Johnnie were peculiarly lonely for Nell. And the evenings without him sitting on the porch step below her were hideous. It was in the evenings that they had planned the conquest of New York.

In August Nell decided she would have to do something. If she sat around idle any longer, she felt that suddenly she might start screaming or act in some other totally extraordinary way. Fortunately Johnnie's place in Ryder's drug store had never been filled to Jim Ryder's satisfaction, and Nell induced him to give her a trial. Her parents opposed—**■**—they were the kind of good, old-fashioned parents who opposed practically everything on general principles—but Nell said nothing, and appeared down at Ryder's ready for work one morning. Which was rather typical of Nell.

It seemed a little easier for Nell after that. It wasn't that she could forget Johnnie, but sometimes she could manage to forget to forget him. And all this time his letters came regularly enough. All through that first summer and into the winter they came. He was doing awfully well in the big furniture shop where he had found employment. They had taken him out of the retail shop and put him in the wholesale department. They were going to send him on trips to Boston, to Philadelphia. He

was to be a salesman on the outside. "It's a much bigger job than clerking it," he wrote proudly. And his salary had been raised to thirty dollars a week. "But it costs an awful lot to live in New York," he added, as if at an afterthought. "Don't worry, dear. I'll soon be making enough for two."

And at first his letters were full of the wonder of New York—the wonder and the loneliness. But after a while they were only full of the wonder,

THEN, quite suddenly, Johnnie's letters ceased. They ceased altogether. Nell, of course, continued to write; she tried to continue to write as she had always written—letters full of love and trust and the utmost confidence in Johnnie. But one day she thought to put her full name and address in the corner of the envelope, and the letter came back to her stamped: "Address Unknown."

Nell had not told anyone that Johnnie had stopped writing to her, although in Old Lennon it was not necessary to tell people a thing like that—they found it out for themselves. But when the letter came back she put her pride in her pocket, or wherever it is you put your pride when it's frightfully hurt and bruised, and she climbed the hill to the little tumble-down house where Johnnie had lived with his aunt—where his aunt still lived.

"Have you heard from Johnnie lately?" she asked.

The aunt was curt in her answer: "No, I ain't. Not in a couple o' months. I knew the city wouldn't do any good to a young feller like Johnnie, who was always sort of wild. But he wouldn't listen to me after some of his high-toned friends told him he oughter go. All I know is he ain't with that Michigan Furniture Company any more."

Old Lennon was a very difficult place for Nell to live in that spring. Everyone knew that Nell was the girl Johnnie had left behind him, and now everyone knew that she was the girl to whom he had ceased to write—she was the girl he had forgotten. But Nell said nothing to the advice and the sympathy and the pity that were offered her. She merely pressed her lips tightly together, and there was a peculiar quality in the clear depths of her green eyes. She could easily have seized the opportunity of becoming the favorite martyr of the village; she could have swum, if she wished, in a sea of well-meant condolences. But the rôle of martyr did not appeal to Nell. Not in the least. Whatever she was going to be, she was thoroughly determined it was not a martyr.

She received six dollars a week for her work down in the drug store. From this time on she began to save every cent of it. She began, too, to practice most assiduously on a ramshackle typewriter which stood in the rear of Jim Ryder's store.

And now you'll begin to see how this story differs from all other stories in which girls are left wait-

## Ten Thousand Footsteps You Could Have Saved

**W**E hear a great deal about overhead charges—but there isn't much said about *underfoot* expense. How much of it is there in your plant? How much does foot-work eat into your profits? How much man-power do you employ in toting, carrying and fetching, that *could* be doing a man's real work in production? Yesterday, one man alone took ten thousand footsteps that could have been saved by Lamsonizing your factory.

Lamson Conveyors are the mechanical toters and carriers. They put a stop to footwork and *underfoot* expense. They reduce overhead charges. They collect and deliver parts from one machine room to another. They tote merchandise. They assemble orders and take the goods to the shipping room—and from there to truck or freight-car.

Lamson Conveyors take heavy castings or fragile china to the place that you want them to go. They can't tire. They never lag. They can't make mistakes. Lamson Conveyors operate with orderly, organized regularity. Their route is direct. Nothing can divert them from their work. Their daily capacity is constant—and walls or floors can't stop them.

They go through, while a man goes 'round. They make production flow smoothly and *get the goods out of the works*. The illustration pictures a Lamson Gravity Conveyor. It puts the right thing into the right hands at the right time. Its uses are almost countless.

There's a Lamson Conveying method for every peculiar business, and made to fit *requirements*. Perhaps you need only one Lamson method. It may be that you need a combination. If you are using man-power for toting, for carrying, for pushing a hand-truck, a Lamson man can quickly show you how the Lamson Idea will make a daily saving that will mean much to you—in hard cash. He'll come at your call. If you prefer, send first for our concise Conveyor Book. We'll start it toward you quick-step.

BRANCHES EVERYWHERE

# Lamson Conveyors

ing in little country villages—left waiting for men who fail to come back. For Nell kept her own counsel, but she had decided that if Johnnie wasn't coming back for her she was going to the city to find Johnnie. Strange to say, she hadn't lost her faith in him. She felt that something—something awful!—had happened to him and before she judged him in any way she was going to find out what it was that had happened.

Nell somehow felt responsible for Johnnie. It was she who had urged him to go. "You can't just wait for things to happen," she had told him many a time. "You've got to get out and make them happen the way you want them to." And if that philosophy was good enough for Johnnie it was good enough for her. She didn't know whether she wanted to marry Johnnie now or not, but first of all she was going to find him and then she felt that she would know.

In November she was ready to go. In a small black hand bag she had a roll of bills which counted up—and they had been counted up many times—to one hundred and twelve dollars.

And so she drove over to Lennon Junction in Bill Heman's stage in the dusk of a November afternoon. Nearly all of Old Lennon, shaking its gray head, saw her go. Nell sat very upright, gazing neither to the right nor the left, much, I imagine, as Marie Antoinette sat in the tumbril while it was driven through the jeering crowds.

"I WANT to find out about John Stanley," said Nell to the man at the wide mahogany desk in one of the inner offices of the Michigan Furniture Company. It was only with difficulty that she had managed to get to him. A regiment of clerks had barred her path. But none of them would tell her anything about Johnnie. They had simply looked at her curiously with an expression in their eyes that she did not understand; did not want to understand. "He left here several months ago," they told her. Nothing more. And she was not satisfied, could not be satisfied with that. At last her persistent questioning, her refusal to be dismissed, had brought her to this man who, they said, had been Johnnie's chief.

Nell could not see why they had made such a pother about letting her into this inner office. They had consulted, discussed, shaken their heads, sent feverish messages to and fro, before escorting her in to this Mr. Jellaby. And now that she was there she did not find him in the least formidable. He was round and rather jolly; his head was bald except for a circlet of hair such as we see in the pictures of merry old monks. You know, the kind of pictures that they're always putting on steins and plaques of various sorts. And his eyes were a twinkling blue. The hurt which Nell had hugged to herself ever since Johnnie ceased writing melted suddenly beneath the pleasant warmth of his glance. And she found herself telling him many things.

"And so you were to marry young Stanley?" he said presently, and the sympathy in his eyes quickened a little.

"Yes, and I won't believe, I can't believe, he's forgotten me!" she exclaimed. "I know something horrible has happened to him, and I want to find out what it is."

Mr. Jellaby seemed to wish to avoid answering her directly. In fact, for a minute or two he did not answer her at all. He gazed out the window with an expression that somehow made Nell think he was remembering the time when perhaps he himself like Johnnie, had come to New York in quest of his fortune. And when he spoke it was as if he were recalling experiences from that long ago. A certain indignation flushed him.

"The city is a rotten place for a high-spirited young fellow," he said. "I mean when the young fellow comes here from his home town fresh and unspoiled and ignorant of a whole lot of things. First it makes him so lonely that he becomes pretty desperate, and then, when the city gets him in that state, suddenly it opens all sorts of doors that had better been left closed. But, Jimminy, it's got him so that he'd pop into any door by that time that offered a little warmth and music and companionship. Of course some come through the test all

right after a little battering"—he threw back his shoulders with a hint of pomposity, and then added more soberly—"but some don't come through."

"You mean Johnnie—didn't come through?" asked Nell, with a little catch in her voice.

"Do you really want me to tell you?"

Nell had a sudden desire to cry "No!" to get out of the office of this man who gazed at her so kindly, to get away from this cruel and monstrous city, to go home, back to Old Lennon. But at that last thought she revolted. No, she could never go back to Old Lennon without knowing the truth about Johnnie. She clenched her hands so that the nails bit into her palms.

"Yes, please tell me everything," she said quietly.

For a minute neither moved nor spoke

"Stanley was one of the best young men we ever had here. Snap! Go! Energy! And, above everything, he had a smile. Maybe that sounds sort of foolish to you, miss, but let me tell you that smile of Stanley's was worth a couple of thousand a year, to him and to us. Jimminy, when he was in the shop downstairs he could smile the ladies into buying anything. I know. I've seen him do it. Well, he was too good for the shop, he was wasted there. We wanted to put him out on the road selling wholesale where his smile, instead of selling one chair, would sell a hundred. We sent him on trips, and it was on one of those trips that he—didn't come through." He eyed Nell keenly. "Do you want me to go on?"

Nell pressed her lips together and nodded.

"WE sent him on a trip to Boston. He went up on the night boat. He had three hundred dollars of the firm's money, and—he never came back to us from that trip."

Nell gave a little cry.

"Oh, nothing like that happened to him," said Mr. Jellaby quickly. "He didn't fall overboard or anything like that. He wrote us, and said he'd lost the money, and that he couldn't come back and look me in the eye, or some rot of that kind."

"But how do you know what's happened to him?" asked Nell.

"We don't know altogether. We put a detective agency on his track, and we found that he'd fallen in with a crowd of gamblers on the boat and lost the three hundred that way. You see, he'd lied to us. He wrote us that the money had been stolen while he was asleep in his stateroom. But we didn't find Stanley. In fact, we called the agency off. We'd found out about as much as we wanted to."

Nell shook her head. "Johnnie doesn't lie, and he doesn't steal."

Mr. Jellaby lay back in his chair and scrutinized her intently. "Why do you say that so confidently?"

"Why shouldn't I say it?" she flared. "Why, I've known Johnnie forever. You can't be with a person every day, for years and years, without knowing him all the way through. The city might make Johnnie do lots of things that are foolish and wild, but it couldn't make him lie or steal. I know that just as well as I know this is my right hand. When Johnnie wrote you that the money had been stolen from his stateroom, he wrote you the truth, Mr. Jellaby. I know. Johnnie was so honest even in the smallest things." And she went on to tell him how in Ryder's drug store Johnnie had always paid for the ridiculous mixtures of ice cream and nuts and chocolates of which he had so generously and so joyously partaken.

Suddenly Mr. Jellaby sat upright, indignant, quivering. And Nell saw now why the clerks outside stood in awe of him; she was, in truth, a bit frightened herself. There was the effect of the crack of a whip in the abrupt sentences he hurled at her. With a resounding thump of his fist on the wide mahogany desk, he exclaimed: "If this young man of yours is so honest, why didn't he come back and face the music? Answer me that! I don't care how he lost that miserable three hundred dollars. He could have chucked it in the sea for all I care! But why didn't he come back here and tell me about it? Why didn't he have the backbone to do that? Do you suppose I'd have let him disappear in this idiotic way if he'd come back like a regular fellow and faced the music? Jimminy, that smile of his was worth money to us. Any young man is apt to slip a cog now and again. I've done it myself. We don't expect a fellow to be perfect."

HE slumped down as suddenly as he had sat upright and continued mumbling. Nell heard him say several times: "Face the music." He seemed obsessed with the phrase. But at last he turned to her almost apologetically. "I'm sorry, miss, that I let myself go that way—no sense in frightening you about it. The trouble is I liked young Stanley."

"You have no idea where he is, then?" asked Nell presently.

"Well, he's paying us back the three hundred a little at a time."

Nell flushed, her eyes sparkled; quickly she leaned forward. "You do know where he is, then?"

Mr. Jellaby shook his head. "I'm sorry, but I don't. He sends the money—it's usually a five-dollar bill—in a plain envelope with a plain sheet of paper saying that it's to be credited to him; that he'll send more shortly. There's no address. But the letters, I've noticed, are mailed in New York."

"That means he's still in the city and working. He must be all right!" exclaimed Nell, and to her own indignation she found that she was crying. She had imagined, oh, she had imagined so many hideous things happening to Johnnie.

Mr. Jellaby shifted his gaze to the window again and let Nell have her cry out.

"What are your plans, Miss Fanshawe?" he asked after Nell had dried her eyes and was looking at him apologetically.

"I'm going to find him."

"You're not going back home?"

Nell shook her head vehemently. "I'm going to stay here and look for Johnnie—everywhere!"

"Have you enough money to live on?" he asked hesitatingly.

"For a little while. I'll have to find a job somewhere."

"Perhaps you can find one right here. We've always got room for a fellow—or a girl—who knows what he wants and is determined to get it."

And so it was arranged that Nell was to do typewriting and clerical work for the Michigan Furniture Company at a salary of ten dollars a week, with the promise of more as soon as she had mastered the gentle art of stenography. Presently Nell walked proudly forth from that inner office into which she had fought her way with such difficulty.

And her attitude toward things generally had changed. At first New York had frightened and overwhelmed her. It was so much vaster than she thought it could possibly be. But she was no longer frightened. She sallied up Fortieth Street and down through the pomp and glitter of Fifth Avenue with her head high and her cheeks

## Vacation Model Grafonolas

### Made for Out-of-door Music

For those jolly, informal parties by seashore, lake, or river the most popular entertainer is always the Columbia Vacation Grafonola. This friendly, companionable Grafonola is a good sort and a good sport. Take him along with you on your holiday trip this year.

Price \$45

Price \$18

Traveling light, strong, and compact, with a voice that is sturdy, sweet, and clear, the Vacation Grafonola will sit up all night to give you music for dancing—and then be ready and cheerful for a bathing or sailing party bright and early in the morning.

Wherever you go in the joyous vacation lands by seashore, lake, or river the Grafonola will give you your favorite music.

Make this a musical vacation. You have no idea how much added pleasure it will mean for you and your friends.

Any Columbia dealer will be glad to show you these Vacation Grafonolas and to play you any record on any model. All are instruments of genuine musical worth with tone qualities suitable for the very best records. They range in price from \$18 to \$55. And for \$7.50 you can buy twenty selections on standard Columbia Records that will give a good variety of vacation music—popular hits, war songs, dance music—anything you like from the great Columbia musical library.

*To make a good record great, play it on the Columbia Grafonola*

COLUMBIA GRAPHOPHONE COMPANY NEW YORK

Price \$30

## Bridging the Atlantic for Victory!

**T**HAT stately procession of great ships, steadily sliding off the ways and bearing our armies to victory, is the American Nation again rising to an emergency.

And because their burden is so priceless and their mission so great, there can be on those ships no part which may fail in the hour of need.

That is why on the ponderous links of great anchor chains—on thousands of vital steel forgings that hold lives in their keeping—is stamped the Triangle B of Billings and Spencer.

That mark says "Rely on Me. I am made as well as I can be made. I shall not fail!"

All through the long years since C. E. Billings in 1861 forged the pistols of the Black Horse Cavalry and helped save the Union, Triangle B has meant "Rely on Me!"

It stands on a thousand great drop hammers beating like titanic pulses of industry all over the nation, pounding out forgings by millions for the Victory Fleet.

For over half a century Billings and Spencer has been building towards the work it is now so proudly doing—for victory.

# UTILIZING RETURN TRIPS

BY JOSEPH BRINKER

**RETURN-LOAD BUREAUS** is a term heard frequently these days, especially in the East and in the central West. "But," you ask, "what are return-load bureaus? Where are they located? What do they mean to me—to the average American citizen?" The return-load-bureau idea is a new one in the United States, although old in Great Britain. Return-load bureaus are a means whereby the shipper of goods may get into quick communication with motor-truck owners capable of hauling goods, so (1) that the railroads may be assisted in handling short-haul freight and (2) that all motor trucks handling such freight shall run with full loads in both directions.

The return-load bureaus list (1) manufacturers and shippers in any particular locality who have goods to be moved by motor trucks, and (2) owners of trucks which run empty over certain routes part of the time, and help bring these classes together.

Up to the present time this has been accomplished by chambers of commerce, councils of State defense, war bureaus, and other public or business men's associations. Chambers of commerce have led the way, since they generally have among their membership a large proportion of the more important manufacturers and shippers. The work has simply consisted in listing, with the names of these manufacturers and shippers and the general classes of goods they have to transport, the routes over which they wish goods shipped. A list of the truck

telephone book and instructing the operators to give the bureau line automatically when "Return Load" is called.

The return-load bureaus usually assume no responsibility to the manufacturer or shipper in case goods carried by the truckmen are lost or damaged in transit, acting merely as a means of getting shipper and truckman together. But the Return Load

As the idea develops in these Atlantic seaboard centers where the congestion is the most acute, and later in Pennsylvania, Ohio, Indiana, Illinois, etc., the appointment of a Government Director of Return Load Bureaus will be necessary to coordinate the work.

The new Director of Return Load Bureaus will in all probability act in conjunction with the High-

registrants in any locality is secured from the secretary of state. Then questionnaires are mailed to owners of trucks. These questionnaires ask the type and size of trucks operated, the kind of goods and the number of tons the owner can carry in a day or a week, and routes on which he can operate if necessary. These lists are then entered on small index file cards, and comprise the working equipment of the return-load bureau.

## Spreading Into New States

**I**N the working out of the idea the shipper or manufacturer writes or telephones the return-load bureau stating what amount of goods he has to be moved, where it must be delivered and when, and the bureau advises him what truckmen are operating trucks over that particular route. The shipper is thus able to get in touch with the truck owner.

Conversely, the truckman seeking to deliver goods calls up the bureau and gets in touch with shippers who can fill his truck with goods for the part of the trip where it would otherwise run empty. In some cases, as, for instance, in Connecticut, where the files of one return-load bureau are duplicated and supplied to all the other bureaus throughout the State, the motor truckman carrying a load of goods from one city to another may call up the bureau in the city to which he is carrying the load and arrange for a return load back to his own city before he begins his outbound trip. This telephoning is made easier by listing the number of the bureau a second time under the head "Return Load" in the

Return-load bureaus are located at Bridgeport, Bristol, Danbury, Greenwich, Hartford, South Manchester, Meriden, Middletown, New Britain, New Haven, New London, South Norwalk, Norwich, Stamford, Waterbury, and Willimantic

Bureau established in New York City by the Merchants' Association is attempting to safeguard its members by demanding of truckmen a bank reference, insurance, or bond securities for the goods and three references from shippers whose goods they have previously carried.

Return-load bureaus are established at this writing in New York City, Philadelphia, Newark, and Trenton, N. J.; Washington, D. C.; Detroit, Mich.; Cleveland, Ohio, and sixteen industrial centers in Connecticut; they are, or soon will be, in Elizabeth, New Brunswick, and Asbury Park, N. J. An organization for the establishment of a State-wide system of return-load bureaus has been formed in Ohio, and more recently a similar organization for Rhode Island and Massachusetts, to link up with the excellent system in force in Connecticut. The New York State Council of Defense at Albany is organizing to introduce similar bureaus in the upper part of the State. It has already established bureaus in Albany, Syracuse, Rochester, and Buffalo.

In addition to the points at which bureaus are already established in New England, the new organization in that territory will open bureaus in the large manufacturing centers of Boston, Lynn, Lowell, Fitchburg, Worcester, Holyoke, Springfield, New Bedford, and Fall River, Mass.; Providence, Pawtucket, Bristol, and Woonsocket, R. I.; and Keene, N. H. The following cities have chambers of commerce or business associations capable of running such bureaus: Utica, N. Y.; Harrisburg and Pittsburgh, Pa.; Conneaut, Akron, Youngstown, Canton, Columbus, Mansfield, Lima, Elyria, Lorain, Sandusky, and Toledo, Ohio; Indianapolis, Ind.; Chicago, Ill.; St. Louis, Mo. Eventually return-load bureaus will be established in all the States where there are enough short-haul traffic and sufficient motor trucks to handle it.

goods by motor trucks. The Connecticut bureaus solved this difficulty of the manufacturers admirably, since the bureaus are located in sixteen industrial centers and list trucking concerns which operate over forty-eight distinct routes. In all about 1,000 motor trucks are listed at the sixteen bureaus, each of which has a duplicate file of both truckmen and shippers.

One of the vital and most important factors in the success of the return-load-bureau system in Connecticut was the cooperation between it and the Connecticut Highway Commissioner in keeping the main routes passably clear of snow during the mid-winter months. While Connecticut's original law in regard to snow removal placed the burden of keeping the roads open upon the local townships and counties, it was soon found that these agencies did not have sufficient money, equipment, or initiative to perform the work properly. As a result, certain parts of the route were cleared and other links in the main highways left impassable. Connecticut therefore passed a new law placing the entire responsibility on the Highway Commissioner of the State and voted him a sufficient amount of money for the successful prosecution of the work. Since the first snow, and up until the middle of March, he had spent approximately \$40,000 for the removal of snow from about 1,000 miles of roads. Some of the Connecticut roads were so well cleared of snow that farmers who had previously used sleighs complained because there was not sufficient snow for them.

New York State has already passed a bill appropriating \$1,000,000 for the maintenance and removal of snow from the main highway between Buffalo and New York. As I write Massachusetts has before its Legislature a bill appropriating a large sum for keeping all of its main roads between its industrial centers clear of snow during the winter of 1918-19.

While the Eastern seaboard was congested with freight to a critical point (Continued on page 40)

way Transport Committee of the Council of National Defense in Washington, since it was that committee which originally fostered the idea and which has brought it up to its present state of development.

## Open Roads

**C**ONNECTICUT was the pioneer. Return-load bureaus were established there in the fall of 1917. Being the heart of America's ammunition workshop, Connecticut felt the acute railroad congestion of last winter perhaps more than any other section of the country. Until the formation of the bureaus, many Connecticut manufacturers were unable to get railroad shipment and were at a loss to know what concerns they could call upon to handle such

goods by motor trucks. The Connecticut bureaus solved this difficulty of the manufacturers admirably, since the bureaus are located in sixteen industrial centers and list trucking concerns which operate over forty-eight distinct routes. In all about 1,000 motor trucks are listed at the sixteen bureaus, each of which has a duplicate file of both truckmen and shippers.

Direct Factory Branches and Service Agencies Throughout the United States and Canada

(Continued from page 13) Pershing's Order No. 33. Prices might have been irregular at times, but one must remember the chaotic condition when our brown bees first began to swarm in France. The Y. was compelled to carry its goods in automobiles from the seaport, oftentimes for great distances, with gasoline costing upward of a dollar per gallon. Many of the canteens were makeshift flimsies. A puff of wind would blow them down, causing considerable loss. But the purpose is to sell goods to soldiers at cost, with transportation added, and nothing to cover clerk hire or overhead expense.

The Y. promptly sends every cent it can lay its hands on for the comfort and amusement of the soldiers. The soldiers pay something for what they

Y. fixtures like these mean deserted cafes

get, but, the deficit is mounting up into the millions.

When Bill Maddox straggled out from the canteen he discovered a diamond, not a twenty-carat stone, but a gem of great price set in a home plate with three bases.

"Say, Bill"—the secretary was a real person—"say, Bill, you boys are pretty stiff from your voyage; hadn't you better limber up?" The secretary produced a ball, bat, mitt, and catcher's mask; all that the boys needed to produce was themselves. They produced. Immediately and hilariously the Bush League was transplanted to France, where ambitious unknowns got their tryout. That night the secretary changed Bill's honest American dollars into francs. Bill crumpled the funny stuff. "Pard, is this genuine money? Looks more like tobacco coupons." Soldiers never can regard the shipplaster currency as legal tender.

We spent a week at our first seaport camp, then late one afternoon our regiment entrained for a jolly journey across France in box cars. At several points along the road we saw the Red Triangle, with secretaries busier than real-estate speculators slapping up shacks in a Western boom town remarkable structures of warped planks, scraps of packing cases, and remnants of tarpaulin. These were not classically artistic to gaze at, but stood ready for the fellows to dry their feet on. Which explains a standard French conundrum: "Where does the Y. get wood?" Generals may be shivering at headquarters while privates in the Y. hut toast their leggings before a cherry-colored stove.

Shifting our quarters from the seaport to the instruction camp was like stepping out of one home into another. The Y. had skirmished in advance and built a hut—which held a thousand men, sometimes more when fellows cuddled in each other's laps to applaud performances on an all-wool stage with scenery.

#### Billeted

IMPORTANT as amusement and athletic work may be in the cities, or at the training camps, it becomes absolutely indispensable when high-spirited American lads are billeted among the villagers. As our forces move nearer and nearer to the front it is considered unwise to build great barracks which would reveal their numbers and their position to German airmen. So the Americans are distributed in villages, some of which are, as we say, no bigger than a split match.

French officers have already canvassed every

town and village and stenciled on each house a sign like this:

Which means that Billet No. 97 will accommodate two officers, eight men, and four horses. Accommodation for man does not signify feather beds, roaring fires, with tea and toast and fresh-laid eggs for breakfast. Breakfast will not be served by an innocent village maiden with comic-opera short red skirts and ravishing ankles. Accommodation means how much floor space there is for men to lie down, and how much standing room for horses. The billet may be a stable. French stables rarely shrink modestly to the rear. They confront the main street, side by side with parlor windows. The same roof shelters man and beast and fowl.

#### They're Just Boys

IT is raining. It is always raining. But the Americans are coming. Presently the head of their column wheels into the narrow, curving street.

And here is a real American soda fountain

"Say, Bill, you boys are pretty stiff from your voyage; hadn't you better limber up?"

Splash! Splash! Splash! they tramp on through the mud, carrying blankets, kits, and helmets. The men are mud-caked, weary from the trenches, and looking forward to all the comforts of home. Clank! Clank! Clank! the men come marching. Big-eyed children peep out from doorways. Drag-gled chickens fly squawking across the road. The captain is looking at the numbers on the houses. "Column, halt! Sergeant, count off eighteen men and put them in here."

"In here" is a stable. The sergeant counts off eighteen men—four fours and two—then leads them inside. The men drop their loads. Helmets and canteens clatter on the cobblestone floor.

"Sergeant," a smooth-faced boy inquires—"sergeant, where do we sleep?"

"Sleep up there"—pointing.

"Up there" is a loft above the cow stalls, reached by a rickety ladder. A man can neither stand up nor sit up. He must crawl in and spread his

blankets on the hay. The hay is clean. It is dry. Up they go, one by one, with their bedding rolls, climbing the ladder. The sergeant turns away, trying not to laugh, yet full of pride in their grit. Do the men grumble and complain? Oh, dear, no. The smooth-faced boy pokes out his head from a pile of hay and calls: "I say, sergeant, I've got the bridal chamber."

Their irrepressible humor will carry our boys over many a rough place before this war is done.

The humor of it is all very well until the novelty wears off, and the deadly drabness eats into their souls. When an artilleryman has curried his horse, cleaned his harness, oiled his gun, or returned from a hundred-mile rush through the sleet on a motorcycle, he has plenty of time to sit in the stable billet without a fire—sit there and contemplate the thick brown rivulets which trickle away from the manure piles. Which is not sufficient for an unmitigated winter's amusement.

There is light and warmth in the cafés. There's an open door to the wine shop—and to worse. That boy is bound to go somewhere.

It is virtuously simple for stay-at-homes to sit in their furnace-heated houses, with clubs, theatres, and movies for relaxation—virtuously simple for them to say that noble fighting men of this republic should not hang around such places. But stay-at-homes must not be content with sitting and saying. They must provide something better for our boys. If nothing better is provided, a few of them will naturally hang around, just as the stay-at-home, in sheer desperation, would hang around similar resorts.

I know these lads. I know them well. And a finer, cleaner lot never breathed. Yet they are boys, just boys, and even men grow morbid with nothing to do but sit around and watch it rain. Battles, defeat, terrific losses, could hardly have more disastrous effect upon the morale of our troops.

#### Y. Recipes

ALL of a sudden, one drizzly morning, a Y. man strikes that village, with a red-hot stove under one arm and a ragtime piano under the other. He is strictly business, that Y. man, and starts things to going in a hurry. Rolling up both sleeves to prove that there was no deception, he produces a house from somewhere or other. At first glance his house seems more like a war map, or railway folder—a jointed contraption with hooks and eyes and bolts to fasten it together. Soldiers flock around him, curiously as children watch when mamma takes her scissors and begins to "cut-here-fold-over-and-paste."

The Y. man clutters the ground with triangular sections, then suddenly remembers. "There now! knew I'd forgot something. A house is no good with-

out a lot for it to stand on." So he fumbles in his pocket and consults a Y. recipe for canned lots—"Add three cups of dirt, stir briskly, and serve." Now then, here's our lot.

Dozens of willing youngsters help him piece the puzzle together. Wherever they find a bolt hole, there will be a bolt to go in it. Just tighten the taps. The sides go up like a back drop in a theatre; the roof fits like a cover on a dish. There's no more trick in hanging a door than there is in hanging up your hat. As to the windows—well, you merely stick them in. Now then! Here's our house—yellow and unpainted, but with picturesque and decorative effects in knot groupings. From my awkward description the reader may not see just how it was done. Neither did the boys, but here was the fixed fact of a clubroom, with writing tables, stove, and magazines, and a piano. That night proprietors of many a deserted café listened to the uproar of their singing. (Continued on page 28)

## It Solves the Carbon Problem For Ford, Overland and Studebaker Owners

For years most motor car builders have plant-equipped their cars with AC Spark Plugs. Each of the 93 leading manufacturers listed below chose AC's after scientific, competitive tests in which every other spark plug on the market had the opportunity to qualify.

The latest triumph of our research laboratories is the AC Carbon Proof Spark Plug specially designed for Ford, Overland and Studebaker cars. This plug is no experiment. It has been thoroughly tested and proved in shop and service.

The principle of the AC Carbon Proof is a simple one. The knife edges of the porcelain attain such terrific heat that all carbon deposits are immediately burned off. They also cool rapidly, thus preventing pre-ignition.

If you own one of these cars and have experienced trouble through spark plug failure, install a set of AC Carbon Proofs and put an end to your inconvenience. You will note

immediate improvement in the performance of your motor. You will marvel at your freedom from spark plug annoyances.

There are various types of AC Spark Plugs for every make and style of motor.

No matter what car you drive you can't go wrong in buying AC Spark Plugs. Their installation eliminates costly experimentation and carries the assurance of continued satisfaction. Your purchase is supported by the overwhelming preference of the country's leading manufacturers.

The letters AC are the initials of the originator. They are glazed in the porcelain of every spark plug he manufactures.

*Write for further information on AC Carbon Proof Plugs specially designed for Ford, Overland and Studebaker cars; also for booklet, "The Unsuspected Source of Most Motor Ills," by Albert Champion.*

GOODYEAR  
AKRON

# *Pioneering Long Distance Motor Transport*

---

**N**O other thing so dramatically demonstrates the importance of the pneumatic tire to the future of the motor truck as Goodyear's Akron-to-Boston Highway Rapid Transit Line.

This pioneer experiment in long distance motor transport, forerunner of a new and broader phase of truck employment, could not possibly have attained its present effectiveness with any other type of equipment.

Only the pneumatic tire affords the speed essential to its swift schedule, the cushioning power required to prevent ruinous depreciation, the tractive efficiency necessary to insure progress over the difficult roads.

Only the pneumatic tire assures full protection for the load in such service, the high gasoline and lubrication mileages desirable, the safety imperative to practical highway travel at the speed these trucks maintain.

The stage of doubt or uncertainty concerning the usefulness and value of Goodyear Cord Tires for Motor Trucks today is past and gone.

For nearly a year Goodyear's seven-truck fleet regularly has shuttled back and forth over its 1500-mile circuit on these tires, to the emphasis and verification of their every virtue.

Not alone in this service, but in the most varied and exacting usage in more than 250 American cities, has the speed, efficiency and economy of Goodyear Cord Tires for Motor Trucks been convincingly proved.

The truck manufacturer or operator who does not now seriously consider them in relation to his own business is disregarding perhaps the foremost factor in the motor truck's future development.

## The War and the "Y"

Continued from page 24

British Tommy may go home on leave; the American lad may not. Therefore the Y. has provided a beautifully appointed clubhouse in Paris where enlisted men gather at night in preference to strolling about the boulevards. And the Y. has taken over certain hotels for their accommodation at reasonable rates. Secretaries meet trains and steer our boys away from swarms of undesirable characters who flock about the railway stations.

By day educated guides are showing to parties of eager-minded lads all that is artistic, beautiful, and historic at the French capital, instead of leaving them to roam around and find what is vicious and depraved. By night competent teachers at the club instruct them in the language. Nothing could possibly be more beneficial and broadening to American youths.

Rival leagues have introduced the national game and rooster slang to throngs who promenade the Bois de Boulogne. Inquisitive Frenchmen are acquiring first-hand information as to the eccentricities of foul tips—and getting their heads broken. Our French allies are now learning not to intervene between batter and pitcher. The Y. is an educational institution.

France is conservative and not overly keen for innovations, yet the Government is negotiating for the Y. to place its facilities at the service of the poilu. This follows a recent suggestion of General Pershing, who said: "The greatest service that America can immediately render is to extend association work to the entire French army."

Of course le soldat français is cordially welcomed at every American hut, but entertainment for him should be conducted in his own beloved tongue. For this purpose 1,500 French-speaking secretaries are urgently needed.

### The Good Is Winning

THE Eagle Hut in London provides beds for 500 men, and can serve dinner to 1,000, with American and British ladies for waitresses, and a cabaret on the side. Here the enlisted men and sailors find every comfort of a modern hotel and amusement resort. When they arrive in London an agent of the Y. is waiting at the station to offer warmest hospitality. Theatres donate free tickets for distribution, and huge busses make regular trips to the Tower, the British Museum, and other landmarks.

Through the muck and mist of a London night the Y. maintains sharp-eyed patrols on the street, looking for unwary lads who may blunder into trouble. Organized forces of good are fighting the hordes of evil, battling for the health and the morals of our men. And the good is winning.

Few of us in the States comprehend the magnitude of this work, which begins with a lad before he enters the

army, follows him through the training school, welcomes him to the first home that he knows in France, affords amusement at big instruction camps, and marches with him to the front.

For the soldier who is incapacitated by wounds and discharged, the British Y. maintains a home and trains him in some employment which he can profitably pursue. Added to all of this is the heartbreaking task of attempting to soften the sorrows of countless prisoners of war, to supply them with occupation and save their sanity. Thousands of these unfortunates go mad.

### Against All Allurements

SEVERAL months ago upward of 5,000 Secretaries were at work, fifteen hundred in France alone. Many have been added since. More and more are demanded, and there is difficulty in finding them because no man subject to draft will be accepted. Thousands of able-bodied citizens, above military age and anxious to serve their country, are now turning toward the Y., men who five years ago would have jested at the idea. Five years ago virile men looked upon this as a namby-pamby, sissified job. Now they realize that it takes sturdy grit, capacity, high intelligence, and endurance.

War activities will necessitate a far wider scope in the selection of secretaries. The war is crude; and handling men engaged in it requires experience and tact. If I were selecting secretaries, I should pick a few from every stratum of society, men who know the Bowery and the great plains, retired baseball players and professional athletes. Many such men, of excellent hearts, who comprehend the under side of human existence, men who have sinned and suffered and been sorry, might prove of sympathetic value to others who fall by the wayside.

One night at dinner a secretary touched my arm. "We've got a thousand fellows in our tent," he whispered; "and our film didn't come. Won't you go down and talk to the boys?"

"Sure."

"Good! Tell 'em funny stories, and keep 'em in the tent until eight-forty-five. Then they won't straggle away to the village."

That's their deep-laid conspiracy—to hold our men against all allurements of wine shops and women.

### Nobility of Service

WHEN this war is done, its most glorious victory must be recorded in the human love and helpfulness which tower superbly among its penalties and rewards. Out of the hate and the horror and the destruction, thousands of unknown workers are engraving upon every soldier's mind a higher and holier conception of the nobility of service.

## The Adversary

Continued from page 9

crew were mostly inarticulate, and those who might have talked of strange comings and goings were "black fella boy know nothing." Her passenger spent the night praying in the bilge; and as for her commander, he left no report. But it is equally certain that when the next dawn spread the iridescence of a pigeon's breast over those empty waters it struck out the hull and spars of Captain Wetherbee's vessel, anchored fair between the tips of two sunken masts.

Captain Wetherbee himself straddled the deck in diving rig, and while a native helper held ready his great gleaming copper helm he mocked a limp, bedraggled, white-faced creature that clung by the rail.

"You'll note for yourself, Brother Seldom," he was saying. "Not a trace of evidence. We've not been spied. The lantern is sunk. These poor cattle haven't a glimmer. Here are we, and there are the pearls, twenty thousand pounds' worth—just overside. Within three hours I'll be off on the pearling banks about my business, and I never heard of any lost steamer. Next week, or any time I choose, I'll be walking the streets of Thursday to hear the news. And who so surprised as Captain Wetherbee, that hard-working man? 'Honest' Wetherbee, with a fortune in his belt to dispose at leisure!"

His pallid face took a diabolic glow in the first sun.

"Except yourself, of course," he

added. "You're evidence. King's evidence. I'm not forgetting you. I'll even give you your chance. Are you coming, old 50 per cent? Yes—down there! With me! Hell—what kind of an adversary do you call yourself? Come on and share. Now's your time to get level and change your luck once for all. Fight it out with me—what? No? Damn it, deacon, I thought you were going to be amusing. I'll knock your silly head in when I come back."

He climbed to the ladder, but a final odd fancy occurred to him, a parting twist to the other's torment; and he summoned the big negro mate.

"You see that fella white man? Mebbe he wants to go below—good; you give him that other suit. Mebbe he raises hell or touches the pump; you knock seven hells out of him. Otherwise no order. You savvy?"

Buttermilk saved with a vacant grin. There hung for a moment after the helmet had been locked a single-eyed and monstrous red ghoul of the sea that presently lowered itself and sank.

Wetherbee landed easily on the boat deck of the *Fernshaw* well away aft. It was hardly bright enough as yet above him, and he had to feel his path a foot at a time in somber green twilight. Quick fishes steered to and fro about him, silent and curious witnesses of this invasion. He gave no heed; he had no care of sharks or diamond fish

# Like Airy Nut Meats

## Whole Grains Puffed to Bubbles

Don't serve Puffed Grains just at mealtime. They are all-day joys in summer.

Boys like them crisped and lightly buttered, to eat like peanuts when at play.

Home-made fudge is light and nut-like with Puffed Rice mixed in. Ice cream is five-fold better with Corn Puffs scattered on it.

And Puffed Grains add to berry dishes what crust adds to a shortcake.

## No July Day Without Them

Let every summer day bring children some Puffed Grain delight. To children they are food confections. To parents they are ideal scientific foods.

They are simply grain foods steam exploded—puffed to eight times former size. Every food cell is blasted, so they easily digest. A fearful heat creates in them a fascinating flavor.

Days should start and end with some Puffed Grain in milk. Between times they will take the place of sweetmeats.

Why serve a less-liked cereal food when everyone prefers these toasted bubble grains?

With Berries

Serve with cream and sugar, or mix with your morning fruit.

or any possible danger, too intent on his errand, too elate and confident.

Balancing on his hands like an acrobat, he crawled over the edge, down to the main deck, and began to explore forward.

In one hand he held a short and heavy steel crowbar, with a fine ground tip. In the other he drew the coils of his life line and air tube. They lengthened after him as he entered by the main companion, passed the door to the saloon, and up a long, dark passage to a thwartship corridor. There, as he had known from a vague and general familiarity with its plan, was the door to the steamer's strong room. The lock proved a trifle in the nip of his powerful jimmy. . . .

WHEN he groped out into the passage, twenty minutes later, he carried, slung to his belt, a sagging canvas bag.

It seemed to him that the ship must have moved in the interval of his search. Some shifting of cargo or fracture of the coral supports had tilted her sharply by the stern. He walked down a noticeable slope, and halfway he met a dead man, sliding on an upward current.

The stranger bobbed into him and went asprawl like a clumsy and apologetic passer-by. His sightless eyes peered into Wetherbee's with mild reproach. Wetherbee thrust him off, and he went bowing and spinning gravely on his course.

Wetherbee cared for no such matters. His nerve remained unshaken, his pulses calm, as befitted a man who had played out the end of a difficult game to rewarded success. But as he resumed his retreat down the passage he caught a glimpse of something surely quite as human and lively as himself.

The light was somewhat stronger now and flooding in through the side panel made a kind of proscenium of the landing by the main companionway. And in that space he descried a dim form facing him there, looking toward him: a man as tall as himself, clad like himself in diving rig—like himself in polished copper helmet. He knew only two helmets of that particular shape and color. One he wore. The other he had left on the deck of the *Fancy Free*.

his spare diving gear. No man of his crew ever could have worn it, for none of them used an apparatus. Therefore he knew that Deacon Selden had come down after all to dispute the prize with him and to claim vengeance on the spot.

He exulted; he could have wished it so and no otherwise. He had meant to kill Selden anyhow. But this was the time and the place and the manner to kill him; a manner to match and to complete his crime as an artistic achievement. One blow on the helmet would crush the fellow's eardrums. And leave no trace—no trace at all! He could bear the body quite openly to Port Kennedy, and even inter it with honors for an unfortunate hand who had died in the line of duty. No trace. Everybody outgeneraled, duped, and defeated and himself free as air.

And the cream of it was: Selden was going to fight! He saw that when he took a stride and the other moved up with him. He stretched out a hand to steady for a rush. So did the other. He swung up his armed fist. The other did the like.

Laughing loud inside his casque, he flung the bar above his head, and went to meet the adversary in crashing impact.

MEANWHILE, above in the sunshine, on the deck of the *Fancy Free*, a limp and wild-eyed gentleman, who had once been deacon in his far past, continued to call abroad with prayerful fervor, if any help might come:

"The wicked man lieth in wait secretly as a lion. . . . Lo, he hath said in his heart, God hath forgotten: he hideth his wrong in his heart. . . . Let him be snared in his own pit: in the net which he hid in his own foot taken, . . . Lord, break Thou the arm of the wicked and the evil man. . . .!"

And when the first luggers came flying from Port Kennedy to the scene of the wreck and the first investigators went below, they found the lifeless body of Captain Wetherbee, the only honest man who had ever come to Thursday Island by sea, who had been drowned there: impaled among the shards and splinters of a broken mirror that had served to mask a saloon door aboard the murdered Brisbane steamer.

## JOHN RUSSELL

ONE morning two years ago, there arrived in this office a story entitled "The Price of the Head." The author's name was John Russell, which meant nothing to us when we began the first sentence and a great deal when we finished the last one. It was the kind of story any magazine is glad to get—a story of the South Seas by a man who had been there and caught the color and romance of it as Kipling a generation ago caught the color and romance of India.

Of course we asked for more stories. Whereupon we got another surprise. The second story was better than the first. And the fourth story, which happened to be called "The Fourth Man," was a perfect corker. We don't doubt that a great many readers of COLLIER'S made a point of saving it.

"THE FOURTH MAN" has a surprise ending. You know the late O. Henry did so many endings with a reverse twist and did them so well that half the short-story writers in the country began to write stories with a reverse twist in the last paragraph. It was as popular as the reverse-twist service in tennis—and in nine cases out of ten it had about as much to do with the story.

But the reverse twist in "The Fourth Man" was an essential part of the idea: it really belonged.

Which is characteristic of John Russell.

When he was fresh from college and doing Sunday stuff for the New York

"Herald," he wrote as many as three stories in a week, and published them under pseudonyms. Now that he has learned his trade it takes him at least three months to write three stories. That causes great pain to his literary agent, but none to the rest of us.

John Russell is still very young—just thirty-three. He was born in Davenport, Iowa, and was graduated from Northwestern University at Evanston. He would probably claim to have got most of his education, however, from association with his father, Charles Edward Russell.

JOHN RUSSELL went from college straight to the staff of the New York "Herald." He worked for six months as a reporter on the daily staff and then for six years on the Sunday staff.

He got his South Seas background on a trip round the world with his father.

There may be a gap in the procession of John Russell stories during the next few months. We print one in this issue of COLLIER'S; we have one more in the office safe; and it is full time a new one came into the office. But John Russell sailed the other day for England on a special mission for the United States Government. And Government missions in war time do not ordinarily leave much time for the ceaseless rewriting which eventually produces the happy perfection of a John Russell story.

## How Big Should the Gasoline Tank Be?

A Motoring Question that Demonstrates Franklin Economy

Suppose you could fill the gasoline tank only once—with 270 miles to go; how big should the tank be?

"It depends on how much gasoline the car burns up"—would naturally be your answer to this question.

Exactly; and your answer leads directly to the reason why the Franklin is the most economical fine car in America.

### The Story Told by the Gasoline Tanks

The Franklin Car (the one on the left in the above picture) because it is scientifically free from unnecessary weight, runs 270 miles on its gasoline tank capacity of 13½ gallons. This is at the rate of 20 miles to the gallon.

The average heavy car (on the right) to run the same distance, would require a cumbersome gasoline tank holding 27 gallons—at the rate of only 10 miles to the gallon.

Why?

Simply because of the mechanical law—as old as the ages—that weight requires power in proportion to move it. And the more power needed, the more gasoline consumed. Wherever

there is excessive weight, there is friction, wear and drag—and it always shows up in the gasoline tank.

### Weight Means Waste

This question of motor car weight has made people think. The vital national need of the times is economy—in motoring as in everything—and the average heavy and rigid car is handicapped in its attempt to comply with the demand. It is bound to use extra fuel in moving its own excessive weight, while the easy rolling, Scientific Light Weight Franklin, with its flexible construction, delivers the maximum force of its fuel into actual mileage.

### Light Weight Means Tire Economy

The same fundamentals decide tire-results. Heavy weight and rigidity pound out tires before their time. Franklin Light Weight and Flexibility allow them to deliver the full mileage that is in them.

Motorists are no longer blind to the handicaps of weight. They are aware that they may be expressed in terms of dollars and cents, and people today are not throwing money away, in the upkeep costs of a wasteful motor car. They are demanding motor car efficiency that at least is comparable to the Franklin facts of daily performance—

*20 Miles to the gallon of gasoline—instead of 10  
10,000 Miles to the set of tires—instead of 5,000*

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N. Y.

Constipation is no respecter of ages. Your health, whatever your period and condition of life, depends largely on the regularity with which your system gets rid of the poisonous ashes of your body fuel.

NUJOL makes you regular as clockwork—without pain. It is gentle and sure, relieves without loss of appetite, and without weakening the delicate mechanism of the body.

You have only one body—you owe it the best treatment. In other words—NUJOL—the *rational* treatment for constipation.

**It is absolutely harmless. Try it.**

All drug stores in U. S. and Canada. In bottles only bearing NUJOL trademark. Never in bulk.

## Serbia on the Rack

Continued from page 11

that revolt over 20,000 persons were killed, although there were at most 1,000 concerned in it and the rest were unarmed.

### Deportations

OVER the head of every Serb in the country there hangs perpetually a sword of Damocles—worse than death, worse than all the misery their oppressors can inflict on them in their homes: the fear of deportation and internment.

It is difficult to write of the Serbian deportations. They are a sentence of slow death, with every kind of degradation and torture crowded into the space that intervenes between arrest and the final merciful release. The laws of old left no such records of bondage in Babylon as the Serbs have to show of their captivity in Austria, in Hungary, in Bulgaria, and in Asia Minor. It is impossible to tell precisely how many Serbian civilians—men, women, and children, of all ages and all ranks—have been deported. Both Austria and Bulgaria discreetly refrain from issuing exact lists of their captives, in order (as a Serbian official report has it) to prevent the world ever finding out what a small number of them will return alive to their country. The number, however, is probably at least 150,000 by now in Austria alone. In the camp at Braunau there were over 25,000; how many survive I cannot say. The number there was heavily reduced by an epidemic of dysentery, which carried off nearly all the children in the camp. According to the statement made last October in the Vienna Reichsrat by the Dalmatian deputy, Dr. Tresic-Pavicic, who had himself been confined as a "hostage" in some of the camps, over 8,000 people perished of disease, starvation, and maltreatment in the camp at Doboij alone.

### Germany Acquiesces

BULGARIA carries out the deportations on an even more wholesale scale than Austria. She takes not merely individuals, but families; not merely families, but whole villages. In the Reichsrat not long ago, Dr. Ribar, a Slovene deputy, stated that from the vicinity of Nish alone over 30,000 persons had been carried away by the Bulgars to the deserts of Asia Minor, and many other reports confirm his words. The Serbian Government authorities reckon, from the facts in their possession, that up to the end of 1916 the Bulgars had already deported at least 10,000 families. There are burned and ruined villages in Serbia where there are no inhabitants left whatever, save a few Turks to whom the confiscated property of the deported or massacred Serbs has been leased by the Bulgarian Government. It should be clearly understood that this desolation has nothing in common with the conditions in northern France. The tide of war itself has not touched this part of Serbia, and the destruction has been carried out solely against the civilians, chiefly women, children, and a few old men at that.

The blackest of all the crimes connected with deportation has been committed by Bulgaria. She has handed over to the Turks thousands of young Serbian girls, chiefly between the ages of ten and fourteen years. There can be only one purpose in this. The children are too young to be of any good for laboring uses. M. Pachitch, the Prime Minister of Serbia, in making a statement about this crime, did not disguise his knowledge of the object for which the children had been carried off. The thing is being worked out quite systematically, the girls generally being kidnapped and taken away in secret. Many of these children have thrown themselves from the moving trains in which they were being taken to Constantinople, rather than face the fate that awaited them there. There is every indication of German acquiescence, if not of direct German complicity, in this iniquity; but as Maurice de Waleffe, writing in the Paris "Journal," said bitterly:

"William is playing a safe game. He knows that if we enter Germany we shall not take eight thousand little German girls from ten to fourteen years old and distribute them among our 'Senegalese!'"

So much for the Serbian dead, and the worse than dead. What of those left behind?

The others are removed by sheer force from the ranks of their nation; but in those who survive the occupying powers

are seeking to destroy the very sense of nationality. In other words, while there may be human beings left alive in Serbia at the end of the war (though God knows there will not be many), they will not be recognizable as Serbs if Austria and Bulgaria can prevent it.

Next to comprehensive massacre there is no more sure way of destroying a nationality than by killing its language. On this point Vienna and Sofia are at one.

Austria has ordered the confiscation of all specifically Serbian books, including the magnificent collections of traditional ballads, the greatest pride of Serbian culture. The Cyrillic alphabet in use in Serbia has been forbidden and the Latin substituted. All Serbian teachers in the schools have been replaced by either Austrians or Magyars, who are educating the children as subjects of the Austrian Emperor, destroying their consciousness of Serbian nationality and tampering with their religion.

Bulgaria has, as usual, gone even further in this respect than her ally. She has inaugurated a systematic destruction of all Serbian literature. Not only every printed book, but ancient manuscripts in the monasteries, the only records preserved since Serbia's medieval days of greatness, have been confiscated and turned over to Bulgarian paper factories to be used for pulp. In the Bulgar paper, "Utro," of April 26, 1916, there appeared the following paragraph:

"The Ministry of Commerce has just published a decree that all books found in the new provinces [i. e., the occupied territories of the Kingdom of Serbia] will, instead of being simply destroyed, be handed over to the National Printing Office. They will then be used as raw material for the manufacture of paper and paid for at the rate of 15 stotinki [3 cents] the kilogram [2 pounds]."

One and a half cents a pound for the ancient and splendid literature of Serbia!

The Serbian Bible has met with the same fate. However, lest in this way the morals of Serbia be endangered, the pious Bulgar has exported such quantities of Bulgarian Bibles into Serbia that some time ago there was not one to be had in the Sofia bookshops. The magazine "Zornitza" of February 8, 1917, explains that "new copies have been ordered from Constantinople and from Berlin, but the railway authorities are unable, through pressure of work, to transport them!" The Bulgars are even forcing the Serbs to change their surnames—that is, to alter the characteristic Serbian termination "ic" into the Bulgar "off." Names of business firms, of shop signs, and of streets in the Serbian cities are all being treated in this way, in addition to the names of private individuals.

In the Serbian territory under Bulgar control the Bulgarian language is compulsory in the schools. All Serbian teachers have been killed or deported; the children are being educated entirely as Bulgars, and the war explained to them from the standpoint of the nation that has murdered their fathers and outraged their mothers. It is easy to see that a few more years of this may well result in a young generation growing up which will indeed believe itself to be Bulgar and not Serb, the more readily in that for so many of these children there is no influence left to preserve in their hearts their Serbian heritage. Their parents are gone—to death or captivity, and even the priests have all been taken away or murdered, and Bulgar priests sent to Serbia in their stead.

### Economic Destruction

IT goes without saying that both the occupying powers are doing their utmost to insure the full economic exploitation of Serbia to their own advantage. Austria has issued an order reducing Serbian currency to half the value of Austrian. This works out at more than a 50 per cent depreciation, since, owing to the superior quality of the metal, the Serbian dinar normally stands higher than the Austrian crown. Forced exchange of Serbian for Austrian currency and widespread buying up of Serbian money by Austrians are proving a valuable speculation for the enemy. Bulgaria has forbidden altogether the circulation of Serbian money, and even punishes anyone found in pos-

# ZINC ORE

Here and there throughout the country Nature hid away a metal so essential to mankind that a great American industry has grown up around it. *This metal is Zinc.*

Zinc protects the millions of miles of telegraph and telephone wires from rust. It gives greater weather resistance to paint. It puts the durability into automobile tires. Without Zinc there would be no such metal as brass. Zinc is used in dyes, dentistry, medicine, batteries and glass—its uses are almost endless.

The New Jersey Zinc Company is the pioneer in the development of Zinc. Its mines and smelters are located wherever the best Zinc Ore is obtainable. Its processes are the result of 70 years of experience and research.

THE NEW JERSEY ZINC COMPANY

55 Wall Street, New York

ESTABLISHED 1848

CHICAGO: Mineral Point Zinc Company, 1111 Marquette Building

Manufacturers of Zinc Oxide, Spelter, Spiegelleisen, Lithopane,  
Sulphuric Acid, Zinc Strips and Plates, Zinc Dust and Zinc Chloride

*The world's standard for Zinc products*

session of such currency. The result, in both sections of the country, has been to reduce well-to-do and poor alike to the same dead level of destitution. By a decree of the Austrian military authorities the moratorium established by the Serbian Government at the outbreak of war has been abolished. Under this decree, German and Austrian creditors (only) can legally claim immediate payment of their debts, plus 6 per cent interest in rapid installments, payments to be made in either Austrian or Serbian money, the latter being rated at half its nominal value. In case of a Serbian debtor being unable to pay his debts, or being absent from Serbia, the authorities liquidate his business and sell his effects. Such sales have been going on since the beginning of 1917. The whole scheme is a legalized plundering of Serbian commerce, with a view to its extinction and replacement by Austrian and German trade. The land is being exploited in every conceivable way, not only as regards its present wealth but in respect to its future resources. Thus the magnificent forests are being ruthlessly destroyed. Of the great state forest of Rogot not a tree remains. The forests of Tara and Rudnik are in like case: mere barren wastes of dead stumps. Here again there can hardly be any question of military necessity, for Austria possesses enormous forest wealth of her own; and in any case the use of forests for practical purposes does not involve the cutting down of every tree, young and old.

Plundering, looting, robbery of every sort, official and unofficial, are rife. Food supplies are commandeered by the enemy authorities, and the small proportion that is sold back to the population that produced it is offered at exorbitant prices, which again are doubled for those whose sole resources are in Serbian money. The land is largely lying idle, partly for want of man power to till it, but more often for want of the plows which Bulgaria has stolen from the women left alone on the farms. Private property (particularly that of absentees) is confiscated, or looted without even the semblance of judicial sanction implied in confiscation. Under Bulgarian rule, all property of absentees (whether these absentees be dead, exiled, serving in the Serbian army, or deported by the Bulgars themselves) has been declared "ownerless" (a term, needless to say, not recognized in international law), and sold for the benefit of the Bulgarian treasury. Advertisements of such sales are constantly to be found in the Bulgarian newspapers. There is no discrimination as to kind or quality: I have read advertisements of the sale of everything—from perfumes to Serbian tombstones. Even the dead are robbed of their identity. The people are reduced to the last level of starvation and misery. How any of them manage to live at all is a matter for wonder to those who know the conditions. No food is being sent in to them from the outside. Since the American Red Cross Mission, and finally the Swiss Committee, were obliged to cease their importation of food, the remaining Serbs are dependent on the rations left them after the enemy authorities have satisfied themselves; and the latter are taking every measure to insure that as many as possible shall die of slow starvation. Since the people are not allowed to sell to each other at all, but only to the military authorities, there is practically no exchange of produce between the different sections of the country. People in the cattle-raising districts can get no grain, and those in the grain lands no meat, etc. What can be the future of children reared under such conditions? In most cases death; in the rest, disease or impaired faculties, or both.

### No Justice or Mercy

THE spiritual oppression is worse than the material. Everything that can be devised to destroy the soul of the Serbian people is being done. Nothing is omitted which could lower their vitality, kill their self-respect, sap their courage, and reduce them to the level of blind and helpless slavery. In the territory under Bulgaria the Serbian language is not even permitted in private correspondence. There is neither law nor justice for the Serbs, neither mercy nor charity. In the part of the country under Austria there are law courts of sorts, but there is no instance recorded of an Austrian being punished for an offense against a Serb. In the two-thirds of Serbia administered by Bulgaria there was until recently not one single judicial court in

operation. Now a court has been established at Nish, which is ironically supposed to serve the whole country. In the villages the police are vested with all powers of life and death; and any disreputable little gendarme, raked up from the mud, may sentence and execute any Serb, man, woman, or child, upon whom his displeasure falls, for the most trifling misdemeanor. In the cities such privileges belong to the army officers and noncommissioned officers.

"In the Prefecture of Police at Belgrade" (I quote from the terrible memorandum presented by the Serbian Social Democrats to the International Socialist Committee at Stockholm) "a certain Lieutenant Wiedmann enjoys unlimited power over the lives and liberties of all the inhabitants. It depends only on his tyranny whether any given inhabitant of Belgrade is arrested, cuffed, beaten with a stick, and, above all, interned. . . . All Belgrade has—and that often in the literal sense of the word—passed through the hands of this gendarme, from ex-ministers to the humblest day laborer. . . . Serbia knows no personage more hateful than this tyrant—which circumstance has not prevented him from retaining his post ever since the beginning of the occupation. It is, therefore, not a case of an exception or an accidental mistake, but, on the contrary, this horrible individual personifies an entire system."

### None to Return?

THE Serbian official figures for last August gave 100,000 (65,000 fighting men) as the number of men left in the Serbian army, which entered the war with 465,000. These men represent practically the whole able-bodied manhood of Serbia that remains free. Among the 30,000 refugees scattered over Europe there are older men, invalids and young boys, but almost no others. Of the deportees carried off by the enemy, we cannot in reason anticipate the return of more than a tiny percentage—the conditions under which they are being held are too bad. For the resumption of the life of Serbia after the war there remains then, in addition to that heroic remnant of an army in Macedonia, practically nothing of the grown manhood of the nation but the prisoners of war held by Austria and Bulgaria. What of their chance of return?

Last year the Paris paper "Le Temps" organized an inquiry into the condition of these Serbian prisoners. Its representative in Switzerland carried out an exhaustive interrogation of exchanged and escaped prisoners, neutral and other reliable witnesses. Here is his description, compiled from sworn depositions, of a camp in Germany where some of the Serbian prisoners were held:

"There were about 4,000 Serbs at the prisoners' camp at Königsbrück (Saxony). They were mere skin and bone, and they were clothed in rags. They were housed in a field by themselves, divided from those of the prisoners of other Allied nations by a high barbed-wire fence. No one was allowed to communicate with them. The food they were given was disgraceful: 'coffee', clear soup without any taste, and a piece of bread. That was all. At first the French and British prisoners contrived to convey bread and jam, tobacco and underclothing to them. But the commandant of the camp forbade them to give anything to their unhappy comrades. None the less, the Allied soldiers, touched by the extreme misery of the Serbs, continued to pass a little food to them by night and by stealth. The military authorities sentenced every 'guilty' British or French soldier to a fortnight in the cells. The Serbs were treated even worse than the Russians. . . . There was one punishment specially reserved for them: they were loaded with sacks filled with pebbles, and forced to run round the barracks, or they were compelled to sit down and rise again alternately till they broke down under the load. Several hundred prisoners died of hunger and exhaustion in that camp."

If possible, the Austrian camps are still worse. At Mauthausen, which is a veritable hell on earth, over 7,000 had died by May, 1917. One man who escaped from there relates that prisoners could constantly be seen digging up bones which had been thrown on the refuse heaps, and pulling up grass for food. Tuberculosis, which is rife everywhere among the prisoners of the Central Powers, has played havoc with the Serbs, and has killed more of them than any other disease, though at one camp 9,000 died of typhus in one week in 1916.

## When Your Spring Breaks Put On VULCAN

IN EVERY TOWN FOR EVERY CAR

FREQUENTLY the breaking of a weak fibred spring is a blessing in disguise, for it enables you to replace it with a sturdy, dependable Vulcan. Thus your car is strengthened and given better riding qualities.

Whenever and wherever one of your springs break, there is an exact duplicate in size and kind, ready to put on at once, without delay or trouble. One of the 3,000 Vulcan dealers is likely to be located near the point where your need arises.

Vulcan Springs are immediately procurable for all popular cars, by reason of this land-wide, convenient distribution. Dealers usually have complete assortments.

Vulcan Springs are made of finest oil-tempered steel, fabricated with accurate care; strength-tested at treble their normal loads.

**The Spring That Should Always Replace a Broken One.**

Reading, Pa.	538 Franklin St.
San Francisco, Cal.	29 Caldwell St.

Here are a few lines from a Russian report, made by M. Novoseloff, of the "Vecherne Vremya," who visited the concentration camps:

"Dysentery, typhus, and spotted typhus are raging among the Serbs . . . apart from numerous cases of nephritis and tuberculosis due to exposure. Rarely is there a day on which there are fewer than fifty to sixty deaths. In the huts the people are crowded together without regard to age or sex. The filth is indescribable, and the warders beat and drive them to work, both children and sick." (This, as the text shows, was a mixed camp, for both soldiers and civilians.)

Of the 154,630 Serbian prisoners taken by Austria and Bulgaria up to February 1, 1917, between 50,000 and 60,000 had died by last fall; and the number must be considerably higher now.

If the war lasts much longer, there will indeed be none of them left to come home; and at best those who do return will be too hopelessly wrecked to be of further service to their country.

### Serbia's Soul

SUCH are the sacrifices which Serbia has made, and is daily making, in the common cause. These present conditions are infinitely worse, infinitely more destructive of racial identity than anything Serbia had to suffer at the hands of the Turks in days gone by; and the ancient influences—the church and the great traditional poetry—which sustained the national spirit through the centuries of Turkish oppression, are being killed. In the old days there were at the worst always the priests and the guslari (the wandering minstrels who chanted the old heroic ballads) to remind the people of their great past and to preserve their faith in a free future. Now there is nothing left to help them but their own individual courage. Yet from their lips we hear no hint of surrender, no whisper of peace. If Serbia survives, it will be by virtue of nothing in the world but her own unconquerable soul.

### Man-Power

Continued from page 1

3. Use more women in industry.
4. Bring in the Chinese.
5. Self-denial. Do without. Economize man power by refraining from the use of luxuries which consume man power. Go on a war basis and consume only necessities.

The idea of drafting all men from the age of sixteen or eighteen up to fifty or sixty, and putting into war work all those not already engaged in some essential industry, is considered more seriously at Washington than the country generally realizes. Various bills providing for some variation of this plan have been introduced. Senator Cummins has advocated it. Senator McCumber made a quite impassioned speech in favor of it. At the time of writing, two State legislatures have passed such a law, and a third is considering it. In Congress the idea is put forth more and more frequently and with increasing vehemence. It has now reached such a point that it is going to be debated seriously. Unless other remedies appear, it may be put in force. Senator Cummins has called on the members of the Cabinet and General Crowder to "confer and report to the Senate" as complete information as they have concerning the country's man power. Among other things, he calls for:

"How many men are there, fit for military service or for labor, not within draft age, who are now employed in hurtful, unnecessary, or nonuseful occupations, and what are these occupations?"

"How many men are there, fit for military service or for labor, not within draft age, who do not work regularly in any occupation?"

### The Last Resort, Conscription

NOW, this method of remedying the shortage is statistically convincing, but in other respects undesirable. Senator McCumber read into the record an impressive tabulation of the quantity of man power engaged in trades which are not essential to winning the war, or not engaged in any trade. But this arbitrary way of treating the case by Government fiat ought to be a last resort.

There is a way of attaining the same end by voluntary action on the part of the consuming public. Government compulsion does not make for good spirit.

*How well acquainted are you with yourself?*

A busy man has little chance, these days, to get acquainted with himself.

I know whereof I speak. I welcome, now and then, a "lonely" evening. Just the two of us together—for a candid "inventory"—Robert Burns and I.

I've come to fix a high appraisal on these quiet hours when Robert Burns and I take stock of what I am, in order, thus, to find out what I *may* be, if I will!

Smoke Robert Burns a month—you'll be convinced that he's peculiarly equipped to be a kind of Mentor to the thoughtful man who smokes.

*Have you tried me lately?*

## What made Johnson laugh—

QUINN hitched uneasily in his chair. "I wish, Johnson," he said, "that you insurance men wouldn't use the word 'risk' to describe my property. It's an unpleasant word and I don't like the sound of it."

"Everything we insure is a 'risk,'" said Johnson.

"Yes, I know; but it isn't a fair name for a place like mine. Just consider this property a moment: Here I've got concrete walls and floors, wire-glass windows, isolated stairways and elevator-shafts. What does the risk of fire amount to here?"

"You're paying a rate of \$1.00 per hundred aren't you?" asked Johnson.

"Yes."

"Well, there are half a dozen firms in town that are paying only 25 cents. Some of them only 10 cents."

"Yes, that's what makes me so sore," snapped Quinn. "There is Henry Simpson, on the other side of the river: He's got a brick-and-wood plant that is forty years old and he's getting a rate of 30 cents. I can't see the reasonableness of it."

"That means that your plant is about three times as liable to burn up as his," said Johnson.

"But why?" persisted Quinn. "Look at those dry old wooden floors of his and that mass of kindling in his shipping-room. Why, I could go over there and strike a match and the place would be a heap of smoking ashes in twenty minutes."

Johnson threw back his head and roared.

"That's pretty good! Ha-ha-ha-ha-ha!"

"Why, man, if you started a fire in his place you'd stand a good chance of getting half drowned in about two minutes!"

"Go try it some time and see! Ha-ha-ha-ha-ha! Take a piece of oily waste and light it with your precious match and

throw it into that room full of kindling and see what happens!"

"In about half a minute you will have a cheerful blaze about the size of a barrel, but there will be a little click up near the ceiling and your nice little fire will be deluged with a drenching down-pour of rain, the alarm-bells will be ringing all over the plant automatically, and the Fire Department will be coming on the run!"

"Is that what happened over there when that crazy little Austrian—"

"Yes," chuckled Johnson. "When Simpson started in on Government orders, that little Austrian conceived it to be his loyal Austrian duty to burn the place up. He started two lively fires—and automatic sprinklers nabbed both of them on the spot."

"Yes, I can see that Simpson would have to have sprinklers in his plant because it is full of fire-hazards. But here in this plant of mine there isn't a fire-hazard to be found anywhere!"

Again Johnson laughed. "I'm afraid you couldn't get a job as an inspector of fire-risks. You don't know a fire-hazard when you see one."

"But tell me—just tell me: how can this reinforced-concrete building burn down?"

"It can't; but what of it? Neither can a stove burn down. But you can have a lovely hot fire in a stove and you can have a lovely hot fire in this concrete grate of yours."

### Why it is called a "Risk"

"To begin with, consider your neighbors: This man to the west of you keeps his oil-tank close to the boundary-line; on the north there's a fellow with an old wooden mill; on the east is the railroad with its sparks and embers and all kinds of cargoes; across the street is a row of tenements with all kinds of tenants, and rubbish in every cellar. Such

exposure-hazards account for 28 per cent. of all the fires.

"Then comes friction—hot bearings, overheated belts in the presence of oil. And you've got lubricating oil and oily waste, a favorite cause of spontaneous combustion."

### Risk, Risker, Riskiest

"You've got hot steam-pipes and radiators, and you can't be sure that garments or inflammable goods will not be placed next to them. Then there's lightning and sparks which are responsible for 7 per cent. of the fire-loss in America. Matches and tobacco, of course. Gasoline and paint. Defective or worn out electric-wiring."

"And finally the unknown causes which are more than 25 per cent. of them all."

"There's nothing in this world that will prevent fires from occurring, even in the best-regulated property."

"You make it seem rather hopeless," said Quinn.

"No, not at all. While there's no infallible protection against fires starting, there is absolute protection against fires spreading."

"You must adopt the remedy. With this fine building your rate will be about 12 cents, if you put in sprinklers. The average fire-loss under sprinklers is negligible."

"They cost too much," ventured Quinn.

Johnson looked at him shrewdly. "Don't theorize—get the figures," he said. "Why, man, sprinklers will earn money for you! You can't afford to be without them, and you can't afford to get any but the best. Send for a copy of the Grinnell Exemption Blanks and let them tell you how much sprinklers will save you in cash each year."

Now, Mr. Reader, to get the figures, just write to the General Fire Extinguisher Company, 288 West Exchange Street, Providence, R. I.

Moreover, Government compulsion "conscription of labor," so called, would not be as effective in the final net result as appears in the figures. An unwilling worker is not a good worker. I should like to hear from Maryland just how many men have been added to that State's labor supply by the law putting slackers and idlers to work. (New York State put a similar law into effect the first of the present month.) Not many farmers or other employers would care much for workers who came to work merely because the Government had ordered them there under threat of punishment. There is a better way than Government compulsion. It will be described later. That method ought to be adopted voluntarily. If it is not, Government compulsion is likely to be.

### U. S.—Employment Agent

THE second of the proposed remedies, the measures for preventing wastage in labor, for making more economic and continuous use of it, are not proposals; they are accomplished facts. There are two institutions just beginning to function in Washington which are epochal innovations. One is the National War Labor Board, of which ex-President Taft is a member. This board may not bring the millennium; on the other hand, it most decidedly is not merely one more of the many "boards" and "committees" whose efforts to do away with strikes have been more or less futile. An index of the power inherent in it is to be seen in the fact that it involves an assent on the part of great corporations which have fought organized labor for years to cease that policy and refrain from opposing the organization of labor in their shops. The War Labor Board will do away with the greatest cause of wastage in labor—strikes.

Neither the War Labor Board nor the other great innovation, the United States Employment Service, can be adequately described in this article. Of the scope of the latter, a suggestion can be given in the fact that within a few weeks there will probably not be a private employment agent (of the sort that supplies factories) left in the United States. Formally or informally, every private employment agent is going to be outlawed. The United States will be the single agent. It will act through the bureau of the Department of Labor which is known as the United States Employment Service. A partial picture of the nature of it may be had from these words written by one of the men in charge of it, Mr. Roger W. Babson:

"The United States Employment Service is one of the great industrial machines which the war has placed in full operation. It should and will eliminate the independent employment bureaus just as the great modern water systems have eliminated the old private wells and cisterns. . . .

"Just as a central authority must mobilize and distribute our military forces, a central authority must mobilize and distribute our industrial army, and the sooner the individual manufacturer accepts this fact the sooner he will find the proper kind of labor. The old private employment bureau has no place in our war-industrial scheme. Its existence means uneconomic competition for labor, unnecessary costs to both employers and workers, and reduction of efficiency. A Pittsburgh employer not long ago obtained a number of machinists in Detroit through a private agency in the latter city. The train bearing these men to Pittsburgh passed another bound from Pittsburgh to Detroit with an equal number of machinists on board. In Norfolk employment agents bid against each other for men already employed in essential industries and swept the near-by farms bare of labor. . . . The situation was rapidly becoming intolerable when the United States Employment Service stepped in."

This is not the expression of a Utopian scheme. It is an existing and rapidly growing institution. All the shipyards in the United States get their labor through it. The Western railroads have adopted its plan. These and other employers have adopted it because it is an obvious refuge, and probably the only refuge under present conditions, against mutual suicide, the plan of tempting labor away from each other by bidding constantly higher and higher wages.

### What Woman Labor Adds

THE third remedy, the use of women in labor, is to a degree in operation already. It has only begun; but as one of the authorities on this subject, Miss

Josephine Goldmark, says, "we are undoubtedly on the threshold of great innovations." It would be most interesting to try to forecast the social changes that are likely to come to the American people through these innovations. Our ways of looking at things, our mental habits, are going to be changed. The one central, imperative restraint which must be observed throughout this process of taking more women into industry is this: the opportunity and capacity of these women to have families should not be curtailed. No panicky sense of emergency should blind us to that consideration. France is in a much worse situation than we. Her need of man power is much more urgent. France has put under arms 2,000,000 men, out of a total population of less than 40,000,000. (For us to do as much in proportion to population would give us an army of 20,000,000.) France's need of man power is ghastly. But she has seen her lesson. She is careful to safeguard her employment of women so as not to make it difficult to raise children. France is careful to make it easy for women to be war workers and mothers too. Indeed, she adds a premium to the pay of mothers. Among the official instructions issued by the French Minister of Munitions concerning the employment of women in war industries are these:

"Every establishment engaged in the manufacture of materials for national defense is required to provide a nursing room supplied with cradles, reserved exclusively for breast-fed babies."

"Every mother, whether paid by the day or otherwise, nursing her infant at the breast shall receive a bonus of ten francs per month and also a premium of 25 per cent of her basic wage."

As to the quantity that we may add to our man power by the employment of women in war work, the probability is that it will not be as large as may be apparent. Of course we already see many women in unfamiliar occupations. But do these represent any actual increase in our net man power? For the most part they represent merely a diversion of women from one occupation to another. The women whom one sees as conductors on the street railways in New York, or as elevator tenders, or in the machine shops of Bethlehem, are practically all women who have formerly been employed in textile mills or elsewhere. The only employment of women that will add anything to our man power is the employment of women who have not formerly been engaged in any occupation.

#### After Ships—the Chinese Question

THE Chinese suggestion generally expresses itself in the large and off-hand phrase of its advocates: "Bring in a million Chinese." That suggestion will be very widely urged a year or so from now. It is going to be one of the principal topics of public discussion. It may very well become an acute political issue. It has already appeared in various measures introduced into Congress. A good many chambers of commerce have passed resolutions favoring it. A good many articles could be, and later on will be, written about this one phase of our man-power question. For the present year, and probably also for the following year, the Chinese suggestion, as a practical matter, is easily disposed of. The answer is ships. Or rather the answer is no ships. If we had the ships to bring in a million Chinese across the Pacific Ocean, we would not bring them in. We would use the ships to carry three million soldiers across the Atlantic Ocean. Right at our doors, in our own territory, in Porto Rico, there is a surplus of 75,000 laborers who would like to come. But there are no ships to bring them. For our own Virgin Islands there is a surplus of 10,000 man power. Lack of ships disposes of the Chinese proposal for the present. A year or two from now, if the war is still on, and when—or if—our shipping situation is easier, the advocacy of the Chinese suggestion will be on us. Powerful instincts of selfishness will press it on us. It is the easiest way. It is the way of self-indulgence. It is the way that promises to let us have our accustomed luxuries. It is the way that makes self-denial less imperative. It seems to open a way to fight the war, and at the same time have our luxuries. It seems to open a way for the individual to do his part in the war by hiring a Chinaman, instead of by individual self-sacrifice.

The final and best way of meeting the famine in man power is by avoid-

## Miles, Miles and More Miles

The utility of the automobile—the spine of America's secondary transportation system—is measured largely in terms of tire miles.

Use your car. But exercise greatest care to choose the tires that show the largest in mileage returns for their cost.

### Ajax Shoulders of Strength

These are burly supports built in on both sides of the Ajax tread. They brace and re-inforce. They give Ajax tires more rubber where it should be—more tread on the road. They mean miles, miles, and more miles.

Ajax tires are 97% Owner's Choice. This huge percentage of the Ajax annual output is chosen by individual users to replace other tires that came on their cars.

## AJAX ROAD KING

Here's the monarch of them all. Mark the massive tread, braced and re-inforced by Ajax Shoulders of Strength. The Road King is the king of casings—a monarch in quality—a democrat in service.

Your nearest Ajax Tire Supply Depot is headquarters for Ajax tires, Ajax tubes, and real service. Write for the free booklet "Ajax Shoulders of Strength".

ing the consumption of man power. We must first of all understand the problem. We must then build on that understanding a great national, spontaneous, voluntary movement in the direction of not using a pound or a yard of any commodity that is not absolutely necessary to well-being. We must first understand that every commodity we use is based on man power. We must understand that every minute an electric light is turned up is just that much consumption of man power in the power station, on the railroad that brought the coal to the station, and in the mine where the coal was dug. We must realize that

that man power is sorely needed to fight the war, and that just in so far as we refrain from using it we are giving it to the nation for war. We must understand that the same is true of everything we eat or wear. We must carry this thought with us every waking minute. It must be a purpose ever present and continuous. The achievement of it must be a point of pride. We must create a nation-wide rivalry in doing without.

We must understand that the best patriot and the one who is most efficiently serving the nation is the one who achieves most in the direction of doing without.

## You Can't Just Wait

Continued from page 18

rouser than Old Lennon had seen them in many months. She was no longer that abject creature, a girl who has been left behind and forgotten. She knew why Johnnie had not written her. He had not, because he was ashamed to write. Ashamed or not, her trust was more absolute than ever. Within her burned warm the belief that some time and somewhere in this huge, tumultuous city she would find her Johnnie.

**I**N the months that followed, however, Nell very often had to do her utmost to keep that belief alive. She had found a small, clean room with a Scandinavian family who lived over a shop in Sixth Avenue, and often, as she lay there in bed, awake, thinking of Johnnie while the elevated trains thundered by, she vowed to herself that no matter what he had done, no matter what the folly into which he had fallen, she would forgive him—if he let her!—for now she realized that New York, with its five million people crowded fast, stepping upon each other's heels, jostling, shoving, is to some of them the loneliest place in the world.

She had made every effort to find Johnnie. She had gone to the lodging house where he had formerly lived and to which she used to send her letters. But there she was told that Johnnie had left without a word as to where he was going. Mr. Jellaby too, who knew some one of authority in the Police Department, made inquiries, but without result. And, of course, the city directory and the telephone book yielded nothing.

Sometimes Nell felt that the only thing which kept her faith going was the letters which came to the Michigan Furniture Company almost every other week, never giving any indication of where they were mailed from, but always containing the five-dollar bill. Even the postmarks varied. The envelopes were always stamped "New York," but the station each time was a different one.

"Tell me," Nell once asked Mr. Jellaby, "if I do find Johnnie"—quickly she corrected herself—"when I do find him, will you give him another chance here? Why, he has to start here again! Nothing else will do. He can never forget his failure here unless you give him the opportunity to erase that failure."

Mr. Jellaby, for a moment, seemed to be threatened with another attack of the phrase "facing the music." But instead he controlled himself and asked: "Do you still want to marry him?"

"Yes—if he still wants to marry me."

"Well, I don't know," said Mr. Jellaby musingly. "If he's still got his smile, why we can use him. For if he still has his smile, that means he's got some courage left—darn him, anyway! He had no right to run away and hide the way he did. Like a small boy without any backbone. He should have come back and"—but he managed to pull himself up in time and added rather lamely—"well, if you have faith enough left in him to marry him, that ought to give him at least some faith in himself. Yes, marry him, and bring him back here smiling—no snivels, no whines of repentance, mind you!—and I'll give him another chance."

Whenever one of Johnnie's letters came Mr. Jellaby would let Nell see it. It was as if he realized that her hopes at last clung only to those letters. And Nell noticed presently that two of the letters in succession were postmarked "Madison Square Station." That buoyed her up to a ridiculous extent. But she said nothing to Mr. Jellaby. It seemed such flimsy ground upon which to build such solid hopes. After that discovery she began to haunt the Madison Square neighborhood. She went to the branch post office and

learned the boundaries of the station, and thereafter her evenings which were not spent in the school of stenography were devoted to walking and walking around the dim streets that focus in the little park. And even after her studies some nights she could be seen floating through that district, gazing into men's faces, standing and peering at the closed fronts of houses, as if with the very intensity of her gaze she would pierce the solid walls. And there was something in her consecrated expression that protected her from furtive leers and whispered innuendoes.

A third and a fourth letter came postmarked "Madison Square"—and then finally Nell found Johnnie.

**I**T was late April. All of a sudden one warm day every fugitive bit of green in the city seemed to blossom forth, mocking, in its bravery, the gray city streets and the drab walls of its cañons. In Madison Square the trees were spangled with a delicate tracery of young leaves, the grass was swept as if by a breath from brown to emerald, and before the windows of the hotels along Fifth Avenue and Broadway appeared window boxes filled with tulips and hyacinths and pink geraniums, lifting their painted bloom above streaming vines of glossy ivy. And the air was soft and caressing, even at nightfall. At half past eight Nell was drifting along Twenty-third Street when through the open door of a drug shop she saw the cool marble of a soda fountain tempting her within. She entered and ordered a glass of vichy. And then an inspiration came to her.

"Does a young man ever come in here," she asked breathlessly, "who eats nothing but ice cream with chocolate sirup and nuts?"

The young man who dispensed the soda smiled at her in comradely spirit. "That guy over there eats it whenever he's got five minutes he don't know what else to do with," he said, and pointed derisively. And behind a counter on which stood cakes of soap in delicately tinted wrappers and bottles of green and yellow perfume Nell discovered Johnnie. As if her gaze drew him, he presently turned and saw her.

For a minute neither moved nor spoke. Then swiftly Johnnie burst forward. "Nell, where did you come from?" he cried. "How in the world—"

and choked and could say no more.

"I came to the city last November to look for you," said Nell, "and I've been looking for you ever since."

"I'll be off duty at nine," he said, his eyes wistful. "Can you wait? No, I'll come now. I must talk with you, Nell."

He turned and, hurrying away, spoke to an elderly man and then disappeared in the rear of the store. In a minute, still hurrying, drawing on his coat, he came toward her. Silently they passed out of the shop together, walking a little apart. As if by mutual understanding they turned into the semidarkness of Madison Square. Presently they found a secluded bench, and then they talked as only youth, long silent, long starved, can talk.

**T**HE arc lights hung around them like luminous white balloons; the Metropolitan tower lifted its majesty far above them, and the huge lighted dial of its clock grinned down upon them; every minute, it seemed, it struck, mockingly and sardonically, the quarter hour; some belated sweatshop workers, jabbering strangely, swept by them; a tramp, muttering, shuffled past them. But none of these things for one minute took their attention from each other.

"I know all about everything at the Michigan Furniture Company," said Nell confidently. "I know—and I understand! Mr. Jellaby has been—oh, he's been wonderful! I have a position

there. Think of it! I'm making fifteen dollars a week now."

As for Johnnie, all he could seem to say, over and over, was: "Nell, how can you forgive me? You will forgive me, won't you, dear? You said you would. You know now why I didn't write. I was ashamed to. But I haven't been able to get you out of my thoughts. Not for a day. And especially not of late. It's almost as if I knew you were looking for me."

NELL kept her best news to the last. "Johnnie, you can go back to the Michigan Furniture Company. Mr. Jellaby said he'd let you start all over again."

"What did he say about me?" asked Johnnie eagerly.

"He said you were one of the most promising and able young men they ever had there."

"He did!" cried Johnnie, and for the first time he really smiled. And Nell, remembering what Mr. Jellaby had said about Johnnie's smile, went on to tell him more of Jellaby's remarks, filling in the details, inventing, exaggerating outrageously. With her words a new confidence seemed to pour into Johnnie; he threw back his shoulders, his eyes shone, he laughed aloud there in the dark silence of the little park.

"And I would have made good!" cried Johnnie. "I loved my work there!" He smiled ashamedly this time. "Why, I loved him, Nell! He was all the time so jolly in a slap-you-on-the-back sort of way. And I think I loved him most when he'd got angry and sputter and swear. But after—after I lost the three hundred dollars, I couldn't go back and face him. I wonder if you know why, or if I can explain why? It's because he'd been so awfully decent to me—always. If he had been less decent, I wouldn't have minded. It sounds strange, but that's the truth of it. I had a hard pull afterward. You see, I had no reference, and no one would consider me for a decent job. Finally I managed to get that clerkship in the drug store. Do you wonder I didn't write you? Back to the same old kind of a job I had in Old Lennon. I get eighteen dollars a week. And I wanted to pay that money back to the Michigan Furniture Company. It was a hard pull. But I felt I could never look at Jellaby again, could never look at you again, until I'd paid it. Then I had such glorious plans of finally making good in a big way and strutting back upon you, saying: 'Well, I've done it after all despite the most awful handicaps.' What an idiot I was!"

"But you can go back now, Johnnie. Jellaby is willing. He's going to start you again just where you left off. Think of it! You'll have that splendid opportunity again. I knew all the time that it was rot that you'd lost the money in a poker game. I knew you wrote them the truth when you wrote the money had been stolen from your stateroom. And I think I've convinced Jellaby that I'm right."

JOHNNIE gave her a quick, startled glance. Suddenly he seemed to crumple up beside her. When he spoke, it was to say: "Why, Nell, somehow I thought you knew."

"Knew what, Johnnie?"

"Knew that I lied to Jellaby. I did lose that money, but I lost it playing poker. Why—why did you think I'd hidden away from you all if I hadn't been the thief?"

At that a silence, a silence of utter misery, fell upon them. The tall buildings around the park seemed to close in upon them, dwarfing them, crushing them. The tramp shuffled by again, and they saw him this time, stared at him. He seemed a creature of portent, a creature of doom and dismay. The huge clock above them sardonically struck ten.

Nell arose. "It's late," she said, and shivered a little. "I must go."

Johnnie sprang to his feet. "I'll walk home with you."

She shook her head. "No, Johnnie, I want to go alone. I want to think."

"You won't marry me now?"

She looked at him sadly, mysteriously. "I don't know, Johnnie."

Abruptly, there beneath the glare of the luminous white arc lamps, he gripped her, the fingers of his hands sinking into her arms. "You can't turn me down now, Nell. You've got to marry me. You've got to. Ever since that time I've gone straight. Always—always!—thinking of you, thinking that some day I could go back to you. I need you. And now that I've seen you again I need you more than ever."

## A Lively Interest

is shown these days in the intrinsic merit of foods and beverages. A few years ago tea and coffee were about the only drinks known on the family table.

Nowadays, people everywhere find appealing flavor, better health and practical economy in

# National War Savings Day June 28<sup>th</sup>

That's the day we sign up.

That's the day we tell Uncle Sam just how hard we want to win this war. That's the day our government has officially set for us to purchase War Savings Stamps.

On June 28th every man, woman and child in the United States will be called upon to pledge his or her full quota of War Savings Stamp purchases for 1918.

You will be expected to pledge the full amount that you can afford—no more—but by the same token, no less.

In every state, county, city, town and village the War Savings Committees are preparing for this big patriotic rally of June 28th. Unless you have already bought War Savings Stamps to the \$1,000 limit, get busy with paper and pencil and figure out the **utmost** you can do.

Remember this. You take no chances when you go the limit on War Savings Stamps. They are the best and safest investment in the world. They pay you 4% interest compounded quar-

terly. They can't go below par. You can get back every dollar you put into War Savings Stamps **any time you need it**. You can turn them in at the Post Office **any time** for their full value plus interest.

Uncle Sam is asking hundreds of thousands of men to give their lives to their country. He is asking you only to lend your money.

What are you lending?

## FRIEDA HEMPEL JOINS EDISON

MISS HEMPEL, of the Metropolitan Opera, called by critics "the most richly endowed soprano in America," has joined the Edison group of stars. A true artist, her ambition to have her voice Re-Created and preserved in all its splendor outweighed all other considerations. Henceforth she will sing for the only instrument which can Re-Create her glorious voice.

It was through hearing the Re-Creations of other great artists that Miss Hempel became interested in the New Edison. The temptation to hear *her* voice thus Re-Created was too strong to be resisted. She came to our laboratories; made a Re-Creation; then submitted it to the searching trial of the tone test. She herself sang in direct comparison with the instrument. It was enough. Those who have heard her voice on talking machines can conceive her joy in hearing it Re-Created with such fidelity that no human ear could distinguish artist from instrument. Then and there she resolved that henceforth the instrument for her voice was

### *The* NEW EDISON "The Phonograph with a Soul"

Now at last you can hear Frieda Hempel. Not an imitation, but Miss Hempel herself. And this though you're a thousand miles from the Metropolitan Opera House. See the list of her Re-Creations. It is your opportunity to hear the world's most beautiful music interpreted by one of the world's greatest singers.

And never was the solace of music more needed than now, with the heavy clouds of war darkening so many households. An evening of music means a let-down, a complete relaxation for the taut nerves. Let music enrich and sweeten your life. Let Miss Hempel help you forget for awhile the din of a world in arms.

A postcard brings our interesting literature including the musical magazine, "Along Broadway."

THOMAS A. EDISON, Inc.  
ORANGE, N. J.

### FRIEDA HEMPEL'S EDISON RE-CREATIONS

*Theme and Variations.* (Proch)—As sung by Miss Hempel at the Metropolitan in "The Daughter of the Regiment."

*Ave Maria—Cavalleria Rusticana.* An adaption from the Intermezzo by Mascagni. Violin obligato by Mary Zentay.

*Aloha Oe (Queen Liliuokalani)*—Assisted by Criterion Quartet.

*My Old Kentucky Home.* (Foster)—Assisted by Criterion Quartet.

*Emmett's Lullaby.* (J. K. Emmett)

*Long, Long Ago.* (Bayly)

The photograph depicts Miss Hempel singing in direct comparison with her own voice on the New Edison. The instrument with which this tone test was made is an Official Laboratory Model, encased in a William and Mary cabinet of walnut. See this cabinet at your dealer's. Price \$265. (In Canada add duty.)

# CONGOLEUM

Gold Seal

# ART-RUGS

## Sizes and Patterns for Use in Every Room in the House

The most surprising thing about Congoleum Art-Rugs is their exceptional value as compared with all other low-priced floor-coverings. Don't fail to consider Congoleum before you buy any floor-covering this season.

Your dealer has Congoleum Gold-Seal Art-Rugs in all the popular sizes from 3x4½ feet up to 9x12 feet, and in a wide variety of designs, offering appropriate rugs for use in any room in the home.

**"That Seal Guarantees Congoleum Quality"** —says the salesman, pointing to it on the rug.

"It shows you that the manufacturers stand squarely behind every claim they make for Congoleum Gold-Seal Art-Rugs and Floor-Coverings. We are glad they put the Gold Seal where you can't help seeing it, because it protects both you and us.

"The moment you see the Gold Seal you know it stands for real, genuine, advertised Congoleum, and that you are not getting an inferior substitute."

**"But why do you recommend Congoleum?"** —asks the customer.

"Because, where a low-priced floor-covering is desired, there is nothing else that answers the purpose so well as a Congoleum Rug.

"First, it is sanitary and easy to keep clean. The entire rug from top to bottom is absolutely water-proof. A damp mop will keep the colors clear and bright.

"Second, a Congoleum Rug is very durable. The surface is wear-resisting and absolutely sanitary.

"Then, too, it lies perfectly flat without fastening."

**"Can we use Congoleum Rugs anywhere?"** "Yes," says the salesman.

"Anywhere that a low-priced fabric rug would be appropriate. The patterns and color-harmonies are really artistic because they are originated by the foremost talent of the country.

"Now, this rug, for instance, could be used in the dining-room, in the living-room, or in a bedroom, and there are some patterns in stock suitable for other rooms in the house.

"Congoleum Art-Rugs are just as attractive and pretty as low priced fabric rugs, with all the disadvantages left out. No woven surface to collect dust and dirt. No beating and sweeping to keep them clean.

"And remember, this Gold Seal guarantees every good point I have told you about them."

### Send for Art-Rug Color-Chart—FREE

We have a new Rug-Chart showing the Congoleum patterns in colors. You should send for a copy to see the many stunning patterns. It will be sent free upon request. Write us today before you forget it.

## P. A. puts such smiles in smokes!

Night-and-day *happygoods*, you'll call Prince Albert! For, it rips down the barrier between you and a jimmy pipe or makin's cigarettes and shoots in a wireless to your smokeapparatus that the coast's clear to bang away like a regular!

You get what you're keen for—*make-good-on-the-spot-quality*—when you tuck the tidy red tin in your jeans for active service! For, Prince Albert's old family name is Quality—and that's what P. A. slips you every time you've a hankering like you must have some of that little old smoking, *for yours!*

Your anticipation of a pipe jammed joy'usly brimful of P. A. or a nifty makin's cigarette will speed such pep into your smokespot you'll have some time getting the business end of a match fussed quick enough to meet demands!

And, to get-set with such smoke yearnings and to know that Prince Albert is as free from bite as a kid kitten is about enough to make a man yearn for a month's vacation every third week! For, P. A. is made by a patented process that cuts out bite and parch. It won't ruffle the touchiest tongue you ever heard tell of up and down the firing line!

You buy Prince Albert in toppy red bags, tidy red tins, handsome pound and half pound tin hamidors—and in that clever, practical pound crystal glass hamidor that keeps the tobacco in such perfect condition.

# PRINCE ALBERT

*the national joy smoke*

is *your* smoke at both ends and the middle. It's so enticing in flavor and fragrance and such a pal every hour of the twenty-four that it'll win your favor quicker than you can bat an eye!

For, P. A.'s made to do a big joyjob with every smoker who's fond of a jimmy pipe or a home made cigarette! And, you can bet-a-house *on that.*

# THE ARM AND THE WALLOP

BY WILLIAM SLAVENS MCNUTT

COLLIER'S SPECIAL CORRESPONDENT

THE Paris boulevards were jammed with a matter-of-fact, sauntering crowd. There came a muffled, jarring noise like a blast in the New York subway. I turned to my companion, a Red Cross officer who had been in France for some months.

"What was that?" I asked casually.

"Shell from the Big Gun," he explained disinterestedly, seemingly surprised that I should ask. "Geel! Look at the medals on that French aviator over there. Wonder who he is?"

The people about me were walking leisurely along, laughing and talking. A shell from the Big Gun had just exploded in the city? Absurd! We stopped at a table in front of a café, and when the waiter had gone with our order I bought one of the meager Continental editions of a paper published in English. The Allied line was bending from the titanic blows of the boche fist. The decisive hour of civilization was perhaps at hand. Up on the line hundreds upon hundreds of thousands of men were battling hour upon hour in an inferno of mud and blood and poisoned air, that the world might henceforth be endurable for them and theirs. At its nearest point that line was not more than forty miles distant. My eye found a small paragraph announcing the number of victims claimed for the Big Gun on the preceding day.

"There's Eddie across the street," my Red Cross friend said, rising hurriedly. "I want to catch him. You're going up to the Press Bureau, aren't you? All right. See you at dinner to-night."

I sat for a few minutes watching the people pass. The crowd on the board walk at Atlantic City is not commonly more matter-of-fact. The people one sees in Times Square on a spring morning are much more worried and nervous in appearance.

I looked again at my paper. The Germans were gaining. The wall of men and steel that marked the shore line of civilization was being forced back. That current hour might be the decisive point of time! I rose and strolled leisurely up the Avenue de l'Opéra toward the Press Bureau, enjoying the warm sunshine and the picturesque appearance of the crowd, so colorful with varied uniforms. And up on the battle field the boche was gaining!

## Along the S. O. S.

THE lieutenant with whom I spoke at the Press Bureau suggested that I take a trip along the lines of communication, or what is now known as the S. O. S.—Service of Supplies—beginning at a base port and working back. That didn't suit me. I wanted to get to the front. Every American in France wants to get to the front. A few nights ago I got on a train at a little French town and found aboard three sergeants from a base port going up to the front to arrest and bring back three deserters—certainly the strangest deserters on record. They were after three men who had deserted from a base port and stowed away, so to speak, with a unit that was on its way to the front. They had

deserted in order to get under fire. Another testimony of the utter futility of the boche attempt to scare the world by frightfulness.

"I think it would be wise for you to take this trip," the lieutenant insisted. "There's big work being done along the lines of the S. O. S., and you'll have a more intelligent idea of the general situation when you go up to the front."

I took the lieutenant's tip. Now I'm back, and I'm going to buy that lieutenant something for Christmas. I have traveled about 600 miles along one of the lines that go to make up the avenues of transportation of the S. O. S.—and I feel better. I know a little more of what we're up against in placing and maintaining a real army in France. I know a little more about what's being done to overcome the difficulties that have stood in our way. I have seen a multitude cheerfully doing hard, monotonous work in order that others who follow may pass quickly to the fields of combat and glory and have something to eat and wear and fight with when they get there. I have seen the men of our army accomplishing the delicate and difficult task of fitting our effort into the intricate French system of activities, and, on the whole, doing it tactfully with an encouraging minimum of friction. And I feel better.

## "Whew Y'all Come From?"

IN this war it is the nation which fights. The army on the line is the armored fist with which the nation strikes. The power of the blow that can be struck with that fist is according to the strength and courage and intelligence of the nation which is the fighter. Think of the United States as the body of the American fighter—which is the American nation. Our heart is the heart of our people; our brain is the brain of our people. Our back and shoulder muscles, upon which a large percentage of our hitting power is dependent, are made up of the sinews of railroads and the thews of factories. Our blood is our wealth. Our upper arm is built of ships, and our fist is the army in the line. What, then, of the striking forearm of this fighter? That forearm, spanning the distance from the base ports of France to the fist on the western front, is, in military anatomy, the S. O. S.

A base port in France: It is one of several and not the largest. The town of narrow, cobbled streets and ancient stone houses is overspread with a fog of dust and loud with the honk and roar of hurrying motor trucks. Two mounted cavalry officers ride clattering past. I turn to watch them, not knowing why. Suddenly I realize. Men on horseback in this modern war of motor vehicles and airplanes! The motorization of our army really began at the border, following the Columbus raid, and to-day the soldier on horseback is an unusual thing—a point worthy of note in reckoning the magnitude of our task.

Motor trucks and soldiers move everywhere. Occasionally a staff car darts by, winding around the heavier service vehicles, stridently demanding the

right of way due to rank. There are more colored soldiers in evidence than white. They are, for the most part, members of labor battalions doing stoddore and construction work. I make no attempt to analyze the sentiment, but something about the sight of these colored boys from home meandering through the crooked streets of this old French seaport town—suggesting dazed animals caught up and whirled along on the grim, relentless tide of military effort—brings a lump to my throat.

They can't even get by with their own kind over here. When they first landed they tried to make good with the Algerian negro troops, and haven't yet satisfactorily figured out why these black men in France can't talk their language. They have evolved many theories. One big American negro stopped an Algerian soldier in the street.

"Boy, whew y'all come from?" he asked pleasantly.

"Blajdhay andhausj whajdugay," the Algerian answered—or words to that effect.

The American negro frowned. "Niggah, you listen to me: Just 'cause y'all got heah fust an' done learn this heah monkey talk, don't you go pertendin' to me that you done fergot how to talk y'own language. Y'all keep in actin' uppity wid me an' Ah'm goin' to bust you right on the jaw. Whew y'all come from?"

"Kahdb shwujs gsfayaf," the Algerian replied—so far as anyone knows.

The American negro sighed in the manner of one confronted by a disagreeable duty, and sadly shook his head. "Boy, Ah done warned you," he said mournfully, and put all he had into a right-hand swing to the jaw. The Algerian dropped and lay quiet.

"Ah done warned him," the American negro justified himself as he walked on, nursing his knuckles. "Actin' uppity wid his home folks!"

## "On Your Way, Bo"

A ROOM in a cold, gloomy old hotel where they have learned to talk a little like Londoners and charge a great deal like New Yorkers; a few hours' chilly oblivion that passes for a night's rest; then we visit post headquarters and go away in a staff car to look over the port and the surrounding camps. At some other ports considerable systems of modern American docks are completed, but here they are still using the old French quays. A number of American ships are discharging cargo. Everywhere about the warehouses and docks groups of negro soldiers are laughing and singing at their work. Here and there we find them adding trackage to switching yards. We pass a yard where Americans and Frenchmen are collaborating on the job of getting a train of cars properly distributed. An American soldier swings down from a freight car with the ease born of long experience as a brakeman and spurs the French engineer.

"Get out o' town, Frenchy," he sings out. "On your way, bo."

He turns and sees me laughing. "My words are

wasted, but I can't help sayin' 'em," he says, grinning. "All these Frenchies get is my motions, but I can't get used to high-ballin' a man on his way without hollerin' somethin' at him. My tongue ain't no use to me around these people except just to wag around in my mouth for my own amusement."

Passing through a maze of motor trucks, switch engines, and freight cars to one end of a clangorous French ammunition shop, we find Americans busy assembling American engines. And here a point about transportation. It will ultimately take in the neighborhood of 50,000 railroad men to operate our lines in France and cooperate with the French in the use of their lines. Our roads at home are driven to capacity and using all their available men. The French roads are operated effectively and to capacity—God knows how—by women and military non-effectives. French trains look like bits of comic-opera scenery to an American railroad man, but somehow they operate! Somehow they keep the army at the front properly supplied and distributed, and when one reckons the French railroads in terms of accomplishment rather than appearance there is no cause for laughter. Experienced railroad men who know the situation here say that we have something to teach the French about railroad operation and a great deal to learn from them as well.

### "If They Can Do It, I Can!"

**THROW** in a lot of American trains and train crews? Easily said! But an American train crew thrown in on a French road would be about as effective at first as a Siamese orator lecturing in his native tongue to an American audience on the value of George Washington's example to the black tribes in darkest Africa. Until the American learns French methods and the French railroad vocabulary he is about the equivalent of a tin whistle in Sousa's band in the transportation scheme of things. And he must be fitted into the French scheme of things without interrupting traffic on the roads that are the veins through which the life blood of the army flows up to the front. And the work is being done, the work of learning, educating, assisting, installing, and finally operating certain of the lines of transportation. The work is being supervised by the best of our railroad brains. This thing encourages me: The big railroad men in charge of our operation here are manifesting an excellent degree of adaptability, patience, and willingness to cooperate rather than dominate. A majority of tactless and nonadaptable men might have done infinite harm. An example: Two yardmasters.

One asked to take over the job at a certain French port. "Cinch," he said confidently. "All I'll need to do is to rebuild those yards right away, cut out those joke turntables, establish modern American switching methods, get some up-to-date equipment, etc., etc., and I'll be able to handle it easily."

"You've got a wonderful mind," the colonel in charge admitted, and arranged for the man's transfer elsewhere.

Another man, an Irishman, confronted with the same proposition: "Colonel, I don't see how them

there Frenchies do anything at all at all with them joke cars an' funny yards o' theirs. I don't see how they get by switchin' their cars around by mule an' man power; but they do get by, an', by Golly, if they can do it, I can!"

The last-mentioned man is in charge of the yard and "getting by."

I may not go into detailed testimony of the extent and success of our railroad transportation effort along the S. O. S. in France. I can give this impression: It is developing gradually and reasonably well in the face of a multiplicity of difficulties that stun the lay mind. In its ultimate plan it is capable of supplying a real American army on the line satisfactorily. It is being developed by big, patient, tactful American railroad men who are willing to learn as well as teach. Their work is beginning to show. It would show more but for the fact that while they are attending to to-day's supply for to-day's army they must be learning and teaching and building always with an eye to to-morrow's enlarged supply for to-morrow's enlarged army, and doing it without vital interruption of French activity. And always, of course, there is the fact that cargo space in ships is needed for things other than railroad equipment.

I imagine it would be easy to pick flaws in our transportation effort in France to date and make a joke of the matter if one were to take the transportation effort and consider it wholly apart from the complex entirety of our military expansion. That would be utterly unjust. There has been such a multitude of things to accomplish in order to establish an army of any real decisive power in France. The establishment of an army that is not decisive in its strength is a futile waste of life.

### Our Military Chain

**BACK** through the town we go in a swirl of dust, and out through the country to a motor reception park. Here are long lines of trucks and ambulances, motorcycles, and staff cars. This reception park, which is comparatively a small one, is one of many in France. It covers about six acres of ground. Here the machines from America are assembled, tested, and sent on their way to service. The park is turning out from sixty to seventy-five cars per day.

Consider for a moment our military motor requirements. An army to-day in the field calls for many thousands of trucks, ambulances, light delivery

vehicles, motorcycles, bicycles, and trailers—easily supplied, manned, and maintained by America were cargo space called for only by motor vehicles and were drivers and mechanics needed only by the motor transportation department. But a motor service perfected speedily at the expense of the manifold other new branches of the service that we have had to develop

"I lose-a my baggage," I shouted loudly. "You sorry? Baggage heap gone! Conch ramoose. Gone. Get me?"

from nothing would not be a worthy accomplishment. All the links of our military chain must be strengthened at the same time and in proportion. We have had to train chauffeurs and motor officers in all branches of service at the front; to establish organization parks, reserve parks, service stations, and overhaul parks. Motor vehicles are wounded up at the front as men are, and, for their care and restoration to service, motor hospitals have had to be provided—first-aid stations, overhaul parks for the more seriously wounded farther back, and still farther to the rear base hospitals where the most serious wrecks are operated upon. We shall see a bit later a little of what is being done in the way of motor restoration at another point along the line.

### Two Months Ago and Now

**THEN** a trip through the reception park where hundreds of cars are being assembled; a ride through a large rest camp of wooden barracks where troops lay off to get their land legs after the voyage across; a glance at an American base hospital with an emergency capacity of 1,400 beds, and then out in the country to a classification and storage yard in process of construction. Here is something to take the eye. A low-lying field five miles long by seven wide. Shortly it will be entirely covered by ordnance and quartermaster warehouses. Many of the buildings are up, and the foundations for scores of them dot the green field like rows of whitewashed stumps.

The buildings are constructed of steel fabricated in America and are sheathed with sheet iron. They are huge affairs of two sizes: 570 feet by 240 feet and 400 feet by 150 feet. The captain who takes us around tells me that they can put up a building a day. Forty-five miles of track is already laid. On the broad, flat field we see many Algerians, American infantry, and artillery troops and engineers at work. The infantrymen and artillerymen are there for a few days only, speeding up the work as best they can until they are called up. Labor is scarce, and a job gets hands where hands may be had. The actual construction work on this yard, which is one of many, began a little more than two months ago. Everywhere I went along the S. O. S. it seemed to me that the work which manifests itself to the eye, the actual construction of big things, got under way between two and four months ago. A rough estimate has it that this one yard will hold an eighteen-day quartermaster supply for two million men—a fair-sized knot of muscle in the American forearm.

Back to town and the (Continued on page 26)

Within ten minutes the prettier of the two girls was sitting beside him

# THE CARGO CAPTAINS

BY JAMES B. CONNOLLY

COLLIER'S SPECIAL CORRESPONDENT

IN peace times a fellow would naturally expect to meet cargo boats—tramp steamers, as we call them—while crossing the Atlantic, or almost anywhere else on the wide ocean; but to see them in these war days is to set a man wondering about them. Wondering, because more than 90 per cent of U-boat sinkings are of ships of less than twelve knots' speed; which means that these rusty old junk heaps, wheezing along at maybe nine or ten, but more likely at seven or eight knots, furnish most of the sinkings. They surely must be having great old times getting by the U-boats, and their captains and crews must surely have a viewpoint of their own!

At this naval base over here you could look almost any day and see five, ten, or twenty of these cargo boats at moorings. And ashore was a pub—there were other pubs, plenty of them—but to this one particular pub came bunches of these cargo captains to forget things. (Stories about being called to the bar may not be as popular in these times as they were in the days of Commodore Truncheon. Knocking around the world, though, a man cannot help noticing that men who face peril regularly do sometimes take a drink to ease off the strain.)

A barmaid, answering to the name of Phyllis, presided over this pub—a blond, square-built, capable person, who had always about three or four of these captains standing on their heads. She was not without sentiment, but never letting sentiment interfere with business.

"Phyllis, my dear," a skipper would begin, and get about that far when she—her right hand reaching for the bottle of Scotch and her left for the soda—would be saying: "The same, captain?"—thereby choking off a great rush of words, and forwarding the business for which she drew one pound ten a week.

Before a creature of that kind these cargo captains were bound to preen themselves. They bought at frequent intervals: their ways were not at all like the ways of another group—not cargo captains—of whom one of our American warrant officers said:

"You buy and buy and buy, and they drink and drink and drink. It comes time for them to buy, and when it does they submerge, and don't come up for air."

## "To Egypt and Back"

THESE cargo skippers were always coming up for air. They would hunt down a man three stories up, wake him out of a deep sleep, and haul him downstairs to have just one more. Between drinks, after they got to know a man pretty well, they would talk of their sea experiences; and, after the fashion of all true adventurers, their talk was almost always of the humorous side of things.

There was a skipper in the pub one morning who hid all hands, especially Phyllis, good-by. He was off to Alexandria. He would not be back for three months—more likely five or six months.

Phyllis pinned a flower in his coat, and off he went. From the pub window they saw him board his ship, and an hour later saw her steam out of the harbor and to sea.

That was at ten in the morning. At five in the afternoon—the lights were just being turned on—those in the pub who happened to be looking out of the window thought they saw this captain's ghost coming up the waterside with his crew trailing behind him. The crew looked as if they had dressed in a hurry and were scampering along to keep warm. But our skipper was wearing all he wore when he left the pub.

He drew nearer. It was no ghost. It was himself, even to the rose in his coat. He halted Phyllis. She was talking to another skipper. The other skipper turned to see who was butting in, and, seeing who it was, said: "To Egypt and back in seven hours—the quickest voyage ever I 'eard of!" Which comment so depressed the voyager that he refused to say anything about what had happened, except that five miles outside of the harbor he had been torpedoed, and they had to take to the boats in a hurry.

## A Fourteen-Bob 'At

THE foregoing is by way of introducing the captain who commented on the quick voyage. A few mornings later I was up at the Admiralty House when he came into the waiting room, let himself carefully down into a mahogany chair, dropped his new soft gray hat into his lap, and looked around.

"A solemn place, ain't it? Would they 'ang a chap, d'y' think, if 'e was to 'ave a bit of a smoke for 'imself while waitin'?"

I said that I thought the fashion nowadays was rather to take a man out and stand him up against a wall and shoot him.

He was tall, heavily built, fresh-colored, with a way of seeming to reflect deeply before he replied to anything. By and by he said: "Oh, aye!" and lit his cigarette, but had not taken the second puff when the doorkeeper's feet sounded outside, at which sound he plucked the cigarette hurriedly by the neck, and looked around for somewhere to dump it. There was no ash tray, and the table being bare mahogany, the floor all polished wood, the fireplace with no fire in it, so brassy and shiny that to put anything there would be treason—he dropped the cigarette into his hat.

The doorkeeper smelled something, but he wasn't one who looked on lowly things when he walked, and so did not see the little spiral of smoke curling up from the hat.

My seafarer was in a great stew. To sit there and watch him was to warm up to him. There he was, a man who regularly faced death by more ways than one at sea, but now in deep fear that this shore-going flunky would catch him smoking a surreptitious cigarette. He stared determinedly at every place except at his hat until the doorkeeper had passed on. When he looked at his hat the cigarette had burned a hole in it. He viewed the hat

sadly. "No gainsayin' it, war is 'ell, ain't it? I paid fourteen bob for that 'at three days back in Cardiff."

I went out to help him buy a new hat. Hat stores were scarce, but life does not end with hat stores; there were fleets of little places where a man could sit down and talk about more important things than hats.

## "Glee Me My Little Cargo Boats"

IN the hotel smoke room after lunch there was no sugar for our coffee. His sea training began to show at once. "The thing you 'ave to learn to do at sea is to go on your own. Nobody doing much for a chap that 'e don't do for 'imself, is there?" From his coat pocket he drew an envelope which once held a letter from home. In place of the letter now was sugar. "Preparedness, 'ere it is." And he sweetened our coffee from the envelope.

He spoke of his life at sea. "I can't say that I like it—I can't say I don't like it—but it was my life before the war and it 'as to be since. You've seen my ship, 'aven't you, lying to moorings? Nothing great to look at, is she? But the managing director of our company—'e 'as the 'andling of maybe a 'undred more like her—'Let 'em 'ave their grand passenger ships,' 'e says, 'but give me my cargo boats that pays for themselves every two voyages."

"The right idea 'e 'ad, I'll say for 'im. And for my part of it there is no everlasting polishing o' brasses and painting o' white work and no buying o' gold-laced uniforms at your own cost. And there's the bonus for me. Oh, aye! A bit of bonus ain't a bit of 'arm, you know, especially when you've a wife that's no eyesore to look at, and little kiddies growin' up."

"Torpedoed? Oh, aye. It's not to be expected of a man to escape that these days. My chum Bob, remember 'im—that was seven hours to Alexandria and back—with a rose in 'is coat? 'Is fourth time torpedoed, that was. I've been blowed up only three times myself. Nothing much of anything special, the last time and the time before that: a matter of getting into boats and by and by being picked up—no more than that—no. But the first time—maybe it was a novelty, like, then. 'Owever, I'd carried a load of coal to Naples and getting twenty-two pounds a ton for coal that cost two pound ten in Cardiff maybe makes it a bit clearer what the managing director 'ad in mind when 'e said: 'Let 'em 'ave their grand passenger ships, but give me my little cargo boats.'

"From Naples I go on to Piræus in Greece, and we take a load on there—admiralty stuff, and not to be spoken of—and we put out for 'ome. She was a good old single screw, this one o' mine. Twenty-five year old—not the worst, though I'd seen better. Well warmed up, she could squeeze out eight knots, or maybe eight and a 'alf. I 'ung close to the land along that Greek shore, for there's no sense 'aving too long a row to the beach in boats if anything 'appens, is there?"

ry good. We're rollin' along one morning the radio man came in with a message which 'Put into nearest port. U-boats.'

And without ado we puts into a little place down 'eel of Italy, and that night I 'ad a 'ot barth lovely long sleep in me brahss bed which the 'ad given me for Christmas the last time. And a great pleasure it was, I say.

Next morning we put to sea again, and next day comes another radio, and it says: 'Put into a port. U-boats.' And we put into Malta, at night again I 'ad another 'ot barth and sleep in me brahss bed.

I resume our voyage from Malta, and a few later I gets another radio—more U-boats—puts into Algiers. Three times in one week made with me 'aving me 'ot barth and a fine n me brahss bed—grand good luck, I say now, did it then to the mate, adding to it: 'There's al station west of Gibraltar—wouldn't it be tful passing that signal station to get the to put back to Gib and stop there for an- night and I 'ave another 'ot barth and a sleep in me four-poster bed? But the mate, y says 'e didn't 'ave no brahss bed aboard o sleep in, and 'e saved 'is 'ot barths, 'e did, got 'ome to enjoy 'em proper.

### "We're Torpedoed, Sir"

DMERTIME it was, and I likes to take my te siesta after lunch—just like the Dona thei- y' know—and I'm 'aving me siesta next day lunch when something woke me up. There's f of books on the wall o' me room—chart and the like—and when all at once I see piling down on top o' me I says to meself: hing's 'appened.' And so it 'ad. The mate, ka 'is 'ead in the door and says: 'We're tor- t, sir.'

ere goes me bonus,' I says, and goes on

I carried a 3-inch gun in a little 'ouse aft, ere was the mate firing at the U-boat, which ut o' water and maybe two miles away. It ne o' those out-o'-date guns the navy would o more to do with, and so they passes it on thinking new good guns would probably be l on us. Maybe that's true. None of us l ever fired a shot from the gory weapon till ay. The mate fired two shots at the U-boat, don't 'it anything. The U-boat fires two shots and she 'its something. One of 'em parases h the chart house, and the other tears a nice ole in 'er forehead.

hat'll do for that gun practice,' I says.

ren't you going to 'ave a go at 'em?'

ou can 'ave all the go at 'em you please,' I after we leave the ship. Besides you there's en men and four Eurasians in this crew, and

some of 'em will maybe like to see 'ome again—I know I do!'

"We get into the boats, myself taking along what was left of a second case of Scotch, and good old prewar Scotch it was, not the gory infant's food they serve these days that a man 'as to take a tumblerful of to know 'e's 'aving a drink at all. I also took along three sofy cushions, hand-worked by the missus, with pink doves and cupids and the like—rare-looking they was. 'A man might's well be comfortable,' I says.

"I 'ad a cook. 'If comfort's the word,' says the cook, 'I might's well take along the wife's canary,' and 'e takes it along in a cage in one 'and, and a bag o' clothes in the other. 'E's in the boat when 'e thinks to go back for a package o' seed 'e'd left for the canary on the shelf in the galley. 'Urry up with your bird seed,' I says, and as I do a shell comes along and explodes inside of 'er old frame somewheres, and the cook says maybe 'e'll be get- ting along without the seed—the canary not bring what you'd call a 'eavy eater, anyway.

"The mate 'ad a cameraw, and when we're clear o' the ship 'e would stand up and set the cameraw on the shoulders of a Eurasian fireman and take shots o' the ship between shells.

"In good time one last shell 'its 'er, and down she goes. The U-boat moves off, and we see no more of 'er.

"It's a fine day and a lovely pink sunset, and there's a beautiful mild sirocco blowing off the African shore to make the 'ot night pleasant as we approach it in the boats. A man could 'ardly ask to be torpedoed under more pleasant conditions, I say, and we continue to row toward the shore in 'igh 'opes. It's maybe two in the morning when we see the sidelights of a ship. She's bound east—a steamer—and we know she's a Britisher, because we're the only chaps carried lights in war zones at that time. Carryin' lights at night, o' course, made us grand marks for the U-boats, but there was no 'elp for it. A Board o' Trade regulation, that was, and no getting away from what the Board o' Trade says. We 'ad our choice o' carrying lights and losing our ships or not carrying lights and losing our jobs. So we lost our ships. After a year and a 'alf of war some bright chap in the board said that maybe it would be a good idea to change the regulation about carrying lights, and they did. And about time, we said.

### Extraordinary Luck

"SOME o' the crew were for 'ailing the ship in the night. 'Ail 'ell!' I says. 'D'y' think I want to be took into that rotten 'ole of a Port Said, or maybe Alexandria, and that end o' the Mediter- ranean fair lousy with U-boats? Besides, we'll get 'ome quicker this way,' I says, and allows 'er to pass on. In the morning we run on to the beach,

and 'ardly there when a crowd of Ayrabs come gal- loping down on 'orseback to us. 'We'll be killed now,' says the mate, and talks under 'is breath o' stubborn captains who wouldn't 'ail a friendly ship's light in the dark; but the only killing the Ayrabs do is two young goats for breakfast. And they make coffee that was coffee, and we 'ad a lovely meal on the sand. And by and by they steered us along the shore to where was a French destroyer, which takes us over to Gibraltar, and from Gib we passed on through Spain and France to Havre. Three weeks that took, and I never 'ad such a three weeks in all me life. 'Eroes, raging 'eroes—that's wot we were!

"At Havre the French authorities took the mate's pictures out o' the cameraw, and they never did give 'em back. Except for that, it was a fine pleasure, that land cruise 'ome.

"Lucky? Oh, aye, you may well say it. Three times in one week I 'ad me 'ot barth and me lovely sleep in me brahss bed it's not to be looked for with ordinary luck, you know."

### "'Ero! 'Im a 'Ero?"

ONE day the destroyer to which I was assigned put to sea. There were other destroyers, and we were to take a fleet of merchantmen from the naval base to such and such a latitude and longi- tude, and there turn them loose. My cargo friend's ship was of the convoy.

We made such and such a latitude and longitude, and there we turned them loose, signaling the posi- tion to them and waiting for acknowledgment. They acknowledged the signal. We then hoisted the three pennants which everywhere at sea means: Pleasant voyage! They answered with the three pennants which everywhere spells: Thank you. And no sooner done than away they bolted, each for himself, and let the U-boats get the hindmost.

The hindmost here was the rusty old cargo boat of my friend. I could see her for miles after the others were hull down; and long after I could see her I could picture him—walking his lonely bridge and his ship plugging away at her seven or maybe seven and a half knots across the lonely ocean.

Three times torpedoed and taking it all as part of his work! Some day they may get him and he won't come back; and when they do the world will hear little about him. Hero? He a hero? Why, a shore-going flunky had him bluffed for smoking a surreptitious cigarette in high quarters!

"'Ero! 'Im a 'ero? Why, 'e don't even wear a uniform."

So there they are, the wheezing old cargo boats and their officers and crews, regularly running the U-boat blockade: British, French, Italian, Ameri- can, but mostly British. No heroes, but the Lord help their people if they hadn't stayed on the job.

"In good time one last shell 'its 'er, and down she goes"

**HIT BY A BURSTING SHELL**

Here is a remarkable and probably unique photograph. It shows a German high-explosive shell bursting in a field behind the British lines, and a British soldier falling, wounded by one of the flying fragments. The picture is absolutely unretouched, its blurred appearance being due to the fact that the force of the concussion must have been such as to jar the camera violently. Evidently the photographer heard the shell coming and aimed at about the spot he expected it to land, only to have it fall rather nearer than he had expected—entirely too near!

**THE END OF AN AIR DUEL**

After a furious battle between a French and a German air scout both planes were disabled and forced to descend behind the French lines. The machines landed about a hundred yards apart, whereupon the German pilot—who, like his French opponent, was unhurt—promptly set his plane on fire. The photograph, taken from a second French plane, shows the German machine, at the left, in flames. At the extreme right is the French machine, and scattered about the field are groups of French soldiers. A larger group, between the two, is crowding around the German aviator.

## IN CONNECTION WITH THE OLD MURRAY PLACE

BY ARTHUR CRABB

ILLUSTRATED BY CLARA ELSÉNÉ PICK

**C**HE railroad from Alden runs westward. On it, eight miles from Alden, just before Stockton, is Hopedale. The village proper of Hopedale is on the south side of the railroad. On the north side are residences, some of them very old, some very new, some in between, but whatever may be said of them individually, they are all in a beautiful setting. There are beautiful curving drives, with gravel walks beside them, fine trees and lawns and, at the proper time, flowers. The people who live in the houses are quite the most pleasant, prosperous, and cultured that Alden and its environs can boast. Hopedale is a place where one lives, if one can.

Running north from the railroad station is Milk Street, which crosses Morton Avenue, and then swings to the right, past Phipps Street, Ladd's Lane, and Dodge Road. Then it comes to Murray Road, which runs uphill perhaps a quarter of a mile, and then down again and wanders off into the country toward Stockton.

At the top of this hill was and is the Murray place. Once upon a time it had been the Murray farm, but real farms had long since moved beyond easy walking distance of the Hopedale Station.

The Murray who had built and first lived in the Murray house was Jeremiah, whose son was John, and John's son was Richard. Jeremiah's father had been a farmer, but Jerry, being of an artistic temperament, had taken up blacksmithing, and later its allied arts, which consisted of making other things than horseshoes out of iron. Many of Jeremiah's creations, such as lanterns, locks, gates, hinges, andirons, and the like, are highly prized to this day, for Jeremiah wrought skillfully.

Later on the business was not just Jerry Murray, but Jeremiah Murray & Son, Ornamental Iron Work, the son, of course, being John. Finally it was Jeremiah Murray & Son Company, and the company was John before he died, John's younger brother Otis, and Richard, John's son, and a few people who owned a few shares of stock, which never, under any circumstances, were sold, but passed as legacies.

John's wife, Esther, died when Richard was a very small boy. Richard, with his work all laid out before him, went to college and studied architecture, structural design, chemistry, metallurgy, and other things pertaining to iron and bronze work, from the railing about a cottage window to the elevator fronts in large office buildings.

The period in which Jeremiah built his house was not a period of good architecture. But there was one saving grace—Jeremiah had seen a house that was a thing of beauty, and he had pointed it out to his architect and said: "Build me one like it." The archi-

tect, bound as to the exterior, had vented his wrath on the interior, and as a result there was a "For Sale" sign upon the premises.

The "For Sale" sign had been on the cedar tree at the gate for nearly five years. Plenty of offers for the Murray place had been made to Richard Murray, but they had not approached the very high price which he had placed on it. He really didn't want to sell at all, and the sign was a half-humorous thing to ease his conscience. Richard carried it, laughed at it, and loved it. The sign had gone up immediately after his father's death. It was surely no place for a twenty-one-year-old boy to live in. Besides being for sale, it was for rent, furnished or partly furnished, but that was a joke pure and simple, for those who could afford to pay a reasonable rent for it and keep the grounds in condition would never live inside it, however much they liked the outside.

One Sunday afternoon in October, after the sign had been up for five years, Richard Murray was out driving. He was a creature of habit, and drove in the country nearly every Sunday afternoon. In the morning he played golf, and after lunch he drew up before a certain door and called: "Oh, Nance!" if the door happened to be open. If it wasn't, he opened it and then called: "Oh, Nance!"

He had opened the door that afternoon, and Nance had answered. Some time before sunset he had said to her: "Would you mind stepping a minute at the place? I'd like to take a look at it."

Nance did not object, and they went through the gateway and up the drive. Richard's key unlocked the front door, and they went in and shortly after came out again. They walked slowly around the house, and looked at the old flower beds, hardly more than outlines of their former glory. They stood side by side, without speaking, their eyes wandering over the weeds, the grass-grown paths, the empty fountain, the untrimmed hedges and trees. It was a very depressing picture, and the two young people, for all their gaiety and happiness, felt the burden of the gloom about them.

Richard turned so that he could see Nance. She was a tall girl, well built, of an athletic figure. Her hair was almost red, but not quite, for one had to stand in just the right light to see the red gleam from the dark brown. Her face was rather full, her cheek bones high, and the cheeks themselves smooth and soft. Her chin and her jaws didn't agree with her mouth at all; they were very firm and suggested that when Miss Nancy set about making

something happen it was very likely to happen. But her mouth stated just as clearly that nothing should happen, if she could help it, that wasn't pleasant and kind. Nancy smiled a great deal oftener than she laughed, and when she smiled she was more beautiful than ever. Her beauty was of the sort that you pick out from a mob and that makes you say: "There is a strong, healthy, clean, bright-looking girl; I'll bet she's a corker."

HE was twenty years, one month, and one day old. Richard had waited for the day, for it was the anniversary of another day seven years ago. He had brought her to the old place to remind her of the day.

"Nancy, don't you think it's time you and I did something about this?"

She heard the words clearly enough, but she did not move. He saw the color mount into her face. "Nance, don't you understand?"

And still Miss Nancy did not move. Then, before she quite knew what had happened, she felt all crushed and some one was kissing her and she was letting him do it.

That was an unheard-of thing and must not be allowed. She broke away from him, looked at him for an instant, and ran through the woods, straight to a hole in the fence, across her own lawn and into her own home.

Richard stood perfectly still and watched her till she disappeared. Then he grinned and, still grinning, drove out through his own gate and into the next one, which was Nance's. He walked in. Nance's family greeted him with varying degrees of cordiality, depending upon how busy they were.

Richard tilted his pipe, lighted it, and said: "Where's Nance?"

"Upstairs," volunteered Henry, a small brother.

"Sure, but where upstairs? In the library?"

"Getting dolled up; what'd you expect?"

"Maybe I'll do the same," said Richard, and up he went. His hands being washed and his hair brushed, he made further inquiries over the banisters for Nance. She had not come down, however, so Richard sat himself upon the next to the lowest step of the third-story stairs and waited, smoking

At last Nancy came, and Richard managed to get her into the upstairs sitting room. He stood between her and the door. "You can't run away now," he said. "Why should I run away?"

"You did before."

"I know you just forgot, Dick, but don't do it again, please."

"The seven years are up, Nance."

"Seven years? What has seven years to do with a lot of gardening?"

"Don't you remember the day we agreed to be engaged for seven years, without saying anything to each other about it? We were never to mention it unless one of us wanted to call it off."

"I was thirteen then; it was a joke."

"No, it wasn't a joke. I knew then that you were going to be what you are now. It is impossible for me to think of your belonging to any other man. Don't you love me?"

Nancy shook her head. "Not a bit."

"I've waited a long time for to-day to come, Nancy. I've wanted to ask you to marry me ever since you were seventeen or eighteen, to promise again what we promised seven years ago. I didn't because I didn't think it was fair; you were too young."

"But, Dick, don't you understand, I've never thought of love or getting married at all. Think, I'm only twenty, which is much too soon to be married. Twenty-five is early enough."

"What's the use of wasting five perfectly good years?"

"But they won't be wasted. I'm having a wonderful time as I am. Poor Dicky," she sighed. "We've been such good friends, and had such good times together, and now to have you suddenly get so sentimental and spoil it all. Is your heart really broken, Mr. Murray?"

"No, Nance; my heart isn't broken. I'm going to keep on hoping and praying. I'm going to fix up the house; I'm going to make it just as beautiful inside as it is outside. It's going to be your house; I'm going to give it to you for a wedding present, with the land and the farm across the road, even if you don't marry me. I'm going to fix up the grounds, cut out all the evergreens, open things up, make them beautiful. And if you want me to, I'll put a nice, smooth, straight path from your house to this one, so you can come back to your mother quickly and comfortably, if I treat you badly."

Nancy had shut her eyes, her head was back against the cushion of the Morris chair. She did not look unhappy. When he stopped speaking she opened her eyes a little and smiled.

"You're a nice boy, Dicky, and it's sweet of you to offer me all those things, but let's go on being friends; nothing could be nicer than that."

"Friends fiddlesticks! Maybe a wife can be a friend, but that's beside the point." He left his own chair and sat down on the arm of hers. "Please shut your eyes."

She shook her head. "I'm very comfortable."

"Please, for me."

"You'll behave?"

"Yes."

It might be that Nancy had her share of curiosity. Very quickly he put the thing over her head. "No,

not yet," he said. She tried to close her hand, but she was not quick enough. "Dick!" she cried and she lay back and her eyes closed. What was there to say? She lifted the string of pearls from her breast and let them drop again. Then she looked at the ring on her finger. Her cheeks were covered with crimson, her bosom rose and fell rapidly.

"That," he said, holding the hand that wore the ring, "is nothing. It came from a store. But these"—he touched the pearls—"did not come from a store. I found them in father's box after he died. With them in the box was a note in my father's handwriting, telling me to give them to my wife. If I am ever to have a wife, Nancy, she will be you, so they are yours. If you will not take them, give them to your mother. I think she will keep them, if you ask her to, in memory of the love the Murrys have always had for her."

Then a small brother came in suddenly and said that supper was ready, and Richard did not see the pearls or the ring again that night, nor did he see Nancy alone, for she stuck to the family like a burr.

That night Nancy's mother heard Nancy call. She went into Nancy's room and found her in bed. Nancy smiled and, by patting the proper part of the bed, indicated where her mother was to sit down. Nancy blinked at her and then smiled, and blinked and smiled, and threw her arms around her mother's neck, and rubbed her cheek with her own, and then nestled down on her mother's shoulder. From somewhere came a muffled "Guess what's happened, ma."

Ma took daughter by the shoulders and sat her up straight. She scowled at her very seriously, turned her head from side to side, then turned the light so that it shone on her daughter's face.

"I can't imagine what has happened, not possibly," exclaimed ma.

"Dick has asked me to marry him."

"What?" Surprise, amazement, and horror were in ma's voice.

"Yes, he did, to-night."

"Annette, you must be careful of my heart; it won't stand shocks."

Nancy looked at her mother. "What do you mean, mother?"

"I mean that you must not tell me things like that suddenly. You must work up to them gradually. Naturally, I never thought of such a thing. Of course you refused him."

"Of course."

"You did? My goodness, why?"

"Why? I don't know; I just did."

"When is he coming back?"

"To-morrow night."

"Sounds as though you didn't refuse him very emphatically."

"I did, just as emphatically as I could."

"You say he's coming back to-morrow night—dinner, I suppose?"

"We didn't say anything about dinner."

"Didn't you?"

"Mother, what is the matter?"

"The shock."

"What shock?"

"Hearing that you two are seriously considering getting married. I never suspected it."

"Mother, you're teasing me."

"I don't want to tease you, daughter, but you don't

blame me for not being surprised. Your father and I are very much pleased."

"You and father pleased—at what?"

"You and Richard."

"But I haven't—I—I'm not going to marry him."

Nancy's mother took her daughter's head between her hands. "I understand, Nancy, but I'm afraid you are. It has been perfectly evident for some days at least, even for some years: as many as half a dozen years."

"But, mother—"

"He's a very nice boy, Nancy, quite the best boy I know, and you're a very sensible young woman. You will be very happy." She kissed her daughter's cheek.

"But, mother, I tell you—"

"There, there, Nancy. You take your old mother's advice: don't tease him when he comes to-morrow. Good night, daughter."

On the way from the Gray house Richard Murray felt as a man feels who has been tried for murder and convicted, notwithstanding that he is innocent, that the evidence was overwhelmingly in his favor, and that the judge told the jury they couldn't do a thing but find the prisoner "not guilty" without leaving their seats.

Many and many a time he had wanted to say: "Let's not wait for the seven years, Nancy. Let's be engaged for a couple of months and then be married," and Nancy was, of course, to have said: "All right, Dick, that suits me. I don't want to wait either."

But he had waited until Nancy was twenty, because Nancy must be fairly treated. She came out when she was eighteen, and to let her commit herself before she had seen something of the world would not have been fair. She should see other older men and learn a lot of things that no girl of eighteen could possibly know. Nancy had had her two seasons, but it had seemed to Richard that those two years had brought them closer and closer.

It never entered his head that Nancy could refuse him. Day by day he had become more and more sure of her, and day by day he had become happier and happier. The perfect understanding between them, without a word being spoken, had seemed to him a very wonderful thing. And then Nancy had refused him, and he was afraid that Nancy meant it. "It simply means," Richard thought, "that I have misunderstood."

Richard Murray had had plenty of reason for believing that Nancy Gray would accept him. She was not a flirt, nor had she ever shown any desire for a galaxy of beaux. There had surely been some sort of understanding between them. Their lives had been lived together; she had no older brother, and he had taken an older brother's place. They had taken it for granted that they could not go where other boys and girls went together except with each other. There had been trust and confidence in each other. The library upstairs had been for him and no other man, she had been his for football and baseball games, and no other man's. They had planned their dances and dinners together, and he had taken her and brought (Continued on page 23)

## "Untimely Boldness"

**T**HE MARINES," says the dispatch describing one of the finest small engagements of the war, "went beyond their objective and entered the village of Torcy." That is what might have been expected of the impetuous youth of this gallant corps. It may be a fault to be so exhilarated by the spirit of pursuit that you go beyond the point which you were asked to take and hold, but it is a fault closely akin to a virtue. "Happy the army," says CLAUSEWITZ, "in which an untimely boldness frequently manifests itself; it is an exuberant growth which shows a rich soil." British officers have complained of the headlong eagerness of the Canadians which carried them farther than they should have gone and exposed them to unnecessary danger. But the fierce spirit of the Canadians did much to enliven their neighbors from the motherland. Our men are of the same mold. A French liaison officer whose work took him to all parts of the front told the writer two years ago that the Canadians were the best soldiers of all—better even than the "elite" troops of Germany.

In this connection it may be said that modern American military theory is all in favor of persistent attack as the best defense. "We will not be content with merely holding our positions," says an American officer of high standing. "When we get troops enough over there we will try to push through. That is the definite policy of our leaders, and that is what the people of this country expect of us." He added a piece of cheerful information. "Most of our troops are in the Metz sector," he said. "And I know the Metz sector as well as I know my own back yard. The German problems on that sector were sent to us and became part of our daily grind at school. If we fail there, it will not be because we don't understand the military opportunities and difficulties of that part of the line."

General FOCH is of the same school as our younger officers, for he says: "Our first axiom must be that, completely to achieve its object, a battle must not be purely defensive. A purely defensive battle, even well conducted, does not result in a victor and a vanquished. It is simply a game that must begin over again."

When the time comes to swing his "bludgeon," as he describes it, the general will find none of his followers more eager to become the head of that weapon than the American troops, whose fighting blood is of the same character as that of the marines "who went beyond their objective and entered the village of Torcy."

## In Union—

**I**NASMUCH as Colonel REPPINGTON, while military editor of the London "Times," was outspoken in opposing unity of command, interest attaches to the "Times's" dispatch from Paris, saying:

We British and we French have now one army. General Foch has accepted very heavy responsibilities at a critical moment. He is well fitted for the task, enjoying, as he does, the earned confidence of the British General Staff. The soldiers at the front have accepted loyally the new order of things, and the success of General Foch's action must not be compromised by ill-informed, injudicious, and untimely criticism by civilians and politicians.

There has been no marked disposition in America, even on the part of "civilians and politicians," to criticize FOCH or the idea of unity of command. Later on, as American losses necessarily grow heavier, there may be hints that disadvantages as well as benefits follow from unity of command. The necessity for that unity will, however, remain perfectly clear regardless of whether or not FOCH has improved his great reputation as a strategist. Unity of command is, on the western front, an essential condition of military health; and details must not, at any crisis, divert the American mind from the main principle. When FRANKLIN declared: "We must all hang together, or assuredly we shall all hang separately!" he was thinking of the thirteen original colonies. This statement holds good today, not of our forty-eight States only, but of all the States which make up the alliance against the powers of Terrorism. The principle of unity of command must be extended rather than limited.

## By Way of History

**J**UST inside the back cover of this week's COLLIER'S we reprint a statement by Ambassador GERARD telling why he is against the postal-zoning legislation framed to take effect July 1, 1918. Citizens who are old-fashioned enough to believe that public opinion is still, and rightly, a national force—also citizens who, when they say "United States," slightly emphasize the first of the two words—will want to read the statement. Everyone else should skip it.

June 29, 1918

## Propaganda

**I**SN'T the American public growing a little weary now of the word "propaganda"? It is natural enough, perhaps, to blame off on "German propaganda" any inconvenient or disagreeable remark, fact, or statistic. All the same, it would be interesting to know just how much enemy propaganda there really is going on in America under war conditions. Before we entered the war, and before we got really going, there certainly was a German propaganda: and not limited to the German-language press either! But at present there's "none at all," one Washington official tells us—though maybe he's too optimistic. Disloyal individuals, certainly, and "alien enemies" and persons imperfectly Americanized, and persons stupidly excessive in their optimism—from whom emanate wrong ideas as to the war, and our part in it, and this or that ally's part in it, and the probable length of it. But let us not call stupidity—even our neighbor's stupidity—"German propaganda": not unless we really do know what we're talking about. In a country of popular traditions and aspirations it doesn't pay to cheapen such phrases: they may be needed later on to express (and combat) the real thing.

## The Long Pull

**A**RE we halfway through the war? Many of us please ourselves daily with the idea that the end is rather near, and this same thought underlies all the scholarly comparisons with what happened at Waterloo, all the newspaper editorial assurances that Germany strikes now in frantic haste to win before America can do her part. The deeper indications seem to be that the end is rather far off. We must distinguish clearly between Teuton policy and the Teuton press agency which labors to make that policy less bitter to the German people. No horse ever hauled a load of a hundred tons; the work is done a ton or so at a time with intermittent oats, water, and rest. In the same way Potsdam keeps the German Michel going—just this one final task and then peace. But why should we believe Potsdam?

These gigantic attacks in Picardy, in Flanders, past Rheims to the Marne, and so on, may very well be intended to establish a new line of battle from which the boche can destructively bombard Paris and the great industrial district of the lower Seine valley. Holding the northern French coast would enable the boche to multiply the submarine peril and to bring various English cities under direct gunfire; for which work this infamous long-range shooting at Paris is a rehearsal. It will be noted that FOCH let the Germans go to the Marne barrier (when he had to), but put his power into breaking their effort to work westward. Huge as they are, these great drives into France are but parts of a larger plan, and it is the scale of that which we must get in mind if we are to see this war as it is. The Teutons are working it out rather carefully, as is indicated by our military experts' revisions of their earlier (and too rosy) estimates of comparative Allied and German losses. Prophecy is dangerous, but it seems safe to predict that when—and if—the German fleet goes out to attack, as has been so much rumored, it will sally forth, not intentionally to commit suicide, but to support a drive for Calais. The recent, much-chronicled submarine raids along our eastern seaboard are certainly intended to divert both the German people and the American navy from even more grave matters.

The rulers of Germany are looking forward, not to a world of peace in which their autocratic power must shrivel and die, but to a world of armed brutality and armed fear in which they will be the masters of an even greater empire. For this they want to establish a battle line through France easier to defend and more crippling to their enemies. Behind it they might be able to drag the war along, hatching trouble by all manner of evil "peace" work among the Allies and drawing aid from the enslavement of Russia's broken remnants. If LUDENDORFF has a system to make fighting men of reluctant convicts from the German prisons, the same system will work with conscripted aliens. The Prussian army has been a jail, ever since the first FREDERICK.

It is on some such scale as the above that the Teuton plan must be viewed. The overthrow of it will be equally gigantic. Allied failure can come only from lack of resources or from lack of understanding leadership. We have to win peace, not merely to defend ourselves, and it is the long pull that will bring the victory.

## Arithmetic of Frightfulness

IF it has taken nearly a year and a half not to reduce England to starvation by means of the U-boat, how long will it take to reduce the United States to starvation by sinking coal schooners and sugar ships off the Jersey coast? This is the simple problem set by the emergence of the Tirpitz touch on this side of the Atlantic.

Ach, ja! Not starvation perhaps, but military operations hampered, American nerves wrenched, morale shaken, and the effectiveness of those blödsinnige Yankee soldiers in France hamstrung, that is worth something, *nicht wahr?* It is true that during the first two weeks' prowling along the Yankee coast no troopships have been hit; also, because of that *Donnerwetter* convoy system, no food ships going to Europe have been struck down in western waters—in fact, no stroke has been delivered against the line of communications across the Atlantic. *Aber doch*, every little bit helps, even a couple of windjammers from Virginia to Boston; better still, a sugar ship from Porto Rico or a coffee ship from Brazil, or a neutral Norwegian. The effect will be felt on the other side all right.

How? It is very simple, *meine Herren*. If we sink a couple of scores of thousands of sugar bags from Porto Rico, the price of sugar in Ashtabula, Ohio, may go up to 11½ cents, *nicht wahr?* Very well. Will not, then, the mothers and sisters and wives of Ashtabula, Ohio, write to their dear ones in France about the growing difficulty of getting sugar for the Red Cross Fair lemonade? Will not that set the Yankee soldiers from Ashtabula to worrying about the pressure of war upon their dear ones at home? Is not that certain to reduce the fighting effectiveness of the Yankee soldier, as figured out by our eminent physiopsychologist PICKELHAUBE, by at least 1-200 of 1 per cent? In view of such irrefutable military necessity, one should not hesitate to set a few hundred men and women adrift on the Atlantic in small boats.

To this arithmetic add the pleasure of announcing, through the Wolff Bureau, that "our U-boat cruisers have sunk a dozen merchant ships off the Port of New York." It will make good reading in Berlin these long supperless nights.

## Dealing with Government

SOME weeks ago the daily papers were noting that the Allied Silk Trading Corporation had voluntarily reduced its rate of commission, on a contract involving the manufacture of 7,000,000 yards of cartridge cloth, from 7½ per cent to 3 per cent, or less. That was an act of good citizenship, and the company deserves the praise it got; but no one appears to have noticed the real lesson of the incident. The silk men said in their statement that the original rate of commission was fixed to guard the company against loss. They were uncertain as to when the Government would pay, what new requirements might be imposed, and what other changes might arise. When they found that UNCLE SAM paid promptly, that his demands were reasonable, and that the Ordnance Department was ready and helpful in all matters of detail, why, then, this insurance was not needed, and they reduced the rate as shown. For good service in turning out war goods we must have not only able and honest contractors, but also prompt and businesslike administrators—and sometimes we do have them.

## The Patriotism That Wins Wars

IN our morning paper we notice a drawing of an energetic little man striding along wearing this placard:

I'VE HAD THIS SUIT SINCE BEFORE THE WAR  
AND I'M PROUD OF IT

Below the picture are the words:

Good for you, old Scout!  
That's the one and only way to conserve both wool and labor.

What is remarkable about this matter-of-fact statement is that it occurs in the advertisement of a New York store whose business is that of selling men's clothes. It's a real progress that this advertisement marks from the old "Business as usual" slogan. Some time ago we reached the stage at which hat makers saw the importance of their customers conserving raw materials by not buying new fishing tackle, but we have needed the patriotism which blurts out boldly: "Get along without most new things, even though they're the commodities I make and sell." That is the winning spirit, and the spirit that deserves to win.

## Records and Results

IN the long run it is planning that counts. For example, that record-breaking 5,500-ton freight ship *Tuckahoe*, which was launched in twenty-seven days, finished in thirty-seven, and sailed with a cargo in forty days from the time her keel was laid, was not a record-breaking job so far as the riveting, etc., is concerned. The materials were all ready at the precise time and spot needed; they moved into her hull like clockwork. Brains, planning, teamwork (not frantic "drives") built the *Tuckahoe*, and those same qualities in action will win the war.

## The Reserves

THE Battle for Paris is a good name for it, no doubt—though perhaps history will call it the second Battle of the Marne. But whatever you call it, you will find a clue to its reality in an article of the "Frankfurter Zeitung," written during the Battle of Picardy in the country of VON MOLTKE, one of whose main principles it illustrates. Said the "Frankfurter":

It can be regarded as the intention of the German Supreme Command first to loosen the whole front of stationary warfare and to convert the stable wall of cement into an improvised front consisting of masses of reserves, and shaken at several points of vital importance—human bodies instead of armored works. As soon as this aim has been achieved, and as soon as the whole position of the English and French armies has become, so to say, ripe for storming, and the development of the enemy reserves has been forced, the time has come for the last and decisive strategic blow.

It is, no doubt, a matter of tremendous importance whether Amiens or the English position on the heights in Flanders falls; it is so important because the great English bridgehead on our side of the Channel cannot afford to lose too much ground without the strategy of the western powers being gravely impaired and the bridgehead itself being menaced. But the point of view which is decisive for the strategy of this campaign lies beyond these outward and visible battle successes; the ultimate question is the question of the measure in which the preparatory strategic operations eat up the forces on both sides. When all the introductory blows have succeeded in loosening the rigid mass, and our army undertakes the last and decisive stroke, will the German command still have preserved so much fighting strength that the favorable strategic situation can be thoroughly exploited?

Evidently our neighbor FRANK SIMONDS has hopes that the answer to this German question is an answer Germany will not like—for he writes in his newspaper that if the enemy too rapidly consumes his limited reserve, "in advance of the moment when he is to make his decisive thrust, he will lack the numbers to enforce his local victory"—just as NAPOLEON lacked them "in his brilliant 1814 campaign, where he won many local successes but found himself without the reserves to enforce any one of them."

"Reserves" has an impersonal sound—but some of FOCH's hail from this side of the Atlantic—so there's nothing impersonal or coldly scientific in these advance speculations on the battle issue.

## Afterward

NEARLY all the discussion as to conditions and policies after the war deals too much with things and too little with men, who are the masters of things. Unless the struggle develops means of destruction incomparably more devastating than any so far known, the fate of this world in future will be framed where it has always been framed: in human hearts and souls. What of our own country? Millions of her sons will some day be returning from the stricken fields, the perilous seas, and the roaring forges of this war. They will be drilled and hardened to the habit of thinking less of daily comfort than of results, less of rights than of duties. They will be strictly of the belief that a man should behave as such—i. e., keep cheerfully and endlessly at the main job, get the best possible sort of life out of the most cheerless circumstances. Turning out at any hour to face any task or any change will be a matter of course. That deadening respect for one's personal wishes and ways will not be nearly so common. Those who have established our country's freedom will be accustomed to look for and follow that true leadership which gives orders and gets things done right; they will have found out what nine-tenths of us go to the grave without ever suspecting: they will have discovered the living power that is in men's souls. The soldiers of the Civil War did that, and ruled our nation for forty years after. The men of this struggle are more fortunate in that they will return undivided, devoted to one cause. What will be the outcome? No one knows. But it is certain that our country's future will be plastic to the will and the courage of those who have won this war.

# THE FACE IN THE LOOPHOLE

BY VINGIE E. ROE

ILLUSTRATED BY FRANK STICK

IT was July in the Trinity. The high vault of the sky was deep and blue, flecked with slow white clouds. The mountains were still as death, placid, waiting, as they had waited for uncounted years. Now and then a cone fell lightly down, striking this limb and that, which resounded musically in the stillness, a woodpecker drummed a quick tattoo, or a gray squirrel suddenly chattered high in the tip of a pine tree.

Where a dim trail followed the back of a lifting ridge Kinsey, forest ranger, slouched idly in his saddle and whistled a little tune as his horse went up at a good running walk. Behind a pack horse, its wooden saddle ingeniously rigged with double racks to hold four square kerosene cans, followed briskly. The ranger was young, about four and twenty, quick of eye and alert. He was well set up and rather handsome in a lithe, brown fashion.

The broad felt hat and regulation butternut shirt and trousers which, supplemented by canvas puttees of the same shade, comprised the Government F. S. uniform, sat very well upon him. In fact, he was "some nifty-looking lad." To his credit be it said, he did not know it.

Kinsey was a Forest Service fan. He took his calling most seriously and fully intended some day to sit in a supervisor's chair. He lived at Dirk's cabin, set at the edge of a meadow at the foot of Granite Peak and ten miles from a neighbor. In that land of vast distances and solitudes the ranger cabin was a landmark. It had its telephone and was known to all the district. It had rude furniture, handmade, and held Kinsey's duffel—some books, a few keepsakes and pictures, and a full stock of F. S. fire tools: spades, axes, shovels, ropes, and wire. There was a complete store of fire rations too, locked away in the south room. If the lookout on the peak should report a fire, Kinsey could summon fifty men from the scattered ranches, outfit them, and put them in the field to fight without calling on headquarters at Weaverville.

He was alone, save for the two horses, Mister and Pat, but did not mind it. He loved the quiet of the waiting hills, covered with their marching ranks of conifers that weaved on their rooted feet and sang continually; the bright waters, cold and sweet, that ran from every slant; the hidden life that rustled in every thicket. Not a week went by that he did not see some big buck sunning his velvet horns high on a rock where the sun came hottest, or come upon a doe, big-eyed and curious, that merely stepped into some cover to watch him pass. There was bear sign all up and down Stuart's Fork and two panthers were on the upper reach of the Trinity. It was a sweet and populous world and the ranger loved it.

This day he was making up and up in the solitudes, rising rapidly as the ridge he was following went into the skirts of Granite Peak. The great mountain itself stood over the landscape, awesome, majestic, 8,200 feet above sea level. For three-fourths of its rugged height it wore a royal mantle of darkest green, that deep, velvety color that only pine and fir, hemlock and spruce, can impart. The rest of the way it rose like a pointed shaft of dull, red-gray granite. On its extreme tip there was set something that sparkled in the sun like a tiny gem to the beholder at the giant's foot twelve miles away. This was, indeed, a gem to its owner, the United States Forest Service—a small, square house, fourteen by fourteen, its entire upper walls of glass. Here, through the fire season, one lone man was forever on watch, his maps tacked to his table, his instruments upon them, his telephone at hand. And here was Kinsey bound, bringing this tireless watcher his week's supply of water, for it was an early season, and the snow, that usually sufficed for the first month, had been gone for several weeks.

AFTER two hours' steady climbing the ranger came to a small slanting meadow, deep in lush grass, starred with strange blue flowers, through which trickled the tiny runnel from a spring. The trail went by this spring, deepened and hollowed to accommodate a dipping pail, and here Kinsey filled the kerosene cans, using a wide-mouthed funnel and screwing down the small caps firmly. This precious liquid, cold as the eternal snows from which it had been stored in the mountain's breast, was worth its weight in gold almost. Man and horses drank their

fill and once more started on, the latter with huge breaths of satisfaction, shaking themselves, blowing through sensitive nostrils, taking up the trail with new vigor.

Shortly after this they left the tree belt and began to climb among great bowlders, over little, smooth-grassed slants. Once or twice the ranger got off to inspect the telephone wire, strung now along the tops of bushes like a child's string, and farther back he had left the horses and gone down into a deep gulch to where the "ground"—a long iron staff—was driven deep in the damp earth below another spring.

Presently the whole mountain narrowed and steepened, the bushes gave way to barrenness and gaunt, gray rocks, old as the world itself. The trail became a "switchback," going a little way to the right along the mountain's face, turning abruptly and going a little way to the left, but each time rising a bit. There were no trees here to speak of, only now and then a poor, twisted, low-topped thing, tragic monument to struggle.

It was a trifle after noon when the little cavalcade made the last switch and Kinsey grinned at Jimmy Bond, the lookout, who had come out to the water barrel. "Gimme my letters, quick, man," said Bond, "an' don't tell me you haven't brought me something to read!"

"Take Mister an' unpack him. In the right-hand bag."

Very carefully the lookout led the foremost horse a few steps up beyond the barrel. Here the trail ended at the very door of the little glass house, and here Mister must stand until his master was ready to go down again, for it was all the room there was on the mountain top. The little glass house had all the rest! It was perched, literally, on the top of Granite Peak, and it so exactly covered it that there was scant room for a man to walk round it with his face to the wall and his arms outspread against it. Pat must stand by the barrel below.

Four strong wire cables went from the roof, crossing upon it and leaving from the corners, down along the steep slant to be anchored securely in the granite.

Kinsey emptied the water and put the cover on the barrel. He got out the nose bags and laid them aside to wait a few minutes until the horses had cooled. Mister whinnied impatiently and nudged him as he passed. Bond—his arms full of week-old papers which Kinsey had ridden twelve miles and back to get, and three letters—led the way in gay spirits. It didn't matter that one letter was from his sister in Omaha, Neb., and the other two circulars—they would be laid away and read minutely, word by word, in the long days of the coming week.

"What you got for dinner?" asked the ranger. "Hope it's not mulligan like last time. I was sick for two days from that."

"No, sir," said Bond, a smiling, ingenious fellow. "there's corn—canned; Rogue River salmon—canned; green tomato relish—also canned—and the biscuits are ready to put in the oven."

"Also canned!"

"Not on your life," protested the other tartly; "I'll back my bread with anybody's, male or female."

He lighted the coal-oil stove in the corner, and Kinsey threw himself down on the neat bed in the opposite one.

"By George!" he said admiringly, "never grows old, does it? Wonderful country."

He squinted his brown eyes and looked around. Far as he could see the world went down and away, a heaving sea of green waves, vast, unspeakable, soft with blue

haze and eternally silent. All to the east, the south, the west it stretched over uncounted miles in matchless beauty. To the north this beauty changed abruptly. There Red Mountain stood in a living death, its great slants devoid of verdure, its gaunt ribs showing from top to foot. The light fell upon it in a sea of blue and gold, softening its grim loneliness.

Down and down and down went the great steep slants. A tin can thrown from the window of the station would leap and fall and leap again for three thousand feet. Granite Peak dominated this lone world, but its sister peaks seemed to dispute its claim. Only the instruments settled the question. Man's eye could not. From the vantage of the glass house the lookout could spot a fire anywhere in a radius of all the district and half the next one on the north—thin, plummy spirals of blue smoke rising quietly in the light. So clear was this vantage that campers, fishing on the little creeks, were often surprised to have a khaki-clad fire warden come riding up to investigate their tiny cooking fire, which had been spotted by the lookout twenty miles away and reported by telephone to the nearest guard. Thus does the service watch its own.

AS Kinsey idly scanned the vast and splendid sight of the dropping slopes he chatted volubly of all the county happenings, for news goes fast in the solitudes where the lone wires run and every ring brings a dozen ranchers and miners on the line to "rubber."

But while the biscuit baked above the coal-oil flame Jimmy came and sat on the narrow bed and fingered the good binoculars that lay on the edge of the desk on the high dais in the center of the room.

"There's something been bothering me," he said, "for two weeks now."

"Yes?" asked the ranger, alert. "Why haven't you mentioned it?"

"Because I wasn't sure."

"Sure now?"

"Passably."

"Well?"

"There's a human on Red Mountain."

"Possibly."

"A human who's afraid to be seen—desperately afraid."

"How do you know?"

"You watch the Loophole. Every other day it is darkened by a face, looking through. It's due to-day."

"Huh?" said Kinsey, wonderingly.

He took the glasses and, training them upon the distant tip of the mountain, looked long at the strange formation which was called the Loophole, a narrow shaft of the rock that formed the crown, the last perfect point that pierced the skies. In the extreme top of this the elements, beating about it for a thousand years, had worn a small round hole through which the blue beyond shone brightly.

It was clear and steady, a magic circle of the solitudes.

"I think you're having visions, Jimmy," he smiled; "a lookout gets the willies sometimes, like a sheep herder."

But the other shook his head. "I've watched it for two weeks now," he said stubbornly, "and every other day for a while at noon that hole is darkened, I tell you. But come on; dinner's ready."

ALL during the meal he talked and argued, sticking by his first statement, and these two men on the top of the world laughed and bantered in huge pleasure. But every few minutes Jimmy reached for the glasses, and, with the keen vision of a hawk, searched not only the steady point of the Loophole on Red Mountain, but all the world below.

At last, just as Kinsey, well content, pushed back from the

# The World's Tribute to a Watch

Great deeds bring tributes in proportion to their worthiness. On the battlefields of Europe those tributes are evidenced in the form of medals with which brave men are decorated.

As the Victoria Cross, for example, is Britain's supreme honor to give for valor, so is the highest tribute to the accuracy of a watch shown in its official choice by a government. Such tributes have the leading nations of five continents bestowed on Waltham — which are very good reasons

## Why Your Watch Selection should be a Waltham

Carrying the war story on through to another chapter, what is Waltham doing to help win it?

For timing important military work on land, sea and in the air, America, England and Canada — in need of chronometers, deck clocks, wristwatches, air-plane clocks and comparing watches — placed their orders at Waltham. And Waltham, by the way, is the only watch factory in the world that can make chronometers.

**COLONIAL A**  
Extremely thin at no sacrifice of accuracy  
Maximum movement 21 jewels  
Riverside movement 19 jewels

And beauty? Yes—in no other watch will you find that richness which makes so many people say:

"How can it be so thin and yet so accurate?" That's Waltham's secret — learned by more than a half-century of watch-making experience. Horological experts choose the Waltham because they know it is more reliable than any other watch made in America or Europe — and critics of watch-artistry, because they consider it more beautiful.

AFTER two hours' steady climbing the ranger came to a small slanting meadow, deep in lush grass, starred with strange blue flowers, through which trickled the tiny rannel from a spring. The trail went by this spring, deepened and hollowed to accommodate a dipping pail, and here Kinsey filled the kerosene cans, using a wide-mouthed funnel and screwing down the small caps firmly. This precious liquid, cold as the eternal snows from which it had been stored in the mountain's breast, was worth its weight in gold almost. Man and horses drank their

fill and once more started on, the latter with huge breaths of satisfaction, shaking themselves, blowing through sensitive nostrils, taking up the trail with new vigor.

Shortly after this they left the tree belt and began to climb among great boulders, over little, smooth-grassed slants. Once or twice the ranger got off to inspect the telephone wire, strung now along the tops of bushes like a child's string, and farther back he had left the horses and gone down into a deep gulch to where the "ground"—a long iron staff—was driven deep in the damp earth below another spring.

Presently the whole mountain narrowed and steepened, the bushes gave way to barrenness and gaunt, gray rocks, old as the world itself. The trail became a "switchback," going a little way to the right along the mountain's face, turning abruptly and going a little way to the left, but each time rising a bit. There were no trees here to speak of, only now and then a poor, twisted, low-topped thing, tragic monument to struggle.

It was a trifle after noon when the little cavalcade made the last switch and Kinsey grinned at Jimmy Bond, the lookout, who had come out to the water barrel. "Gimme my letters, quick, man," said Bond, "an' don't tell me you haven't brought me something to read!"

"Take Mister an' unpack him. In the right-hand bag."

Very carefully the lookout led the foremost horse a few steps up beyond the barrel. Here the trail ended at the very door of the little glass house, and here Mister must stand until his master was ready to go down again, for it was all the room there was on the mountain top. The little glass house had all the rest! It was perched, literally, on the top of Granite Peak, and it so exactly covered it that there was scant room for a man to walk round it with his face to the wall and his arms outspread against it. Pat must stand by the barrel below.

Four strong wire cables went from the roof, crossing upon it and leaving from the corners, down along the steep slant to be anchored securely in the granite.

Kinsey emptied the water and put the cover on the barrel. He got out the nose bags and laid them aside to wait a few minutes until the horses had cooled. Mister whinnied impatiently and nudged him as he passed. Bond—his arms full of week-old papers which Kinsey had ridden twelve miles and back to get, and three letters—led the way in gay spirits. It didn't matter that one letter was from his sister in Omaha, Neb., and the other two circulars—they would be laid away and read minutely, word by word, in the long days of the coming week.

"What you got for dinner?" asked the ranger. "Hope it's not mulligan like last time. I was sick for two days from that."

"No, sir," said Bond, a smiling, ingenious fellow. "There's corn—canned; Rogue River salmon—canned; green tomato relish—also canned—and the biscuits are ready to put in the oven."

"Also canned!"

"Not on your life," protested the other tartly; "I'll back my bread with anybody's, male or female."

He lighted the coal-oil stove in the corner, and Kinsey threw himself down on the neat bed in the opposite one.

"By George!" he said admiringly, "never grows old, does it? Wonderful country."

He squinted his brown eyes and looked around. Far as he could see the world went down and away, a heaving sea of green waves, vast, unspeakable, soft with blue

haze and eternally silent. All to the east, the south, the west it stretched over uncounted miles in matchless beauty. To the north this beauty changed abruptly. There Red Mountain stood in a living death, its great slants devoid of verdure, its gaunt ribs showing from top to foot. The light fell upon it in a sea of blue and gold, softening its grim loneliness.

Down and down went the great steep slants. A tin can thrown from the window of the station would leap and fall and leap again for three thousand feet. Granite Peak dominated this lone world, but its sister peaks seemed to dispute its claim. Only the instruments settled the question. Man's eye could not. From the vantage of the glass house the lookout could spot a fire anywhere in a radius of all the district and half the next one on the north—thin, plummy spirals of blue smoke rising quietly in the light. So clear was this vantage that campers, fishing on the little creeks, were often surprised to have a khaki-clad fire warden come riding up to investigate their tiny cooking fire, which had been spotted by the lookout twenty miles away and reported by telephone to the nearest guard. Thus does the service watch its own.

AS Kinsey idly scanned the vast and splendid sight of the dropping slopes he chatted volubly of all the county happenings, for news came fast in the solitudes where the lone wires run and every ring brings a dozen ranchers and miners on the line to "rubber."

But while the biscuit baked above the coal-oil flame Jimmy came and sat on the narrow bed and fingered the good binoculars that lay on the edge of the desk on the high dais in the center of the room.

"There's something been bothering me," he said, "for two weeks now."

"Yes?" asked the ranger, alert. "Why haven't you mentioned it?"

"Because I wasn't sure."

"Sure now?"

"Passably."

"Well?"

"There's a human on Red Mountain."

"Possibly."

"A human who's afraid to be seen—desperately afraid."

"How do you know?"

"You watch the Loophole. Every other day it is darkened by a face, looking through. It's due to-day."

"Huh!" said Kinsey, wonderingly.

He took the glasses and, training them upon the distant tip of the mountain, looked long at the strange formation which was called the Loophole, a narrow shaft of the rock that formed the crown, the last perfect point that pierced the skies. In the extreme top of this the elements, beating about it for a thousand years, had worn a small round hole through which the blue beyond shone brightly.

It was clear and steady, a magic circle of the solitudes.

"I think you're having visions, Jimmy," he smiled; "a lookout gets the willies sometimes, like a sheep herder."

But the other shook his head. "I've watched it for two weeks now."

he said stubbornly, "and every other day for a while at noon that hole is darkened, I tell you. But come on; dinner's ready."

ALL during the meal he talked and argued, sticking by his first statement, and these two men on the top of the world laughed and bantered in huge pleasure. But every few minutes Jimmy reached for the glasses, and, with the keen vision of a hawk, searched not only the steady point of the Loophole on Red Mountain, but all the world below.

At last, just as Kinsey, well content, pushed back from the

# The World's Tribute to a Watch

Great deeds bring tributes in proportion to their worthiness. On the battlefields of Europe those tributes are evidenced in the form of medals with which brave men are decorated.

As the Victoria Cross, for example, is Britain's supreme honor to give for valor, so is the highest tribute to the accuracy of a watch shown in its official choice by a government. Such tributes have the leading nations of five continents bestowed on Waltham — which are very good reasons

## Why Your Watch Selection should be a Waltham

Carrying the war story on through to another chapter, what is Waltham doing to help win it?

For timing important military work on land, sea and in the air, America, England and Canada — in need of chronometers, deck clocks, wristwatches, air-plane clocks and comparing watches — placed their orders at Waltham. And Waltham, by the way, is the only watch factory in the world that can make chronometers.

**COLONIAL A**  
Extremely thin at no sacrifice of accuracy  
Maximum movement 21 jewels  
Riverside movement 19 jewels

And beauty? Yes—in no other watch will you find that richness which makes so many people say:

"How can it be so thin and yet so accurate?" That's Waltham's secret — learned by more than a half-century of watch-making experience. Horological experts choose the Waltham because they know it is more reliable than any other watch made in America or Europe — and critics of watch-artistry, because they consider it more beautiful.

# WALTHAM

THE WORLD'S WATCH OVER TIME

narrow table below the dais, he handed him the glasses.

"Now, you old wet blanket," he said quietly, "look!"

And Kinsey looked—looked long and steadily. The blue of the sky no longer shone through the magic circle—it was a solid point that tipped the peak! For ten minutes he held the glass upon it without moving. Then once more the tiny circle flashed out, unobstructed.

"By George!" he said, "you're right, Jimmy. I apologize."

"And," said the lookout, "that's not all. Once in a while a shot comes faintly over on the wind."

At that the ranger's eyes hardened. "Shooting deer?" he said. "I'm about fed up on that. I don't mind passing by on the other slope when some old hill billy who's lived here all his life gets his necessary meat, but these damned hunters, these vacationists from the cities who come out on purpose—who break the law for the pure joy of the thing and grin when they pass a ranger—they get on my nerves. Your mysterious tenant of Red Mountain may be a cat of another color, but I'm going after him right pronto."

"May not be anything wrong," said Jimmy, "but I thought I'd tell you."

TWO days later Kinsey, with emergency rations in his saddle bags, was on Red Mountain. It was a dismal place. Why nature had cursed it was a mystery, but accursed it was in very truth. Nothing grew on its southern slope. The vast red slants were bare as a man's palm. It bore no life of any kind, while all about its sisters stood clothed in majesty.

Only the rocks, tumbled bowlders weighing uncounted tons, lent it a forbidding dignity. Here Kinsey crept like an atom from early day till noon. By that time he was high under the shoulder of the crest where the sleepless eye of the Loophole watched the land below. He had water in Pat's kerosene cans, for here there was none, though the northern side of the hill was sweet with springs.

At noon he made camp in a hidden cove between two rocky cliffs as high as a house. He fed the horses, ate his own "snack" from the bags and, with his glasses in his hand, lay down in the shelter of a bare brown stone to watch for the mysterious face.

And he was none too soon, for scarcely had he made himself comfortable when the light went out of the Loophole. He was close beneath it, but still too far away for the naked eye to tell him much. With an eager hand he turned the glasses swiftly until they caught the proper focus.

Then, in the next few moments, young Kinsey of the G. F. S. got the shock of his life. The face that filled the Loophole was strange, indeed, for that environment. It was white as a moon, thin-cheeked and delicate, with deep dark eyes beneath a fluff of red-gold hair, and it was a woman's face!

It set itself in the circle of the stone and searched the land below with the wide, still gaze of abject fear, as an animal that has reason to fear searches its back track from some hiding cover. All over the great expanse the eyes roved, keen, searching, alert. Then they rested on the little glass house afar on the tip of Granite Peak, where the lookout lived, the only other human, so far as they knew, in all the lonesome country. They burned upon it with a sort of passionate intensity, as if the sight of the flag floating so bravely from the staff on its top were a source of comfort.

After a while they turned and looked down in Kinsey's glass, and so powerful was the lens that he involuntarily ducked his head. It was as if she looked at him consciously, and yet he knew better.

They searched his rock, the other rocks about, passed on to the clifflike formation where he had left Mister and Pat, and traveled on down, clear to the distant bottom of Red Mountain where the sweeping carpets of the conifers came up to fringe its barrenness. For a long time they rested there, frowning a bit—Kinsey could see the pucker between the straight black brows that stood out so sharply beneath the shining hair—and then, as if the owner were satisfied that no danger lurked in the waiting solitudes below, the face slipped downward from the Loophole and the serene blue skies shone through. The man in the shelter of the rock lowered the binoculars and lay for a long time turning them idly in his fingers.

"Now what th' Sam Hill?" he said softly at last. "Who, what, an' why?"

All that afternoon he and Pat and Mister picked their trackless way around the western shoulder of Red Mountain, climbing, sliding, stumbling among the bowlders and the red volcanic dust that had lain in peace, save for the light foot of deer and panther, for countless ages.

When the blue and purple twilight fell in the Trinities, transfiguring the peaks, swathing the valleys in smoky-black shadows, they made camp on the northwestern shoulder just where the green of tree and spring began, for up the northern slope of the hill nature, relenting, had spread a strip of verdure. This strip of forest was some three miles wide at the base and tapered accordingly to the summit, running so close to the crown that a few stunted spruce

*She slid slowly around against the stone, and faced them*

trees stood a stone's throw beneath the shaft of the Loophole itself.

Here Kinsey ate, picketed the horses in the swatch of grass that followed the trickle of a spring, and, wrapping himself in his blankets, slept.

THE next morning he was up early and out on the slopes afoot. He searched the immediate vicinity of the peak for tracks, but there were none. The woman had evidently kept to the rocks with a careful cunning. Switching back and forth across the narrow but constantly widening belt of trees, he descended the mountain. He went clear to the bottom, but found nothing save silence and the eternal peace of the waiting hills. It was as if the face in the Loophole had been a figment of his fancy, and yet he knew better. Tired and disappointed, he climbed back to the crest and ate a late lunch, made himself comfortable with his blankets and a month-old paper, and prepared to pass the day. He was not lonely. He was never lonely. The pageant of the sunset was divine companionship.

The next day he took to the tree-clad slope and deliberately laid himself down in a low thicket of spruce to wait. This was the third day, the appointed time for the stranger to take that keen survey from the Loophole. The golden morning passed slowly with utter silence save for the still wood sounds, the hushed flap of a wing where a bird alighted in a green refuge, the sudden chatter of a squirrel, the awaying creak of some tall pine rubbing a branch against another.

The watcher waited quietly, and presently he had his reward. Where a shaft of sunlight came sharply through the shade of a group of spruces he caught a flash of gold. It was a bare red head, bobbing as its owner climbed.

Kinsey lay low, holding his breath.

"Climbs like an old-timer," he said to himself, "makes no noise an' sticks to the sheltered places."

But presently the climber came out in the open between tall pines, and he shook his head, for at every few steps she stopped, glanced behind, around, and even cast a swift look at the whispering crown of the trees.

"No mountaineer," he told himself, "an' she's sore afraid—afraid of th' stillness. Afraid of animals too."

He saw that she was young, scarce out of her girlhood, yet her eyes were old with experience. And she was pretty too, with an odd prettiness. She was clad simply in a man's garments, a faded shirt and overalls, the kind with a bib and suspenders crossing in the back. She wore boots too, trim leather boots that laced to the knee, and she carried a new rifle.

She crossed the small slanting glade, passing close to Kinsey's thicket, and he had a clear view of her face, so that he knew that the cheeks were thinner than they should be, that those straight dark brows and lashes beneath the gold-red hair lent a strange charm to her features.

Then she entered the undergrowth again and was lost to sight. She had made scarcely a sound, climbing with both grace and wonderful stealth.

"By George!" said the ranger wonderingly, "is she a little off? What's she doing alone on Red Mountain?" For somehow he felt that she was alone, unutterably, pitifully alone.

FOR another hour he lay and waited. Then, without warning, he saw her come suddenly down from the brush above and pass back the way she had come. As quietly as she went he rose and followed her, keeping a goodly distance in the rear. From place to place he watched her, knowing what manner of way she chose, that she kept to shelter for the most part, and was amazed at the speed with which she descended. Born in the hills as he had been, she taxed him to keep her in sight. He saw her stop on a rock once and scan all the world about, then plunge ahead in that same light, quick fashion. And there he lost her. Search as he might, he found no trace of her, saw her no more that day. At four o'clock he gave up, went back to the camp, saddled Mister and Pat, and put back to his cabin far around the skirts of Granite Peak. But his interest was caught fast. For the next few days he rode diligently, patrolling his southern boundaries, seeing to the telephone lines, calling up Jimmy Bond every morning and night, hunting and putting out a little fire the lookout reported at the mouth of a small creek—a mere column of smoke from a log left burning by campers—and getting things in good shape. For he meant to ride to Red Mountain again.

This time he camped lower down. It was the sixth day from his other visit, and he knew she would be going up to make that strange, scared search of her world.

He was right, for he saw her far off to the east, the sun on her bright head betraying her. This time Kinsey swung over that way and put himself where she might run upon him coming down. He sat on a rock and waited, but before she had had time enough to be coming back something brought him up standing—the keen, clear crack of a rifle not so very high above him.

With instant decision the ranger started in the direction of the sound. He swung upward with the carrying stride of the born climber, the ball of the foot taking the burden, the body swaying hardly at all. He covered the ground between his starting place and the source of that shot in record time, but when he reached the high point of jutting rock from which he knew it had come there was not a thing to be seen. He stood on the flat top of one of the bowlders and looked around. For a goodly space there was no shelter. A flat slope went down to the ring of trees below, while above there was a very bare and scattering growth of sky-high firs.

Anyone getting away from there must have traveled as fast as he had traveled, and with a set purpose of flight. Moreover, there was in the still air the pungent smell of rifle smoke.

"H'm!" he said aloud.

For a long time he stood and studied the lie of the land about. Then he stepped down from the boulder and started around and up toward the peak.

As he left the jumbled group of rocks something drew his glance around. Instantly he stopped.

There, huddled down beneath a low shelf of the formation like a fright—

(Continued on page 30)

"You'll always  
find a Savage

where the service  
is the hardest"

## We owe you an explanation

**S**AVAGE ARMS CORPORATION built itself up—made its reputation—wedged itself into its present commanding position in the small arms business in the face of long-established and powerful competition—by its policy of giving the trade and the consumer *what they wanted*.

We have asked for your criticisms on our guns and we have followed your suggestions just as far as manufacturing conditions would permit.

We have introduced radical changes in arms and ammunition, but they have been changes in the *right direction*.

And the results—the tremendous popularity of the .303 Savage, the Savage Automatic Pistol, the .22 Savage Hi-Power and the .250-3000 Savage, and our .22 Rim-fire Rifles—have shown that you appreciated it.

Now we have stopped making rifles and pistols and our whole equipment is engaged in making Lewis Machine Guns for our Government.

### *We have got to help win this war!*

If we don't, you won't need any hunting rifles or pistols. You couldn't afford to buy them. Every cent you had would be paying taxes—indemnities—tribute to the Kaiser. And the Kaiser wouldn't let you own fire-arms anyway. Slaves can't own guns.

So that winning the war—your war—our war—is absolutely vital to us all. If we don't win it, nothing matters.

We are making Lewis Machine Guns—nothing but Lewis Machine Guns—for you because you need them more than you need rifles, or pistols, or anything else.

Are we not still true to Savage tradition? Is this not doing things "your way"?

We'll keep on making Lewis Machine Guns—as many and as well as we possibly can—until your need for them is over and we can start making rifles and pistols again.

Till then, remember we are doing our bit—for you!

**SAVAGE ARMS CORPORATION**  
UTICA, N. Y.

# THE ARMY'S SKIRTS

BY MARY ALDEN HOPKINS

YOU wouldn't expect, would you, to find a Y. W. C. A. house nestled in the center of a military camp? Confess that you've always looked upon the society as a sort of maiden aunt dispensing sterilized recreation to sour-faced girls. Yet the explanation is simple enough. The Y. W. C. A. is concerned with girls. Girls are concerned with many matters—at present chiefly soldiers. Therefore, the Y. W. C. A. is deeply, enthusiastically interested in the cantonments.

Hostess houses have been placed by the Young Women's Christian Association in the military camps all over the country from Palo Alto, Cal., to Plattsburg, N. Y.; from Jacksonville, Fla., to the Great Lakes Naval Training Station. Seventy-five of these were either in full swing or in process of erection the last time I heard, but requests came in so fast to the National Board in New York, and buildings go up so quickly, thanks to Government sanction and Government workmen, that hostess houses are as hard to keep count of as pigs in clover.

As soon as a hostess house opens its doors it is filled by the soldiers and their womenfolk. Soldiers stand in rows around the walls to watch Esau kissing Kate. Actually sometimes it is necessary on crowded visiting days to shut out soldiers unless escorted by mothers, sisters, sweet-hearts, aunts, wives, or something in the petticoat line. Lonesome lads sneak in and slide stealthily behind the baby grand just for the sake of listening to a family wrangle. At Camp Gordon, Atlanta, an acre of roofage is none too much shelter. Sixty thousand people entered the house at Camp Lewis, American Lake, Wash., the first month it was opened.

Large reception rooms are the hospitality centers of each house. Quiet rest rooms offer forty winks for transients. All women need "renovating" after the journey to the cantonment, according to the hostess at Camp Taylor, Louisville, Ky., and all men are hungry. Cafeterias fragrant with apple pie and baked beans remind us that man does not live by wheat bread alone. "Pie hounds" the cook calls the soldiers who follow their noses at Camp Dodge, Iowa. A hostess house in a cantonment caters to the varied domestic needs of from twenty thousand to fifty thousand soldiers, and as many of their families as can raise the train fare.

## Eureka! She Had Found Him!

THE Westminster Catechism is easy compared to the questions asked daily in every hostess house: "What places of historic interest in the neighborhood should my wife visit?"

"Who started hostess houses?"

"Can you help me get my furlough?"

"When's the war going to end?"

"Will you please help me write a letter?"

"Do you believe in a future life?"

An apple blossom of a girl danced breezily up to the information secretary in one house to say, in matter-of-fact tones:

"I just stopped in to see if you could lend me a pair of breeches. Yes, I said breeches. My brother wants me to ride with him. I can wear this coat, but I can't find any breeches in the shops. Yes, I might borrow a pair from him, but, you see, he's six feet four and I'm only five feet five. I thought perhaps you could tell me who might have a pair to lend. Mrs. Blank of Blank Street might let me have a pair? Thank you so much. I just knew the Y. W. C. A. could help me."

The first duty of every hostess is to be a finger-

post sign to wandering fathers and mothers rescued distraught from the company streets. The Lady Who Finds Your Friends was the name given to the hostess at Balboa Park, California.

One house opened with an ostrich-feathered mother in tulle insistently demanding her "Danny," side by side with a sunbonneted mother in gingham yearning for her "John Henry," and lined up behind them, a teary, smiling wife from the Middle West, a smiling, teary one from the North, a long-distance mother from the East, and a brace of parents from the South.

A cantonment is about as inspiring a hunting

The administration is in the hands of college-bred colored women, experienced in social work. The natural aptitude of the negro race for cordiality and kindness makes a visit to one of their hostess houses a delightful experience.

Every hostess house has its nursery. Old rose quilts are rolled on the beds and old rose curtains hang at the windows. Here come babies sometimes who have never before met their fathers. A soldier's baby at camp is everybody's baby. Lonesome fathers tiptoe into the "kids' room" for the dubious joy of admiring other people's children.

Matrimony, in 1918, according to the Social Register, increased 200 per cent in Seattle, 60 per cent in Washington, D. C., and 60 per cent in Pittsburgh, not to mention other cities. All of these brides, the hostesses will assure you, come regularly to the cantonments to admire their new acquisitions. A patient group of girl wives in the rain, at the entrance of the Plattsburg camp, looking like gay, dripping mushrooms with their red and blue and green umbrellas, almost took root in the muddy road. They waited hours, every day, no matter how bad the weather, in hopes of a few minutes' chance chat with their husbands. For their comfort and protection the first hostess house was built. In the seventy-four succeeding houses, girl wives have been equally prominent. Their needs are extensive and sometimes surprising.

"Do you have a regular Sunday school?" inquired a demure young bride of the hostess at Camp Pike, Arkansas.

The hostess admitted that no regular Sunday school was there. The disappointed girl pulled out a little book and exhibited a record of four years' perfect attendance at Sunday school.

"Last Sunday," she said, "I walked three miles in snow up to my knees to get to the Sugar Creek Sunday school. See, here's the certificate."

The hostess rose to the situation. She recommended a Sunday school in Little Rock. The bride thanked her and disappeared. She was back again in the afternoon with a signed certificate and a good conscience.

"Now, I can enjoy the rest of the day with my husband," she assured the hostess.

## The Soldiers Want the House

THE wife who met in Camp Funston, Kansas, the husband whom she had not seen since the Mexican mobilization might be classed as a war bride. After an hour's happy chat with him in the hostess house, she bade the hostess good-by, saying appreciatively: "I can't tell you how I've enjoyed seeing my husband again. We had so many things to talk over."

The hostess house remembers the wives at home held back by family duties, distance, or poverty. Any soldier who wants some service performed for his wife just naturally seeks the hostess. A corporal with the tanned face of a college boy on a yachting trip and the eyes of a man who looks at an unexpected world came into a hostess house on a day when troops were leaving for France. The room was crowded. Wives who were being left behind simulated a jiggety blitheness which, if genuine, would have stamped them as heartless. Husbands about to go exhibited that facetious gayety behind which a good American hides his feelings.

The corporal showed the hostess a small purple box. Might he wrap it for mailing?

With shy pride he opened the box. Covered with cotton, wrapped in a bit of newspaper, was a diamond ring. The diamond was very, very small, but it was a real one.

"My wife has never had an engagement ring," he explained. "I never had the money to buy it. Now I'm sending it to her as a parting gift."

The hostess house, if you please, is nothing less than military recognition of a woman's right to love a man

ground to the casual visitor as a checkerboard would be with each square occupied by wooden barracks. Camp Lewis, Washington, is seven miles long. Your friend at Camp Lee, Virginia, is one of 40,000 men. One hundred thousand men are encamped around San Antonio, Tex. Don't try to find a soldier yourself in Camp Upton, New York, unless you have brought compass, sextant, and logarithmic tables. Go straight to the hostess house and let the kind lady help you. Visitors are so fussy about getting the particular bundle of khaki they ask for! A very pretty young woman, blushing

like a robin's breast, firm as the Ancient Mariner, wanted a certain doctor. Since she desired him for social purposes and not for professional services, she may be excused for believing that no other doctor would do. The patient secretary who lives at the telephone transmitter in that hostess house called up the base hospital and inquired for that young doctor. She was referred to the ambulance station. She called up the ambulance station and was referred back to the base hospital. She called up the base hospital again and was referred to the ambulance headquarters. She called up the ambulance headquarters and was referred to a definite ward in the base hospital. Eureka! She had found him!

The doctor was over at the hostess house before the blushes had faded from the lady's cheeks.

A khaki kid at Camp Cody, New Mexico, was summoned by telephone to the hostess house to meet his mother, who had come to surprise him. He arrived on the leap. It was a surprise all round!

"You're not my mother!" he expostulated.

"That's not my son!" cried the indignant woman. Fancy being rooked with a changeling when your baby is twenty-five years old. The real son turned out, by delightful coincidence, to be the changeling's friend. Everybody was finally happy.

## Nothing Missing

WHEREVER colored troops are stationed, hostess houses are built for them. A beautiful house at Upton is in operation. At Camp Funston a barracks is being used temporarily. Eight other houses have been promised to impatient commandants.

Why is a hostess house, after all? That it contributes to the mere entertainment of soldiers is trifling compared to what other agencies afford. What comfort it gives to women is woman's affair. Yet its presence in the cantonment is tremendously significant. The hostess house, if you please, is nothing less than military recognition of a woman's right to love a man. Wives, mothers, cousins, "only girls," aunts, fiancées, grandmothers, "lady friends," and sisters have right of entry into military camps. Even a girl who only hopes to love a soldier boy some day is passed into the hostess house.

This extraordinary condition of affairs comes about because the men wish it. Women have not stormed an entrance. They're invited. The Secretary of War, who is not a woman, sanctions the building of houses. The Foodick Commission, which is not made up of women, supervises the undertaking. A commandant who six months ago said he wouldn't have "a skirt on the station" has asked prettily for a third house. The soldiers want the houses.

The busyness of the bee, the strength of the lion, the gentleness of the dove, and the foxiness of the diplomat are prerequisites for a hostess. A guileless country lad confided to one that he was going to invite out a too well

known girl in the neighboring town. "She is attractive, isn't she?" agreed the canny hostess. "Now, if she has a fit while you're out together, you must get her out of the crowd and—what? You didn't know. Oh, yes, poor girl! The last time she was here it took us an hour to bring her round. You think you won't invite her. Well, perhaps you're wise under the circumstances."

Never too busy to take on an extra job—that is the attitude of the secretaries to their work. A boy in the hospital at Camp Taylor, Louisville, was out of danger but still too sick to write. His parents, about to return home to Nebraska, were guaranteed letters by the hostess house. When the Y. W. C. A. worker went to the hospital two days later to fulfill the promise she found the father beside the bed.

"I got halfway home," he explained, "and decided to come back. We were afraid you'd be too busy to write his letters."

Reassured, he went home the next day. "Good-by," he said. "God bless you women of the hostess house."

Many useful purposes are served by these outposts of family life.

"Mother feels so much easier about me," an ex-college football player assured a hostess, "since she knows I can come in here any time and get a piece of cake."

## In Connection with the Old Murray Place

Continued from page 12

her home, with the approval and consent of her father and mother, and often to the comfort of the family chauffeur. He needed no invitation to dinner, and was often warned not to turn up in a business suit; there was a bed for him in Sam's room.

There had always been a sweet admission in Nancy's eyes, a gentle confession that she was happy and content when she was with him. Her smile had told him what was in her heart, that she was waiting for the day when she would really be a woman, and his. Could Nancy lie like that?

THE next morning Miss Nancy Gray went marketing, and at the butcher's she met Mrs. Soule. Mrs. Soule was a good-natured and pleasant old lady. She was no gossip, and Nancy knew it. "Nancy, my dear," she said, "you just walk along with me and tell me all about it."

"Of course I will," said Nancy, "if you'll tell me what it is."

"Goodness gracious, aren't our young people becoming bashful! You and Richard Murray, of course. Naturally, we've known that it was only a matter of time, and I'm not a bit surprised. Some girls I know I wouldn't advise to marry at twenty, but you are different. You are a very sensible, substantial young woman, and you have a very excellent young man, very indeed."

"But, Mrs. Soule, I am not going to marry Mr. Murray."

"Tut, tut, of course you are. Don't try to fool me. I'm too wise, and even if it isn't announced, you confide in me. I'm an old woman, and almost the only pleasure I have is knowing that other people are happy."

"But I'm very happy as I am."

"True, my dear, undoubtedly. If you won't tell me, you won't, but you must promise to tell me before you tell every Tom, Dick, and Harry; you will, won't you? You'll live in the old Murray house, of course; it could be made very comfortable. I suppose you've decided already what you are going to do to it."

"We are not going to do anything." But just then they met Mrs. Wilson, and Nancy fled.

AFTER lunch Helen Bond came to see a Nancy. She hugged Nancy and kissed her with great enthusiasm.

"Of course, Nancy, I'm not surprised; we've all known that it would happen, but now that it is done we're all terribly pleased. He's an awfully nice man."

Nancy Gray was furious inside. Outside she smiled. "Helen, don't be foolish; I'm not engaged to anybody, and I'm not going to be. I don't understand why people—"

"There, there, Nancy. You're both very lucky children. Arthur says Richard is the salt of the earth, and I think so too. I suppose you'll live in the old Murray house; Richard is going to have it all done over inside, isn't he? It will be awfully nice to be so near your family."

"I suppose," said Nancy, "that there

is no use my saying a word. It is all being done without consulting me."

Helen laughed. "Nonsense; Richard will do exactly what you want. Women care lots more how a house looks than men do. It's only natural. Arthur never notices a thing in our house as long as meals are on time."

NANCY dressed for dinner earlier than usual. It was fortunate that she did, for Richard arrived before six o'clock. On Mondays Richard rang the bell. The maid smiled at him pleasantly. She had been with the Grays for a long time and was very fond of Nancy, and proud of Nancy's young man.

"Oh, Nancy!" The maid had indicated that Miss Nancy was upstairs.

"Come up, Dick." The words had the tone of inevitable necessity. She smiled at Richard. It was a very sad smile for Nancy.

"Hello, Dick," she said.

"Hello, Nancy." He tried to see a sign of surrender in her face, but it was not there.

"What are those, Dick?" He had brought with him two large pieces of cardboard, tied together with tape, with sheets of heavy paper between.

"Sketches of the house and grounds," he said. "They are simply suggestions. Will you help me with them, Nancy?"

Even Nancy in her present mood could not subdue the real Nancy. "Of course I'll help you, if I can, Dick. But what can I do?"

"Tell me if you like the pictures and suggestions. It is for you, you know."

"But it isn't for me. Won't you understand?"

"All right. We'll suppose that it is to be the way you'd like to have it if you were going to live in it." He untied the tapes and spread the sketches out on the table.

Nancy was looking hard at the sketches and seeing nothing.

"Landscapist, the landscape architect, did this. I told him that everything should be very simple, with just a little artificiality as possible. The dark evergreens are to go, and all but the best of the trees immediately around the house. The drive is to be changed; it was laid out for carriages, and it's too narrow, and the curves are too sharp, and there is no place to leave cars, so that other cars can get past them. That's the reason for the big gravel circle in front of the house. There is a little addition put on the house that cars can drive under when it is raining. Do you understand topographical drawings?"

"A little. I think I understand this—it is not very complicated. Is the barn there now?" She pointed to a building on the plan.

"No; the old stable is to come down, and the brick in it used in the addition to the house. They are very old bricks and are not made any more."

"Dick, have you told anyone that you and I are going to be married?"

"Are we?"

"Have you?"

# Williams'

The box top serves also as a holder for the stick

## PATENTED Holder Top Shaving Stick

IN the early A. M. when minutes count, the quick-acting lather from a Williams' Holder Top Stick is a time-saver. Quick to come, quick to soften the beard; it shortens the shave by many needed minutes. No strong-arm work needed to bring the softening, soothing, lasting lather. No rough riding for the razor. A snappy, smooth job and an after-feel of radiant comfort.

Besides there's the Holder Top feature, fitting snugly in its box when the Stick is not in use; fitting snugly in the fingers while applying the soap.

Every morning in camp, your soldier will be grateful to you for having sent him Williams'—the shaving soap he has always used—the one real luxury he need not give up.

**Dollar Khaki-Kit**

## Ever-Ready Safety Razor

HERE'S the 'Ever-Ready' in its new Khaki uniform—all snug and tight and very compact—ready to be slipped into corner of kit bag. The new kit is fine quality Khaki—rubberized and waterproof, made to stand up under the hard service "over there" the same as the famous 'Ever-Ready' frame and blades.

Every enlisted man has his especially designed outfit for active duty, be he a Private or General,—Yeoman or Admiral.

**Extra 'Ever-Ready' Blades—6 for 30c**

'Ever-Ready' Radio Blades are keen to shave you. The only popular priced razor and blades that guarantee the enlisted man supply in France and England. Radio Blades are the keenest, cleanest made. Each blade is triple hair tested and triply protected against rust and dust by patented package. Take them anywhere—dry or damp weather—they're protected, and so are you.

AMERICAN SAFETY RAZOR CO., Inc., Brooklyn, N. Y.

**Standard Dollar Outfit**

**'Ever-Ready' Radio Blades**

Ever-Ready' Blades are the keenest, cleanest, finest blades made. The tender your skin, the more you'll appreciate the "Radio" blades that come in each 'Ever-Ready' Set. Sold everywhere in packages like illustration.

AMERICAN SAFETY RAZOR CO., Inc., BROOKLYN, N. Y.

"Think, Nance, would I? Could I, possibly?"

She looked up at him and her lips curled into a half-hearted smile. Of course she knew he hadn't. Then the sound of bells in the hall below announced that dinner was ready.

"I had no idea it was so late," he exclaimed. "No one asked me to dinner."

"You'd better stay. If you go, they'd think that there had been a fight. We mustn't let them think that. I'll be down in a minute."

She did come down in a minute and so quietly on the carpeted stairs that no one heard her. She stopped on the landing. Two men were in the hall below. Her father had Dick's hand in one of his and his other hand was on Dick's shoulder. She heard her father say: "Bully, boy! Of course we knew it would happen before long. It's very satisfactory, my boy."

"But it isn't true. I asked Nance, but she said 'no.' I hope she'll change her mind."

"No, you don't. She's been waiting for you, waiting to grow up. Goodness gracious, Nance has never thought of another man in her life. She's teasing you. She has her mother's spirit."

They walked toward the dining room. Nancy saw her mother smile at Richard in a way that indicated feelings much deeper than a mere welcome to dinner.

DINNER went smoothly enough till halfway through dessert, except that Sam, being rather fond of rice pudding, was all the way through and was waiting for more, when he had an inspiration. Dinner had been rather quiet; Sam had not been sat on once. Things needed livening up a bit. He slipped one arm around Nancy's, putting it out of action. Sam's other arm was ready to repel the other.

"Say, Nan, have you named the happy day yet?"

No one paid any attention to Samuel. He waited till there was a lull in the conversation. "Say, Mr. Murray, is Nan a good kisser?"

"Samuel!"

"Ah, come on, tell us. Cut out this secret stuff. Everybody's on to you."

It was more than Nancy could stand. She fled, and Richard fled after her. He caught her at the head of the stairs and guided her into the sitting room.

"I simply will not stand it!" she cried.

"I'm awfully sorry, Nancy," he said, "but little brothers have been cruel since the world began."

"It is cruel, and it isn't fair. There is no one who believes me; there isn't anyone that I can go to. Everybody says I've thrown myself at you."

"Why not come to me, Nancy?"

"Ugh," she exclaimed and jumped up, leaving Richard staring at the fire. A moment later he turned and saw her looking at the papers that were still on the table, and he went and stood beside her.

"You see, Nancy, the old, heavy, black stairs come out and new ones, white, with mahogany treads and a mahogany rail, go in instead. All that terrible black walnut woodwork comes out and white goes back, with mahogany doors."

He took her from cellar to garret, up and down stairs, explaining everything in all the rooms. He told her of bright bedrooms, of comfortable living rooms, of new furniture and old furniture refinished, of electric lights and new fireplaces, of a thousand and one things. "Of course, there is a great deal to be decided still, and there will be a great deal to do. You'll help me, Nancy?"

"But if I help you it will mean—"

"Nothing, except that you are my friend. The house will be made ready to live in, down to knives and forks, napkins, flour, and sugar. There will be flowers in it from the garden or the greenhouse. The lamps will be lighted at night. It will be dusted every day; it will be kept ready for the lady who is to be head of the house. It is going to be her wedding present, from me, even if I am not to be there with her. Tell me, Nance, is the landscape part all right?"

"I think," she said, "that it will be very nice."

"And you'll watch it every day, as the work goes on, and tell me if everything is not the way you'd like to have it?"

There was a knock at the door. Sam, with some evidence of repentance, came in. "I'm sorry I said what I did. Father wants to know if you want to play bridge." Samuel beat a hasty retreat.

Nancy walked quickly into the hall and downstairs. Richard collected the sketches and followed her. As he was leaving that night, he said: "The plans are behind the couch, Nancy. You'll tell me, won't you, if they are not what they should be?"

THE next morning Nancy Gray finished breakfast, took the morning paper, and sat down in the window seat to read. Eventually she came to a column which almost every woman reads every day. It is friendly, personal chat of Alden society, by "Polly Swift."

"I hear," it ran, "that the Murray house at Hopedale is to get the surprise of its life. Its rococo, early Pullman interior is to be scattered to the four winds, and a perfect colonial inside, in keeping with the beautiful exterior, is to take its place. The best artists and decorators are being consulted, and already signs of progress may be noted if one happens to drive past the dozen acres about the old-time residence."

"Of course no one can be sure what all this means, but as no sale of the property has taken place, it is not hard to guess that the owner has some reason for it all. Alden is waiting to be taken into his confidence, though by no possible stretch of the imagination can anyone expect to be surprised. The happiness of the two young people has been so evident ever since the young woman came out two years ago, their mutual attachment has been so pleasantly admitted, that there can be but one answer to the rebuilding. The nest is being prepared, and it is such a sensible, satisfactory, and eminently fitting romance, isn't it? It can hardly be said that there is a secret, but it is surprising that a quiet word has not been said before this. At any rate, the formal announcement cannot be long deferred."

Nancy, quiet, gentle, sweet Nancy stamped her foot and crushed the horrid paper. "I won't have it, I won't! Are other people going to decide whom I am going to marry? They all seem to think that I have nothing to say about it; that I must simply accept the first man who comes along, because—because—he's nice and I know him, and—because I simply like him. And they think I can be bribed. I don't believe Dick would try to bribe me, though, but it looks as if he were. I hate him; I hate everybody."

Nancy's eyes were far away across the lawn, and over the tree tops of the Murray place. Anger and determination were in Nancy's eyes, where usually were laughter and sweetness. She stood, seeing nothing but red, with black streaks in it, for some minutes. She was thinking hard, trying to make up her mind what she should do, something that would make them understand. She simply would not have people take it for granted that she had to marry Richard Murray, as though he were the only man who would have her. She would teach them all a lesson. She was not at the beck and call of any man.

What was that? The top of a great cedar that she could just see through a notch in the maples trembled, and then trembled again, and then slowly it began to move to the right, and then faster and faster, in a great arc, till it disappeared and she heard the sound of crashing limbs in the distance.

Then Nancy stamped her foot again, clenched her hands and went away from the window. She saw her sweater on a chair in the hall and snatched it up and, fighting mad, went out into the sharp morning air.

Of course it was very wrong for Nancy to go straight to the hole in the fence and then up to the old house. It was the very worst thing she could have done, especially as not only was Mr. Langmaid, the landscape architect, there, but beside him was Tom Burke, the Murray farmer, from the other side of the road. Tom Burke was an old man and an old friend of Nancy's.

HE saw her and he waited not on the order of his going to her. "Ah, Miss Nancy," he said, "it's good news now, isn't it? The old place is to be made as it should be, and for you too? I've known it all along, like everybody else, but it's comforting to be able to talk about it, open and aboveboard."

Then Mr. Langmaid reached them. He was there on business and, never having spoken to Miss Gray before, he stuck to business.

"Good morning, Miss Gray," he said; "beautiful day, isn't it?"

Nancy said it was a wonderful day. "Would you like me to show you

what we propose doing—you may be interested." Mr. Langmaid, loving a lover, like the rest of the world, smiled as though he remembered how he had felt about things like this when he was young. "We have not done very much yet, but we have staked out the new drives and the terrace. The old terrace is to go, of course, you know."

Axes were ringing about her; men with a transit and tape were showing a workman where to drive stakes. The workman was a colored man whom Nancy knew. He did odd jobs for everyone and owned a horse and an old cart. As she passed him, he stood up and grinned. "Ah'm glad to hear you-all is gwine marry Mister Murray, and come up heah and live. You-all sho' make a mighty fine-lookin' couple, Miss Nancy."

OF course Nancy could not discuss the matter with him or with Tom Burke. She simply ignored them both and sauntered round for a moment with Mr. Langmaid. Why had she gone? Why had she let her curiosity get the better of her? She left him as soon as she could and went toward her house. On the way she saw four girls coming toward her. Her first thought was to evade them, but she knew that it would be impossible. They ran toward her, laughing and shouting; they crowded around her, kissing her when they could.

"Oh, Nan, it's wonderful!"

"Of course, we've always known, but it's so nice to—"

"Why didn't you tell us first, before you let all those old fogies know it?"

"And you're going to live here, you lucky girl!"

"Stop!" shouted quiet, soft-voiced Nancy above the din. "I haven't the slightest idea what you are talking about."

"Horrors, it's still a secret?"

"Will you tell us after you're all married?"

"And just this minute coming from inspecting your new estate. Nance, dear, if it's not really announced, we'll promise not to tell a soul, but we know it, so why not admit it?"

"Who told you?"

"Mrs. Soule and Helen, and Helen talked to your mother about it, and your mother just grinned. Of course she had promised you not to tell, so she couldn't, but what nonsense! Nancy, you old dear, you're a goose. Absolutely everyone has known it for years."

And then Miss Annette Gray, with all the dignity and emphasis that she had in her, said: "I am not engaged to Richard Murray or anyone else, and I do not expect to be. Can I make it any plainer?"

"But Sam says you sent him for a handkerchief, and he saw a perfectly scrumptious ring in your bureau drawer."

Nancy blushed a fiery red, and they would listen to no explanation. She was helpless, and they pushed her into the automobile that had brought them, and carried her off. Poor Nancy Gray! They kept her for lunch, and she reached home late in the afternoon. The maid told her that a dozen people had called to see her, and that more than a dozen others had called her on the telephone, and that every one of them had spoken to Mary. "Very pleased indeed, Miss Nancy, as they should be," Nancy could not argue with Mary, but she could talk to her mother and in no uncertain terms. It must be stopped, and it would be. At any rate Richard Murray was not coming that evening; there would be time to talk with her mother, and talk she would.

IT was four o'clock. She told Mary that if anyone asked for her, she was not at home. The house was very quiet, which meant that no one was at home. She found a book that she was reading and went upstairs.

"Oh, Nance."

The voice came from the sitting room.

"I didn't expect to find you here," she said.

"You don't sound very glad to see me."

"Don't I, Dick? I'm sorry."

"Then you're not?"

"Not very, I'm afraid."

It was serious business this. His face was serious and a little sad.

"No, Dick, something has got to be done. Everyone takes it for granted that we're engaged. Everyone speaks to me about it. I don't know why they should; it is very embarrassing and very unpleasant."

"Can't we make it true, Nancy?"

She shook her head. "When I get married," she said, "it will be to a

man I've selected myself, not one that the rest of the world has selected for me. I can choose, and I expect to choose, for myself, if I ever get married at all. I can't imagine how all this talk started so suddenly."

"All right, Nance." They were almost in darkness. He walked to the window. "Will you come over here, where I can see you?" he asked. She went to the window and he, leaning against the window frame, faced her.

"Nancy, can't you imagine why everyone thinks you are going to marry me?"

"No, I can't, Dick."

"Then I'll tell you. It's because you have made them think so, and made me think so. There are things nice girls do, and things they don't do. There is no use of my explaining them to you; you understand. You have behaved toward me for years in a way no square, honest, nice girl could unless she knew the man loved her, and she confessed her love for him. You are a disgrace to yourself and to your family."

"Dick!"

"You have done what no well-brought-up, ladylike girl could possibly do, unless—"

"Dick!"

"—she loved—me. You have led me on; you have—"

"Dick, stop; I'm not that sort of girl. I do—"

But Nancy's eyes and Nancy's arms had reached him before she had time to tell him anything more.

"SO you do love me after all?"

Nancy shook her head. "Nope, but I've got to keep the family honor unstained, and I think I'm going to love the house."

"Nancy?"

"But I'll admit this is the most comfortable place I've ever been in: it is, honest, Dick." She smiled up at him. "And while I'm admitting things, I suppose I might as well admit that I've waited and waited for that old seven years to pass. I've always known you loved me, and I've always known that you knew I loved you. I've known everybody knew it."

"Then why—"

"Simply because I made up my mind a long time ago that I wouldn't say 'yes' for a month after you asked me. I marked the month on my calendar upstairs. It comes on a Wednesday, and I wanted to be sure not to make any engagements for that night."

"But why a month?"

"I thought that was the shortest time that was respectable. Then, when we did what we're doing now—up there Sunday, I knew that I couldn't keep it up for a month, so I decided on a week. That night I knew I couldn't keep it up for a week, so I decided on a day. Then I told mother, and mother said: 'My, my, how you surprise me,' just as though she had known all about it. Then the next morning people began to tell me about it, and—well, everyone had known about it forever and ever, and I got mad, and that's all there is to it. I decided to go back to my first plan and make it a month. But, Dick, how do you suppose all these busybodies began to talk about it at once, and just at the psychological moment?"

"I can't imagine—"

"Hey, you! Break away. Can't a feller walk around his own house without bumping into this goo-goo stuff all the time? Say, I thought you weren't engaged." Sam was caught before he reached the stairs, and brought back and stood up before his captors.

"Have a heart," said Sam; "can't you stand a little kidding?"

"Sam, I'm going to marry Mr. Murray."

"You don't say, really; I'm so surprised. When did you find it out?"

"Sam!"

"Sam! Sam! Sam! Can't you say anything but 'Sam'? I suppose you just fixed it up this minute. How about last Sunday afternoon?"

They looked at each other and laughed. "Heck, I'll bet that wasn't the first time either. You're a pair of soft ones."

"Sam, what did you see last Sunday afternoon?"

"Nothin' much, except me and Bill, and Ben Edwards, and Charley, and Jim, and Lazy, and Fatty Smith, and maybe a couple of others, was down in the old barn, and you two came along and pulled some of this clinching stuff, and—"

"This time Sam escaped."

"And we wondered why—"

"—everybody knew," said Nancy Gray.

## JOHNS-MANVILLE NON BURN Asbestos Brake Lining

**What Asbestos  
is in your brake lining?**

**E**conomy and safety both ask this question. Years ago and today the heavy duty brakes on machinery found the answer in Johns-Manville Asbestos.

They say "we use it because it checks tons of load—positively—because it is fail-proof and long wearing." But we know that it owes its record to a particular kind of asbestos fibre, mined and processed by a concern who stand in the business world as sponsors for asbestos.

Now the motorist with good judgment buys this same selected fibre built into Brake Lining and called Non-Burn. Not realizing, perhaps, that it is woven in a certain way to get the most grip per square inch. You'll be more interested in this point when you have Non-Burn in your car brakes.

Look for Non-Burn when you buy a car. Insist on it when renewing brakes or clutches.

To the Trade:

## The Arm and the Wallop

Continued from page 7

gloomy old hotel crowded with officers growling at the fate that held them so far behind the lines where the show was on. An excellent dinner that was worth at least half what I paid for it and a songfest around the piano in the parlor that ran the gamut from the latest rag to "The Old Oaken Bucket." On the way to my night's refrigeration I got a daily paper. It told briefly of a boche advance. The Allied line was bending. The situation was critical. That very hour might be the decisive point of time!

### Europe's Grandchildren

LATE the following afternoon another correspondent and myself left by train for a point along the line some distance inland. A wizened interpreter took us in charge and admitted that we were in good hands. In spite of him we managed to get a cab. He carried a small part of our baggage to the station door, where he got into difficulties. The guard would not admit him. That guard ought to be promoted. He has sense. We listened to the fight for a couple of rounds and then tipped the interpreter—for what I don't know—and boarded our train that was supposed to reach our destination at nine that evening. I suspected that train from the beginning. It had an ornery, hang-dog, sneaking sort of look about it. Then we were in a first-class coach which had two flat wheels—which is irregular. As I understand it, the first-class coaches here have one flat wheel, second-class two, third-class three, and the wheels of the freight cars are unanimous in their flatness. Travelling here nowadays one stands up to take the jar off the spine, sits down to take the jar off the heels, and gets out and walks to take any comfort.

About six o'clock our train pulled into a fairly large town and began meandering aimlessly about the yards, hither and yon, back and fore, like a twelve o'clock guy after curfew in a nine-o'clock town. Finally it sat down to rest for a spell, and after some minutes I suggested that we get out and stretch our legs. We alighted and found that we had ceased to be a train at all and were just a couple of coaches out in the suburbs. Of all that started from that base port nothing was left of us but our first-class coach and a troop car carrying a dozen men in charge of a lieutenant. The lieutenant told us we were to be picked up at nine that night. We hurried down the track past the station to a Red Cross building where we had a fine dinner for a good deal less than the same meal would have cost in the States. It was cooked and served by American women who made one proud to be an American. The women in the Red Cross cauldrons in France are doing real work in an unostentatious way where real work is needed.

After dinner, in company with the lieutenant and his men, we clattered uptown and gazed at the church, with utterances of admiration variously expressed.

It was nearly dark when we made our way back past an old ruin. A Frenchman at the entrance gave us to understand that we might enter. We went in and climbed the worn stone steps to the top and stood there in the gathering dark—thinking things! What varieties of things have the eyes of Time beheld standing there, gazing off into the dark and—thinking things! And now the American standing there, strong, young, curious, idealistic, with a little of the strange feeling of a man who unknowingly finds himself in a spot,

the faintest image of which a brief residence in early childhood has stamped upon his memory; a strange sense of standing among things that are hauntingly familiar though utterly forgotten!

The grandchildren of Europe were back from the new home for a purpose, looking the old things over and—thinking there in the dark!

We reached the station a full twenty minutes before train time and found the troop car there, but our coach was gone!

Where had it gone and when? Nobody knew. God save the king's English and spread the knowledge thereof abroad among the peoples of the earth! I grabbed a little man who looked less bright than the average and so was probably connected in some way with the station, and within the space of a minute poured into his ear half of all the French I know. His face brightened, and eagerly he said: "Ah, oui." That didn't get me my baggage back, so I consumed one more minute

on to the train just as it began to move. Safe at last. We would arrive at our destination a bit late, but in time for a good night's rest. Ah, yes! The train ran about halfway to where we hoped to go in about twice the time we expected to consume in getting there, and quit for the night. It was after midnight and raining. I don't have to remember not to mention the name of the near-town at which we were thrown off, because I can't remember it. We learned that every hotel in town was full, and just as I was ready to sit on my typewriter case and add my tears to the downpour, a soldier with the brassard of the Railroad Transportation Department happened by and spoke of a cot in the Red Cross dormitory near by to which he had the key. Clean sheets and warm blankets! I'm not a fit person to write about the Red Cross; I'm prejudiced.

On up the line we went in the morning in the troop car, with the lieutenant and his men and a number of French civilians. The lieutenant was conducting a class in French. One handsome young scallawag opined that he didn't figure on wasting any time learning the lingo.

"What's the good?" he asked scornfully. "Us Americans are all going to be together, an' we'll get along all right. I can say 'Woof, woof,' an' get me a couple o' eggs if I need 'em, an' I savvy enough to get me meat an' bread an' a bottle o' wine. I ain't goin' to strain me tongue for life tryin' to learn no more."

About ten o'clock two young French girls got on. The young scallawag's eyes brightened. He sat up and brushed the cigarette ash from his knees. He was a fast worker, that lad! Within ten minutes the prettiest of the two girls was sitting beside him trying to pronounce his name, and just before she got off, a half hour later, I saw her writing her address in his notebook.

"Goo-by, Fred," she called as she climbed off. "Hear that?" Fred asked ecstatically. "Don't she say my name pretty? Ain't she a pippin? What? Daw-gone it! If I could just 'a' talked a little more o' her lingo! We got along fine in the little I do know."

A little later he sneaked into the group surrounding the lieutenant. He had a book, "French for Soldiers," open in his hand.

"How do you say: 'What is your name?'" he asked sheepishly.

"Thought you weren't going to learn any French?"

"Aw, might's well learn it as long as I'm here," he muttered, blushing. "Listen: How do you say: 'Where do you live?'"

After some few more hours we reached the town that is the headquarters of the S. O. S. I got a paper and read that the Allied line was still being pushed back. The Germans had taken Kemmel Hill. They might drive through to the coast. The situation was critical in the extreme. That very hour might be the decisive point of time!

### The Salvage Plant

WE spent two days at headquarters to get a line on the functions of the S. O. S. Of it all one word to the American people about the spirit that lives in the American army in France: A major in charge of a big work greeted us cordially and spent a half hour eagerly explaining what was being done under his direction. As we were making ready to leave I made some mention of the men fighting in the line. The major looked at a spot just over my head, far, very far away.

"My only boy was killed at —," he said slowly, gently. "I buried him last month down at —." He drew a deep

## THE STAR REAPERS

BY HARRY KEMP

From Texas north to Idaho  
Innumerable seas of wheat  
Ripple beneath the running wind  
And ripen in the golden heat.

A thousand thousand dusty men  
Turn out to labor in the sun,  
And down innumerable fields  
The reapers and the binders run. . . .

From Texas north to Idaho  
There spreads a mighty chart of gold  
Made up of farm and farm on farm,  
All into one huge vista rolled. . . .

O thousand thousand dusty men,  
The thing you reap is more than wheat,  
Is more than bins of yellow grain  
For hungry continents to eat. . . .

'Tis Love that you are reaping there,  
'Tis life that laughs at its brief span:  
Your harvest is a sacrament  
Where God Himself grows one with Man!

expending the remaining half of my French vocabulary. The little man's face grew sad. Maybe I got my words in the wrong place and told him some bad news. He shook his head and shrugged his shoulders mournfully. "Ah, non," he said, and went away and left me.

Then I went mad. I grabbed a fellow by the shoulders and leaned close as though I were going to bite him.

"I lose-a my baggage," I shouted loudly in his ear in my best Pacific Coast pidgin English with a wee brogue of Siwash mixed in. "You savvy? Baggage heap gone! Coach vamoose. Gone. Get me?"

I doubt if he did. After he had escaped I had a sane moment and remembered that one of the Red Cross women had mentioned having lived in France for fourteen years. If she'd lived here only thirteen years, she'd never have located the only man in that mob who knew the spot to which that coach had been switched. From the way they'd hid it I imagine they must have suspected that some boche was going to try to steal it during the night. I panted along after the guide, got my baggage, and panted back over and under freight cars and around little switch engines that I was afraid I might step on in the dark and break, and crawled panting

breath—and smiled. "Good-by, boys. Good luck."

I looked around as I went through the door. The major was back at his desk hard at work, doing his best to see to it that the boche gets licked.

We found near the headquarters another enterprise new to the American army, a salvage plant—in a huge building mountains of old shoes piled to the roof, hills of hats, ruined uniforms, blankets, all manner of personal equipment. Seen as it comes in from the field, this equipment seems to be nothing but junk. Yet every scrap of it is used. Sixty per cent of the old shoes and 75 per cent of the old clothing are salvaged and sent back practically as good as new at a cost only 15 per cent of the amount necessary to buy the same material new.

Shoe uppers that are beyond hope are made into shoe linings, which are scarce. Hats that can't be re-formed to wear on the head are cut up and sewed together into slippers to wear on the feet in hospitals. Torn rubber boots and slickers are made as good as new. Uniforms disastrously kissed by barbed wire are restored to respectability by the deft fingers of French seamstresses. All manner of leather and web equipment is either repaired to serve its original purpose or used to make some other needed thing.

The plant was put in operation three months ago with three officers, four enlisted men, and six women. Now it has thirty officers, 600 enlisted men, and 2,600 civilians. In the first two months the stuff the plant returned to use was worth a half million dollars. Fifteen hundred pairs of shoes are re-formed there each day, and they expect an output of 3,000. They expect soon to restore to service half a million dollars' worth of stuff each month. A rough estimate has it that this salvage work will amount to a saving of 5 per cent of our total tonnage—not an inconsiderable item. In one room we saw more than 600 women mending discarded uniforms. One of the women held up a pair of breeches as we passed with the officer in charge and defied him to find the patch she had sewed in. We all admired her work and were immediately mobbed by a shyly eager crowd of Frenchwomen all insistent on exhibiting their handiwork. From what I saw I believe some of those women could take a buttonhole and a little time and produce a perfectly good new uniform.

### "Tough Drudging"

ANOTHER point along the line of the S. O. S.: A great classification and storage yard akin in size and purpose to the one at a base port above described but with added features. Here, for one thing, is an engineers' depot, where machinery for the army's use is assembled, and here we may get some idea of the manifold needs of our army in France. Some days as high as 300 cars deposit their freight. Here in one great pile are 90,000 shovels—a very mountain of backache! Wherever there is room to store them there are piles of wheelbarrows. Piled everywhere in seeming confusion, but all in process of assembly, are electric shovels, rock crushers, road rollers, caterpillar trucks, electric drills, steam cranes, all manner of shop tools and sawmills, all kinds of logging materials, plumbing devices, shower baths, miles of piping of all sizes, artesian well diggers, printing presses, blue-print machines, light railway equipment, locomotive cranes, hoisting engines, portable barracks of twenty-eight varieties, spikes, roofing paper, grindstones, jacks, forges, pumps of many kinds, wire netting, oil cans, sprinkling carts, and so on. Do you happen to think of sawmills in connection with an army? There are thirty-six American sawmills in operation in the forests of France to-day; soon there will be more than double that number. Or farming? This camp, in common with all others in France, has its garden officer and farm for the production of vegetables for the men. This particular camp has a farm of 240 acres—just a small item of activity to be added in reckoning up the vast and complex whole.

At this camp there are also an ice plant and cold-storage house now practically complete. The ice house has a capacity of 500 tons a day, and I am told that there are but a few larger in the world. The modern cold-storage house, which stands near by, is 986 feet long by 190 feet wide. It will store 5,000 tons of meat, which, by the way, I understand is but a seven-day ration

for a million men! This is the largest but not the only plant of its kind to serve the American army in France.

As elsewhere in camps along the S. O. S. here were American officers and men, working hard at the monotonous job of serving our present force at the front and making ready for the enlarged and decisive force in prospect—grumbling all at the fate that held them back of the fighting line, but working cheerfully.

"It's tough drudging along back here," said one. "But I tell my men that some day we'll be up at the front, and when we're in the line and needing things quick we'll thank God for every hard monotonous hour we put in back here."

Yet another point on the lines of the S. O. S.: A large car and locomotive assembly and repair plant in process of construction; in the yards a number of new and shiny Red Cross hospital trains of sixteen cars each. I went through one. No limited de luxe on any of the crack roads at home was ever more solidly or comfortably equipped. Each train carries a pharmacy and an operating room in addition to the staff cars and ten ward cars to accommodate 360 wounded.

### Conservation

HERE also were a mechanical repair shop—a hospital for wounded motor and wagon vehicles that in its operation is illustrative in a small way of our task and its accomplishment. Some miles from this point a modern repair shop is in process of construction. I understand that it is to be one of the largest and most complete in the world. In the meantime the work of repair must go on. It goes on in shops stuck here and there and everywhere in an old French system of barracks that has been taken over by the Americans. Tonnage is gold to us to-day, and the wrecked equipment in France must be mended and made to operate if mending be humanly possible. This repair shop restores to service 95 per cent of all broken parts sent back from the front or from along the lines of transport: 111 skilled occupations are represented in the personnel. The force here came to the present quarters in February and began work the day after moving in. They operate twenty-four hours a day. They even make their own tools when tools are lacking, as they frequently are. When a large valve becomes useless they grind it down to make a smaller one. I saw crank cases and cylinder boxes with holes in them that I could put my foot through. They weld patches into such holes with oxy-acetylene burners and restore the part to service. The colonel commanding is scornful of the American packers because they waste the squeal. There is a filtrate from an acetylene generator at this shop, and with it he is making a necessary calamine. After hours of inspection of unbelievable feats of repair the colonel led me to the junk pile. Two and one-half months of repairing thousands of different makes of cars and wagons had produced less than three bushel basketfuls of junk, tiny bits of scrap iron impossible of identification. Every other scrap of wreck that had come into that makeshift shop, operating in stray corners of barracks and under tents, had been sent back into service. Motor and wagon vehicles that had taken toll of precious tonnage had been saved from the scrap heap, and while the salvage was being accomplished the construction of the modern shop near by went on according to the labor and material that could be had.

### The Nation's Forearm

THE brief sketch that space permits me to give of our work along the line of the S. O. S. is at best but a fragment. I was gone eleven days on the trip over one line, seeking to acquire a general idea of our present position and efficiency and of our future possibilities and purposes. It would take reams of dry argument, detailed testimony, and information that may not be used at this time, to present the evidence upon which my present personal judgment of the general situation is based. Let me, then, offer my personal judgment for what it may be worth.

I believe that we are building solidly and well for the definite ultimate purpose of adding to the Allied line whatever force may be necessary to win the war. If I had seen a smaller degree of preparation more complete, I would be

P. F. Collier & Son  
Sole PublishersTHE BOOKLET  
BELOW IS FOR YOU—FREE

**T**HIS advertisement opens to you the opportunity to get absolutely free of charge and without obligation of any sort one of the most valuable little volumes about books and their makers that you ever opened.

Simply clip off the coupon at the foot of this page—tear it off if you can't find your shears.

—then fill it out and mail it.

It will bring to you by mail the little thirty-two page book which we have prepared for the purpose of describing Dr. Eliot's famous Five-Foot Shelf of Books.

**I**t is really a delightful little book—not a mere catalogue of titles and authors, but a chatty informal appreciation of the finest of English literary productions, showing why certain authors and certain works were chosen and going into a discussion of those authors and their works.

It is a literary guide and summary of

a character that no book lover can afford to neglect.

**T**HERE are few people, no matter what the advantages of their education, who would not gladly accept an invitation to visit Dr. Eliot's library and cultivate his friendship among his books, to read, as he directed, the books that would furnish a better understanding of literature, science, history, and art.

This booklet is in effect an invitation to share just such an opportunity—an invitation to be guided by Dr. Eliot on books just as you would want to be guided by the greatest authority on law or medicine or finance.

A few hours in each year and a few years in a lifetime are all any of us has in which to read, and the man who devotes some at least of his spare moments to the really worth-while books is astonished to find how quickly his appre-

ciation of literature is strengthened, his ability to meet and deal with men increased, and a new world of unsuspected mental riches opened for his delight.

**T**HESE are some of the topics from the free booklet shown below:

- What are The Harvard Classics?
- The Art of Reading
- Dr. Eliot Tells Why He Undertook the Work
- Reading and Business Success
- Liberal Education Defined
- Twelve Little Essays on Literature
- The Remarkable Index

**I**N itself, this booklet is a guidebook to books that no book lover should pass by. Tear the coupon off now as you sit here reading and mail it to-day.

It will be well worth your while to read in the pages of this booklet Dr. Eliot's own statement of his reasons for undertaking the work, how he planned and carried it out, and what he hoped the Five-Foot Shelf would accomplish.

MAIL THIS COUPON NOW

less optimistic than I now am. Many people in America have been waiting for Germany to blow up. Foolishness! Germany is not going to blow up; she must be blown up, and it is up to us to add to the Allied blast a measure of explosive great enough to send her sky-rocketing. To mold a small and delicate, though perfect, forearm for the body of our American fighter—a forearm capable of thrusting about half a knuckle of a fist against the German line—were a comparatively easy but criminally foolish thing. To fashion in France a forearm that shall be in size and strength in proportion to the size of our fighter's body—the nation at home—and capable of swinging a fist heavy enough to land a knockout blow, is hard but sensible.

I believe that such a forearm is being fashioned, and that, on the whole, the process is going on with an encouraging degree of speed.

### A Strong Bridge

I BELIEVE that we have made more mistakes than we are now making and that we are making more now than we are going to make henceforth. The fire of experience is welding our officers and men into an army, where at first they were a dissociated mass of individual bits of energy all tugging earnestly at the same load but not pulling in unison nor in the same direction. I believe that our army along the lines of the S. O. S. is a healthy, kicking organization that is rapidly divesting itself of the encumbering bonds of useless red tape. Traveling about, one hears a tremendous amount of kicking. Excellent! An entangled horse that gives up and lies down must have help to rise or he is useless, whereas the nag that keeps on kicking—while he may throw himself and get bruised up, stagger about in alien stalls, and disturb other animals—will finally break loose and have the free use of himself. However, it does not behoove a serviceable and trustworthy horse to kick himself loose from necessary harness. There is red tape and red tape. Some of it is strangling and useless entanglement and some of it is necessary harness. I believe that the officers of our army are beginning to strike a judicious average in kicking loose from the useless entanglements and still staying in the necessary traces.

It takes time and experience to distinguish between a needed bit of harness and a tangle of useless leather, for there are many horses to our military wagon and what appears useless to one may be a vital necessity to another, pulling from a different angle.

In common with every other American in France, I am exasperated by the slowness of our progress, inevitable though it may be. I would be just as greatly exasperated were we making ten times our present speed. Such exasperation is a necessary and healthy irritant at the present time.

In this crisis of the world there is no such thing as enough. The best that seems possible can but be provocative of the realization that we must do twice as much. But there is a panic of speed that approximates inertia. A Marathon may not be run like a hundred-yard dash.

I hear some criticism of the extent and thoroughness of our preparation. I don't concur. I hear talk of our "making the war to order." I hear some men say that we are preparing so greatly that the war will be over before we get started. If they're right, I'm wrong. It's true enough that if we had made less preparation in the last nine months for transporting and maintaining a big army in France we might have sooner put a bigger little army in the line. To me a big little American army that's not big enough is like a fine bridge that's not quite strong enough. Time and excellent material may go into its construction, but if it's not quite strong enough, what's the use? It's a tangled wreck at the bottom of the river, and those who sacrificed strength to speed in order to get quickly across the river will stay where they are or build anew as they should have built in the beginning.

### Faith!

I HAVE a vision—a vision with a sweep of over 6,000 miles. It begins at Camp Lewis, the great training camp on Puget Sound. It extends over the entire body of America, north and south, to Camp Upton near New York. It reaches across the Atlantic on a thin bridge of hunted ships to the shores of France. It spreads out over the body

of France, at base ports, in peaceful valleys, on sunny plains, in storied towns, on up to the mutinous bounds of hell itself, that threatening rim of hell that we call the western front.

Moving everywhere within the limits of that vast vision I see consecrated figures clad in the olive-drab of the service. I see them everywhere, from the shores of the Pacific to the battle lines of France: clerks and laborers, artisans and shopkeepers, millionaires and paupers, college men and recent immigrants whose tongues but clumsily attempt the language of the land for which they fight; railroad presidents and corporation attorneys, preachers and doctors, idlers and misers, and curious, amazed young farm boys, all going about one vast, strange common business—blunderingly at first, from the rookie at his first bayonet drill to the man of affairs at his first military problem, but with a rapidly increasing unity and intelligence of effort. The scene changes to a period only about a year ago. It was just after we had declared war. New York was aflame with flags. I stood in the window of a building on upper Broadway and cried at the ludicrous pathos of a great parade that flowed by in the street below: thousands upon thousands of civilian men, women, and children, marching solemnly with market baskets, rakes, hoes, broomsticks, banners, and garden spades! Great God! At war with the greatest and most ruthless military power in the history of the world, and the expression of our will a parade of untrained men and boys, women and little girls, marching solemnly with garden tools and banners! Flouting promises to raise potatoes in the face of the Kaiser! And on that day untrained civilians were practically all we had in the way of soldiers, and garden tools were our only weapons!

And now the vision merges into today's reality, when I sit and casually talk with boys who were untrained civilians on the day of that parade, level-eyed American boys who have been wounded on the line and sit about grousing bitterly because the doctor insists on their resting another week before going back to the front-line trenches. From that vision I get an impression of indomitable courage, an incalculable store of power gradually beginning to be organized and directed. It is a power of will and material that beggars description. It is a power initially as awkward as it is tremendous, and the time needed for its organization is a time of anguish for all who realize the necessity for its full, immediate use. I hear much of honest pessimism, light sneering, and foolish optimism. There are inevitable frictions and delays. But I have that vision, and—

Oh, America! I have faith!

### The Reality

THE night train to Paris at two o'clock of a rainy, cold morning. Jammed like the New York subway in the rush hour; six officers and myself crowded in the cement-floored vestibule at the front end of a crowded coach. By cooperating we all manage to get a part of ourselves on the floor in something approximating recumbent positions. My head is on a captain's hip, my legs hang over a lieutenant's shoulders, and in the pit of my tummy there is a major's head. He, at least, has a comfortable pillow. About every ten minutes some wandering nuisance walks over us.

"To make the world safe for democracy," drones a weary voice from the dark. "Democracy can't need safety worse than I need my sleep."

A heavy lady passing over gets a foothold on my shoulder and slips. I offer my ear as evidence that French heels should be used as weapons at the front.

Paris in the early morning: I stop at a café for coffee and buy a morning paper. The important positions around Kemmel Hill are being held. All along the line the boche is stopped. The Allied line is holding. Shopgirls are passing, talking gayly and giggling. An old hackman goes joggling past, singing sleepily to himself. War? It must be a far-off dream—an absurdity! I look at the paper again. A small item tells of the number of victims claimed from Paris the previous day by the shells from the Big Gun. . . .

This article pictures Mr. McNutt's first impressions of the American Expeditionary Force. The second will appear in an early issue.

## Cool, Free, Easy

No chafing, no binding, no annoyance. Combines the best comfort features of two-piece and union-suits, without the disadvantages of either. The fullness of natural blouse, confined above the belt by the snug waistband, gives freely with every bodily movement, without the slightest strain anywhere.

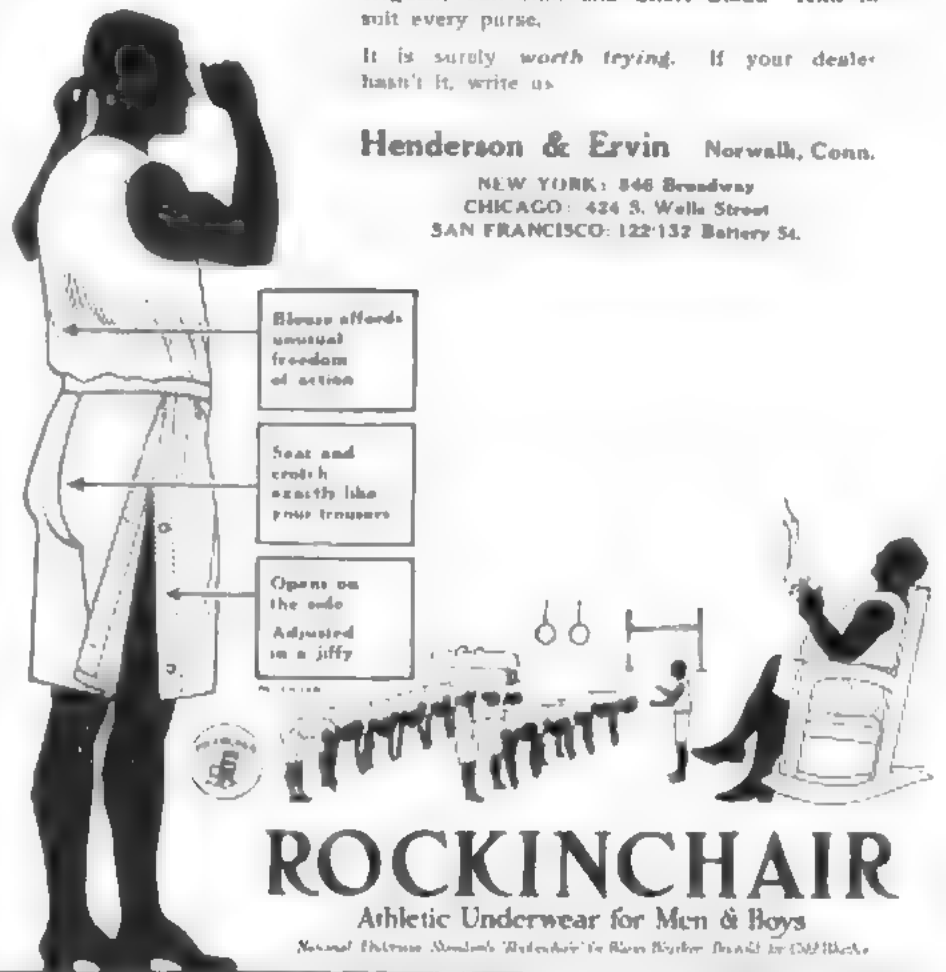

The seat and crotch are made exactly like your trousers—absolutely closed. No back split to open, bunch up and annoy. No drop-seat to sag open. No button in the crotch to pinch or come off. The two buttons down the side of one leg are visible to the eye, easy to adjust. As they bear no strain, they won't come off. This side opening allows a broad sweep clearly across the back.

Rockinchair is designed like your clothes—to fit perfectly. A model to fit every figure, Regular, Tall Slim and Short Stout. And to suit every purse.

It is surely worth trying. If your dealer hasn't it, write us.

# POWERSTEEL TRUCKLINE

"Fight on!" cried the Maid; "the place is ours!"

Defeated and discouraged, her men were giving way and beginning a retreat that would soon have been turned into a rout, but at her words they returned to the attack, stormed through the defenses and captured or killed every man of the enemy.

The Maid was Joan of Arc, whose wonderful character and courage have been an inspiration to all who have read her history.

#### Does Your Boy or Girl Know the Story of Joan of Arc?

It is one of the collection of tales, poems, legends and biographies known as

## "The Junior Classics"

Out of all the stories, poems, legends, etc., in the world, 847 have been chosen by famous educators. They are just the 847 that are best adapted to form character, make school work easier, insure success. They make the best reading in the world for the young folks. They inspire clean, high ideals out of the heroic, thrilling incidents of history and legend.

#### You Know How the Young Folks Just Love a Good Story—

How they would rather listen to one than eat or play or sleep—how they beg you, sometimes, to tell them a story, to read to them.

They will read something, you know, and it's what they read now that determines what they are to be. It's their heroes, their ideals, the men and women who are made to seem to them wonderful and worthy to pattern after, that form your children's characters.

## This Book FREE

#### Here is a Free Book About Your Young Folks' Reading

It was printed to give away. There is a copy for every Collier reader who has children—absolutely free.

It contains the advice of the greatest teachers in America about the young folks' reading—priceless counsel for fathers and mothers who care.

It tells how all the heroes and heroines of literature have been gathered together into ten beautiful volumes—how you may have them for your own boy or girl.

## JIM CONNOLLY

### JIM CONNOLLY

Jim is never happy unless he's risking his neck. He's been doing it now for twenty years and more. And though he has won prizes for his fiction and honors for his articles, writing has never been more than an avocation with him. His real job is taking desperate chances. Athlete, sailor, and soldier—he has never been beaten at anything except running for Congress.

Connolly's public record begins way back in 1891, when he was captain of the Savannah football team. In those years Connolly alternated between Georgia and Massachusetts. In the spring of '92 he won the amateur championship of the United States in the hop-step-and-jump under the colors of the Trimount Athletic Club of South Boston. The next year he was back in Georgia, where he won the commendation of his superiors in the United States Engineering Corps for saving a deck hand from drowning. He entered Harvard in the fall of 1895. But that was when the world of sport was looking to Athens and the first Olympic games. Connolly wanted to compete. The academic authorities at Harvard were somewhat less interested in the games than Connolly was. They intimated that if he went to Athens he might not be permitted to come back to Cambridge. Connolly went.

It was not so very long after Connolly arrived in Greece that the American flag was run to the top of the great staff in the middle of the field to announce that an American had won the first event on the program. The record for two hops and a jump of forty-nine feet and a half inch that Connolly made that season stood for thirteen years.

Then came '98 and the Spanish-American War. Connolly enlisted in the Ninth Massachusetts Infantry. He got only one chance to distinguish himself; it was an awfully short war. That was in the trenches before Santiago, when he carried rations to some comrades cut off from supplies by the Spanish fire. Connolly had to cross a space fifty yards wide in direct view of the enemy. His battalion commander thought his chance of getting there was nil and ordered him back. But the Ninth Massa-

chusetts was a volunteer regiment, and Connolly is Irish. He carried the rations and got away with it.

The war over and everything quiet in the United States, Connolly was reduced to looking for trouble. The most promising field of hardship and adventure seemed the Grand Banks. Connolly got an excuse in the way of a commission to write some magazine articles about the Gloucester fishermen, and sailed for the fishing grounds. In the next four years he shipped several times on North Atlantic steamers as a cattle hand, trav-

eled steerage out of New York and as an immigrant out of France to study beef transportation, immigration, and the like, for various magazines.

He was on the Russian frontier, and with the Baltic fishermen, and up in the Arctic Ocean with the whalers, and down at Panama and in Central America, and on an oil tanker in the Gulf, and up and down the Mississippi River—always with a commission from some magazine in his pocket, but otherwise quite one of whatever gang he found himself with.

IN 1906 he took a vacation, crossing the Atlantic in the Kaiser's cup race with Tom Bohlen. Bohlen was a famous Gloucester skipper, with a reputation for cracking on more canvas in a breeze than any other man off the New England coast. The eighty-seven-foot schooner did the trip—more than 3,000 miles—in fourteen days and nine hours. Readers who know about sailing ships will know what that meant.

Connolly once enlisted in the navy. By special order of the War Department he was aboard the battleship *Vermont* on the navy's world cruise.

He was at Kingston, Jamaica, two days after the great earthquake, and got mentioned in navy dispatches for his relief work. He was aboard the *Republic* when she was wrecked off Nantucket. He was in Mexico in 1914, and with the American destroyers hunting submarines in 1918. And though he is in his forties now, he is still flat in the waist.

How has he ever found time to write eight or ten books?

## The Face in the Loophole

Continued from page 29

ened rabbit, he saw her. The red head was tucked in against the rock; she was on her knees, doubled up like a jack-knife, while both her hands were in place on the rifle. "I beg your pardon!" said Kinsey gently.

WITH one swift motion, lithe as a cat's, she had whirled and faced him, still on her knees but straightened, the gun covering him precisely.

Kinsey thrilled at the businesslike effectiveness of it.

"You may put that down," he said quietly, "an' get up. I don't mean you any harm."

He never forgot those eyes upturned to his, wide as their lids would let them, deep, black, and filled to the brim and spilling over with fear.

She did not move, but looked at him steadily.

"Go away," she said at last in a low, sweet voice; "please go away. You see that I am alone, and I am dangerous for that very reason. I can take no chances. Please turn around and go away."

But the man stood still. "I want to make you understand," he said, "that you need not fear me. But this is my country, an' I have business here."

At that her face seemed to go a shade whiter than it was, a pearly clearness growing in the flesh like a light. She

wet her lips with her tongue, and Kinsey saw that she had teeth of the same clear tint, even teeth like a child's first ones.

"You—" she said and stopped. Then she tried over again.

"You—you are—?"

Her eyes went to the bronze badge on his breast.

"Only a United States Forest Service man," he said, "an' a friend to settlers."

"Then if you are that," she said, "you will go away and not bother me."

The man saw the justice of her words, that there was no excuse to linger. She had not risen as he had commanded her, but sat on her knees, her rifle still covering him. He looked her over keenly.

The man's bib overalls that clothed her slight figure were worn to the last thread, patched and mended and washed through many a month, he knew.

The trim boots were worn too, cut and roughened by the hard going of Red Mountain's slopes. But on the hand that grasped the rifle barrel so desperately there shone and shimmered in the sun a ring that astounded him. It was on the little finger, and it was set with one great pearl, as deep and perfect as one sometimes dreams a pearl to be, and around this there flashed a circle of diamonds. It was an ornament of taste and wealth, and Kinsey contrasted it wonderingly with the utter

poverty of her appearance otherwise. Once more he looked into her face and, lifting his hat, was turning away when he stopped again. "What were you shootin' at just now?" he asked. "A hawk," she said, and he knew she lied.

AFTER that Kinsey of the F. S. was like the proverbial flea in his efforts to do his duty by all his domain and yet be able to haunt Red Mountain, but come as he would at unexpected times and climb the slopes as he might, he got no further glimpse of the mysterious stranger. He knew from Jimmy or the Peak that she still came to the Loophole to search the hills, but she had given up her regular visits, coming at fitful intervals.

He skirted the foot of Red Mountain for sign of her habitation, but found none. And then one day he got another light upon her. He had been watching and tramping as usual when a shot far down below sent him headlong in its direction. He went fast until he came close to where he thought it came from, then dropped into the caution of an Indian. There were thickets here of hazelnut bush, and a tiny stream laughed and gurgled down the slants. Going carefully, he put aside the leaves and peered out on a small flat where the buck brush grew.

There, in the very center of the opening, lay a big four-pointer, just killed, while on her knees beside it, rocking back and forth in an agony of pity, was the girl of Red Mountain!

Her rifle lay beside her and a hunting knife hung in a leather sheath from her hip. She wrung her hands and put them over her face, and Kinsey knew she was crying as if her heart would break. Once she leaned over and rolled the beautiful head with its branching horns this way and that, to sit back again and give up to the weeping that obsessed her.

The ranger kept still and watched her, and presently he saw her rise, take out the knife and set to work upon the carcass with a practiced hand. That was not the first deer she had skinned, he knew before she had worked three minutes. That she intended to save every shred of the meat was apparent when she had finished, for she took out the hams, working deftly with the big knife and a small hand ax which she had evidently carried along on her back, and, putting them aside, wrapped the rest in the hide and bound it tight with a thin rope. It was a hard task, since she could not hang the body up, but Kinsey admired the way she went about it. She made but one error in the whole proceeding. She tried to sling both hams on her shoulders, but found she could not carry them. She was compelled to cut them apart and, untying the rest, to add one of them to the bundle. It was evident that she was loath to leave it for fear of the coyotes, but there was nothing else to do. Therefore, picking up her gun and slinging the fresh ham on her shoulder, she set off through the sunlight, a slim, strong, boyish figure.

Now Kinsey, as has been said before, was a Forest Service man, and took his calling seriously. A straight duty faced him now, but there was a problem behind it.

Was that girl hungry that her cheeks were so thin? Did she hunt from necessity? Should he follow her and find out? That was the logical course. She had broken the law, and Kinsey was the law in these parts, but somehow there was something about her, something in the fear-filled eyes, the desperate dignity of her, that forbade. He frowned and hesitated and presently he turned and went back up to where he had left Mister and Pat. He had an ugly half hour with his conscience, but finally smothered it, saddled up and departed for the station around the skirts of the peak.

IT was late in July before he saw her again. There had been a stubborn fire over on Stuart's Fork, and he had had twenty men in the woods for five days. He had worked like a beaver himself and was scorched and blistered and tired, but all through the strenuous work when he had dug trenches, felled pines, and helped to kill out ground fires, his mind had harked back to Red Mountain and the girl who cried at her kill. He could not forget the charm of the dark eyes beneath the gold-red hair, nor the sweetness of the unsmiling mouth. They lured him back, as woman has ever lured man back since time began, and with the first breathing space after the fire he was again on the great dead hill. This time he did not have to

hunt, for she came to him herself. It was a glorious day, sweet with wind, and lighted by a golden sun. The conifers waved their green banners to the bending sky and roared in profound diapason.

He was making his noon camp by one of the springs, had already fed Mister—he had left Pat at home this time—and was just taking his own lunch from the saddle bags when she spoke from the edge of a small grove of young pines. He had not heard her come, nor felt her presence, and her words jerked him around like a toy.

"Good morning," she said.

Kinsey dropped the flap of the bag and snatched off his hat. At the boyish act, so indicative of a woman's standing, she smiled for the first time in his experience of her. With that smile Kinsey went down.

It was the sweetest thing he had ever witnessed, and at the same time the most pathetic—as if it were a lost art with her. The grave lips curved up at the corners adorably and the black eyes narrowed with an entrancing sweep of lashes. She seemed whiter than before, as if all the sun and wind could do was not enough to banish something which sapped her from within. She still wore the faded suit of dungarees, still carried the rifle. And to Kinsey she was the most wistfully beautiful creature in all the wide world.

WITH a sudden quick impulse he went toward her with his hand outstretched. "Won't you be friends?" he asked frankly, plunging far ahead of what might reasonably be expected. "I've seen you so many times that I feel like I know you already."

"What?" she said.

"Sure," said the man, "I've watched you look through the Loophole a lot of times, and I've been on Red Mountain too when you passed."

She drew back, and he saw that look of fear deepen in her eyes. "Have—have you followed—me?" she asked.

Kinsey shook his head.

"Not exactly."

"I thought you wouldn't bother me," she said reproachfully.

"Have I?" asked the man simply.

"No," she conceded. "No."

Then she smiled again, and he had the uncomfortable feeling that it was forced, that she was cajoling him because of some extremity.

"There's something you want of me, isn't there?" he asked gravely—"something I can do for you? If there is, I will do it."

At that suddenly comprehending speech he saw the smile fade from her mouth, and she took the lower lip, which trembled, between her teeth.

"There is," she said at last. "Oh, yes, there is—and that's why I have watched and waited for you for a long time."

She came a step forward, so that she could look deep into his eyes, searching first one and then the other, as if she would make sure what manner of man he was. "I believe I have the average modicum of honor," said the ranger gently; "won't you trust me?"

At that she suddenly put her hands over her face for a moment. When she took them down it was with a smoothing motion, as if she wiped away suspicion and distrust. She sighed tremulously, then smiled again.

"I have no choice," she said, "and I seem ungrateful, but if you knew—oh, if you knew one-tenth of the gratitude I shall feel if you do something for me!"

She put her slim hand in a pocket and took out a folded paper.

"You go down to the towns, don't you, sometimes?" she asked.

"Sometimes to Weaverville."

"Then—if you would—if you would get and bring me these few things?"

The black brows drew together, and Kinsey felt his heart leap at their beauty, the sheen of the curling hair above. He looked so long at this aureole of light that she recalled him.

"Read," she said, "and don't fail of one single thing. I have worked them down to the barest necessities, but they are necessities."

Kinsey took the paper and read the items, clearly written in pencil, and they were a strange lot for a camper on Red Mountain to want as necessities:

Butter—one roll.  
Cheap kodak and films.  
Fruit—anything.  
Some malted milk.  
Magazines.  
Ten yards white muslin.  
A Bible.

At that last item the ranger stared a long time. When he lifted his eyes she was regarding him with fear and anxiety. "Will you bring them, with-

## The Right Camera for These Stirring Times

Picture opportunities are plentiful. Be ready for them with the Ansco V-P No. 2. It rests so lightly in your pocket, and gets into action so quickly, that you will want to carry it with you always. Its fast anastigmat lens, in exclusive combination with a simple micrometer focusing device, assures pictures sharp and clear in every detail.

# ANSCO

CAMERAS & SPEEDEX FILM

The watch-case cover protecting the high grade lens, the genuine fine grain leather covering and the superb workmanship are in perfect harmony with the pictures it takes, and unite in making the Ansco V-P No. 2 a camera which you will be proud to own.

Write for specimen picture on V-P paper. Then see the Ansco dealer for a demonstration.

Binghamton, New York

## A free booklet—that takes you "behind the scenes" of history.

It is illustrated with half-tone cuts of celebrated paintings and describes the famous collection known as

### "Secret Memoirs of the Courts of Europe"

The booklet is one no book lover should pass by. Fine man described it as "a fascinating peep into the past."

#### DU BARRY

"The Frenchman who was the first to introduce the rifle into the battlefield."

#### DE POMPADOUR

"The beautiful mistress of Louis XV. whose extravagance almost ruined France."

#### EMPERESS JOSEPHINE

"The beautiful woman who seduced Napoleon and became his empress."

#### MARIE ANTOINETTE

"The French queen who was guillotined during the French Revolution."

#### CATHARINE DE MEDICI

"The French queen who was the mother of Henry II and who was the cause of the St. Bartholomew's Massacre."

#### MARGARET DE VALOIS

"The French queen who was the mother of Henry III and who was the cause of the Wars of Religion."

Just a brief note or a post card saying "Send me the free Memoirs booklet" will bring you a copy by mail and without obligation of any sort. Address:

out fail—and quickly?" she asked. "This will more than pay for them—and your trouble."

She put her two hands together—leaning the gun between her knees in wary readiness—and stripped off the beautiful ring. When she handed it to him there was a certain pride about her shut lips, and Kinsey took it.

IN the next few days he gave Mister the grill of his life getting down to the town and back. He had successfully done the bidding of the scrap of paper and had every item safe in the meal sack behind his saddle. In the long hours of climbing he had had ample time for reflection and time after time his mind had moiled over the strange collection.

"White muslin!" he said aloud. "Now, what in thunder could she do with that? An' a Bible! The milk an' fruit I can understand. Sometimes an old prospector, long shut in the hills, will nearly sell his head for a peach or an apple, an' there's splendid use for the kodak. But the rest is a riddle."

When he reached Red Mountain and made his night camp she was waiting at the rocks where he had first seen her. She had seen him coming for an hour and signaled him with two shots, a wait, and two shots again.

With his heart beating a strange tattoo, Kinsey went to meet her.

Halfway down she came toward him, grave and pale, and there was in her dark eyes an immeasurable gratitude. For the first time she did not cling so warily to the rifle, watch every move he made so desperately. She took the sack with hands that trembled.

"I can't thank you," she said—"not with my lips, only with my heart."

The wonderful sunset of the mountains was tinging the peaks with crimson and gold, filling the cups of the defiles with shadow. The light set soft about her witching head with its fluff of hair, and her cheeks seemed thinner than ever. For an enchanted moment she stood looking up into his eyes, and her lips were parted, adding the last touch of wistfulness to her loneliness, her poverty, and withal her amazing grit.

"Look here," said the ranger desperately. "This isn't natural. It's awful for a woman to be alone on Red Mountain—God, awful! Can't you tell me your trouble an' let me help you? I'd rather help you than anything I know of in this world. Can't I?"

She shook her head, and he saw that a film of tears was dimming the beauty of her eyes all suddenly, as if she had borne so much that this kindness was the last straw to her endurance.

"Only God Himself can do that," she said simply.

Then she straightened the slim shoulders under the blue suspenders and reached out a hand. Kinsey took it, held it hard for a minute, and dropped it quickly. The next moment she was gone, an unreal figure in the coming dusk, carrying the precious meal sack slung on her back like a man.

ALONG in the first of August he was on Red Mountain again. Not for a day was she out of his thoughts, and anxiety ate him. Hour by hour he questioned his reason about her and got no answer.

Now a new cause for worry beset him. At Weaverville he received news that sent him to the mountain with a purpose.

McCulloch, the "big, big chief," as the office called him, was to be in on the 10th, and he was keen as a hound after offenders. His word was law above the local field, and he was keen and hard and efficient, a long rider, a sharp hunter, and withal hard to convince. Kinsey's heart ached to think of McCulloch coming across his red-haired girl without a better alibi than "shooting a hawk." Therefore he waylaid her one golden day by the clump of bowlders, and it seemed to him that all the sunshine he had ever seen was gathered in that shining head of hers.

"I want to talk to you," said Kinsey when he had held her hand for an enchanted moment of greeting. "Sit down."

She did as he bade her, and he saw with a thrill that she stood the gun aside for the first time. He had won her confidence.

He wanted desperately to put out a hand and touch hers where it lay on the rock inertly. It was a pretty hand, slim and finely formed, tanned and hardened by contact with weather and work. He had to close his own into a

tight fist to keep from doing it. But he would not have startled her for all the standing timber in the reserve. Instead he looked deep into her eyes and came straight to his point.

"You know, and I know," he said. "that we have been playing at cross-purposes here on Red Mountain. I have watched you for a month. I first saw your face looking through the Loop hole. I lay close under an' brought you so near with my glasses that I could see your eyes an' the little pucker of a frown that was between them. I saw the sun on this shining hair, an' I've never forgotten you a minute since."

But the girl had risen with her lips apart, and the last bit of color drained from her cheeks. There was a pitiful anguish in her face.

"How—how much—do you know about me?" she said in a whisper.

Kinsey rose too. To save his life he could not stay away from her—she was so slim, so sweet, so very evidently in despair.

He came and took her hands in his and held them in a warm and comforting grasp, smoothing them a bit as a mother smooths small hands that are hurt.

"Nothing," he said truthfully, "except that—that you have broken the law I stand for, an' that I've betrayed my duty by not arresting you."

SHE swallowed once, and he felt the trembling that set up all through her slender body.

"Yes," she said bravely, "I know, and you know. And only my own soul knows the rest—how hard it has been—how I fear and run and hide! How I watch every shadow, every rock, every tree! How I could cut off my right hand every time I—I kill one! Here the miserable tears welled frankly up, and she looked at him through them as from a far place.

"When I go up, sometimes they are not—quite dead. I could kill myself then—willingly. But sometimes—there are things—situations, crises—that will make one do things—will test and grind one down to the last thread. I can't make you see."

"Yes," said Kinsey with a huskiness in his deep voice, "you can—dramatically! And I'd give my right hand to snatch you out of this."

The slim hands tightened on his fingers.

"You are good," she said, "and I doubted you. But unhappiness can make one doubt the very angels in heaven. Will you forgive me?"

Kinsey could bear no more of this. He turned abruptly and stared with unseeing eyes down along the wooded slants. When he turned back again she had gathered up her gun preparatory to departure.

"There is only one thing I can do, it seems," he said gently, "and that is to tell you not to break the law again. There is liable to be another on Red Mountain who—who is truer to his duty than I. Will you let me bring you something from my own supply of stores?"

She shook her head.

"I have the malted milk," she said, "and there is still some of the butter left—and flour. I cook at night."

Many a time in the coming week Kinsey thought about that last word "I cook at night," with puckered brow. Wholly and from every angle the thing was a mystery.

AND then one day McCulloch rode in to the glade about Dirk's cabin and took possession. He came with three horses and a "swamper," accompanied by Kammerlain, the district ranger from Weaverville, a quiet, kindly, efficient man whom Kinsey loved.

When old McCulloch, grizzled in the Forest Service, who knew more about it than any other forest examiner on the coast, came into a district that neck of the woods sat up and took notice—was on its toes in every department.

He went about for the most part unheralded and was apt to do unheard-of things—always for the good of the service.

He greeted the young ranger with a bluff kindness and moved into his house, bag and baggage.

The very next day he chose to make the trip to the lookout on Granite Peak, and by noon the three men came up the "switchback" to delight Jimmy with their company. McCulloch had been here before either Bond or Kinsey were

(Continued on page 34)

## Stemming the German Tide—

ONCE more the German hordes have been turned back when victory seemed almost within their grasp. Once more the gallant soldiers of France, England, and America have stopped the onrushing tide of Huns with a wall of flesh and blood and steel. Regiment after regiment, division after division, surged and raged against that solid wall only to be hurled back defeated and broken.

### And Now the Might of America Is Beginning to Make Itself Felt

All through those anxious days when the Germans were drawing nearer and nearer to Paris, the watchword of the Allies was: "Hold on till America can get her full strength in."

That strength is fast making itself felt. Already our men are in the battle line by the hundred thousand; already our Navy has definitely checked the U-boat menace. Soon we will have more than a million

men in France and our shipbuilding alone will more than replace any future losses from submarines and mines.

But to definitely defeat the German Military Power, to win the war and make the world safe for the next hundred years, will take every bit of energy, every ounce of force that we can muster; and one of the first things necessary in order to get the most out of our enormous resources is to know all about the war—what led up to it, how it began, through it all. Where can you find all this? In

## "The Story of the Great War"

—Historic Perspective—Expert Analysis—Vivid Description

It gives you historic perspective, digging out the roots of the war over the past fifty years. Vivid description, covering in detail the thrilling events of the war; there is an outline of the plans behind the first German offensives against France and Russia, the Gallipoli affair, Verdun, the Battle of 1917, the entry of the United States into the war, and the great German offensive of 1918—a

vivid account of the fighting, an analysis of each campaign with the causes of its success or failure, a resume of the net results.

There is a full description of how Science has revolutionized the actual fighting; an accurate account of the industrial and social factors, the financing of the war, etc. Our own relations to the belligerents from the very beginning are impartially described, and the stirring messages of President Wilson given in detail.

In short, the Story of the Great War is a real history written to keep pace with the conflict—a work every American should read now.

## POWDER IN SHOES AS WELL AS GUNS

Foot-Ease to Be Added to Equip-  
ment of Hospital Corps  
at Fort Wayne

Under the above heading the Detroit *Free Press*, among other things says: "The theory is that soldiers whose feet are in good condition can walk further and faster than soldiers who have corns and bunions incised to raw hide."

The Plattsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning.

One war relief committee reports, of all the things sent out in their Comfort Bags of "Kits," Allen's Foot-Ease received the most praise from the soldiers and men of the navy. It is used by American, French and British troops, because it takes the friction from the shoe and freshens the feet. There is no foot comforter equal to Allen's Foot-Ease, the antiseptic, healing powder to be shaken into shoes and sprinkled in the foot-bath, the standard remedy for over 25 years for hot, tired, aching, perspiring, smarting, swollen, tender feet, corns, bunions, blisters or callouses.

Why not order a dozen or more 35¢ boxes today from your Druggist or Dept. store to mail to your friends in training camps and in the army and navy. *Adv.*

in the service, and he looked around with the eye of a possessor.

"Beautiful land," he said brusquely—"unlimited resources. That cable needs tautening. Wind still blow from south-west?"

He took the glasses from the table and swept the dropping world with appraising eyes. As he swung around toward the north his grim lips under the clipped gray mustache parted in a smile.

"Ah! My old friend, Red Mountain!" he said. "Still God-forsaken. Say, what's this? Has some one stopped up the Loophole—some fool been tampering with that remarkable formation?"

He twirled the screw, focusing the glasses the better to his vision. Behind him Kinsey cast an anxious glance at Bond.

"H'm!" said McCulloch. "H'm! By George—by George—that's funny!"

He looked a long minute, then lowered the glasses and once more lifted them.

"I'd stake my head that that opening was filled when I first looked at it," he said to Kammerlain, "and now it is clear."

In the general talk that followed the incident was passed over and Kinsey breathed freer. McCulloch took in every detail about the lookout station and was ready to depart at two o'clock.

All would have gone well but for one small thing—the faint pop-pop of a rifle, borne over on the thin air just as the old service man put foot to stirrup for the back track.

"Aha!" he said and listened. It came again, one shot and then silence.

As if a warrior smelled smoke, McCulloch's gray eyes hardened, brightened. "It's been a long time since I hunted down a lawbreaker on horseback," he said, "and it's just the thing I'd most enjoy. We'll be on Red Mountain to-morrow."

ALL that night Kinsey at the cabin stirred and thought and thought again. Once he sat up and smoked a cigarette, and again he got up and dressed and went out to stand under the stars and wonder sickly what was to come of the morrow's hunt—what trouble their trip might bring to the slim, courageous figure in the overalls.

But McCulloch was the law, and he was bound beneath it.

Therefore late noon of the next day found the three of them, McCulloch, Kammerlain, and himself, with emergency rations in the bags, camped low down on the northeastern shoulder of the old dead hill where the one strip of green began.

"I think," said McCulloch "that we'll go low along the skirt. Of course his camp will be close to water."

But Kinsey, speaking out of his heart, advised a killing climb to the Loophole. He knew that not likely would the girl be out to-day, since yesterday she had made her accustomed survey, and he hoped for the weakening of the big chief's zeal with the unwonted physical labor. But destiny has a way of brushing aside like cobwebs the careful schemes of mortals. Kinsey had forgotten that she might come out for the rest of the meat if she had made a kill. And that was just what happened.

It was McCulloch who first caught a glimpse of her as they climbed—McCulloch who had not hunted a human for many a day, but was the keen scout still. They were low along the mountain, going up, and far across a distant slant he saw her, going down and to their right, diagonally, and she staggered under a burden that shone white and red in the sun—the pretty fat-ringed quarter of a little buck!

Like a hound, the old man went to the spot, and though she had disappeared he took up her trail—a fine piece of business that neither Kammerlain nor Kinsey could have accomplished.

DOWN along the slopes he led them, going slowly but surely. Kinsey was sick with a deadly nausea. All the pity there was in him welled up, and his nervous fingers went to a pocket and clutched a tiny packet that hid therein a flat little packet which held a ring, a ring of pearl and diamonds.

It was slow going. Twice the old war dog of a service man lost the trail, and there were long waits. The hours went all too quickly, and the early twilight that falls so softly in the Trinity was beginning to paint its magic pictures when they came down to the bed of a stream that ran from a rocky gorge into the barren regions toward the west.

Here there was nothing to follow, neither sliding footprint nor broken branch nor fallen leaf, but McCulloch went unerringly west.

"Waded," he said admiringly—"a good evader."

THE green of the tree belt had stopped abruptly. Beyond there was the desolation that made Red Mountain accursed. Here the men dismounted and left the horses, going forward on foot. They went into a land of shadows, cool and rapidly dimming with the coming night, and they followed the small trickle of the stream. It was no light nor any sound that first betrayed the quarry they were after. It was the smell of smoke, not live smoke of a new-kindled fire, but the dead smoke of long-banked embers.

Kinsey felt a hand clutch at his heart and his lips were dry. Poor, brave figure in the overalls! Poor little redhead with the frightened eyes! The thing she had most dreaded, it seemed, was come upon her. A cold sweat broke out on his body, and he felt a heavy anger surge up against the eager old man ahead. They stepped softly, picking their way among the great boulders that formed a veritable forest about them, an ideal hiding place.

And then a sound reached them, a sound that stopped them in their tracks, for it was the sound of a woman's weeping, low, hopeless, terrible, the regular intake of a breath and its exhalation in a sob that came from deep down in the vitals. It was awful weeping, strong and sustained, not the usual hysteria of feminine grief.

For a long moment they listened. Then, with one accord, drawn as by a magnet, they rounded the last huge rock and found what they hunted.

There in the fading light, serene and pale with its reflection from the still fair heavens, lay a camp. It was set in the heart of the rocks, scant and grim of comforts, the shade derived from a tarpaulin stretched above. A table made with infinite labor from adzed slabs stood at one side with a few pans and a tin cup on it. Between two stones a day-old fire smoked from its banking, the thin wisp of blue drifting aside with the little wind that drew down the cut of the stream. Some blankets were folded to one side on the ground, while a small box, doing duty as a cupboard, held the bottle of malted milk Kinsey had brought from the town.

PRECISELY under the shelter of the tarpaulin there stood a light folding cot—the kind de luxe campers use—and upon it, his red head of curly hair thrown pitifully back, the long sweep of black lashes under black brows staining the waxen cheeks beneath, there lay a man, or what had once been a man.

Wasting illness had drained the skin that stretched upon the slight frame. One pale hand dragged helplessly outside the cot on the hard earth. And against the wall of the great boulder beyond, with her back upon them all, her face against the stone and her arms

locked above, there stood the girl of Red Mountain!

At her feet lay the useless quarter of the buck where it had dropped, white hanging from a peg driven into a fissure of the wall there gleamed, hidden in the twilight, the staring black hair of a striped prison suit!

Kinsey felt his mouth fall open, the breath stop in his throat. He knew that beside him Kammerlain of the tender heart opened and closed his two hands helplessly. McCulloch stood like a graven image.

And then she took down her arms, and slowly around against the stone, and faced them. Her face was drenched with weeping, ashen, pinched, her dark eyes narrowed with anguish, and yet to one man of the three it was beautiful—nothing else on the earth is beautiful.

"Too late," said the girl dully; "it's all too late—you, and the law, and myself. Even the meat"—she touched the quarter with her ragged boot—"that I used to press for the broth for him, it's too late too."

She raised her eyes to Kinsey's, and he could have killed McCulloch for bringing him here.

"It's been a hard fight and a losing fight, but a good one. He had the grand open world for a time at least"—she waved a hand at the waiting mountains—"and he had one of his own kin with him. The rest—the rest were like all the world. They hated him for—for the disgrace, but I—"

She stopped for a moment to let the deep sigh that choked her free itself from her straining throat.

"Gentlemen, I am his twin. There is something—something about that a little deeper, a little truer. It draws one I had to stick by."

Kinsey put a hand to his throat and swallowed.

"He had—freedom and peace," she went on as if reciting a litany, "and the blue skies all day. He had fruit and malted milk—for luxuries, and a Bible. He had the Psalms that his mother used to read to us both when we were little. And I have—have white muslin—for the dignity of his burial. I could not bury him—in those."

She waved a hand at the limp garments on the rocky wall.

But here Kinsey, breaking the tension that had gripped him like a vise, leaped forward and with one sweep of his arm gathered her to his breast.

He held her up as one lifts a child and tucked the red head in his shoulder. Above her his eyes burned on his chief.

"By God, sir!" he said hoarsely, "we're vandals! I let you lead me to this partly knowing—God forgive me!—knowing at least that she had a secret—and we have profaned her sacredness! She has defied the Forest Service daily—an' I let her be! I have helped her all I could. Put me out of the service if you will, but now get busy!"

And with his burden in his arms Kinsey turned and walked abruptly away from the pitiful camp with its tragedy that was, somehow, beautiful.

Where the tiny stream murmured and lapped among its rocks he knelt and bathed her face. Adoringly he smoothed the bright hair, and, finding a flat boulder, he sat down, took her in his lap and, with her cheek against his throat, let her weep as a child weeps, softly and with healing.

THE dawn came over the eastern shoulder of Red Mountain with its ageless mystery of splendor. Deep in the valleys dim shadows lingered still. It was a virgin world, silent and sweet. Along the skirts of the dead hill three men rode slowly, and one bore on his saddlebow a slim figure in worn dunnage which clung to him as to a tower of strength. The face that watched the world from over her red head was transfigured, for Kinsey saw visions, touched the peaks of profound glory.

"It is a good cabin, dear," he was whispering, "an' we'll make it back from Weaver by the end of the week. McCulloch spoke in the night, an' I'm still in the service. An' we'll be happy as few are in this world."

"You are so good," she said softly, smiling up at him through the mist of tears in her eyes—"so good! And I doubted you once! But I knew it all the time. Yes, we'll be happy."

Behind in the rocky waste of Red Mountain's desolation the sun, slanting down like heavenly gold, touched a nameless mound between the boulders.

"Comforts," said the voice against Kinsey's breast, "white—for a decent burial—and the Psalms! Oh, my good, good man! I love you!"

**JAMES W. GERARD**  
*Former Ambassador to Germany*

# I Am Against the Postal 'Zone' Law"

## **Mr. Gerard Said:**

"Now we have to meet this German Propaganda. The war is not going to last forever—and you have seen what German Propaganda has done in Russia. These are grave dangers, and they only go to show what can happen in a country like Russia.

"Fortunately they cannot propaganda this country as they can Russia, because we have great publications that go all over the country and have unified the whole country and the whole continent. That is why I am against the postal zone law passed by the last Congress putting an extra tax on papers sent from the cities where published.

"They forget that, whether these publications go from Philadelphia, from San Francisco, or from Chicago, it is the exchange of these papers from and to all parts of the country that makes one, universal, united America.

"They unify the sentiment, and that is worth far more in this war than the small amount of extra postage which the Government will obtain."

The postal zone rates referred to by Mr. Gerard, go into effect beginning July 1st.

This legislation not only raises all rates for carrying newspapers and periodicals through the mails but divides the country into zones.

It is not a war measure, and properly belongs in the postal Bill.

It is not a revenue measure, and the chances are will decrease rather than increase revenue. If you are interested, you can help to repeal this unjust and disastrous law.

Write to your Congressman at once. If you don't know who your Congressman is, ask at your Post Office.

If you will help, send your name and address to Charles Johnson Post, 200 Fifth Avenue, New York City.

Coolness!

THE NATIONAL WEEKLY

more than a million Every week

Drain out used oil

Fill crankcase with kerosene

Run engine very slowly 30 seconds

Drain out the kerosene

Fill up with Veedol

Make a test run. Pick out some familiar hill that has always caused you trouble, and see how much easier you go sailing over the top, with Veedol in your crankcase.

# How to get real hill-pulling power

**E**VERY motorist is proud of his car when it goes sailing up a stiff grade on high gear all the way. He is doubly proud when he has to throttle it down at the top.

With any engine the difference between confident, smooth, pulling power and uncertain, racking inefficiency is, more often than motorists realize, in the lubrication.

## Why ordinary oil increases friction and wastes power

Inferior oil cannot stand up under the terrific heat of the engine—200° to 1000° F. It breaks down quickly, a large portion turning to black sediment.

Sediment is the greatest enemy of the working parts of the engine. Sediment has no lubricating value and it crowds out the oil with lubricating qualities

from the bearings and other points where it is most needed.

When you try to climb a steep grade, sediment may break the oil film between the pistons and cylinder walls, so necessary to maintain the compression seal which means pulling power. In addition, there is increased fric-

tion, and consequent drag, consuming power at every point of contact between working parts.

## How scientific lubricant solves your problems

To get real hill-climbing power, smooth, quiet running and freedom from mechanical troubles, you must use an oil that will resist heat and minimize the formation of wear-producing sediment—a lubricant that will be scientifically suited to your particular engine. The oil which most perfectly fulfills these requirements is the scientific lubricant—Veedol.

## Veedol is made by a special process

Veedol is unlike ordinary oil. It is made differently, and has different properties and characteristics. Veedol is made by the Faulkner Process—recently discovered and used exclusively by this company.

The famous Sediment Test shows how Veedol resists heat and reduces sediment. After 500 miles of running in the same engine and under identical conditions, ordinary oil, shown in the left-hand bottle, contains fully seven times as much sediment as Veedol.

The average motor oil acts like water in a kettle. When water is subjected to intense heat it evaporates in the form of steam. Under the terrific heat of the engine ordinary oil evaporates very rapidly through the oil filler in the form of vapor.

Veedol not only resists destruction by heat and the consequent formation of sediment, but also reduces oil evaporation in your engine to a minimum. You will get from 25% to 50% more mileage per gallon with Veedol for this reason.

When figured by miles of service, and not by cost per gallon, Veedol proves much more economical than ordinary oils, which evaporate rapidly under the heat of the engine.

## Make this simple conclusive test today

Drain the oil out of your crankcase, and fill with kerosene as shown above. Run the engine slowly for 30 seconds and then drain out all kerosene. Fill with Veedol and make a test run over a familiar road, including steep hills and level straightaways.

You will find that your engine has acquired wonderful hill-climbing power and snappy pick-up. It will run more smoothly and quietly and will give you more gasoline mileage.

## Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

## Send for this 100-page book on lubrication

The most complete book ever published on automobile lubrication, written by a prominent expert, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like a clock at minimum expense.

Also contains Veedol Lubrication Chart, the correct grade of Veedol for every car, with summer. Send 10c for a copy. It may save you many dollars.

## TIDE WATER OIL COMPANY Veedol Department

2029 Bowling Green Bldg. New York

Branches and distributors in all principal cities of United States and Canada

Left: Sediment after 500 miles of running. Right: Veedol after 500 miles of running.

All Veedol Grades are of the same quality. Veedol Oil, Veedol Grease, Veedol Compound Grease, and Veedol Lubricant are available in three grades, Light, Medium and Heavy, as is Veedol Graphite Grease, which is recommended for lubricating water pump shafts. Many motorists prefer it to oil for its superior performance.

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

*Talk No. 1 on the Shortage of Man Power*

## Now There's a Girl Behind the Soda Counter

ON one of those recent hot afternoons a friend of ours went into a drug store for a glass of soda.

Instead of the expert soda dispenser to whom he was accustomed he found a new clerk—a girl.

Now there must be a certain knack about mixing soda. It has always seemed a most simple thing to do. And yet this new hand at the art made an exceedingly poor job of it. Our friend thought contemptuously that it was the poorest glass of soda he had ever tasted.

But then another thought arrested him and effectively routed his first impatience. It was this:

"We have no right nowadays to be impatient. There is a good reason—a tremendous reason!—why that untrained girl has taken the place of the expert soda dispenser who formerly served me."

And no matter what we buy if we are compelled to put up with delays and mistakes because of the inexperience of an untrained clerk we should practice patience—because of that tremendous reason behind it all.

• • • • •

In Mark Sullivan's article in the June 22d Collier's he pointed out the vast shortage of man power that now exists—a shortage that will increase constantly as the wheels of war sweep more and more workers into industries which are necessary to carry on and win this war of ours.

Of course our first thought is of the army, but the two million men now in the army, huge as is that number, are but a small proportion of the man power required.

The industrial army behind the fighting army must numerically be much larger.

Men are required to build ships—to make airplanes—and guns—and shells—and rifles; millions of men are required for these vital factors in carrying on war.

And that is only the beginning! For millions of workers are required

to do the farming that will feed the army and man the railroads which will transport food and equipment, and dig the coal which will keep the wheels moving.

To quote Mr. Sullivan, "There is a famine of man power!" And this famine cannot be left unsatisfied in those industries which must forge ahead under full steam to achieve victory.

Where, then, shall we get men?

• • • • •

This question brings us directly back to the girl behind the soda counter.

Now you realize where the man has gone whose place she has taken.

Perhaps not into the army. Or the navy. But into some absolutely essential industry where a man's strength is demanded.

And what has happened behind the soda counter has happened or may soon happen behind the grocer's counter and, of course, in department stores at those counters where men were formerly employed and in the shoe shop and possibly, in time, even behind the counter of the tobacco shop and the haberdasher's.

We do not mean that a girl will always take the place of the man. An older man perhaps. Perhaps a youth.

But the outstanding fact is that the untrained will take the place of the trained.

And we, you and I, under these circumstances must

not be impatient. We have not the slightest right to be impatient when we realize the tremendous cause that has taken the trained salesman away and put the unskilled clerk in his place.

Close your eyes for a minute and visualize this wide country of ours. In factories and machine shops and shipyards and munition plants these men who have gone from behind the counters are working for us—for you and for me. The Atlantic is bridged because of them. The flow of food and equipment to our boys in France is ceaseless because of them. And then be patient with those, no matter how unskilled, who have taken their places. Be considerate. Sympathize—don't criticize.

At this point in our country's history to practice patience is also to serve.

This is the thing that, for one minute, we should not let ourselves forget.

*Next Talk:*

**The Voice of a Million Tongues**

*She may not be an expert as yet, but—*

*to practice patience nowadays is also to serve.*

## Simple as A B C

**T**HERE is nothing mysterious about the supremacy of Winther Internal Gear Drive Motor Trucks.

It is true that in less than two short years Winther Trucks have taken their rightful place among the foremost trucks built anywhere in the world today.

*It is true that Winther Trucks have established new standards of economy in upkeep and maintenance and of efficiency in motor truck transport.*

It is true that among those who deal in motor trucks the Winther connection is considered as most desirable—Winther Trucks are "easy" to sell.

These are facts known to almost every one. Yet there is nothing strange about them, unusual as they seem to be—and are. The reason for this marvelous record of Winther in both sales and service is as simple as A-B-C.

You have only to look to the facts of how Winther Motor Trucks came into being, to understand.

Winther Motor Trucks are the direct result of the late military expedition into Mexico under General Pershing. They applied for the first time to commercial use, the lessons there learned concerning motor trucks in military use. It is an admitted fact that the Mexican service was the most severe to which motor trucks have ever been subjected. It is an admitted fact that the lessons there learned changed, almost over night, the whole trend of motor truck design.

*Model 38 Maximum Capacity 1½ tons*

*Model 48 Maximum Capacity 2 tons*

*Model 68 Maximum Capacity 3 tons*

*Model 148 Maximum Capacity 7 tons*

*Winther, in a new factory, with neither old policies nor old equipment investments to be protected, alone was able to fully apply these lessons.*

It is not strange that this truck, the direct outgrowth of war time conditions, has best met war time conditions in commercial use.

It is not strange that Winther Trucks should be trucks of greater economy, more free from trouble, and of immeasurably wider usefulness.

Winther has made possible the long haul of today with economy.

Winther has solved and is solving train tie-ups, embargoes, priority shipment rules, etc., etc., for scores of American manufacturers.

*Winther Trucks are delivering today from Coast to Coast, trucking service in every branch of American industry, unthought of and undreamed of two years ago.*

The point of it all is simply this: with transportation problems which will become increasingly difficult as the months pass, wouldn't it be wise for you to find out now what Winther equipment can do for you?

There is a Winther of the correct size and capacity to meet every trucking need. One way to cut hauling costs is to use trucks to meet your needs, not force the need to fit the truck.

*Model 88 Maximum Capacity 4 tons*

*Model 108 Maximum Capacity 5 tons*

*Model 128 Maximum Capacity 6 tons*

## THE START

*A remarkable photograph, which reached this country from Germany via Holland, showing a German submarine of the latest type being stocked for a voyage by a supply ship in a German harbor. The picture gives a good idea of the great length of the U-boat. Notice the portholes in the side of the vessel and the wireless equipment on deck*

# THE ELUSIVE FRONT

BY WILLIAM SLAVENS McNUTT

COLLIER'S SPECIAL CORRESPONDENT

"GEE, this doesn't seem much like war the way you read about it back home, does it?"

He was sitting opposite me at a table in the dining car of an express train from Paris rushing up through the zone of advance toward the American front. A slim, pale, slightly stooped and shopworn-looking kid, unmistakably fresh from some small town in the States, he was as eager, ignorant, and frankly interested as a country boy at his first circus trying to make two eyes cover three rings at one and the same time. According to the map, one of the most historic sectors of the western front was only a few miles away over the low hills on our left; according to any visual evidence of the sordidness and horror of war, it might have been on the opposite side of the world. We were well up in the zone of advance and rolling swiftly over a brilliant green and well-tilled countryside, as perfect in its spring loveliness and as unscarred as the smooth cheek of a healthy child.

The shell-wrecked house by the roadside shows a buttonhole bouquet of verdure that has found nourishment in some small crevice of the crumbling wall, and had the stones a voice, one might hear: "Phut! It is nothing, this. I was old and needed replacing. But you shall see the grand new house they will build where I stood!"

"You knew not that my leg was of wood," the poilu chortles gleefully, as one who has perpetrated a great hoax. "Ah, it is a great limb, this one. One gets about splendidly. And it will not ache with rheumatism, eh?"

## Hunting for War

"I SUPPOSE that when we get right up to the front it'll be like what we read about," the young soldier across from me continued expectantly. "I'm an ambulance driver. I enlisted in January, an' they sent me right over as a casual. I been in a casual camp ever since, an', gee, I ain't seen anything that looked like war to me. I'm goin' up now to take the place of a driver that got killed, an' I thought as soon as I got up here in the zone of advance that it'd be like what I'd read about. But, gee, I bet I couldn't make my folks back home believe I was here ridin' in this nice dinin' car through nice, pretty country like this, even if I wrote an' told 'em. I bet they think I'm livin' in the mud somewhere with the shells bustin' around me all the time an' not gettin' any sleep, an' all like that. I guess when you get right sure enough up to the front it is a little like that—ain't it?"

"Search me. It's my first trip up."

The young soldier scratched his chin thoughtfully. There was a puzzled look in his eyes. After a little time he nodded toward four sergeants at lunch across the aisle from us. The gold V on their sleeves denoted six months' service.

"I was talking to those fellows a while ago," he went on. "They been in several battles, an' one of 'em's been wounded. They don't seem much worried or—or—or kindo' strained-lookin', do they?"

"Sure don't."

"It's funny. I thought all the French people over here'd be sad all the time an' cryin' a lot an' 'akin' on, but they don't. Why, they go on about their business same as we would at home any time. I see one old lady down near camp where we was who just got a letter about her son bein' killed, an' she

was cryin' some. She's the first one I see in France that acted like anything awful had happened. An' you know what? An hour after I seen her out on a piece o' farm in back o' where she lived hoelin' like Old Harry! Can you beat it?"

"They're a mighty game people."

"You said somethin'! Anybody says these French people is licked is crazy! An' them sergeants over there that've been up at the front an' in the fightin', an' all— Why, I thought fellows like them would be—you know—have lines in their faces an'—an' be kindo'—oh, old-lookin' an' all like that. Why, them fellows is just the same as you or anybody, ain't they?"

"Seem to be."

"Sure. I don't believe it's as bad up there—that is, all the time—as you read about. Do you?"

"See me later. I haven't been up yet."

"Of course it must be awful tough some o' the time, but—I dunno."

The young soldier was silent for a little, neglecting his food to stare out through the window at the lovely country through which we were passing. There was a look of extreme puzzlement in his eyes—the look of a man who strives to recall a perfectly familiar name, for the moment utterly forgotten.

"It beats me," he said suddenly, returning to the business of lunch. "Why, when I left home to enlist I felt a lot more like I was goin' to war than I do now. I suppose when I get right up to the front it'll be like what you read about, but, but—I dunno."

Throughout the afternoon I sat with the young soldier. We strove together for a first-hand impression of the reality of war and succeeded only in fervently admiring the scenery. Everywhere was beauty, the beauty of brilliant green fields, winding, willow-bordered rivers, and soldierly rows of poplars.

In the middle of the afternoon we saw a cluster of wrecked farmhouses near the track. It was the first hint of the thing we expected to see, and we stared at it unbelievably.

"S'pose the Germans did that?" the young soldier asked me.

I asked an officer.

"Sure," he said. "They got through here on their first drive."

We stared at those shell-wrecked houses, trying desperately to be as interested as we expected to be. The scene did not register. I think we both had the feeling that we were being joshed. That wreckage was probably some old ruin. No doubt the officer was trying to kid us.

"Man, look at that patch of yellow up there on that green hill," the soldier cried excitedly. "Looks like a big, yellow flag laid there, don't it? Is it mustard, I wonder, or dandelions maybe?"

We debated the matter. The beauty of the country forced itself upon our consciousness, claimed our entire attention. The glimpse of the shell-wrecked village passed from mind.

Late in the afternoon I dropped off the train at a small town surrounded by hills where a motor was

to meet me. It was as peaceful and quiet as a water tank and general store in southern Indiana. My soldier friend leaned from the window and viewed the tranquil scene sadly.

"Good-by," he said, in the monotonous voice of a man who has found out definitely that the banks won't cash the gold to be found in the pot at the end of the rainbow. "It ain't much like you read about, is it?"

## That Lovely Mask

FOLLOWED a long ride over the hills in an open motor car. By that time I had not the faintest idea of the whereabouts of the elusive front. I was doing my best in the matter of speed, but as far as any visual evidence offered it seemed to be farther away than ever. I gave myself up to enjoyment of the scenery and the intoxication of swift, smooth flight over the low hills.

It was coming dark when we slowed up to miss the chickens and children in the narrow street of a squat little town. A thin, faint mist blurred the outlines of the hilltops. A stir of wet night wind made woolen a welcome wear. The driver half turned in his seat.

"This town we're coming into is where Joan of Arc was born," he said casually. "That church you see there just ahead, that's where she used to worship, an' her house—where she lived—is right in back o' that bunch o' trees there. An' see up there on the hill ahead—up where you see that church steeple? That's where she saw her visions."

We whirled out into the valley beyond the town, and suddenly the war gripped me. There was no roar of cannon or flash of bursting shell to impress it upon me. Down the road through the misty dusk came an old, bent peasant woman, a young girl, and a child of five or six, driving a flock of sheep. An old peasant woman, a girl, and a child there

in that misty green valley of dreams, and a young, big, American soldier, grinning, strong, talking in fragments of atrocious French, carrying the child perched on one broad shoulder. I was seeing the symbol of a great fact.

And then that gas mask! It was a clear, sunny morning. The old French town was warm, pleasantly picturesque—and peaceful. The front of which I was in search was a million miles away. Then that gas mask!

I hung the ugly, grotesque, nightmarish-looking thing about my neck and went out into a sunlit court where a sergeant was drilling a number of soldiers in the use of the mask. The sun turned cold. The face of the world was grim and threatening. My flesh shrank from the feel of the ugly thing hung about my neck as from the cold, slimy coil of a snake.

"You put this mask on in six movements," the sergeant informed us. "It's supposed to be done in six seconds—and hold your breath while you're doing it. Remember that. Hold your breath. If you don't, some hospital orderly gets your watch, and your folks get your insurance—if you've had sense enough to take some out. In six movements—like this."

He illustrated. He stood there before us, a sane, normal-looking American. A swift succession of deft

movements—and where he had been there appeared to us a sort of a two-legged, land-going sea serpent, surpassing the description of any summer-resort press agent on the Atlantic Coast! A wipe of the hand across his face and he was the sergeant again.

"All right now, try it," he ordered. "One, two, three—"

I grabbed into the bag after that mask like a starving wolf snapping after a rising partridge. The blamed thing was alive. It wriggled and fought back at me like an angry snake. "Six, seven, eight, nine—" (the sergeant was counting monotonously; I hadn't got the thing free of the bag yet!) "ten, eleven, twelve—" I got the reptile out with a final, mighty tug and stuck my face into it. Apparently my features weren't made to fit it. I could have broken the world's record for underwater swimming in the length of time I held my breath. And still the mask was not on. The sergeant had quit counting. What was the use? I was long since theoretically dead. I took a long breath and finally got the thing on in a drunken, crooked sort of way, and stood there panting,

winded, feeling foolishly certain that I never could get it adjusted in less than six minutes and sixty movements, practice as I might. If I ever got into gas, I'd be a gone goose, sure! But the next try was better, and soon I was able to make a fair job of it. Then the sergeant spoke at length on the necessity for caring tenderly for that mask. His talk was simple, but I have never heard a more eloquent oration. Of course his subject matter was of interest, for his subject was that of life as opposed to death. I say truthfully that he held the attention of his audience to the end. I can't say that we enjoyed his remarks, but we gave him our ears.

To all unappreciated orators who burn to thrill and grip an audience I recommend this: Be a gas officer and instruct men going up to the front in the functions and use of a mask! I promise you a hearing.

When we had so advanced in our drill that in a gas attack at the front we would not have died more than two or three times before getting our masks adjusted the sergeant led us to the gas chamber. We put on our masks. He shut the door and fired a revolver several times. I waited expectantly to be suffocated. Nothing happened. The air I breathed through my mask was sweet, if somewhat scanty. The sergeant opened the door.

"Now take off your masks and see how much protection you've had," he ordered. "Don't stay any longer than you feel comfortable."

I confidently removed my mask. Why not? The air in there was all right—perfectly all right. I removed my mask—and then I went! Every stockyard, glue factory, and chemical plant in the world had been collected by some miscreant, boiled down and poured into that room! I couldn't see them, but my nose knew! I passed South Omaha, the Chicago yards, and the Jersey shore on a hot night in half a stride. I went out running unanimously—my feet, eyes, and nose were all going. The sergeant explained that the gas in the chamber was very, very mild. According to his logic, no doubt, the Atlantic Ocean is uncomfortably dusty in winter, the Rocky Mountains are flat, and the ice in the Arctic is warm!

"Take good care of your mask," he advised me as I was leaving.

Take good care of that mask! I'm more or less out of condition, and normally I couldn't go six rounds with a good lightweight, but if Jess Willard and Fred Fulton were to collaborate on the job of taking that mask away from me I could lick the pair in one punch!

### Tape

HOURS in a swift motor across country, the loneliness of which banished all impression of war and its horrors, and then the headquarters town—soldiers and mud and a matter-of-fact business of moving trucks and hustling men. There was as much of the atmosphere and appearance of war as one finds in any training camp in the States—no more. I met an old friend, an officer, and we met and talked as we would have done on Broadway. The front was a long way off!

As we stood there talking in the rain, recalling old things of mutual interest, I heard a band playing. The beat of the music was slow, measured, heavy. The expression in my friend's face changed. He lowered his eyes and spoke in a tone that I have since come to know well: a low, furtive tone. It is the tone in which a soldier speaks of the recent dead.

"I had forgotten," he said softly. "One of our lieutenants got it yesterday on a road back of the lines. Will you ride up with me?"

We rode up through the cold, fine rain to a green hill back of the town. I had meant to describe that scene. It was the most impressive I have ever witnessed. I find that I can't write of it in detail.

When the last volley had been fired and the sad notes of Taps had sounded on the wet air, they set a cross at the head of his resting place. As we rode down the hill I looked back and saw it outlined dimly against the racing blur of low slate-colored clouds.

I slept that night in the tiny front room of a tiny stone house far out on the edge of the town. I had had an excellent dinner at an officers' mess and a pleasant evening at the club. The drip and patter of the rain on the low roof was a lullaby of nature. The moist, silken sigh of the night breeze in the dripping evergreens was the calm sleep breath of a serene world, confidently at rest in space. From my pillow I could see, through the open window, occasional vague ghosts of light momentarily visible in the far blackness of the night. They were the illumination from flares burning over No Man's Land! The bed was warm and soft. The lullaby of the rain upon the low roof gave the lie to the fact of war and its horrors. The front was a

million miles away, and lying there, warm, drowsy, idly watching the vague reflections of the lights, I ceased to marvel that it had taken America so long to realize and interpret the dread fact.

### Playing Soldier

THE next morning I visited a summer resort in the Maine woods. The map and the officers with me agreed that it was a poste de secours immediately behind the front-line trenches; but they couldn't fool me! I knew perfectly well that it was a summer resort in the Maine woods. I knew that there was a complex conspiracy to josh me. Time and distance, maps and men, were in it. They were all trying to convince me that it was at the front. How childish! I knew perfectly well that I was at a summer resort in the Maine woods.

With a captain I had come over lovely, rolling green miles of what he had tried to make me believe was a battle field. The whole district, as a matter of fact, was getting ready for some sort of a carnival. There was evidence of the preparation in all the villages we had passed through and even along miles of country road. The captain called the fantastic decorations camouflage, but he couldn't fool me. I had seen street fairs and carnivals before.

I felt that he was carrying the joke a little too far when he stopped the car under the lee of a low hill and insisted that it was necessary for us to get out and walk. He was a good joker, though, that captain. He kept a perfectly straight face while explaining that the Germans could spot a car on the road from there on and would shell us if we attempted to make the rest of the trip by motor. He never cracked a smile. He even carried it so far

as to insist that we walk some distance apart so the Germans wouldn't think we were a regiment and spend ammunition on us. I fell in with the spirit of the foolery, and we footed it over that sunlit country road single file, some thirty yards apart, all dolled up in tin hats and gas masks, like kids playing soldier. There were many shallow holes in the green fields by the roadside, where some farmer had evidently been blasting stumps, and the captain took advantage of their presence to further the hoax by telling me that they were made by German shells. He was a thorough cuss, that captain!

And then the summer resort that they called the poste de secours and the knowledge that I was in

the Maine woods! A number of rustic cottages were there, most of them built into the earth and bearing over their doors the names common to summer-resort cottages everywhere in the States—Dew Drop Inn, Stagger Inn, etc. We found a fine lot of fellows there, lazing around on the sun-splattered ground under the tall trees, smoking and reading magazines. They were all in on the joke, all trying to make me believe that they were soldiers up at the front!

### "Welcome to Our Home"

WE had dinner in a circular rustic summerhouse with a nice bunch of fellows dressed up as American army officers. While we were eating we heard the whang of a rifle somewhere off in the woods.

"Sniper," some one explained in answer to my look of inquiry.

I knew, of course, that it was some one of the fellows out hunting. I felt vaguely annoyed. I had much the same feeling I experienced during my initiation into a certain lodge. I had the instinct to say: "Ah, cut out all this folderol! I know you're kidding me, and you know I know it. Why pretend?"

"How far is it from here up to the front-line trenches?" I asked, pretending to have fallen victim to the hoax.

"Oh, about three hundred yards!"

That was the limit! Expecting me to believe that we were sitting there in a rustic summerhouse in the woods calmly enjoying our dinner only three hundred yards from the front-line trenches!

"Well, let's get along up," said the captain, rising.

I followed him out.

"Keep well to the right here," he told me. "This is swept by indirect machine-gun fire."

More foolery!

We stepped down into a shallow ditch floored with duck boards. The ditch grew deeper. We dodged to pass under a roof of barbed wire and came to a trench running at right angles to the one by which we had entered. A knot of ragged, muddy men with rifles slung over their shoulders stared at me curiously.

"Welcome to our home," said one, grinning.

"You bet your life, you're welcome to it," another added fervently. "I'm the most hospitable guy in the world up here. Anybody who wants my part o' this home any hour o' the day or night I'll get right out an' give it to him. Yeh! My room here's for rent free to anybody that wants to occupy it!"

"Well, what do you think o' the front-line trenches?"

"I haven't been here long enough to find out."

"That's why I asked you what you think of 'em," my questioner explained. "I know what you'd think of 'em if you were here long enough."

"Say, you're from COLLEGE's, ain't you?" asked another.

"Yea."

"Who's that guy writes that stuff about the baseball pitcher in the army over here?"

"Witwer?"

"That's the guy. Some card, that bird! Gee, I

"Why, they go on about their business same as we would at home any time"

laughed myself into a fit last night down in the dugout readin' one o' them things. That's funny stuff!"

"When d'you leave New York?"

"March 30," I told this questioner.

"Oh, boche, come get me now! Hey, fellows, here's a guy was in New York only last month."

A man apparently asleep on the fire step rolled over on his back and stretched.

"New York?" he repeated reminiscently, blinking up at the sun. "New York. Name sounds familiar. I think I drank one once. Or was it a show I saw, or something?"

"Listen, mister, was the town still there when you came away?" another demanded, grasping me tightly by the arm.

"Sure was."

# CLAY FEET

BY DONN BYRNE

ILLUSTRATED BY JAMES MONTGOMERY FLAGG

VERY laboriously, and with the tip of his tongue showing at the left-hand corner of his mouth—a trick of which he could never rid himself—the old man continued his letter:

"And be careful after the dances to wrap yourself up. You know it was neglecting that gave you the pleurisy. Give yourself plenty of rest."

He laid the pen down, and made a motion to wipe his brow, as though the writing had been hard physical labor. Outside, in his great offices, a score of competent stenographers were ready with pen and machine. For years the only writing he had done was the signing of his name to checks and letters, except for the single item of his correspondence with his son.

"Go on and make love to every girl you meet. When I was your age I had a score of them. But don't let any of them marry you for your money, when you're not looking."

He gazed for an instant at the photograph of the boy on the polished desk in front of him, a slim, black-haired lad, with blue eyes, and unconsciously he began to compare the features with his own. There was the same stubborn mold of jaw, heavy but fine-lined, coming together at the apex like the sides of a triangle. The fairness of the lad's skin stood out in contrast to his own bluff red complexion. Where the boy's eyes were blue, the old man's were granite-gray. The father's hair, now white, silky as scutched flax, had been of a noncommittal brown, where the son's was the bluish-black of the Galway tribes. There was a hint of the Connemara mother, too, in the mobile mouth, where the old man's was firm and straight-lined from forty years of battle.

"The dead spirit of herself, God be with her," old Brady said. "You'd know him out of her a mile away."

The nicked telephone at his elbow jangled melodiously. He picked up the receiver.

"Mr. Dougherty to see you," came his secretary's soft, cultured voice, "about those steel rails."

"I'll be with him in a minute," Brady answered. "I'll be after finishing a letter."

"Take care of yourself, my boy," went the stumpy fingers laboriously, "but have the best of a time. Hoping this finds you as it leaves me, your affectionate father, Phelim Brady."

He rang his bell for the secretary. A trim, young woman came in smiling. She took the laboriously written sheets.

"Make out an envelope for Master Patrick, and send it on to him. Show Mr. Dougherty in."

THE old steel man, hawk-faced, white-haired as Brady himself, came in. The big contractor looked him over from his meticulous morning clothes to the ribbon of the Order of St. Gregory in his lapel.

"Well, Tom," he greeted him, "and where's the wedding?"

The steel man ignored the gibe. He sat down.

"And how's the boy getting on, Phelim?" he asked.

"Oh, he's coming along," the contractor answered.

"That Palm Beach place seems to be doing him a lot of good."

"It's a wonder to me," the Knight of St. Gregory told him, "that you don't run down to Palm Beach

yourself for a while in the winter, now that you've got all the money you want."

"Ah, sure, what would the like of us be doing down there, Tom," Brady said—"us that once carried hods and tended bar? I know more about driving a team of horses than riding one of them. It's all right for Patrick. He knows the ways of those people, but not for me. I'm content where I am."

He looked at the photograph again and nodded his head proudly.

"The best's none too good for that boy of mine," he said half to himself.

"To be sure! To be sure!" Dougherty acquiesced. "Now, Phelim, you old robber, you, about those rails . . ."

NOW, all New York, I think, is divided in its opinion as to the personality of Phelim Brady, the great contractor. There are men who howl against him like wolves, accusing him as an industrial octopus, stretching out his tentacles and grasping everything in which there is the possibility of profit. There is his own people, the sturdy Irish of two generations gone, who tell their sons of

his rise in an epic that ranks with the deeds of Achilles. In the green hills of Longford, on the other hand, in the snug cabins of night, he is given as a modern instance of the success awaiting the sons of Erin in a country they still think of as the Golden Medina of Talmudic lore—a land of gilded streets whose stones are blue turquoise, of silver battlements and towers of ivory.

And in New York is another section, never tired of sneering at him as an upstart hodman, of caricaturing him in the public press in a dented hat with a broken clay pipe in the corner of his mouth, with a prominent fleshy upper lip.

"Well, if it does them any good to draw me like that," Brady would grin, "it does me no harm." And with that he would let it go.

There is this fact that is unfair in this material world of ours—that a man's achievements stand out preeminent, and that to arrive at an estimate of them, one reasons backward from achievement to motive, in place of forward from motive to achievement. He must have been greedy, unscrupulous, overbearing, say they, to have accumulated this wealth. He must have ground the poor and bullied the needy. That, they insist, is irrefutable logic. "A posteriori," they begin—a churchman's device!

I CAN think of nothing more indicative of the man's personality, and more typical of the misunderstanding about him, than an incident in Union Square some four years ago. A labor agitator had mounted on a platform to protest against the just execution of some man implicated in an industrial murder. The red flag had been raised, and the East European horde that had invaded New York stretched all about him like a hill of ants. The speaker, a heavy-eyed, hook-nosed product of East Side sweat shops, was haranguing his mob in broken singsong English.

"They told us this was a land of liberty, and we find it a land of slaves. They told us that here was democracy, and we find it a place where feudalism—"

It must have been the inquisitive childlikeness of the Celt that made old Brady stop his car on his way uptown, and make his way toward the platform—the instinct of the Irish boy following the ballad singer. He arrived in time to hear himself denounced.

" . . . And there is Brady," the speaker went on. "How did he get his money, my friends? Wait; I'll tell you. By grinding the last ounce of labor out of his workmen for the least money. No, my friends, not in Siberia did this happen, where the chain gangs labor in the mines, but in free and democratic America—"

"You're a damned liar!" old Brady roared. His bluff face was red with rage. His white hair bristled. He shook his stick viciously. "You're a damned liar, and for two pins I'd jump up on that platform and break your face for you, you dirty, hook-nosed, little Polack shrimp!"

He went out through the crowd, his stick thumping, his voice muttering anathema as he passed. For a moment there was silence. The orator put his head on one side. His beady black eyes leered. His hands went out fanwise.

"Well?" he insinuated in his Oriental singsong. And the mob howled back its applause.

The old men who knew Phelim Brady in his young days—some of them are judges on the bench now, and some are back in Ireland, and some are dead—how their eyes would glisten as they might think of Brady and him a young man! "The best hurler in the County Longford," they used to admit: "a great footballer too. A grand hand for the dancing, and the voice of him! By cripes! there were singers in Ireland then!"

It was that idealistic chase for the crock of gold at the rainbow's end that brought him to New York—the chase that brought St. Brendan in his curragh to the Brazilian shore. In New York he came to his Uncle Matt, licensed to sell vinous liquors.

"I suppose," said the caustic old publican, "that you expected to find the roofs of New York set with showers of gold."

"I did so."

"Well, you won't."

"Here's for a crack at fortune with the hod then, begor!" said young Phelim, and he wired in.

HE might, all things being equal, have gone on the primrose path of song and liquor in New York, such being concomitants of chasing fairy gold—it sort of eases the sting when disappointment comes—had it not been for his meeting with Moyra Costello. Very erect and tall, very black-haired, and very blue-eyed, there was a pallor to her cheeks and a flush beneath her eyes that were supernatural. The Rose of Galway, they used to call her at home. Straightway Brady made a whirlwind courtship and got her promise to marry him.

"And that, I suppose," he told himself, "needs a house and furniture, and a steady job."

As a matter of fact, it requires none of these things at all for the committal of matrimony, but Brady, nevertheless, acquired them, and with state and pomp suitable to their station, Phelim Brady of Longford was married to Moyra Costello.

I skip rapidly over this marriage of Phelim Brady's, because, interesting as it might be to those who know Brady's fame, it is nothing but one of the cornice stones of his fortune's edifice. And Moyra Brady is dead now and abides in that chaste and somewhat frigid Celtic heaven where Columbkille is, and Brigid, and Patrick of the book and bell, a green, dawn-lit solitude where the lark carols *Laud Deo* in the clear air, and the thrumming harps of Gaeldom sound in measured magnificats . . .

A doctor who had been called in six months after the marriage shook his head gravely as he looked at Moyra Brady.

"There's no doubt about it," he said; "she'll die. But there is no reason why the child should not be saved."

When her hour came Moyra Brady lay very weak and white with her new-born son in her arms.

"I've got nothing to leave you, Phelim," she smiled hushily, "beyond this wee legacy." She gave him the pitiful little bundle, and then she suddenly seemed to be dropping through space, and darkness came about her, and she died.

Now, the pleasantness of death is not for the survivor. He is left behind on a bleak and desolate shore, while the flying soul journeys through the trackless ocean ways of mystery. Space broadens until it embraces the universe, and great tragedies are enacted then, and great stories founded. But there is little time for tragedy and little time for repining when a small, red-faced piece of humanity is clamoring loudly for food and attention.

AND so Phelim Brady sat down and tackled the problem of caring for young Patrick in a conscientious and practical way. He worked as hard as ever—harder now, that he might occupy his mind so as to keep care from gnawing at his heart. He amassed money comfortably, and soon inevitable Opportunity, which not only knocks at the door but smashes it open with broad muscular shoulder, came to him and claimed him. Of course the opportunity needed money and it needed men.

"Oh, I guess it will be all right," said the bank which extended him credit, paying thus tacitly tribute to his clear eye and upstanding presence. "And do you mind the time he shot the goal in the hurling match against the County Cavan," the men said; "two hundred and fifty yards it was if an inch, straight like a bullet into the mouth of the goal, and the Cavan men around him, howling like wolves, ripping skin and hair. There was never a good hurler yet but he was an honest man."

Were one to look, in a sort of parallel columns, at the state of Phelim Brady in those days and at his state now, one would think not unnaturally of Aladdin, the Master of the Lamp, who, a poor widow's boy, raised a palace of precious stones with the help of afreets and jinn. But by fair and stealthy steps, in a sort of geometrical progression, Brady's fortune waxed and expanded unconsciously. It was his uprightness and fair play that helped him, made him rather. His workmen were loyal, his backers true. In those days his office was a tiny shack on West Broadway. Now there were great suites of offices on Wall Street, calm, dignified, luxurious. His home then had been a small flat on the lower West Side; now there was a dignified mansion on Madison Avenue, with a door of wrought iron work, with trim, silent maids, and an efficient butler.

**B**UT never in all that time did the spirit of the man change with prosperity. He was still the same unaffected Irish boy that left Longford twenty-four years before, although now his hair was whiter than a sheep's fleece, and the once lithe figure had become portly.

It was still his pleasure to sit smoking his pipe in the evenings, although now it was in a severe drawing room, instead of the cozy interior of a little flat.

He had long ago brought from Ireland an aunt of his to look after the son, a calm, maternal woman in everlasting black with a quiet smile and a sense of religion which was practically a passion. About him all were the Irish he loved. And in the evenings he was never tired of telling the boy stories of his old country—of the great fight between Sir Daniel Donnelly and Cooper, the British champion, at the Curragh of Kildare; of the old Hell-fire Club of Dublin; of the Athlone Giant, and the great pipers of Aran. He would tell him, too, stories of the Norman-Celt aristocrats, the hook-nosed, brown-faced, lithe sportsmen who drank and roistered and hunted and sang, of the Younger of Oriel, and the Knight of Cavan, and Sir Bryan Kennedy, who

chased the bailiffs with his hunting pack, horns blowing and the huntsmen yodling to the hounds.

The boy's blue eyes would sparkle. "Go on, dad," he would insist.

Or occasionally the old man would break into the sorrowful ballads of his country, songs sung only when the heart is joyful. He would trumpet out the lament for the Earl of Lucan:

*Oh, Patrick Sarsfield! Ireland's wonder  
Fought in the field like bolts of thunder.  
One of Ireland's best commanders  
Now is food for the crows of Flanders.  
Och! Ochone!*

Or he would pick out with one finger on the piano "The Bard of Armagh," or "The Tanyard Side."

He was no longer a child to be dandled on the knee, that son of his and Moyra Costello's. He was man's size now, twenty-three years old, lithe and tall as a sapling, with his mother's hair and eyes and mobile mouth, with his father's resolute chin and iron physique. But still he never wearied of hearing his father's stories of the older country, and his doleful songs that bespoke happiness in the singer.

"Dad," he used to grin, "if you'd gone on the stage, you'd have been the hit of the century." The older Brady would pooh-pooh the suggestion, but it never failed to please the simplicity of him.

**T**HE days at the expensive school to which the father had sent the boy and the years at Harvard had turned young Brady into a product which had made the old man proud, but had a little terrified him. For years now he had understood that his early dream of the boy succeeding him in the business was doomed to failure. He had never mentioned the matter to his son, because he had always taken it for granted, and also because he was not in the habit of discussing business with anyone. It was only when he had come out of Harvard that the matter had been broached.

"Have you been thinking now," the old man said, "of what you'd like to do? Maybe—with a twinkle in his eye—"it's a clergyman you'd like to be."

"Father," the lad told him seriously, "I think the best thing for me would be the diplomatic service."

The elder Brady took the blow without flinching. It had been a crashing, unnerving one, but the old sportsmanlike smile showed at the corners of his mouth.

"Well," he said slowly, "it's the first time I ever heard of a Brady trying to settle a dispute with his tongue, but if you think you can do it, why, go ahead, and God be with you!"

It was only right, the old man thought later, it was only right after all. Progress, the inexorable law, demanded it. The boy was a polished diamond that would cut through crystal where he, the old man, had been a slung shot in the foreheads of embattled opposition. The son of Moyra Costello would walk with kings. With the great ones of the earth would his business be. The glamour of courts, the polished niceties of birth and breeding, should be his portion. The old man was proud of it. "Ay, damned proud!" he said emphatically. "A fine thing for him, ay! and a great day for me!"

**B**UT it seemed to him at that decision that a part of him had died. All that great organization of his, from the subdued and dignified offices to the burrowed mains in the streets, was a portion of his life and personality. His brain had conceived them and his vitality brought them forth. Into every one of his people, his trim stenographers, his neat clerks, his swarthy, sweating Polacks in the construction camps, into every one of them had a portion of his life gone.

All that, with him, must die. And for the first time he recognized the tragedy of the master mason who rears his building only that it may crumble into dust. Immeasurably greater than he had builded up to be forgotten. The sons of Noah, those ancient adepts, where was their great tower now? And Solomon! His temple was a few crumbling stones. If only it would last a century, old Brady thought, if only a few generations—a tribute to his mind and hand! But with him it would die, and in a few years his memory would be forgotten, and also his love and his hatred would be perished! He sang no more.

# SPEEDING THE SHIPS

BY EDWARD HUNGERFORD

YOU may toss a pebble into a mill pond and then watch the encircling ripples widen. When the 5,500-ton collier *Tuckahoe* went into the waters of the Delaware at Camden, N. J., on the first Sunday in May, the ripples that she made went round the world—front-page stories for the newspapers of America, lines for the bulletin boards of London and Paris and Tokyo and Hongkong—and, unless I am very much mistaken, a typewritten slip announcing the fact was placed under royal eyes in Germany. For in all the history of shipbuilding no great ship had ever before been built and launched in twenty-seven days. Nor was this all. The *Tuckahoe*, contrary to the custom of many shipyards, was virtually complete in every detail from truck to keel: engines installed, boilers and funnels in place, masts stepped, propeller fitted, rudder hung. Only a few details remained, and to complete these was a matter of but ten more days. On May 15 the *Tuckahoe*, 330 feet long and 50 feet beam, steamed out from the yard of the New York Shipbuilding Corporation at Camden and was ready to do her part in outwitting the German pirates.

A little less than a year ago I made the statement in print on behalf of that same yard that its organization could and upon demand would in nine months produce a steel steamship of from 7,500 to 9,000 tons and that it would duplicate such a standardized ship each twenty-four hours for an indefinite period thereafter. The *Tuckahoe* is evidence that the New York Shipbuilding Corporation knew exactly what it could do when it authorized that statement and when it told William Denman, the first chairman of the United States Shipping Board, that it could produce standardized cargo ships at daily intervals.

## The Race

ON the same day that the *Tuckahoe* took the water a few miles down the Delaware to-day well named the American Clyde—there was a double launching at the yard of the Sun Shipbuilding Com-

pany at Chester. A mine layer of moderate tonnage was put over for the navy and a big cargo ship, the *Lancaster*, preceded her by half an hour. The 450-foot *Lancaster* is the second of a fleet of 10,000-ton cargo ships, originally ordered by the Cunard Line and last autumn taken over by the Emergency Fleet Corporation under its general policy of requisitioning all ships under construction for foreign owners. It took four months from the laying of her keel until her launching, with boilers installed and a considerable amount of hold fittings completed, which is a record for a 10,000-ton ship. Yet the officers of the Sun Company feel confident that they will do far better.

On the May Sabbath that the shipbuilders of the Delaware were pluming themselves word came that the record of eighty-five days previously held by a shipyard in Portland, Ore., had been broken by the Skinner & Eddy Corporation of Seattle, which had built the 8,800-ton steel carrier *West Lianga* in what was, until the remarkable performance of the *Tuckahoe*, a world record of fifty-five working days from the date of keel laying to launching, and had delivered her to the Government for service in sixty-seven working days after the first sections of the keel were laid upon the ways. Now watch Portland, the other Columbia River towns, and Tacoma!

Sounds like a race, doesn't it? So it is. It is the Great Merchant Marine Handicap, with the first heat to be finished on the night of the 31st of next

December. There are many entrants—and of various sorts. A few are old nags, which hint reminiscently of their conquests in the days of the clipper ships or when iron vessels were first beginning to come into their own; others are racers in the height of form, groomed and backed seemingly with all that money and expert brains may command; still others green horses—dark horses, perhaps—coming into the great commercial and patriotic contest. There are some stragglers, of course. And a few of the entrants are still entangled with the starting tape and seemingly unable even to get started in the race.

## 398 Ways

COLLIER'S has neither the space nor the desire to give an exact catalogue of shipyards nor their launching ways. Of these last it is sufficient to say that there are now 398 ways in the shipyards of the country so designed as to permit of the construction of steel ships. Three-quarters of these ways are upon the Atlantic Coast north of Norfolk, Va., or else are upon rivers directly tributary. In April, 1917, there were, in the thirty-seven steel shipyards of the United States, but 162 launching ways. These yards have added thirty-three new sets of ways to their equipment. That more have not been added is due in most cases to the fact that many of the older yards are in the heart of communities which have grown up round about them and so

have made it difficult and expensive for them to expand. And because new ways mean new fabricating and machine shops in definite proportions to keep pace with them, it generally has been cheaper for the older organizations to start entirely new unit yards somewhere in the vicinity, as the Fore River company has done. It expanded its original plant at Quincy, Mass., to the farthest practical limits, and then more than doubled the size of the original plant by building an entirely new unit at Squantum, some five or six miles distant.

5,700 shipbuilders of Wilmington protesting against the "no Sunday Baseball" statute

Four hundred ways, to make a round figure of the 398, make an impressive possibility of ship production. Given a minimum of only one ship a year and that ship of but 5,000 tons burden—a little less, in fact, than any of the steel cargo ships that are being built in the United States to-day—and we would have 2,000,000 tons of brand-new shipping. And under the methods of expedited production exemplified in the *Tuckahoe* twelve months would represent a well-nigh impossible drag for a vessel on the ways. Ninety days would seem to be a fairer mark. But, as we shall presently see, there are many conditions to be borne in mind; labor must be contented and hard upon the job—which, in turn, means a solution of many difficult problems of housing and transportation and entertainment. And transportation is again an important factor in the bringing of raw material and of fuel. Even weather conditions come closely into the reckoning.

Of the 203 brand-new ways in the yards for building of the steel cargo ships, seventy-eight are in two yards alone—the Hog Island plant of the American International Corporation, near Philadelphia, possessing fifty; the great new yards of the Submarine Boat Corporation at Port Newark, N. J., having the other twenty-eight.

The New York Shipbuilding Corporation's yard, on the Delaware, at Camden, N. J., although slightly outranked in size by the Union Iron Works of San Francisco, was, till recently, not only one of the very largest plants in America, but was—and still is—one of the finest shipyards in the world. There is nothing upon the Scottish Clyde seriously to rival it.

It gave me a great thrill the first time I visited it; I had not conceived it even possible to build huge ships—of 8,000 or 10,000 or 12,000 tons burden—under a roof, even to masts and funnels, as the men upon the Harlem and the St. Lawrence used to build the racing motor boats. The erecting shop of that yard has the finest interior I have ever seen—and I have in mind the Capitol and the Congressional Library at Washington, the Auditorium at Chicago, the atrium of the Sinclair Hotel at West Baden, Ind., and Madison Square Garden, New York. The arena of this last place is a huge apartment; and yet two and a half of them, placed end to end like railroad cars, would fit under the roof of this erecting shop.

This yard and its great ante bellum compatriots of the Northeast, Newport News, the Baltimore and the Maryland plants in the neighborhood of Baltimore, Harlan & Hollingsworth at Wilmington, William Cramp & Sons at Philadelphia, the Chester Shipbuilding Company, and the Fore River yard have built ships from raw materials and almost, if not entirely, complete within their own fences. Like these are some of the newer plants coming into existence—the Sun yard of the Pew Brothers at Chester, the Pennsylvania yard at Gloucester, N. J., and the Federal yard, with its twelve broad ways, at Newark, to take three out of several recent examples. In fact, in the older standard yards it was the boast of the master shipbuilders that they made the ship from keel to truck—in some of them, such as the New York Shipbuilding plant at Camden, they even went so far as to build the small boats and the roll-top decks for the officers' cabins. But the Hog Island plant, which has had a good deal of notoriety (all of it undeserved), the Submarine plant at Port Newark, and the yard of the Merchant Shipbuilding Company, which young Averell Harriman, having turned his taste from railroading for the moment, is putting up at Bristol, Pa., and some others, are or are becoming fabricated yards—by which really is meant shipyards in which vessels are about 95 per cent fabricated at distant and inland points.

#### "How About Structural Steel?"

"FABRICATED yard is a good deal of a misnomer. It ought to be known as a structural shipyard. More of a vessel is fabricated in the old type of yard than in one like this," says H. A. Sutphen, vice president of the Submarine Boat Corporation. He ought to know. He built the yard. Three years ago he was building motor boats at Bayonne, on the other side of Newark Bay. A representative of the British Government called upon him soon after the war began and asked him if he could build small seventy-foot scout or patrol launches. The boats would be built in parts at Bayonne and then—to avoid certain diplomatic entanglements—sent to Montreal or Quebec, assembled there and sent overseas upon the decks of larger craft. Sutphen said that

he might try a few. The Englishman said that really he would not be interested in talking in lots of less than a hundred. Sutphen said that ten would be a big contract for him; he finally promised to make fifty within the ensuing twelvemonth. And, as a matter of fact, he made 550, carted them up to both Montreal and Quebec and had them completely assembled and ready in just 488 days. It was one of these little Bayonne-built boats—modestly called a motor launch—that played so dramatic a part in the bottling up of the German U-boat base at Zeebrugge.

Sutphen had had his first taste in quantity ship production—quality ship production as well. For each of these little mosquito ships was guaranteed to make nineteen knots an hour and penalized against a wasteful fuel consumption in attaining that speed.

The *Tuckahoe* is evidence that standardized cargo ships can be produced at daily intervals

It was Sutphen who more than a year ago called the attention of General Goethals to the fact that it was futile to try to build wooden ships in great quantity, the supply of wood available for the construction of sizable ocean carriers being so limited.

"Suppose we try and build these 3,000-ton steamers out of steel," he suggested. "There practically is no limit to the steel supply of America."

Goethals replied that the shipbuilders had told him the existing orders for ship steel would use all the facilities of the rolling mills of the country; that to get more rolls was a provokingly tedious matter.

"Ship steel, yes," Sutphen conceded; "but how about structural steel?"

He meant the sort of steel that goes into our bridges and our skyscrapers—a steel lacking a fine fraction of the tensile strength that the finicky old-fashioned shipbuilders had demanded of the rolling mills, but still good enough to make a craft rated in the highest class under the classifications both of Lloyds and the American Bureau of Shipping. The many bridge-building plants of the United States, in times of peace producing spans for all over the world, plus the skilled structural steel workers of the land, could produce, many miles inland, fabricated portions of the vessels faster than railroad flat cars could be got to bring them to tidewater.

It was no visionary who brought this scheme to General Goethals. Back of Sutphen was his quantity-production record for the British Government. Goethals, who is something of a quantity producer himself, bade Sutphen go ahead, and gave him a contract for 150 completely standardized steel ships, each of 5,500 tons burden and 335 feet in length, as a starter.

When I stood upon the No. 1 launching ways of the Submarine plant May 16 in the afternoon, it was on the deck of a structural steel oil-burning steamship which was promised for launching on Memorial Day—fourteen days later. It was no record job. The keel had been laid on December 20. But at that time the yard was scarce eighty days old—a jumble of a morass in which teams and motor trucks stumbled and stalled, while their drivers swore and only a superoptimist could see a possibility of anything even remotely resembling a shipyard. And since the keel had gone down, there had come the hardest winter of recent years on the North Atlantic Coast, weeks and months when even the big bosses grew a bit discouraged. But they did not give up. Oh, no. On schedule time, May 30, the *Agassiz* slid into Newark Bay.

On the 16th of May there were twenty-seven ways beside the one on which I stood, and back of them a widespread, orderly shipyard—tracks and buildings and warehouses, all of them arranged with an eye toward the most efficient and economical handling of men and materials. There is no community pressing in upon this yard. It is on the Newark meadows—until the coming of the war a huge vacant tract, gridironed with railroads, and, though within ten miles of New York City Hall, one of the greatest economic wastes in America. It is no longer. Three shipyards are there already and a number of other new industries more or less dependent upon the war. Transportation facilities and proximity to the labor supply of the metropolis are having their effect.

There was not the slightest variation in the details of the twenty-seven other ships rising from the even line of ways, interspersed with a hundred derricks set upon high cranes. Each was perfectly standardized. Each would have upon its completion almost exactly 412,000 rivets. Of these 112,000 would be driven at the structural shops far inland, and all these shops would have exactly similar blue prints of exactly similar ships. The plates and beams and angles would be lettered at the shops for definite places in the standardized ship, but not for any one designated ship. So a plate from the bridge shop at Sharon, Pa., might lie next in the ship to one from Joliet, Ill. There are fifty-six inland shops providing 95 per cent of the finished plates for the ships at the Port Newark plant, and some of them come from as great distance as

Milwaukee. On the way up from Philadelphia I

had seen a Lehigh Valley fast freight at Bound Brook laden with fabricated floor sections. The lady next to me thought they were some sort of motor truck destined for the Allies!

"We will have fifty of our 150 ships ready and delivered by December 31 next," says Sutphen, "and by that time we will be delivering them at the rate of fifteen a month, which means that a launching will be an every-other-day sort of a party with us."

Don't forget that Sutphen gave the British more than he promised.

#### Like Hot Cakes

NEITHER are the people at Hog Island novices. They are the men who developed that masterpiece, the Camden yard of the New York Shipbuilding Corporation. And, having made one masterpiece, they were quite willing to try their hand at another—possibly

(Continued on page 30)

# Collier's

## The Day of Healing

OF old our Fourth of July was too often kept as a day of enmity; in this year of measureless strife it has become a day of healing. We are now aware and proud of our essential partnership with the men of Great Britain whose ancestors established freedom under the law, and with the men of France whose fathers gave to the work of free institutions a clearness of logic and an intensity of enthusiasm that no other race can match. England has her Tories still as of old, reactionaries as bitter and shortsighted as those who grouped themselves about the narrowly despotic court of German GEORGE III, but the heart of the nation is not with them. Not for long can they hope to balk justice to any of the kingdoms or to any part of the empire—so long as empires abide. France still has her intriguers and her demagogues, but the republic is strong in spite of them. The three greater guardians of freedom do not stand alone, for the liberty-loving states of every race and every clime are gathering to their side. And in every one of these, whether Portugal, Cuba, or China, the inner story is the same: the men who care for freedom are sinking their differences and shaping the course of their country by the best light they have. Never were the forces of right so arrayed in continuing power as on this July 4, 1918. Never did true men have such a cause for which to fight. Those who wish can re-read the Declaration of Independence and reflect how immensely more devastating and tyrannical the would-be tyranny of Potsdam is than that which WASHINGTON put down. On the Fourth of July our hearts pledge the world's future, and this gigantic welding of free races which we have already seen achieved is the living proof that that future shall be established in liberty and in justice.

## The Scale of Business

IN moving stones to build a summer-camp cooking place, a wheelbarrow may be big enough. But a city is not a camp, and how many wheelbarrows does it take to equal a freight car? That, in a nutshell, is the problem of the scale on which modern business should be run. We have always held that the United States is now a huge enterprise, and that, to serve its needs best, things must be done on the corresponding scale, not by methods that were adequate for smaller times. This problem was considered by the Supreme Court in the recent case of the United Shoe Machinery Company. The nub of the opinion rendered by the four justices who gave the majority verdict is to be found in the brief observation that "the idea was repellent that so complete an instrumentality should be dismantled and its concentration and efficiency lost." In other words, the country could not afford to deprive itself of the results obtained by doing an important sort of work in what appears to be the most effective way yet discovered. There are other cases now pending against other corporations more or less similar to this one, and it will be interesting to see whether or not this view holds good. We will have to discard some of our once-accepted theories as the work of this war comes to sit more closely on our national shoulders. It will be fortunate indeed if we can clear our minds from all fogs of litigious and a priori reasoning and form the habit of looking facts squarely in the face. Getting our national living is now the nation's business, and the nation is in control of it. There is no need of weakening any economic enterprise so as to keep it subordinate to the just power of our united country. Find the best way of achieving results and follow that course! There is no time now for any other.

## The Seattle Way

IN COLLIER'S for May 25 it was said, in an article on shipbuilding on the Pacific Coast, that Seattle had solved its labor problem. That was true in February. Now Seattle is expanding its shipyards and other war industries. More men will be needed, and Seattle begs COLLIER'S to say that she must have 15,000 more men by November. And Seattle will get them: a town so intelligent in handling labor problems need have no fears on that score.

## Stamp Germany Out

THE President set aside June 28 as "War Savings Day" with the purpose of concentrating public attention on one of the best of the Government enterprises that have grown out of our common danger and our common hopes. But the movement

must go on after June 28. The War Savings Fund has been eclipsed at times by the Liberty Loan and the Red Cross drives, both conducted with such fervor and intelligence that nothing else could be seen while they were in the sky. But we doubt whether either of them will do more real good in the long run than this steady, sound appeal to the country to SAVE. Secretary MCADOO has taken so much interest in the campaign that this movement and the Liberty Loan are practically linked. Both the Liberty Bonds and the War Savings Stamps are Government securities of the highest character. A man who buys War Savings Stamps can always cash them in on ten days' notice at 3 per cent simple interest. If he holds them to the date of maturity, he will get his money back with 4 per cent interest compounded quarterly. The terms are such that few of the holders of the stamps have redeemed them, for both patriotic and selfish reasons impel them to register these unequalled securities and put them away to grow in value until 1923.

At first officers of savings banks looked on the war-savings movement a little coldly. But they soon learned from experience that they were mistaken. Step by step, with the sale of stamps in their institutions, their deposits increased. The habit of saving was establishing itself, and the wise among them soon foresaw that people who buy these stamps will be apt to deposit in the savings banks the money they receive when they redeem their securities. The habit of saving will then be second nature to them.

The movement is not restricted to any class in the community. The limit was set at \$1,000 for each individual simply because the return is so high that the very rich might be tempted to buy great quantities as an investment. But it is the Government's desire that every person shall save and buy as many of these stamps as he can within the limit prescribed. If the two-billion-dollar limit is reached, we shall have in this country a savings fund that will be the surest possible foundation for the financial welfare of our people.

## To Help Russia

PRESIDENT WILSON and other American liberals have refrained from denouncing "the Judas among nations" and have insisted upon America's essential sympathy with all that is real in the Russian Revolution. But it is WILLIAM MARION REEDY of St. Louis, Mo., who says most in fewest words:

Immediately, the one thing we can do for Russia is to defeat Germany.

## Diplomacy, Secret and Open

IT is the ordinary and proper thing to speak of the President as a master of verbal expression. Yet if the test of perfect mastery is a style utterly free from ambiguity and needing no postscript of explanation, Mr. WILSON has not always commanded the ideal literary style. There have been occasions when the White House or the State Department has found it necessary to point out just what the President did mean. The Wilson style is at times over-emphatic. Senator BORAH was justified in basing his proposal for the public discussion of all treaties in the Senate on Mr. WILSON's declaration to Congress, on January 8, that "open covenants of peace, openly arrived at, are requisite to a lasting peace, and that from now on the processes of diplomacy must be always in the open." What could this mean but full publicity from the moment an international document is laid before the Senate to the moment the necessary two-thirds vote is definitely conceded or withheld?

On the face of Mr. WILSON's language this was the only possible meaning. On the face of reality and common sense this could not be the meaning, and the President hastened to enlighten Senator BORAH: "When I pronounced for open diplomacy I meant, not that there should be no private discussion, but that no secret agreements of any sort should be entered into, and that all international relations when fixed should be open, aboveboard, and explicit." Did that make it quite plain to Senator BORAH? A new ambiguity interjected itself. "International relations when fixed." Mr. BORAH thanked the President, with a wry smile, for the privilege accorded the people of knowing what it is they have been bound to after they have been bound.

So Mr. WILSON finds himself once more misunderstood. What he obviously meant was that the people must know that a treaty with Abyssinia or Zanzibar is under consideration in the Senate, that the people must know what the treaty binds us to in general terms while it is under discussion; and must know the treaty in detail

# Editorials

after it has been ratified. But the people need not know every delicate point in the debate, every personal susceptibility, let us say, connected with the sovereign of Abyssinia or Zanzibar, which does not enter into the essence of the treaty, but which may easily wreck things when shouted from the housetops.

Life knows no perfectly open diplomacy and will not permit it. Civilization is made possible only by merciful suppressions and white lies. The working formula must be found somewhere between midnight diplomacy and blab. In England and France there has been a how-de-do over the secret diplomacy of the Hapsburg letters to POINCARÉ and King GEORGE via Cousin SIXTUS. Why were not these letters laid before the Parliaments? For the very reason that the offer was made on condition of its being kept secret. It has been cited as a striking example of the evils of secret diplomacy that two men in France and England should have had the power of rejecting a possible peace. But under perfectly open diplomacy the Hapsburg offer could never have been made at all.

So far the record of pitilessly open diplomacy consists of the Ford peace expedition to the trenches and Comrade TROTZKY's triumphs at Brest-Litovsk.

## Our Reign of Terror

OUT in Bloomington "bachelor life is officially prohibited. An investigating commission found that a great number of young ladies, widows, widowers, and bachelors were each occupying, all by themselves, large houses. If they should marry, one of each couple's houses could be turned over to other families to live in, and expenses of lighting, heating, etc., reduced. So the women were given the privilege to demand a husband, and no citizen is permitted to refuse to marry a woman who demands him, if he is able to support a family. In desperate cases, where the man persists in refusing to marry, a compromise may be effected, compelling the bachelor to keep in his house, and feed, three orphans or two cripples, for the duration of the war.

"The same measures are to be introduced all over the United States."
